Our subsequent journey down the beautiful South Branch bore out all that Mr. Gaylord said and more. That stream is an ideal trout stream. Broad and with great volume of water even at the present low stage of the lake, clear and cold as ice water, and tumbling along over a rocky bed which seemed a natural right-of-way for trout. I have never seen a stream, unless it were some of the mountain streams of the Rockies, which was more beautiful or more beautifully adapted to trout fishing. Here I had my first opportunity, and, indeed, almost my only opportunity during the trip, to cast a fly. What was the result? Hundreds of chubs, and hardly a trout in the prettiest part of the stream. By climbing, crawling and wading up to a small stream which runs in above the Brock dam, I found a long pool of nearly motionless water just at the edge of the overflow of the dam. Here, standing nearly waist-deep in the trembling bog, whose bottom was no one knows where, I caught about a dozen splendid trout, a few of which would run over a pound. They bit very sluggishly. In fact, the trout in that section were not nearly so gamy as the chubs. The latter took the fly readily, and the trout would not. I think it was too late in the season, and believe the trout were working up into the narrow waters preparatory to the spawning season, which begins in September. The bass spawned very late in Coleman Lake this year, many so late as the end of July; but the trout seem about to spawn early. I took several trout nearly ready to spawn in the pool above mentioned, learning this too late to spare them.

The Gaylord Club must have between 3,000 and 4,000 acres of land in title and under lease. It controls all the shore of the lake, about five miles along the South Branch, and nearly as much on the "Inlet," including the enlargement of that stream known as Trout Lake. It owns all the lake shore where the club house and garden are situated. Its tenure on most of the other land is by lease from the great lumber companies who practically own that country. The land is now nearly all "logged off," and is worthless for any other purpose. In most instances, therefore, the lumber kings have been content to lease bodies of the land merely in consideration of the payment of the taxes. They ought to be glad to get even that much for it, for it is the most desolate pine country on earth, and never will be farmed in the lives of any now living, at any rate. In this way the Gaylord Club has been continually picking up land, and will continue its operations until it has an immense acreage under its control. The lumber people all feel very well disposed toward the club, and well they may, for it is starting in the middle of a great wilderness of lawlessness the only movement that will ever bring people into that country, and the only movement which will keep up the supply of fish and game which constitute the sole inducement to bring in any visitors except the logging gangs and railroad men.

There are a great many deer in that country yet, and under intelligent treatment there always will be plenty. Thirty deer were killed from the Gaylord club house last fall, and doubtless the shooting members of the club will have good sport this season, although old Nig, the club's big hound, will have to be left tied up this year. Wisconsin has already offered her proof of the fact that hounding of deer is the worst thing possible to spoil the sport and to drive the deer out of the country. The only protest I heard from the natives against violations of any law were against the Chicago and Milwaukee men who

bring big packs of hounds in and run the deer all out of the country. The righteous native summer pot-hunter rebels at this. One frank apostle of the native creed admitted to me that he had in Michigan taken pay as a guide in putting out the hounds, and afterward sold the scalps of hounds he had killed for that same party on the hunt. North wood's morals are touchingly fine and elevated! It is hard to say that all loose hounds should be killed, but it is easy enough to see that all hounds should be kept out of that country. It may as well be definitely announced that hounding will not be permitted on Gaylord Club territory, and any violator of this law will be hunted for until caught and punished to the full limit. Mr. Gaylord is a man not disposed to be quarrelsome, but he says be is not spending money up there to be fooled with; his determination is sufficient to make him fearless in enforcing the rights of the club.

The beneficial results of a little honest work of this kind will soon be apparent. Stock in a well-conducted club like this will be worth more and more as the years go by. To some extent these club preserves solve the question of game and fish protection, and as such factors they certainly deserve the interest of all sportsmen. I have, in an earlier article or two, shown just how much the law is respected in that country, and to just what extent local protection is carried by the law and its wardens in adjacent territory not thus preserved by a club. The only just verdict is that the game law is worthless as now applied in that region. I will cite one instance as foundation of the belief that the law will be enforced on Gaylord Club territory: On the last night of my stay we noticed a light moving around the lake shore near the outlet. At once the club keeper, Mr. Thompson, was sent out, and quietly paddling up discovered the poacher to be a man from one of the temporary log camps near by. He was ordered off the lake at once, and went. Had there been no Gaylord Club there, some doe or half-grown fawn might have been killed that night. Be sure, in any other place in that big wilderness, the illegal hunter might have run his jacklight undisturbed. I do not believe the wardens are efficient in very many instances.

I had a smart Aleck of a young Chicago fellow boast to me the other day that he and his party always killed plenty of deer on their summer trips into Wisconsin, and that the game warden of Elk River district had on one occasion gone out deer hunting with them in the summer time, last year. Neither native, nor Indian, nor city smart Aleck will be allowed to break the law on the Gaylord Club grounds. Mr. Gaylord does not boast of the plentifulness of game and fish on the club property. To the contrary, he says that the country has been nearly ruined for sport; but he also says that in five years it shall tell a different story, and this beyond doubt is true. His ideas are moderate and intelligent, and all he deprecates is the complaint of members who may come up expecting to catch a basket of trout in an hour, or to kill a deer every time they go out. That is not to be wished or expected. If members would see that most nearly approximated, they will do well to keep Mr. Gaylord right where he is, for he is unquestionably on the right track, and he has got sense and sand. E. HOUGH.

[TO BE CONCLUDED.]

FIELDS TO BE HARVESTED.

JAYTON, Kent County, Texas, Aug. 14.—*Editor Forest and Stream:* Through the warm summer days of the past weeks work of nearly all kinds has ceased. The mornings and late afternoons are pleasant while a good breeze prevents the heat being oppressive at any time. It seems to be a waste of nature that this country, which would afford such fine and profitable sport to so many of the denizens of the cities, is so far from them. The prairies here teem with plover, doves, Bob White and the crested quail, to say nothing of rabbits and jack rabbits. The inhabitants of this country need no outings, their every day life being spent in riding and looking after half-wild stock, which are never fed. The small game above mentioned is never hunted or shot at; becoming so used to the stock passing about, they have little or no fear of man. The jack rabbit, a hare approaching the size of a fox, is very fleet, never going to any shelter when pursued, but keeping on the prairie and depending on its fleetness of foot to escape, which it generally does. Large, strong and properly trained greyhounds can take them. The chase is rare sport, but nothing of the kind has occurred here for years. A neighboring ranchman who had a truck patch too much infested went gunning one afternoon recently and with a .22cal. rifle killed 47 out of 55 shots. They weigh 7 to 12lbs. each. (No other instance of shooting them has come to the knowledge of the writer.) In riding a little over one mile yesterday evening I counted 19 by the roadside.

Tracks of bears, panthers and the large gray wolves are very ferocious and live upon cattle and colts which they kill. If there is any place on earth where hunters or sportsmen would be welcome it is here, particularly if they were equipped to hunt the fiercer kinds. Foxes and catamounts are quite common, but the coyote or prairie wolf is the most common and most universally hated on account of his cowardly, sneaking, thieving propensities. STOCKMAN.

Editor Forest and Stream:

I notice with regret that some of the able sportsmen of our big State are quite content seemingly to have her lie in oblivion as far as making any representation of game is concerned. To many Northern and Eastern sportsmen it may be news to hear that the very best quail shooting in the Union is to be had in Texas. When I say best I do so advisedly, as there are more birds than I have ever seen anywhere else, and but little or nothing to bother the dogs, such as burrs, etc. There is plenty of water with lots of shade, and if a man gets tired of killing quail there is a large variety of other game, such as deer, bear, turkey, antelope, and ducks and geese by the million. Another advantage this country has over others is the nice, soft bottom for dogs' feet; the dogs will go for weeks in the soft mesquite grass without being footsore. The only drawback, if it can be called so, is the mild weather. Upland plover are giving us pretty good sport just now, and are in great numbers on the prairie. The young quail are well grown, and judging from the numbers close to town the outlook for a good fall's shooting is grand. The best time to come here for a shoot is about Nov. 1, when the weather is cool enough for the game to keep. COTTONTAIL.

DALLAS, Texas, Aug. 21.

WORCESTER'S OPENING DAY.

WORCESTER, Mass., Aug. 26.—As the open season on partridge and woodcock draws near, and reports of plenty of birds are heard, bird hunters begin to make up their parties for opening day.

As Monday, Sept. 2, the opening day this year, comes on Labor Day, the number of hunters out will probably be large.

Worcester sportsmen usually hunt in pairs, and the season is usually spent with the same partner year after year. It is a little early yet for the final arrangements to be made, but the following partners have been selected: "Lisha" Knowles and Uncle Nathan Harrington, who, with their famous opening day lunch (including home-made apple pie, carroway seed cookies, bottled cider and cigars), have hunted opening day together for years, take with them Congressman Walker and his son, who could scarcely have fallen into better hands. E. F. Swan and Austin Warren, the only pair who hunted through the rain a year ago, will try it again. They know where there are a lot of them, too, "by Jinks." L. E. Divol goes to Lancaster to hunt with Geo. Sampsom. G. J. Rugg and Robt. Mason will endeavor to duplicate their usual large opening day bag. E. T. Whitaker and Harry Morse will hunt together. Dr. Harris and Col. Drennan go down to the cape after shore birds instead of trying the covers about here. E. T. Smith goes to Milford to hunt with Charlie Howe, and if Milford birds don't get a hustling for an opener then I am no prophet. Two better bird shots can't be found.

Less illegal shooting is reported this year than usual, and the present week, the last of the close season, during which most of the illegal shooting is done, will probably not be a very profitable one for violators of the game laws.

The Worcester Sportsmen's Club has shown more than the usual amount of interest in the matter, and last week arranged with one of the keenest and most resolute detectives in the State to look after the early shooters. He is thoroughly acquainted with every mile of country about here, knows where illegal shooting is likely to be done, and when he goes after a man he usually gets him. We look for one or two examples this week, but hope they will not be necessary.

The club has also published in all the local papers the following notice, and any one who gets into trouble must do so wantonly and with his eyes open:

"To Bird Hunters: The open season on partridge and woodcock begins Sept. 1, and until that time it is expected that all who respect the law will hold up until it is legal to shoot game. A reward of $10 will be paid by the Worcester Sportsmen's Club for information that will lead to the arrest and conviction of any one violating the law. We are willing to wait. If you don't, look out for trouble.—G. J. Rugg, Pres.; A. B. F. Kinney, 1st Vice-Pres.; E. S. Knowles, 2d Vice-Pres.; M. D. Gilman, Treas.; E. F. Swan, Sec.; V. F. Prentice, C. H. Morse, W. R. Dean, E. T. Smith, Executive Committee."

They mean business, too, and have the coöperation of about all the farmers in this vicinity, who are as anxious for the enforcement of the game laws as sportsmen. HAL.

SMALL-CALIBER RIFLES.

Editor Forest and Stream:

Much has been said about a new size of small-bore rifle, .25 and .27cal. being mentioned. I do not like the .25 for several reasons: It is too near the .22 for much greater killing power and it cannot be made from a .22 as well as can a .27. If the idea is to get a new size as near the .22 as possible the .25 is all right, but if greater killing power is wanted and the .32 is too large, why not split the difference and make a .27? No trouble would then be experienced by any rifle manufacturer in cutting the many rusty .22s out to the new .27. I prophesy that for some time after the new size is out a great many more .22s will be rebored for the new size than new guns will be sold, and consequently let us have a size that makes it possible to produce a perfect barrel from a rusty .22. W. W. L.

MEDFORD, Wisconsin.

A NOVEL REFRIGERATOR.—Chicago, Ill., Aug. 19.—A young friend of mine, who has for several years each summer gone with his father on a camping trip on the south shore of Lake Superior, tells me of a novel expedient they often employed for preserving their venison in warm weather. In that country some of the streams are flanked by long rows of sandhills, whose composition is so loose that they shift about continually under a wind of any force. In the winter time the high winds often blow the sand over the great snow banks which lie upon the north side of the sand dunes, covering up the snow to a depth of several feet. The snow is thus kept unmelted, and even in the middle of summer one can dig down through the sand to it and find the best imaginable sort of a natural refrigerator. In this way, said my young friend, they buried their deer and trout, and found them kept entirely fresh so long as they cared to leave them. This is certainly a new instance of nature's bountifulness with the sportsman. I wonder if my innocent informant knew that he had wronged kindly nature in killing during the summer season the deer they buried in the snow? It would be better to bury just the trout next time. Trout and deer do not go together.—E. HOUGH.

IDAHO GAME.—Cœur d'Alene, Idaho, Aug. 20.—I am told that game in this and adjoining counties is very plentiful. Owing to the very extensive forest fires which are raging hereabouts, hunting is considered to be more practicable than it usually is at the commencement of the season, deer having remained in the bottoms and being greatly confined in range. Good hunters and fair shots give stalking up in disgust at the expiration of a week of hardest work without coming to shot, and either leave or hound. What deer are killed hereabouts with the exception of an occasional one by a fishing party or roving Indian are killed before the hounds. Of all deer killed by hounding parties I have to see the first one offered for sale or shipped. Grouse and pheasants having wintered well and being but little disturbed at any time, will offer good sport.—MUSE.

RAIL AND REED BIRD SHOOTING will be in order next Monday in Connecticut, New York, New Jersey, Pennsylvania, Delaware and the District of Columbia.

MANITOBA PROTECTIVE ASSOCIATION.—The Manitoba Game and Fish Protective Association's headquarters are at Winnipeg; Colin Inkster, President; Chas. A. Boxer, Secretary-Treasurer. Persons learning of cases of infraction of the game or fish laws are requested to immediately communicate with the secretary-treasurer of the Association, in order that proceedings may be instituted. All information of this nature will be treated as strictly confidential, and the names of the persons furnishing it will not be divulged. Copies of the game law and warning posters containing the principal provisions of the law will be supplied free of charge on application to the secretary treasurer of the Association. For open seasons on game see head of this department.

A WEST VIRGINIA RESORT.—Columbus, O., Aug. 23.—In your issue of Aug. 15 E. R. L. asks where a party of three can go in Virginia, and find sport for a month with turkey, deer, etc. Permit me to say in reply, that I know of my own knowledge Romney, West Virginia, to be one of the best and most accessible points for such an outing. Romney can be reached by the Baltimore and Ohio R. R. A letter addressed to Capt C. S. White, State Fish Commissioner, Romney, W. Va., himself an ardent sportsman, will be pretty sure to elicit all the information desired.—M. P. P.

THE FIELD PLOVER have been exceedingly common in the vicinity of Laurel, Maryland, flocks of from one-half dozen to fifteen being found in the stubble fields. Considerable destruction of young quail is reported by their being cut to pieces by mowing and reaping machines.

THE CONNECTICUT ASSOCIATION, at its annual meeting, re-elected Mr. A. C. Collins president, and he well deserved the place for another year.

Camp-Fire Flickerings.

"That reminds me."

276.

SOME two years back there lived in this city an aged woodsman, who had been given over in his boyhood days to the sports of gun and dog. One evening several of his hunting friends were telling about the running qualities of their dogs, and no doubt some rather careless handling of the truth was done for his special benefit. After each one had given an instance of the marvelous staying qualities of a certain dog he used to own the old fellow gave them the following: "Well, boys, some of you have had some pretty fair dogs, I admit, but before this meeting breaks up I must tell you of a dog I owned when I first came to northern Wisconsin in '72. He was a handsome and inteligent creature, and had I think the sweetest voice of any hound I have ever seen or heard. We started out one October morning, and before going far Zeph was running a deer. After listening to him a minute, I started for a runway, where I knew they would go, but they passed and were far away before I reached my stand. I waited round about for two or three hours, when I heard Zeph in the distance, coming closer and closer, though not coming near enough for a shot. Then they made three more rounds and I got a shot at the buck, while I noticed Zeph was gaming on him. The next time they got within hearing I whistled and called to the dog, but he did not or would not hear, and I started for home expecting he would soon follow, but I went to bed minus my dog. Being a little anxious I was out early next morning, but found no dog; and so I started back to the woods. After reaching the spot where I last saw Zeph I began looking around and calling to him. Soon I heard the old familiar chorus nearing me, and shortly I saw the buck and Zeph running for all they were worth (though it was not very fast), with their tongues out, Zeph yelping as usual, but he was about three rods ahead of the buck!" W. W. L.

277.

The geese were coming in thick; there was no doubt about that. Every morning and evening for a week or ten days the sky was filled with the peculiarly formed flights, and the air was melodious with vigorous honks. Now, one day of this is usually enough to cause a longing for action, but let a sportsman stand a ten days' siege, and only those who have experienced it can tell what my feelings at that time were. But relief was at hand. A friend proposed that we should drive out to the farm of a mutual acquaintance and bag some geese. "Right you are, Van, I will be with you in a minute." I got my gun, a couple of dozen shells, and was ready. Upon reaching the sidewalk I found another gunner added to the party, Mr. A. This was a welcome addition. We climbed into the buckboard, the nondescript, by courtesy called a horse, was, by a little persuasion, induced to get into a cross between a trot and a canter, and we slowly left Hastings behind.

We arrived at the farm on time, tied the horse to a haystack, took five tin geese decoys over on to the edge of a cornfield, stuck them up, built up some hou-es out of cornstalks, filled a pipe, and prepared for business. Van was on my right, about 25yds. away, while Mr. A. had gone to my left fully fifteen rods. The geese decoys were directly in front of me on some newly plowed ground, and as it had been recently seeded it was "just the spot."

Van and I were talking, when he exclaimed, "Look out, here they come." And come they did, hundreds of them, right over our heads, near enough to be touched with a fish pole. I cocked both barrels, when a tearful voice uprose from my left, "For the Lord's sake, don't shoot, boys, until they come my way." It was A., who was just out of gunshot. Van hurriedly whispered, "We'll give him a chance;" and we both lay still.

The main flock passed over to the south; but fully one hundred swung out over the decoys, and commenced to slowly circle round them fully a dozen times. Van and I could have knocked down a dozen with our four shots, but every time the flock would swing away from us, the supplicating voice rose up, "Oh, boys, remember I'm here. When they work down my way, we'll all get a shot. Now, boys, don't shoot until I get a whack at them," Van and I told him that we would not spoil his

chance, and there we sat. Yes, gentlemen, sat there for one hour by my reputable Waterbury. The flock lit within 10ft. of me, and commenced to feed slowly away. Van and I talked freely the whole time they were feeding, but no attention was paid by them to us, owing, no doubt, to the fact that the "guards" were placed far out on the open plowed field.

Some one on the prairie fired a gun, when up rose our flock. Six reports rang out simultaneously; but, alas, the birds were out of range. I distinctly heard my shot spatter one old honker I had picked out. That was all, however; it had lost power to knock him down.

As it was getting late, we concluded to go home; the horse was persuaded to meander; and in due time we reached town.

When we were talking matters over the next day, in the presence of a veteran goose hunter, he made a remark which I have since taken to heart and always act upon. It ran to the effect, "Friendship is friendship, and hunting is hunting, and friendship stops right short in the range of a good shot when hunting geese."

GARDNER, Ill. A. H. B.

Sea and River Fishing.

CAMPS OF THE KINGFISHERS.—VII.

ECHO LAKE, ONTARIO, CANADA.

IT came about next morning that Charley and the skipper were to fish together that day; and accordingly after breakfast we wrapped a day's rations in an old newspaper, and with our rods, a bucket of frogs, the milk pail and a two-gallon stone jug to bring back filled with water from the natural ice water spring at the foot of the lake, pulled out for the farm below, just as the sun looked over into the lake from the summit of the hills back of upper Echo River.

Except for a faint ripple, the water was quiet, and we fished and idled along down shore till it was near noon, before we were below the island; but the sport was rather poor, as we took but four or five pickerel, although we passed over the same water where, the evening before, Dan and I had taken them till our arms were tired handling the slimy sneaks.

We were a little disappointed at not getting a bass or two, but we found consolation in a fragment of old Ben Renshaw's philosophy: "Pickerel fishin' was good enough for the Joneses, for the Joneses never was used to the very best o' fishin' nohow,"—which had eased his mind, and ours, on many a day in past years when the bass were like Dick Mac——'s customers—"a leetle too facetious in th ir tastes to appreciate good vittels."

The big maskinonje was again seen to break water with a great swirl after we had passed his haunt a hundred yards or so, in pure derision, as it seemed to us, at the feeble tackle we were foolish enough to think might prevail against his great strength; but we did not turn back to risk the humiliation of a defeat, knowing the advantage he would have in the forest of bushweeds and rushes infesting his chosen territory. Besides, for the last mile or two Charley had complained of a headache and nausea, to which he was subject, and we wanted to get to the farmhouse where he could lie down for awhile and get Mother Ruttle to make a cup of strong tea, which would doubtless afford at least a temporary relief. At the landing we were met by the dog Jack, who had not forgotten his new-made friend of the day before, and instead of erect bristles and a growl, we were welcomed in his waggish way and escorted with sundry doggish antics to the house, where on stating Charley's case the good dame set about brewing a cup of tea, while he stretched himself on a lounge looking really like a sick man; but he said the "spells" never lasted long, and for me to take the boat and go up the lake for a couple of hours' fishing, after which he thought he would feel well enough to start back to camp, where a dose of "crow and ginger" would put him in good shape again.

On going down to the boat, after seeing that nothing more could be done for him, I found that my four-footed friend had been there before me. The bottom of the boat was strewn with torn pieces of paper, a few fragments of egg shells, and a corner of a square cracker that he had overlooked, and this was the remains of our lunch. He had eaten a good-sized cut of raw bacon that we had intended to broil over a quick fire, four or five hard-boiled eggs without taking much notice of the shells, all of the crackers except the fragment lying under the thwart; and the indications were that he had bolted the bigger part of a *Cincinnati Commercial Gazette*, editorials and all. Verily, the appetite of the average country dog passeth the understanding of man.

To say my temper was a trifle ruffled would be drawing it mild, for I began to feel a craving for some of that lunch myself, and a sound drubbing on sight was straightway laid by for the culprit; but on turning to go back to the house, there at the top of the bank stood the thieving rascal, wagging his tail with half stroke and with such an innocent "fooled-ye-that time-ole feller" look on his four by nine countenance that I had to laugh outright; and once more the hatchet was buried between us, and Jack escaped the thrashing he so richly merited.

Back at the house, Mother Ruttle in the goodness of her heart made the lunch good by two great slices of buttered bread and a bowl of fresh sweet milk; and with many thanks I took my way up lake in a placid state of mind, with Jack following along the bank to the upper end of the wheattield, where he stood at the edge of the swamp for awhile, looking after the boat with a wistful expression that said as plainly as dog language could, "When you come down again don't forget your lunch."

Three more pickerel were added to the string tied to a bush at the landing as the result of the trip up the lake to the island and back; and the last were turned over to Mother Ruttle—enough to keep the whole family in fish for a week. During my absence the good woman had killed a chicken and made a savory pot of broth, which seemed to be the very remedy Charley was hankering after, as he had drank it all and was feeling much better, albeit he still suffered from a trifling "fullness" in the region of the stomach, which was small wonder. But the skipper and little Henry, the bright-eyed eight year-old "baby" of the family, got the best end of the "festival soup" by eating the chicken and tossing the bones to Jack, waiting at the door, whose appetite and capacity for mixed victuals appeared to be boundless.

When the last scrap of the chicken had disappeared and Charley announced himself ready to start, we pulled across to the spring, filled the jug and headed for camp, not very well satisfied with the day's experience, but it was yet several hours till dark and we decided to fish the deep bay a while before going in.

As we were pulling lazily along past the rocky point across from the island, our rods winged out on either side with the frogs trailing sixty or seventy feet astern, a swirl in the water near the fringe of rushes and a violent pull at the line that made the reel handle spin brought the skipper to his feet and out of a pleasant reverie, with a jerk that jarred the little boat from stem to stern and roused Charley out of a half doze with, "What's the matter, Hickory, spring water goin' to yer head?" at the same time reeling in his line to be out of the way, knowing by the indications that a fight with a good fish was at hand. Slowly the line ran off the reel out in the lake and as quickly as possible Charley took the oars and pulled the boat some yards away from the rushes to give Hickory room to work when the fray opened.

When sufficient time had been given the fish to swallow the frog, a smart strike started the fun, and instantly he turned and swung in toward the shore. The pull on the rod was so heavy that we thought sure it was a big pickerel making the trouble, and the old rod was nearly doubled in the effort to hold him away from the rushes for which he was heading, but it was no use, and a moment later a magnificent fish went high in the air 10ft. inside of the rush line, turned half over in a graceful curve, and fell back with a noisy splash in the water with head pointed in the direction of the boat. It was a feat an acrobat might have been proud of, but we had no time to waste in applause, as he was coming out in the lake again at a pace that kept the reel busy to take up the slack of the line. Fortunately the line had not fouled in the rushes, and we were now, barring an accident, on an equal footing in the struggle.

While it was in the air we saw that it was a maskinonje; and forgetting his illness and his late tussle with the pot of chicken broth, Charley let out a yell—in which Hickory lifted up his voice and "jined"—that started our lunch thief to barking at the farm below, and scared into silence a saucy little red squirrel chattering at us from a limb of a cedar hanging over the water near the point.

The fish went by the boat out in the lake with a steady rush, and Charley, dropping the oar blades in the water, pulled after him; and then we had it, around and up and down the lake for nearly a half hour, before he showed any sign of weakening, swimming deep the while, and never showing near the surface again after the first leap in the bulrushes.

At last (as we have noted is a habit of the "masky" when he has exhausted his strength and arts in an effort to escape from the deadly hook) he came to the top of the water, near a hundred feet away in this instance, and lay there with his dorsal sticking out, resting up as it looked, and studying out a new scheme to break the little thread that was worrying him to his death. Charley backed the boat quietly up to within four or five yards, when with a great flirt of his tail, he went under water again for another brief struggle with the tough old rod. The persistent strain soon brought him to the top again, tired out and dazed at his failure, and this time he was pulled within striking distance, when reaching cautiously out Charley deftly jerked the gaff into his lower jaw—this to avoid making a mortal wound—and swung him into the boat with one sweep of his arm.

We wanted to take him alive to camp, and to this end working carefully to avoid his dangerous teeth, the little line that had wrought his dowfall, was cut a few inches above the gimp, leaving the hook somewhere out of sight in his "innards," a stringer securely knotted to his jaw, and the brave old fellow dropped back in the water and tied near the stern, where after a few powerful surges that only served to tighten the knot and yank his countenance out of shape, he gave up the useless struggle and towed quietly along after the boat as though accustomed to it all his life.

He was not a large fish for one of his tribe (weight just 13lbs.), but he was the gamiest and hardest fighter the old rod had ever been called on to do battle with, and it was handled thereafter with a perfect confidence in its trusty qualities.

Another hook was tied on, and we pulled in and fished diligently back and forth along the rushes a distance of a hundred yards two or three times in the hope of striking his mate, for where one is found the mate is not usually far away; but if in the vicinity when the other was struck, it had probably taken the alarm and "hied off," as old Ben would have said, into deep water. We pursued our way along the shore somewhat disappointed, as Charley had never taken a maskinonje, and he was aching in every fiber of his body to "hang" a big one just to see how his new split-bamboo rod would work on a "sure enough maskylong." I was sorry the one towing astern had not taken his frog instead of mine; but it was the luck of angling, and it were little use to repine over it. I might, too, have handed him my rod after striking the fish, to give him a taste of the fighting qualities of the tribe of *Esox*, but there would have been small satisfaction in this, as every angler wants to strike his fish with his own rod, that he may feel the gratification of having done it all himself and get the full measure of the glory resulting from a well-earned victory, or bear alone the twinges of a defeat.

Talking it over in this light as we went along past a point just as we turned into the bay, the skipper's reel took another whirling fit that moved Charley to remark as he reeled up, "Now, just look at the luck of the old sardine, will ye? Must a-put honey on yer frog."

A backward stroke of the oar stopped the boat, and snatching up the rod under a trifle of excitement, a too hasty strike that was like burying a hook in a log gave promise of another and a greater contest; but a sudden and violent jerk of the line that caught the skipper off his guard wilted our hopes, the rod flew back, and when a few appropriate remarks had been offered up befitting the situation, the line was reeled in to find the hook broken off below the barb, the result, no doubt, of striking a bony part of the fish's mouth. It was a calamity to be deplored. What a great story was spoiled for the boys in camp. And then it was certainly not less than a 40-pounder, for who ever heard of an honest angler losing a maskinonje of a lesser weight?

While another hook was tied on, Charley made several casts around in the vicinity where the fish was struck, and then we pulled back over the water and back again, but the prick of the broken hook had doubtless made the old fellow shy of speckled frogs; and after wasting a half hour in a vain endeavor to "hang" him again, we went on around into the bay to take revenge on the first sneaking Canadian pike that should dare take issue with us in the matter of using United States frogs in Canadian waters.

We found so many of them eager to discuss the bait question with us, and some of the "longest-headed" ones so strong in their opposition to our "real" intentions, that it was nearly dark before the controversy was wound up and we were ready to start for camp.

Supper was waiting for us when we got in, but we waited for no invitation, as a couple of slices of bread had been rather a meager day's ration for the skipper, and the chicken broth had evaporated so thoroughly that Charley looked as thin as a spring bear after a hard winter's hibernation.

The boys had been out during the day with varying success, and like us, none of them had taken a bass, but unlike us none had brought in a maskinonje, the noblest fish of all the northern waters with the possible exception of the simon pure salmon; and we were as a consequence the heroes of the day.

We turned in early after a short session around the camp-fire, tired and happy, and were lulled to sleep by the nightly concert outside of the mosquito bars and the soothing patter of rain on the shingles overhead, which before midnight had increased to a storm that awoke everybody in the little warehouse except the Jedge, whose sonorous snore kept time in regular measure with the angry dash of the surf on the sandy beach only a few feet away.

A heavy wind was blowing from the southwest and the boats were beating and grinding against the dock in a manner that required immediate attention if we expected to see them afloat in a shape other than splinters in the morning. Lighting a lantern and donning our rubber coats, old Sam and I got out in the storm and by dint of some hard work and a few general remarks on the state of the weather succeeded in getting them one at a time around on the lee side of the dock, where they were left tugging at their painters to ride out the night in comparatively smooth water. Then we made a trip up the hill to see how Dan and the two boys were faring in the tent; and found them awake with everything snug and dry and the tent standing the strain of the wind without starting a stake, a condition of things due to the old pelican's foresight in selecting the ground on which it stood and the care exercised in putting it up. It has always been an understanding in our camps that when a tent is pitched to suit the critical eye of Uncle Dan it is good enough to let alone, and we went back to the warehouse to find the Jedge still keeping time with the beat of the surf and in a few minutes we were under the bar joining in the chorus.

When we got out in the morning the wind had gone down, but the rain was still falling steadily, and Louis got breakfast, wrapped in Charley's rubber coat that hid him from ear to heel, flitting from the fly to the stoves and back, meantime keeping up a stream of mongrel French and Chippewa profanity that no doubt would have been highly amusing had we understood it all. So long as he confined himself to French, Knots, who understood and spoke it equal to a genuine peasouper, acted as interpreter; but when Louis branched off into Chippewa to reach a climax not attainable with the ordinary Kanuck jargon, there were painful gaps in the entertainment that Knots was unable to bridge over. However, when Louis had at last exhausted his list of plain and mixed cuss words and was beginning over again with some variations, as Knots informed us, the breakfast was ready and we gathered around the table to the music of the falling rain that still ran in tiny streams from the edges of the sloping fly.

Toward 10 o'clock the rain stopped and Sam and Charley decided to take a boat and go up Echo River to some rapids Louis told them about to see if they could find a few trout, while Knots and the skipper got ready for a trip to the farm and a little pickerel fishing (we had about given up the bass), if it came in our way going down and back.

Before we reached the point below, it began to rain again; and by the time we were within half a mile of the farm it came down in such torrents that even with rubber coats on we pulled ashore and took to the woods to get out of the wet, where each selected a good sized hemlock under which we stood, and squatted for nearly an hour, cramped and uncomfortable, till the water began to drip through the foliage overhead even worse than the downpour on the lake.

With grim determination we took to the boat again after bailing out a bar'l o' water, and made our way through the blinding rain to the farmhouse, this time without seeing our four-footed friend Jack, who usually stood at the top of the bank near the landing to wag us a welcome.

It was well along in the afternoon before the rain let up and we got started back to camp to do a little fishing on the way, having done nothing coming down. As we pulled across to the spring to fill the jug, we noticed there was a strong current in the river running up stream into the lake, a condition of affairs that rather upset our notions of gravity, as gleaned from "Comstock's Philosophy" in our youth, but the phenomenon had been made as clear as mud to Charley and the skipper (we had noticed the current running the wrong way the day before) by Ruttle, who explained that it was the "suction." "Suction" was the one solitary word that settled the matter in his mind—it was just "the suction" and nothing else, and we just let it "suck" and went on up the lake to our fishing; but the grizzled, practical head of old Knots figured it out that the up stream current was doubtless due to a strong wind blowing up Lake George, backing the water up in the bay below and forcing it through the canal-like river into Echo Lake, the flow changing its direction when the wind went down.

"You will notice, James Mackerel," he said, with a glint of humor in his eye as he selected a frog from the bucket when he neared the territory of the big maskinonje, "that there are a great many things in this world that we can't understand—and there goes one of 'em, the slippery cuss," as the frog by a dexterous twist escaped from his grasp and in a twinkling was a dozen feet away, swimming frantically for the rushes.

Reaching into the bucket and holding the lid carefully to

prevent the frogs from jumping out, he clutched another one with a grip that made it croak, and when he had run the hook through both jaws exactly in the center, to make it trail without twisting in the water, he made a long cast astern and picked up the thread of his talk where the "slippery cuss" had parted it, and who was now out of sight among the rushes.

"As I was saying when that tricky batrachian kicked out of my hand, there are a good many things in the world that we can't understand unless we know the reasons for 'em. Neighbor Ruttle's theory about the inflow of the river is perfectly clear to *his* mind, and he has no doubt been waiting a good while for a chance to work his suction on a lot of suckers like us fellows, to show how easy it is for a man of attainments to see through a hole in a grindstone, so to speak, and tell why the water back there runs up stream at certain times. I tell you, James Mackerel, there's nothing like—great Cæsar's bones! stop the boat. That must be the old maskalonge you have been talking about so much," and the dissertation was cut short as he stood up in the narrow boat balancing himself like a "teeter snipe," while the click of his reel reeled off a few bars of lively music, always pleasing to the angler's ear, whether made by pickerel, bass or maskinonje.

But it was not the "old general," only a rank-smelling Canada pike of three or four pounds, that after cutting a few capers in the grass was summarily pulled alongside and knocked on the head with the gaff handle, a warning to others of his tribe not to trifle with old Knots when not in an amiable humor.

Knots detests a pickerel as a cat does mud, because they are snaky and slimy and emit a disagreeable odor, and he sets small store by them as a game fish; but a mile further up lake another big one came so near smashing his cherished bethabara rod in a long, determined struggle that his notions about their fighting qualities were all upset for the time, and when at last the old fellow was brought to gaff he was ready to sit down and rest his weary wrist and "take his oath that this particular longsnout had only missed being a maskalonge by having the wrong spots and markings put on by mistake in his infancy." It was a pretty fight, and Knots was so pleased with the performance of his rod that he was in great good humor all the rest of the way to camp.

We took five or six more on the way up, but could get no sign from a bass; and we began to think there were very few of them in the lake, or that we had lost our cunning and forgotten all our years of training as old-time bass fishers. But no doubt the true reason we got so few was that they were not in the humor to feed on the baits offered them; or it was not quite late enough in the season, as we had been told from the first; and it was the more aggravating to stand on the dock of a clear afternoon and see from two to half a dozen great lazy, black-backed fellows sunning themselves in the shallow water out from the mouth of the little stream, fanning the gravelly bottom with their fins as though it were the only thing in life they had to do.

We tried most of the arts known to the craft to fool them; we would quietly cast a frog, minnow or young perch among them from the screen of some bushes on the bank; but they would swim leisurely off into deep water without paying the slightest attention to the tempting bait only to get away from it; and then from the dock we tried them with perch, shiner, frog, rubber helgramite, phantom minnow, flies of divers hues, spoon and grasshoppers. But they were blind to all our lures, and we were fain to content ourselves with the sport to be had with the ever-hungry Canada pike, hoping the while that a maskinonje might occasionally slip in "between bites" just to vary the monotony.

Charley had brought along a minnow bucket full of genuine home-grown Kentucky fishin' worms—with a pedigree—(about everything animate in Ole Kentuck has a pedigree), and the appetites of their epicurian highnesses, the bass, might possibly have been tempted with these; but one of the camp rules forbade the use of worms, even with pedigrees, for any fish except "bluegills," minnows, sunfish and other small fry, and any "Kingfisher" caught insulting a bass by offering a worm for bait would have been requested to "hand in his resignation at an early date." But we kept on fishing for bass, and kept right on taking pickerel till old Sam "declar'd that if we didn't soon leave the lake we would all have 'snakes,'" and that night a camp-fire consultation resulted in a determination to worry the waters a few days longer and then break up and go back into Michigan where the bass were not quite so particular about their diet.

The trip made by the Kentuckians up Echo River for trout furnished old Sam with another "episode," but this time it was in the nature of a dismal failure, as he expressed it, "from start to finish." They had readily found the mouth of the stream and followed it up for a half mile or so to the riffles, where they left the boat and took to the bank and fished along up for another quarter of a mile, fighting mosquitoes and blackflies, and pushing their way at intervals through a tangle of low cedars and underbrush to the stream, without getting a rise or even a sight of a trout, and then the rain came down on them, even as it had come down on Knots and the skipper at the lower end of the lake—very copiously and wet; and as they had with great "hind sight" left the camp hurriedly, and without their rubber coats, they came back soaked to the skin, chilled to the bone, without a solitary fish and as forlorn looking a pair of old loon-atics as ever took shelter under a leaky cedar bush in a hard rain to keep from getting wet.

However, a change to dry clothing restored the circulation of their blood and their good humor, and when Louis announced supper, Sam was just winding up a graphic description of "the miseries of a rainy day in the bresh of upper Echo River and the delights o' trout fishin' in a crick that had nothin' in it but a passel o' measley white suckers," ending the recital in a voice that sounded like a buzz saw cutting its way through a knotty hemlock log, with, "My feller fish liars, I'm more'n ever convinced that the feller—I forgit his name—that wrote in the Scripters that 'all men ar' liars,' was mighty nigh right, an' ef he'd only said trout liars it would hev bin a cl'ar case that he was lookin' 'way into the futur', an' had in his mind's eye the present prevaricatin' gineration o' this very region." KINGFISHER.

The revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

A TRIP TO THE UNKNOWN RIVER.

ON the morning of June 4, 1889, a party of four gentlemen left Columbus, O., on a fishing expedition to the Unknown River, Michigan. Arrived at Sault Ste. Marie, or the "Soo," we went direct to the ferry and crossed over to the Canadian side of the river. By half past 4 o'clock we had found a hotel that suited us pretty well, and half an hour later were on the road to the rapids, which are about a mile from the hotel. We had promised ourselves trout for breakfast the next morning, and we were going to have them if possible. When we reached the rapids we found that it was almost impossible to throw a fly on account of the wind that was blowing a perfect gale from the north; but with this against us we took seven good-sized trout and got back to the hotel before dark.

The Canadian "Soo" is just now enjoying a boom in real estate. Several new hotels and a large number of dwelling houses have been put up in the last year, and a goodly number are now being erected. The new ship canal in course of construction is located just opposite the United States canal. About 600 men are now employed in excavating, and more will be added as soon as places can be found for them. Three years is the time given for the contractors to finish the canal; then the Canadians will "shinny" on their own side and Uncle Sam will lose a lot of toll.

We found the fishing in the rapids fairly good. We could get all the 6 to 8in. trout we wanted, and occasionally hook one 10 to 14in. long. Of course, the water in the rapids is as clear as crystal all the time, there are very few mosquitoes, and it is a pretty place to fish. Any one used to trout fishing, either with fly or bait, can have good sport here any day in the season. The St. Mary's River affords fine bass fishing at a number of points. One place, the Nebish Rapids, is especially noted for its fine bass fishing. August and September are the months to come for bass. Any one desiring information regarding this locality would do well to write to Mr. Peter M. Moore, Deputy Fish and Game Warden, Sault Ste. Marie, Mich., who is well informed as to the trout and bass fishing, and is a very obliging gentleman.

The taking of whitefish is carried on by the Indians altogether. Two of them in a canoe start in below the rapids and work up as far as they can, then the one in the stern holds the canoe with a set pole, while the forward one with his little scoop net scoops until he gets five or six whitefish; then they return to the shore, sell the fish for ten cents, get two drinks and go back to fishing again. This is a nice arrangement for the tourist, for one never fails to find Indians fishing in the rapids.

On Sunday we visited the American Soo and took dinner with friend Kennedy of the Hotel Superior. Tuesday morning we boarded the boat and started for the Unknown River, about 140 miles distant, where we arrived the next day at noon. We found the river very high and roily, and the prospect for fly-fishing not very good, but we concluded to make camp and wait until the river went down. Our dinner of bacon, potatoes, bread, butter and coffee was prepared and dispatched in short order, as our fifteen-mile ride over a corduroy road and the piny ozone had made us as hungry as bears. It took us all the afternoon to arrange our camp, a broken ridgepole delayed us some, as we had to stop and make a new one, but by 7 o'clock everything was in good shape, so that we had nothing to do now except to cook our meals, throw flies and fight mosquitoes. We were all about tired out, and the prospect of catching any trout was not favorable, but we voted that all should try and perhaps some one of us would get one for breakfast. We tried flies, but could not get a rise, then we tied on spoons and got three trout in twenty minutes, the three weighing 5¼lbs. We stopped fishing then, for we thought we could get plenty in the morning; but alas! for our hopes, that night a terrible storm came up, and it rained in torrents for several hours. By morning the river had its Sunday clothes on and was on a regular tear; and it seemed out of the question to do much fishing for several days.

For the following ten days it rained almost every day, keeping the river on a continual boom. We fished a little every day with spoon and minnows and managed to get enough trout to eat. Of course we had a good deal of time on our hands these rainy days, but we got along pretty well and managed to get four meals a day between the showers. Our chief amusement was whist, but we enjoyed every bit of our camp life. A mink came to our camp every night for scraps, but he got in the habit of eating the soap and almost anything else that happened to be left out, so we declared war against him. Charlie made a dead-fall big enough for a bear, but Mr. Mink was not to be caught that way, there was a darker fate awaiting him. We had two dozen pickles sent us one evening, and as it was not our time of day for eating pickles only two of them were disposed of at supper, but the mink came that night and got the remaining twenty-two pickles, and was buried the next day. Finally the weather became settled, the rain ceased and the river got down to a condition for fly-fishing; then the sport began in earnest. We had six live-boxes stationed along the river at convenient places, and all the trout we could save alive were put into these boxes to be kept until we should start home.

One side of the river is heavily timbered, but the side on which our camp was located is cleared land extending half a mile back from the river. In the edge of the clearing, a half mile from camp, is a farmhouse owned by some lumber company, and is the only house on the river. Mr. R. and his good wife run the farm and board the men during the logging season. We are under obligations to Mrs. R. for her kindness to us in furnishing butter, milk, eggs and many other nice things to eat. The river is 75 to 150ft. wide. The bed in rocky with a clay streak here and there that is as slippery as soap. There are no logs, brush nor overhanging trees to bother the fly-fisherman, and the stream is full of trout, big ones too, as it was rare to hook one weighing less than a pound. We fished in sight of camp nearly all the time, scarcely ever going further away than half a mile. The best flies we found to be black-gnat, brown-hackle, gray-peacock hackle, silver-doctor, professor, royal-coachman, Ruben-Wood, Govenor-Alvord, queen-of-the-waters and the chippie. By far the most killing fly we used was the one called "the chippie." It is a combination of red, yellow, white and black and was gotten up and named by one of the dealers in Columbus. The New York house who manufactured them made a poor job of the lot we had. We have about a dozen flies on our list that we have sworn by for years, but we all had to acknowledge the superior taking qualities of the chippie, and will hereafter have it on our list.

We had a week or ten days of lovely weather, and the days went by quickly enough as the time for breaking camp drew near. Finally came the last evening we were to spend in camp, and with it many regrets that we must leave on the morrow. To celebrate the occasion we finished up the day with a grand supper of everything we had in the locker. A 3lb. trout was rolled up in clay and baked, and trout were cooked in several other ways, and there were baked pork and beans, boiled onions, boiled potatoes, eggs one side, bacon, salt pork, bread and butter, jelly cake, cookies, coffee and cream as thick as your finger. The crowning dish was the baked trout, which all pronounced good enough for a king.

Before turning in for the night we had a summing up of the trip, from the bear tracks we saw in the road to the big trout we had played and lost on such and such a day. George and Henry had kept the party in good humor with their jokes and were voted the champions in that respect. If any little annoyance had occurred to any one on the trip, it had been forgotten, and we remembered only the pleasant things, and all voted our trip a grand success. With thoughts of home and friends that we should soon see we rolled up in our blankets and were soon fast asleep. We were up bright and early in the morning making preparations for our departure. The live-boxes were hauled up and the significant number of 13 trout were dealt out to each one, making 52 altogether. We had about 20 that would weigh form 1½lbs. to 2½lbs. each, several weighing about 3lbs. each and 1 of 4½lbs. These were carefully packed in two boxes with pounded ice. The team came along about 9 o'clock, our traps were put into the wagon, and jumping in ourselves we soon left behing the beautiful Unknown and the camping place where we had spent so many pleasant hours. Two days later we arrived home safe and sound, with the trout all in good shape. The trout were on exhibition all one day, and several hundred people came to see them. Some would not believe they were brook trout because they were so large. Those who knew all about trout said they were the finest lot they had ever seen. JACK.

COLUMBUS, Ohio, July 10.

A WEEK IN THE LAURENTIANS.

THE glory of the Laurentian region of Quebec is its lakes and rivers. Apart from these, the whole region, except for a comparatively few small clearings, is so densely covered with a growth of timber, mainly coniferous, that the contracted view affords nothing to relieve the unbroken somber uniformity of the evergreen forest. In a state of nature, the old trees, spreading their gnarled arms on all sides, create with their foliage a lace-work shade through which the softened sunlight penetrates in tremulous flickerings too subdued to support undergrowth on the forest floor, and the eye wanders away through dim vistas, outlined by stately columns; but one must wander far away into the Quebec wilderness nowadays to reach the primeval forest. The ubiquitous lumberman has been everywhere and removed all the large timber, and a young generation springing up in its place crowds the ground in the struggle for existence, and the trees as yet branched to the ground render the forest gloomy and almost impenetrable.

But the first glance of water ordinarily suffices to dispel the impression of monotony. Here by some sequestered lake the forest-clad hills are seen reflected in its calm depths, and the eye wanders over a wide succession of hill and dale to where some mountain chain bounds the distant horizon; and occasionally the lake shore, rising ten, twenty, or it may be fifty feet from the water, reveals the massive gneissic rocks, the foundations for these sombre solitudes. But one must go to the river's bank for the realization of the wild grandeur which the lake shores only suggest. The lake scenery may be fairly characterized as soft, the rugged floor and walls of the cavernous rifts of the rocks are concealed beneath the calm surface of the lake which mirrors the blue sky in its tranquil depths, fringed by the reflected forest in the deep shadow of its shores. When the banks of the rivers are reached, the gloomy monotony of the eternal spruce forest, and the soft beauty of the lake shore, alike give place to scenes of wild grandeur, at least in those places where the river running along the foot of some lofty mountain has eaten into its base and brought the giant masses of gneiss tumbling down, to obstruct its own course and form alternate pools and rapids, leaving the mountainside rising sheer sometimes for several hundred feet above the water's edge. If the rock were homogeneous in structure the effect would be comparatively tame, but the massive crystalline gneiss is often shattered *in situ* into more or less regular blocks, as if by contraction or earthquake, and these superimposed one upon the other on the broken face of the mountain, or strewing the river's banks, present a scene of rugged grandeur almost unparalleled. The gneiss rock of this region is sometimes found as black as coal, and sometimes contains sufficient iron to render it a bright red. Both varieties are found with perfect crystalline structure, constituting it perhaps the most beautiful stone on the continent for ornamental architecture, while the fact that it sometimes exists in comparatively regular massive blocks would materially facilitate quarrying operations.

But it is not my intention to boom the Canadian gneiss with the object of getting up a syndicate to work the Laurentian quarries. The rock will have its market value in the course of a century or two, and it is no use trying to force matters. Besides, I did not start out to describe the natural resources of the Dominion. I went forth to breathe the fresh air of the pine woods, and to cast a fly upon the still bosom of Canadian lakes and upon the rapids and whirling eddies of its rivers, and I came home so full of the exhilarating oxygen of the wilderness, and of inward gratification at having found fishing waters that were all my fancy painted them, that I resolved to publish the news to the world of anglers, and advise the weary toilers of the city who have never yet tried couclusions with the sportive ouinaish to follow my trail to Lake St. John in the wilderness, and its Discharge through gorge and chasm, which constitutes the headwaters of the Saguenay.

Day after day, week after week, the task has been postponed in subordination to more pressing duties; but the call was upon me, and the sense of responsibility in

the matter is at length pressing so heavily upon me, that my sleep is disturbed by visions of a monstrous ouinanish fighting me for hours, and then at last poising itself in mid air, fixing its fishy eyes upon me with a countenance expressive rather of sorrow than of anger, and reproaching me for duties neglected, then shaking himself free of the fly and plunging sullenly into the depths of the river.

Thus urged and haunted, I seize my pen at every available opportunity; and if any one wants to know why I didn't begin with the fishing, let me politely crave permission to tell my story my own way: you shall know all about the ouinanish in due course.

Moreover, catching fish is not the sum total of the joys of a fishing tour; there is, perhaps, as much enjoyment drunk in with the exhilarating forest air, or by sympathy with the scenes reflected upon the retina. Who does not love the plunging, rolling, rippling, eddying river, with its black pools and frothy rapids? What sweeter music is there than the soft murmurs of its waters? But, for all that, when I set out with the aphorism that "the glory of the Laurentian region is its lakes and rivers," it was but as a prelude to a second aphorism, that the glory of its lakes and rivers is its game fish. My passing remarks upon the scenery were only introductory and by the way. I am a fisherman, and although I am intensely fond of river scenery, and appreciative of the oxygen of the pine forest, I am free to admit that I never enjoy them so much as when I find waters densely populated by gamy fish after my own heart, with whom I have succeeded in placing myself on a familiar footing. You cannot get the same ouinanish on every day for a week, see him jump six feet out of water almost within reach of the landing net, survey you tranquilly from the corner of his eye while poised in air, then shake himself free and plunge into the depths of the pool, without establishing something of mutual appreciation. And all this is after the manner of ouinanish or wininish—whichever may be the approved spelling.

My acquaintance with the ouinanish began on a Saturday; it was July 27. The boat from Robervale crosses the lake only on Wednesdays and Saturdays, fare seventy cents: leaves about 9 A. M., reaches the opposite shore, some two miles from the mouth of the discharge, about 1 P. M.

The opening of the discharge, the first rapids, and the great pools or lakes below them, about two miles as the crow flies, and perhaps nearly double that distance following the tortuous course of the river, is held by Mr. Griffiths under the old riparian laws which vested the fishing rights in the owners of the adjacent lands. Mr. Griffiths is a man of means and leisure, an ardent fisherman, and spends his summers with his wife on the borders of the lake. They keep no hostelry, but many guests are received under their hospitable roof. Fishing permits can be obtained from Mr. Griffiths at a charge of $5 a day per rod, the number of such permits in force at any one time being limited to five.

Next in order come Mr. Scott's waters, which are leased from the Quebec Government for $100 a year and extend about seven miles further down the discharge.

Below this the Alma Club, of twelve members, owns down to the junction of the Grand and Little Discharge, the two main headwaters of the Saguenay. This is practically the seaward limit of the ouinanish, although an occasional fish goes down the rapids to the Saguenay proper and makes one in the score of the Saguenay Club.

Mr. Scott has put up a light factory-made building of pine and paper with accommodations for a dozen guests, and charges $4 a day for accommodation and fishing permit. A canoe and two boatmen are necessary adjuncts to ouinanish fishing in these waters, and these are supplied at a further charge of $2.50 a day. It is possible to get along with one good man by making a carry whenever one comes to the ascent of rapids, especially if the fisherman being paddled into convenient places will do a good share of his fishing from the rocks, but one gets along much better with two, especially in the matter of handling the fish in rough waters, when one man is wanted to give all his attention to the canoe. So much for the preparatory conditions.

The river itself, for the Grand Discharge, although properly described as such, is by no means a river of the conventional type, of approximately equal breadth throughout its course. The outlet is dotted with numerous wooded islands, and the escaping waters are soon inclosed in a wild rocky gorge, down which they rush and leap with roar and fury, emptying themselves into a broad deep basin about a mile in diameter, with two small islands in its center. There is perhaps no more favored fishing spot in the river than in the seething, whirling, eddying waters of this great pool, although a succession of shallow rapids and deep broad island-studded pools is the leading characteristic of these waters.

The ouinanish should always be sought where the waters are in commotion, either in the rapids, or where the white foam floats on the surface of the whirling eddies; in these latter the whitefish too disport themselves, their arched backs continually showing above the surface in their gambols, but it is hard to induce them to take the fly, and harder still to haul them in out of the wet, so delicate are their mouths. I did not succeed in taking one during my stay, but I learned by experience at Mrs. Griffiths' hospitable board, that she and a whitefish could make excellent chowder.

The pike or pickerel lurks in the quiet eddies at the foot of the rapids, and as he is also sometimes taken in some of the broad basins of the river in which the water is as calm as in a lake, and in which the ouinanish is never found, it is probable that he goes there to digest his prey in quiet, for your pike, although not a game fish, is doubtless something of a philosopher. The doré or pike-perch is also found in these waters, and a sucker or chub appears plentiful enough and takes the fly occasionally. These latter too may be very good although coarse table fish, but with ouinanish in plenty the fisherman is quite content to see the canoemen take all the other spoils of the waters to their families. As to the ouinanish, his good qualities at the table harmonize perfectly with the excellent traits he displays as a game fish. These fish are admirably fitted to minister to man's enjoyment, for I can safely say that from the moment they took the fly until they passed into my digestive organs all my experiences of them were pleasurable. The flesh is more delicate than that of either trout or salmon, and may be eaten continuously without palling on the appetite.

Well, as I said, I reached the waters of the ouinanish on a Saturday. I was on my way to Scott's, and as one of his guides, John Morell, crossed in the steamer with me and had his house just a hundred yards from the landing place, I was soon on my landward way to my destination. John Morell's report was one and a half miles by buckboard, and an equal distance on foot, and as John had often tramped it with a load on his back, his estimate proved pretty correct.

The buckboard broke down with a snap at the foot of the first rough descent, but it was only the spring board that had snapped, and by sitting one in the front and the other behind and driving carefully over the stones, we took the strain off the other board and achieved the journey in safety.

John engaged me to fish from his canoe before starting, and regarding me as a tenderfoot in possession, he eyed the two casting lines around my hat, and asked what sort of flies I had brought. I showed him those I had bent on, which included slate grays, browns, scarlet and white, but he shook his head remarking that they would not do at all, and produced a packet of smaller flies which he said were the correct thing for ouinanish. In vain I ransacked my memory for the French equivalent of the good old saying that "old birds are not caught with chaff," but I managed to express myself to the general effect that my flies were all so good that any one of them was better than all the rest, and that they displayed a measure of diversity which fish are always charmed with.

John sighed, and when on the Monday following we shot the first rapid a hundred yards below the house, and reached the pool below with three fish on, one on a royal-coachman, one on a scarlet-ibis and the third on a Jock-Scott, I found it impossible to lead him into a discussion on the comparative merit of flies, he looked far more disposed to anathematize the fish for their lack of discrimination. However, his flies were good enough, and I have no doubt he will find a market for them some day.

I found only one guest at Scott's on my arrival, and he had just eaten all the dinner and gone fishing again. But the good wife had spared one egg, perhaps for the baby, and this, fried with a rasher of ham and supported by good bread and butter, with tea, appeased the cravings of the inner man.

Dinner disposed of I reported courteously to my employer that I was at his service whenever he felt disposed to go fishing, but he replied that 5 o'clock was early enough, and then went to his shanty and lay down for a nap. I let him sleep until four, then roused him and told him that I was going fishing, and asked whether he felt disposed to go with me or not. We were soon afloat, and after fishing some time in a swirling pool and landing one or two fish we shot a rapid, and bringing the canoe into an eddy at the foot John suggested to me to fish from the rocks, while he went to find another man to help him.

I caught half a dozen fish before supper, one of which, a three-pounder, I took on a minnow, and after the meal was over I lighted my pipe, took my rod and strolled down to the rocks in front of the house.

The whitefish were disporting themselves in lively style, and supposing they were large ouinanish, I cast my flies in eager anticipation; but they did not rise, and I gradually took in the situation.

I took two small ouinanish, both under half a pound, and a two-pound sucker, which fought so gamely that I mistook him for a black bass. The ouinanish I put back again for next season.

Here let me remark that while a few fish of six or seven ounces are taken every day at this season, they are comparatively rare, at least in the waters fished in. The next size, about three-fourths of a pound, and presumably a two-year-old fish, is very common, but the preponderance of fish in a day's catch, as far as my experience goes, is of the third size, a fish running pretty uniformly about a pound and a quarter, and, as I suppose, a three-year-old fish. The next larger size is a two-pounder, also in fair proportion as to numbers, while three, four and five-pound fish are rare in the order of their size, and anything above five pounds exceptional. I was under a misapprehension as to the size of these fish, and took larger flies than were necessary, but a half-pound trout or ouinanish can take the biggest salmon fly made.

But for sport I want no bigger fish than the ouinanish, and nothing more gamy, although in the matter of fighting I think some writers have unconsciously overestimated his abilities. In leaping, whether for height, grace or frequency, he is unsurpassed by any fish I know; but for a desperate run which makes the wheel spin round while he runs out fifty or a hundred feet of line, the black bass is unapproachable by a wininish of equal weight. In fact, it is not the tactics of the Canadian fish to make one desperate plunge and exhaust himself in the effort. At the moment of striking he may go off a few yards, but give him the butt and place your finger on the line and he is content to maintain a good steady strain, springing occasionally into the air to try to shake the fly loose. Get your fish on, and it matters little what size he is, you may paddle away to the opposite shore and tow him along with you without paying out more than an occasional yard or two of line. The consequence is, that when you get him alongside he shows little sign of exhaustion, and unless your boatman is handy in getting the net under him at the right moment, your fish makes a little run, springs into the air to reconnoitre, and even if he fail to win a slack line and work the hook out, as he is apt to do at close quarters, he is still as fresh as when first struck, and it is better to give him line freely and encourage him to run, than to keep him wheeling about the boat.

The Sunday morning following my arrival at the camp it rained incessantly, but it cleared up a little in the afternoon, and I strolled down to the rocks below the camp and did a little unsuccessful fishing with the fly; then I bent on a minnow and enticed a 4 pound pickerel into a dry cleft of the rock; bent on the flies again, and at length landed a 2-pound ouinanish, which gave fresh fish for supper. A little later I took two 1-pound chubs at one cast, which completed my fishing for the day; a smart shower and a sprained ankle suggesting that I had better have left Sunday fishing alone.

The following morning we were at work in good time, and made one or two circles of the foaming water above the first rapid. We then shot down the rapid. A fish got on as we entered it, and when we reached the basin below I found as beforesaid that we had three on. One of these fish was a three-pounder, one a pound and a half and one three-quarters of a pound. John saved them all cleverly, and paddling into a broad expanse of still water suggested that I bend my minnow on the second rod. This I did, and finding the reel revolve slowly I placed it so that the handle was in contact with one of the ribs of the boat. There was a run, and before I could get the rod in my hand a pickerel, or pike, as they are properly called here, snapped the line and carried away the only minnow I had. Fortunately I was able to replace it with a spoon, and before we had completed the circuit of the pool I got on another pike, which gave three runs and made as plucky a fight for life and liberty as one could ask for in a game fish. He weighed 7lbs. John commenced another circuit of the pool, but I reminded him that I came out primarily for ouinanish, and he turned and paddled me into living waters.

Fishing alternately from the canoe and from the rocks, I scored up seven ouinanish before dinner, after putting back one or two yearlings, and I have no doubt I might have doubled the score had we devoted all our attention to the rapids, but while John was as capable a boatman as one could wish in a canoe, and a man to be relied on in an emergency, he soon rendered it clear to me that he wasn't in search of any emergencies.

After dinner I saw Mr. Griffiths in his canoe, and after a little chat with him, he insisted on my becoming his guest and having a day in his waters, and I promised to avail myself of this privilege on the morrow, and the raw edge of my enthusiasm having been by that time taken off, I allowed John and his son and helper a two hours' rest before I called them to renewed exertions. That afternoon I took six fish ranging from three-quarters of a pound to two pounds, and although I was eclipsed every time by my brother of the craft, a genial Kentuckian who was at the camp with me, I took quite enough to satisfy me.

In the evening John asked permission to take the pike and some surplus fish to his family, being anxious to see his wife who was sick. This was readily conceded, and he appeared enthusiastic at the prospect of securing some big fish in Griffiths' waters. I had consequently no anxiety about his being promptly on hand in the morning.

C. F. AMERY.

[TO BE CONTINUED.]

NORTH CAROLINA TROUT STREAMS.

I NOTICE fishing notes in FOREST AND STREAM from various sections of the country, but do not remember to have seen any from Western North Carolina. Many of your readers may not be aware of the fact that some of the finest trout fishing is to be found in the streams rising among the hills and mountains of the western part of this State. A portion of the headwaters of the Savannah River are to be found in Jackson and Transylvania counties, and probably there are no streams in any section of the country better stocked with trout than these. They are cool, pure, mountain streams, not deep, so that the fish do not grow much larger than a pound in weight, but they are very plenty, and the sportsman soon finds that his creel is full. It is not an uncommon thing for one hundred or more to be taken in a single forenoon, and in some of the streams even more. Most of the waters are fished by wading, and as the streams are shoal this can be easily done. There are many places, however, where a fly can be easily cast from the bank. The Horse Pasture and Toxaway rivers are the two best streams in Transylvania county, and the east forks of the Chatuga, in Jackson county, are very good. The writer is an invalid and able to walk but a short distance, so he has been obliged to confine his fishing to the easterly fork of the Chatuga, and to a distance of half a mile on the stream, and yet has taken this spring—from March 15 to June 1—over five hundred trout, and within a distance of a mile and a half over one thousand have been taken from this stream. No other fish are to be found in the upper waters of these streams, and the season for fly-fishing opens on March 1 and lasts until Sept. 1.

I have fished the streams of Connecticut, Massachusetts, Vermont, New Hampshire, the lakes and streams of Nova Scotia, but have never found any stream fishing equal to such as is found here. In some of the larger streams in Maine the fish grow to a much larger size but do not compare in number. Here they are very gamy, and with light tackle afford most excellent sport.

The game here consists of rabbits, gray squirrel, ruffed grouse, partridge (Bob White), wild turkey, deer, wild cat, and occasionally bear. This section would be a fine location for a sportsman's club. There are no natural ponds nor lakes, but plenty of small branches where trout ponds could be constructed at very little expense. The climate is mild and healthy; seldom any snow in winter, and cool and salubrious in summer, and is much sought as a summer resort by people from the low country as well as from the higher latitudes. Parties desiring to visit this section of the State should go to Walhalla, S. C., by rail, and there take private conveyance to Cashiers Valley, N. C., which is a central location, from which point the best fishing can be easily reached. Comfortable quarters, with good plain fare, can be had here at a very moderate price. W.

COLLECTOR ERHARDT, of the New York Custom House, gave this advice to a young man who was going fishing one day last week: "You are a young man. You are a nice young man. You are going fishing. Much of your future welfare, your success in life and in business may depend upon your action during the next few weeks. Never be misled as to the size of the fish. It is wonderful how large a small fish will become after it gets out of the water. Young man, a very small Kodak will take a very large picture of a very small fish. Good luck to you."

WOOD'S HOLL, Mass., Aug. 15.—Bluefish are quite plentiful this season about here. Young bluefish from 4 to 6in. long are in good numbers. Squeteague are very scarce and run small. Sea bass fishing with hook and line is about as last year, fair. I have seen but six or eight young sea bass this season, and not a single young squeteague. Bonito, Spanish mackerel and cero have been common this summer, more having been captured this season already than in the five years previous to this altogether.—V. N. EDWARDS.

TWO DAYS ON KOSHEE LAKE.

GRAVENHURST, Ont., Aug. 5.—From many reports and from a recent personal experience, I find the fishing in our Muskoka lakes excellent at present. In all the lakes surrounding us large catches are daily made. A few days since a party of six as jolly anglers as ever made a trip went to Koshee Lake for a two-days' outing. The party consisted of Mac, the dude of the party and a right royal fellow; Harry K., the champion yarner on duck shooting in the crowd; Joe W., a "dawn good fellow;" Emery C., Sile, and, last but not least (in size), the writer. We were also accompanied by three ladies, wives of three of the party. An early start and a delightful drive of seven miles brought us to the lake, where we embarked on one of the two small steamers already at the landing. After a few minutes' sail among the islands we landed on Wawayanda's Point. This point received its name in memory of the visit and camp of two months' duration of the author of "Camp Flotsam," one of the most delightful and interesting writers on camp life and fishing that it has ever been my good fortune to read. I cannot attempt to describe this beautiful lake. Only the pen of "Wawayanda" can do it justice. The unabridged name of the lake is Koshee-she-bog-a-mog, and when pronounced by an Indian it sounds really musical. "Wawayanda" and myself tried diligently to get an authentic definition of the name. "The lake of the (or a) hundred islands" is, I believe, the accepted translation. It is about five miles in length; the breadth is hard to determine, owing to the numerous deep bays and islands, but about one and one-half miles would, I think, be the average. There are certainly a hundred or more islands of every conceivable shape and size. During the visit of "Wawayanda" the shores of the lake and very many of the islands suffered the scourge of all pine countries, fire, due in the majority of instances to the carelessness of campers and lumbermen. I am pleased to say, however, that a clean new growth is rapidly springing up, which will in a short time restore in a measure the pristine beauty.

After unloading the calamities ("Kingfisher") and engaging the steamer to call for us again in the evening, we got our tackle in order and struck out. The ladies elected to remain on the shore to look after the plunder and to loaf. We had two large roomy boats, three of us in a boat, and each party struck out for some favored locality. Your correspondent being probably the best acquainted with the lake, selected an old well-tried nook. A few fine fish rewarded our efforts. The bass did not bite freely, as the day was well advanced and clear, with the water perfectly calm. At noon the melodious echoes of a tin horn, operated by the *enfant terrible* of the party (a future sportsman), recalled the parties to the point, where a bounteous lunch awaited us.

After lunch a start was again made with a change of location. The sky had clouded over and a nice fishing breeze was rippling the water. We chose a channel between two small islands. After anchoring the boat the fun began. For a couple of hours I never saw the bass bite better. Frequently the three of us would be fighting a regular trio of old mossbacks at one time, leaving one of the party to handle his fish and the landing net at the same time. Frogs and worms were the baits used. Flies and spoons seemed to have no attractions for them on this particular day, although on former occasions I have taken many a good string with the artificial fly; a large fly made with turkey wings and a large yellow body being the best. Nearly every fish that we secured seemed to be literally gorged with winged ants, showing that a migration of these insects must have taken place during the previous night. Seventeen bass of an average weight of 2¼lbs. were taken without moving the boat. The largest one, a 4-pounder, yielded to the excellent play and faithful Washabo rod handled by Joe, who, of course, began at once to throw out unlimited instructions. After a few hours' sport we all met at the appointed hour on the point. The other crowd showed up with about thirty measly catfish as the result of their efforts. The efficacy of light tackle as placed against the bean pole had been fully discussed before our start, and each was bound to demonstrate the supremacy of his favorite. Each of the three in our boat was using a valuable rod and light tackle, while the others to a man were armed with small trees, and yanked their helpless victims in by main force and akwardness. After considerable chaffing they reluctantly confessed that there was something loose somewhere. The steamer putting in an appearance we gathered up the fragments and steamed back to the landing.

The ladies occupied for the night a vacant house kindly placed at their disposal by Mr. Clark, the proprietor. Right here a dilemma presented itself. Who ever heard of ladies occupying a strange house without a stalwart defender during the dark shades of the night? So one of the party was duly installed to guard over the fair ones, which he immediately did by bravely swinging a hammock over the stove in the kitchen, tumbling in and never opening an eye until called the next morning. The rest of the party adjourned to the barn, each rolled himself up in his blanket, and on the fresh, new mown hay slept the sleep of the just. Shortly after daylight the ubiquitous mosquito got in his fine work, and we concluded to try an early morning fish, so taking to the boats in the same order as the day before we proceeded to the fishing grounds. A stern resolve seemed settled over the bean-pole crowd, and that with whisperings and mutterings warned us that our work was cut out for us. A catch of five splendid old bronze backs rewarded us, while the other boat only showed up one. All of our ancient jokes and wit fell stale and unprofitable at the breakfast round up. Not a smile could we provoke, but a grim, silent party soon wended their way to the boat again, followed by such encouragement as we, out of our generosity, bestowed upon them.

The steamer again landed us at our old rendezvous. The day seemed just ordered for us. It was one to delight any bass fisher; a clouded sky with breeze enough to cause a splendid ripple on the water. We started out jubilant in anticipation of a splendid day's sport. We tried one likely spot after another without a single strike; we grew anxious and adopted the "move on" system; changed our bait, but it was all useless.

Observing that the bean-pole crew lingered in the same locality, with a pertinacity out of all keeping with their conduct of the day before, we concluded to sneak up and investigate. We found that they were occupying the same spot that we did when we made our big string. I've had lots of fun in my short life, but it paled into insignificance when compared with the hilarity that was spread over that crowd. "Whoop! I've got him," was about the only intelligible expression we heard. They seemed all to be fighting old mossbacks at one time. One would yank this way, and another that, their poles would get tangled up, they yelled and cheered, and the antics of that beggarly set made us sick. Nineteen splendid bass fell to that jeering crowd. Comparisons were odious, and we voted we had fun enough for that trip.

In all nearly sixty fish were taken, every one gamy to the last degree and all of good size. The fish were all kept alive until we started for home, by means of the stringer I described in FOREST AND STREAM some time ago. It is the most complete stringer that I have seen yet. I describe it again: Get about two dozen Lindsay's safety blanket pins No. 8; knot them on a good, strong, hard-twisted cotton cord about 1in. apart. About 12 to 16in. above last pin tie on a large brass swivel, and to this tie on another cord about 3ft. long; fasten this to the gunwale of the boat. In stringing the fish pass the pin up through thin part of under lip and lock it, and throw the fish overboard. Never pass a cord through the gills, as it interferes with the respiration and drowns the fish.

Packing up we started back to town. The drive in the evening was enjoyable in the extreme. We arrived home tired but happy. The fish were distributed to our friends who were not fortunate enough to enjoy the sport of the trip. Just as I am closing a report comes to me that some grand catches have been made in the vicinity of Bala. KOSHEE.

MAINE TROUT.

THE cold weather and high water are bringing the trout back to the fishing grounds in the lakes and streams of New England earlier than usual this season. It is not commonly the case that there is much fly-fishing in the Maine lakes in August, but such was the case last year, for the season was wet and cold like the present. Trout are a great deal under the influence of the temperature of the water, and a few frosty nights will bring them back from their hot-weather haunts in the deep pools into the shoal waters, when they quickly begin to rise to the fly freely. Those who read the FOREST AND STREAM will remember that the fly-fishing in Maine and New Hampshire waters was earlier last year than usual, and they will also remember that the weather was colder. There was a frost in Maine, late in August, that entirely destroyed the sweet corn, and this frost was followed by a number of days and nights very cold for the season. Soon after came news of good fly-fishing. Dr. James, of Boston, came back from Moosehead Lake last week. He came back because business called him. But he is off again this week for the same region. The trout are rising to the fly freely in Moosehead, nearly two weeks earlier than usual. The Doctor caught over fifty last week, the largest weighing 3lbs. About the same reports come from the other Maine lakes. Considerable company is summering at different stations on the Rangeley Lakes, and the sportsmen are having good luck with the fly-rod. One gentleman reports excellent sport at the Outlet, Rangeley Lake, last week. The mercury was down to 42° one morning, while there was a touch of frost in the valleys. The mercury at Moosehead registered 40° one or two mornings last week.

Black bass fishing is not proving very satisfactory in New England waters this season. There was considerable sport early in the season, but later there has been considerable fishing, with but few bass, as the result. In Maine lakes and ponds the black bass is fast becoming an unpopular fish, and besides the pickerel the question is frequently asked, "What is the stickleback here for?" He is not popular as a food fish, and as to his gaminess, the Maine sportsmen, with a plenty of trout within reaching distance, have never taken kindly to the foreigner.

The latest idea in the fish line (no intentional pun) is a pliable form of a trout. Mr. E. J. Shattuck, one of the Vive Vele Camp owners at the Narrows, Richardson Lake, had the good fortune to secure a nine-pound trout on his spring fishing trip this year, and he has had made a pliable model of this fish. The form is perfect, as it is shown in Appleton's window, on Washington street, but the coloring is not up to the standard. In the first place there is too much yellow or orange, and again the mottling or wavy blending of the darker colors on the back is not as it should be. But Mr. Shattuck will not thank me for this criticism, though I hope that he may some time be so fortunate as to put his pliable model beside of a real trout, just out of the waters of the Narrows, and then I am sure that somebody will immediately have an order to paint that model over.

Mr. Nat Manson, of the firm of Bellows & Manson, iron merchants, with his friend Mr. Binner of Cambridge will depart for Camp Stewart, Richardson Lake, on Friday. They are going for the double purpose of a vacation, which they both very much need, and for a good time in the woods. Besides Mr. Manson has had an early call of the hay fever This hay fever leaves him as soon as he strikes the mountain air. A bear is to be added to their catch this year. Last year it was a deer. Oscar W. Cuttings is to be guide and cook. Oscar has been up at the camp nearly all summer. He came out the other day over the mountain, and in Sawyer Notch he saw this very bear that Manson and Binner are after. He has written them, and they are coming prepared. If that bear is caught by those hunters, the FOREST AND STREAM shall hear of it. SPECIAL.

SAFETY APPLIANCES.—Cœur d'Alene, Idaho.—Appreciating suggestions to increase safety of boating and canoeing parties, embodied in article "Chicago and the West," Vol. XXXIII., No. 3, I beg leave to state that I consider a cork jacket, as adopted by the U. S. Government, and a large ring buoy essential parts of boat equipment. The merits of these articles are well known, they are easily procured and cheap.—MUSE.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Idoan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Fishculture.

FISHCULTURE IN THE NATIONAL PARK.

[From a Special Correspondent.]

YELLOWSTONE NATIONAL PARK, Aug. 16.—The trip made by Col. McDonald, United States Fish Commissioner, and Captain Boutelle, for the purpose of examining those waters of the Yellowstone Park which are at present without fish, was in all respects satisfactory. The Gardiner, Gibbon and Shoshone waters were visited, and it was found that food and spawning places were abundant in the lakes or streams of each system, and that there is no apparent reason why trout should not do well. In the Firehole River, where the water is warmed by the heated outflow from the geysers, it is thought that coarser fish, such as the rock bass and the pike-perch, would do well.

It seems quite probable that each one of the river basins named may be stocked with fish of a different species, and if this should be done, it would make the National Park the grandest fishing ground on this continent, and would add enormously to its attractiveness to all classes of visitors. Col. McDonald has indicated his intention of making these experiments, and has expressed the opinion that landlocked salmon, Loch Leven trout and lake trout might be introduced into the waters of Shoshone and Lewis Lakes. These could be planted either as fry or as yearlings, since there exist, so far as known, no enemies which could prey on these young fish. Into the waters of the Gibbon the brown trout of Europe may be introduced, while the headwaters of the Gardiner seems well adapted to the Eastern brook trout.

Just how the waters of the Yellowstone Lake shall be treated is a somewhat intricate problem. At present, the only fish known to inhabit this lake is the black-spotted *Salmo purpuratus*, which may very possibly have reached this body of water from the other side of the range, crossing from Pacific to Atlantic waters in times of melting snow; when, as is sometimes the case, waters flow from one pool or lake into either ocean. A well-known example of this occurs at Two-Ocean Pass, where the streams which form the heads of Atlantic and Pacific Creeks, flow side by side on almost the same level, but in opposite directions, through a low meadow, and in times of high water are no doubt connected. Across this, or some similar pass, the Pacific slope trout may have passed into the Yellowstone waters.

The trout of the Yellowstone Lake, as is well known, are affected with a parasite, which lives in their flesh. It is a long, flat, jointed worm, which occurs knotted up; sometimes close under the skin and sometimes penetrating into the abdominal cavity. This worm, which is probably the larval stage of some tree insect, was described by Prof. Leidy many years ago, under the name *Dibothrium cordiceps*, but its life history has never been studied, and nothing is known about it. Although by no means all of these Yellowstone Lake trout are thus afflicted, and though the proportion of diseased fish varies from year to year, yet the presence of this parasite causes all fish taken from the lake to be regarded with suspicion, and it is to be hoped that a study of this worm and a knowledge of the causes to which its presence is due may result in finding a remedy for the affection.

The food of these Yellowstone Lake trout appears to consist mainly of insects, though no doubt they devour a certain proportion of the young of their own species, for Col. McDonald recently found a small trout in one of them. They are very even in size, rarely exceeding a pound and a half in weight. The largest that I have ever seen was caught here by Professor E. S. Dana in the year 1875, and measured 22in. in length. It has been suggested by Captain Boutelle that the small size of these fish may be due to the fact that they are underfed, and this seems plausible, since we know that in the Yellowstone River, where fish food is abundant, trout of this same species attain a weight of five, six and even nine pounds. It is possible that were these trout in the lake better fed, they might be better able to resist the attacks of the parasitic worm which now preys upon them.

The waters of Yellowstone Lake are clear, cold and very deep. No systematic series of soundings has as yet been made, but the Geological Survey have found 350ft. of water, and between Stevenson Island and the main shore there is over 200ft. It is more than probable that the whitefish either of the Great Lakes or of the Northern Rocky Mountain would do well in Yellowstone Lake, and their young would furnish an admirable food for the trout. So far as our limited observations go, the trout are at present found for the most part in the streams tributary to the lake, in the river, and along the lake shore. They do not seem to occur in any numbers in the very deepest water, and there is thus a very large portion of this great body of water which is practically uninhabited by fish. The introduction of the whitefish would people this barren area, would afford an unfailing food supply to the trout, and might wholly change the character of these latter. The experiment certainly would seem worth trying.

It is generally believed that the whitefish can be taken only by means of nets, but this impression is erroneous. To say nothing of the numerous records of the casual capture of large whitefish by means of the fly, and the well-known fact that the river whitefish rise freely to this lure, we have it on unquestionable authority that the lake whitefish rise freely to a small brown fly. They have, however, a small and very tender mouth, and must be handled with the greatest skill and delicacy if they are to be saved. The time may come when this species will be regarded as a valuable game fish as well as one of our most delicious food fishes. The whitefish is native to many of the mountain lakes in the northern Rocky Mountains, and there is little reason to doubt that it would flourish in the Yellowstone Lake, providing the fry first introduced could be cared for until they have attained sufficient size to be safe from the attacks of the trout. They would probably thrive in many of the mountain lakes of the Yellowstone region. If, as now seems probable, there is to be a general stocking here of such waters as are now without fish, it will probably be necessary to furnish the introduced species with fish food, and such food the whitefish will supply. The hatching and rearing of the whitefish has been conducted on so extensive a scale that this side of the question presents no difficulties whatever.

Col. McDonald's visit to the National Park promises to result in a great benefit to the Yellowstone region, and to the country watered by streams which take their rise in that region. The U. S. Commissioner of Fisheries takes a broad view of the question of stocking the waters of the National Park, and sees in this project much more than the mere present advantage to the tourists who visit the region. The stocking of these waters will result in a large addition to the supply of food fish to the inhabitants of those sections watered by the Missouri and the Snake rivers. A fish hatchery in the Park will serve as an admirable point from which to distribute fresh-water fish to all points in the northern Rocky Mountains, and will fitly supplement the work now being done in Colorado by the U. S. fish hatchery there.

Col. McDonald's appreciation of the Park and his interest in its many features, æsthetic and economic, give assurance that he will do all that lies in his power to develop the resources of this wonderful region, and, if he can carry out the plans which have suggested themselves to him, he will earn for himself the thanks of the whole public. It must not be forgotten that Col. McDonald's visit was suggested by Capt.

Boutelle, who personally showed the Commissioner through the Park and introduced him to its waters, and thus a large share of the credit for whatever may be done will belong to the Superintendent of the Park.

BEAM-TRAWL FISHING.*

IN his introductory note Capt. Collins states that, "This report has been prepared for the purpose of placing before those directly interested in the fisheries of the United States such information as seems necessary to convey a moderately comprehensive idea of the British beam-trawl fishery."

The history, development and the importance of this fishery is dwelt upon at length. The apparatus used in conjunction with the trawl, the methods of fishing and the manner of marketing the fish are fully described. The fishes captured in the trawl net are, principally, turbot, sole, brill; plaice, dabs and halibut (flatfishes); and cod, haddock, hake, ling and whiting (*Gadidæ*).

The captain's observations were made principally at Grimsby and at Hull, and in a cruise in the North Sea made in 1880; he also studied the apparatus and methods shown at the International Fisheries Exposition, London, 1883.

This is the most comprehensive treatise on the subject dealt with that has been published, and taken in connection with the recent attempt of the U. S. Fish Commission to introduce into American waters that highly-esteemed delicacy, the European sole, and the growing demand for flatfishes in our markets, its appearance seems timely.

This pamphlet will be issued as a "public document free," as all of the Fish Commission publications are. In this connection it may be added that the possibilities of bringing fish alive from Europe are greater now than heretofore, for the reason that the Commission may some time find it practicable to send the Grampus across the Atlantic for that purpose. This vessel is provided with a well for transporting fishes alive, and it is believed that many of the most valuable of the flat-fishes of Europe can be successfully transported to this side of the Atlantic.

* The Beam-Trawl Fishery of Great Britain; with notes on beam-trawling in other European countries; etc. By Captain J. W. Collins, Assistant in Charge of Division of Fisheries of the U. S. Fish Commission. Bulletin of the U. S. Fish Commission, 1887, pp. 289-407. To be issued also in a 4to pamphlet of 119 pp., with 22 full-page illustrations and 34 figures in the text, showing in detail the apparatus, and giving lines showing the construction of vessels used in the beam-trawl fishery.

YOUNG CODFISH ON THE MASSACHUSETTS COAST.—A statement has recently been going the rounds of the press concerning the occurrence of young codfish off Plymouth, Mass., where no young of that species have been seen for many years, the oldest fishermen having no recollection of seeing any there before. So great was the surprise that the fishermen could scarce believe their own eyes and dared not call them "sure enough" cod, though the resemblance placed the matter almost beyond question. To do away with all doubt, however, a well-known gentleman of Plymouth sent a specimen of the fish to the U. S. Fish Commission at Wood's Holl, where it was at once identified as a young codfish (*Gadus morrhua*), and judged to be about one and one-half to two years old. It measures 13in. in length, and is evidently the young of the ocean gray cod, a variety quite distinct from the reddish brown "rock cod" that feed among the algæ near the shore. We learn from Capt. J. W. Collins that, while in command of the Grampus in the winter of 1886-87, he planted 3,000,000 young cod on Jan. 28, 1887, between Race Point and Plymouth. It seems more than probable that the present unusual abundance of young cod off Plymouth may be traced to this plant, though it is by no means impossible that fish of this species hatched but at Gloucester may have found their way across Massachusetts Bay to Plymouth. The results of the cod hatching at Gloucester for the past two years have been apparent during the past spring and this summer. Young cod, varying in age from a few months to a year or more, have thronged the outer harbor of Gloucester, and have been so plentiful on the inshore grounds off Eastern Point as to prove a source of annoyance to the boat fishermen, who have frequently been obliged to change their position because these fish nibbled the bait off their hooks as fast as they were put out. When these fish have attained maturity and swarm in similar abundance upon the shore grounds, the effect will be apparent both in the increased earnings of the fishermen and in the superior quality of the fish put upon the market.

NORTH CAROLINA FISHCULTURE.—We have been looking for a long time for the Agricultural Department of North Carolina to resume its interest and work in the propagation of fish. We hardly think the people of the eastern third of the State, and comprising more than one-third the population, will consent to have this important scientific industry longer neglected, in the face of the manifest fact that the former work of the department in that line has shown itself to have been of such immense value in restocking our waters with food fishes in superabundance. The hatching of shad was the very first work of the Agricultural Department on its establishment, in 1877, and so far as one can see, by actual results, it was the most successful and the most valuable of all the work of that department in the State. Why it was abandoned, just as its good effects were beginning to be realized, has never been satisfactorily explained, and the people of eastern Carolina have just cause to feel that they were outraged in the matter. As a result of the artificial propagation of shad they are more numerous in our eastern waters than were ever known within the memory of men, but unless the system is restored and the work permanently kept up, the supply will be speedily exhausted, and our water as barren of them as before the process of artificial propagation was resorted to.—*Wilmington (N. C.) Messenger.* [It is to be hoped that the Legislature of North Carolina will be alive to the issue at its next session, and make a liberal appropriation so as to enable the Department to resume the work of restocking the waters of the State with valuable fishes.]

FISHERY STATISTICS OF THE UNITED STATES.—Dr. Hugh M Smith and Mr. W. H. Abbott, of the U. S. Fish Commission, have gone to Eastport, Maine, to collect statistics of the fisheries of that State. Mr. Ansley Hall will soon be ordered to Belfast, and Mr. C. H. Stevenson to Boothbay, Me., for the same purpose. There is a district assigned to each one of these to canvass. The Maine coast is a specially difficult region for such work, owing to the many outlying islands and the almost numberless indentations of the shore line, from all of which fishing is carried on to a greater or less extent, and where in many cases the places can be reached only by water in boats. It is quite impracticable to accomplish anything there except when the weather is mild, and for this reason a special effort is now being made to complete the investigation before the close of the warm season. A complete canvass will be made of the entire New England coast; indeed, it is already well advanced. Mr. F. F. Dimmick is at work for the Commission at Boston, and Capt. S. J. Martin and Mr. E. F. Locke at Gloucester. Mr. W. A. Wilcox has nearly completed his inquiries on the Pacific coast from San Diego to Puget Sound. He is now at Port Townsend, and soon will be ordered East to assist in the work in New England.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 9 to 12.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary. Entries close Aug. 29.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary. Entries close 11 A. M., Sept. 9.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager. Entries close Sept. 5

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary. Entries close Aug. 31.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Company, Toledo, O. Chas. E. Rowland, Secretary, Box 423. Entries close Aug. 26.

Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Sec'y. Entries close Sept. 4.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y. Entries close Sept. 7.

Oct. 8 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary. Entries close Sept. 28.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

COURSING.

THE following article on coursing is from the pen of Dr. G. Irwin Royce in the *Clipper*, published at Hutchinson, Kansas:

As a pastime there is nothing that so thoroughly adapts itself to all classes of people as coursing. It meets the popular demand for harmless competition without uniting with it any of the offensive elements of other contests. It is peculiarly American in its methods, quick and fiery, and with that peculiar reckless dash, with the competitors thoroughly in earnest racing for blood, and ending with a kill that is sudden and painless to the rabbits. Although the competition is wholly with the two dogs, there is almost a nervous interest to see if they will secure the rabbit before he reaches a place of safety. The only animal that will bring out all of the speed and quickness of the greyhound is the fleet-footed jack rabbit of the Western plains, and for this reason he is employed to test the speed of the swift and silent pursuers. The speed of the jack rabbit is something phenomenal, and at certain seasons of the year and when in condition from being pursued by ordinary cur dogs successively for weeks, there are no two greyhounds in the world that can catch them, but take them as usually found and even in the best season, March, a good pair of dogs will secure three out of five. To thoroughly appreciate him he should be seen in his native element.

As far as history goes back you will find accounts of the chase with fleet dogs, but the larger kind of animals were more generally pursued, and it remained for the English to introduce competition with the greyhound and to originate the peculiar type of greyhounds for their special purpose, and the scientific contest with greyhounds has become one of the most important pastimes in England, and the services of the successful greyhound at the coursing meetings will command almost fabulous prices.

The greyhound was brought to this country at a very early day, and they have been used on the Western plains for coursing antelope, deer and other large game, but more especially for pursuing the jack rabbit. The brave Custer took great pains to gather up a choice pack, and it became the chief source of amusement for the officers while on duty on the borders. Many enthusiastic owners of smaller packs scattered over the West have derived great pleasure from pursuing the swift prairie hare, but there was little thought of uniting the interests and formally contesting the speed of their favorites until the year 1885, when a request was made by the writer for correspondence in regard to the formation of a coursing club. No response was made, although several gentlemen had signified a desire personally to unite with us in advancing the interest; and seeing that the only method left was to make a date and invite all who were interested to be present, we made such a call in April, stating that a meeting would be held on the Cheyenne Plains, near Great Bend, Kan., March 1, 1886, and that an organization would be formed at that time. This was responded to by Mr. M. E. Allison, of Hutchinson, Kan.; V. R. Bartlett, of Winfield, Kan.; Dr. Van Hummel, of Denver, Col., and others, advising an organization at once, and in response to this a meeting was called for July 9, at Topeka, Kan., and the result was the formation of the American Club, and the date fixed for Oct. 15 for the first grand meeting. The meeting was successful beyond the most sanguine expectation of the projectors, and it suddenly sprang into popularity, and its future was assured. Three annual meetings have been held, and slumbering interest in this most delightful pastime is now thoroughly aroused throughout the United States. The original design of coursing was to visit an open field where the nimble hare was known to abound and to frighten him from his hiding place in the grass, and as he appeared, loose the greyhound from the slips and pursue him to death. This is called open field coursing, but in order to bring it within the reach of those who are unable to go long distances to witness the sport, local or inclosed parks are being arranged where the rabbits are confined to a limited space of, perhaps, a few hundred acres, and a narrow race track filled up and the rabbits secured and the contest confined to this space, with an escape for the rabbits at the end of a half or quarter mile.

This method is equally scientific and probably more humane, because it affords the rabbit a greater chance for life and prevents the dog from running one of those pumping races of two miles or more. Often the dog and rabbit have been found dead within a few feet of each other, literally run to death in one of those long three or four mile races on the open prairie. After the second meeting of the American Coursing Club, at Great Bend, Kan., Mr. M. E. Allison, of Hutchinson, Kan., filled with enthusiasm at the success of coursing, conceived the idea of forming a local organization in Hutchinson, Kan., and building a park, which he has carried to a successful termination, and to-day the National Coursing Association Park, at Hutchinson, Kan., is the only complete and thoroughly equipped coursing and breeding park in the United States; it comprises a full half section of ground, made rabbit-tight by a wire fence surrounding the whole, and now in the inclosure there are no less than 500 strong, healthy jack rabbits, untamed and fairly in their native element. When required for the contest they are frightened to a narrow inclosure and secured a day previous to the running, but in no sense are they tamed or domesticated, and to disabuse the mind of the fact of their being unable to protect themselves from the dogs one has only to see an old resident leave the chute for the escape at the lower end of the course and he will declare that truly motion is quicker than sight.

A grand meeting will be held at this park Oct. 8 to 11, with purses aggregating $800. After much thought and consultation with a few enthusiastic practical coursing men it was decided to more thoroughly popularize the sport by bringing it directly to the doors of those residing in the Eastern cities where even a jackrabbit is a novelty, and by arranging a coursing ground on a race track, invite the public to an entertainment that is chaste, grand and most highly entertaining. Dates have been arranged for several cities east of the Mississippi, and the following are the cities to be visited this fall and winter: Louisville, Sept. 4 to 7, inclusive; Lexington, Cincinnati, St. Louis, Memphis, Chattanooga, Birmingham, New Orleans, and most of the larger cities of the South.

The knowledge of coursing is so limited that we deem it only proper to give a description of the method of testing the speed of the greyhound. A stake is made of, perhaps, thirty-two dogs, and in order to bring perfect fairness to the test the dogs are chosen by lot to run together, two at a time. There would necessarily be sixteen pairs in the first round, and there would be left sixteen winners. These sixteen would again be paired off, and when the eight pairs had been run off there would be left four pairs to contend with each other, then two pairs, and the last two unbeaten dogs try conclusions for the first honors, and the one last running with winner is called the "runner up" because he ran a successful race up to the last round. In order to judge of the comparative merits of the greyhound, the value of the work done is credited to each dog by points. The points of the course are, first:

Speed, which is counted one, two, three, according to the superiority shown.

The turn is where the rabbit is forced to jump to one side to avoid the dog, and counts one point for the dog making the turn.

The third is the go-bye, which counts two or three points conditioned on whether the dog runs by the other dog on a straight course or whether they are running on a circle. If one greyhound starts a length behind the other anywhere in the race and runs by him and gets a length in the lead it is a go-bye.

The trip is where the dog touches the rabbit and throws him over, but fails to hold him, and counts a point.

The wrench gives a dog a half point. This is when the rabbit is forced from running a straight line, but does not turn at a direct angle.

The kill is the most difficult to judge, as the dog may score two points or nothing. If by his own dash and great speed he picks up a swift rabbit on a straight run it may count two points, but should the hind dog simply grab the rabbit as he is turned to him by the other he may get no credit at all.

These probably are repeated several times in a race, and often it is difficult to keep near enough to the dogs to judge the true merits of the course, and should the points be equal at the kill, the race will have to be repeated till one dog has shown superiority over the other.

The rules have been carefully amended from time to time, and to-day they are as near perfection as one could ask, barring the difference between our fields and rabbits and those of the English. In time these little differences will be adjusted and we will be more consistent. In arranging the rules for the American Coursing Club, several superfluous words in the English rules were left out, as for instance, it speaks of a dog sticking in a muse, but there is more or less of a tendency to ape the English, and it will require time to thoroughly Americanize coursing; now and then a mulish Englishman arrives in this country filled with bombast, seasoned with conceit, and contempt for the illiteracy of the blasted American, and for a time works mischief, but their selfish methods are soon exposed and they are relegated to more than obscurity. It is well to be a little wary of absorbing too much of their superior knowledge, for it don't mix well with our limited stock of information, as several have found to their cost.

The great popularity which coursing is destined to have in this country demands that it shall be kept free from objectionable features as far as possible, so that our wives, mothers and sisters shall be able to attend a coursing meeting with safety and pleasure.

Thus far in this country no criticism has fallen on us, and no occasion should be given whereby the most fastidious can carp.

The dogs are loosened and are at their best. The jockey is not there to restrain them, and the rabbit is quite sure to hold out splendid inducements for them to extend themselves.

In the open meetings on the Western prairies they flee for safety and frequently distance the dogs and are safe. Even when they are killed, it is so sudden that cruelty can scarcely be mentioned in connection with coursing, and in inclosed park coursing, the dogs can even be muzzled and in this way prevent their doing the rabbit any injury whatever. Unfortunately for coursing, a few gentlemen in the East, commendably eager to see the contest, substituted the fox-terrier for the greyhound, and the little cotton tail for the jack rabbit, and they were loosened in an inclosure, without an escape, and pursued to the death. This brought on them the stormy indignation of the Society for the Prevention of Cruelty to Animals, and this kind of rabbit baiting was abolished, but no just cause for interference can be found in connection with the true methods of coursing with the greyhound and jack rabbit, for even those having the most delicate sensibilities can scarcely find one objectionable feature connected with the pastime. When once seen a thirst is created for more, ever after there is an unabated interest, and in time coursing will have a foremost position in the world of amusements, and the beautiful and affectionate greyhound will take his position as the king and aristocrat among dogs.

DANBURY DOG SHOW.—Bridgeport, Aug. 20.—*Editor Forest and Stream:* The Danbury Agricultural Society will hold their annual bench show Oct. 8 to 12, under the auspices of the Connecticut State Kennel Club. They will give premiums of $5 and $3 in all classes and will charge no entrance fee. Premium lists will be out in a few days, entries will close ten days before the show. The address of the secretary is B. C. Lynes, Danbury, Conn.—Dr. Jas. E. Hair.

THE FOX-TERRIER.

WHO that has ever enjoyed his friendship would not read with pleasure anything said in his praise? During these summer days I have been fortunate enough to gain the love of one called Witty, owned by a friend of mine, and many delightful rambles have we had together—Witty and I—among the beautiful hills about Stanley, N. J., the home of Geo. Shepard Page (well known to many of your readers). With Witty's assistance, too, I have added much to my limited knowledge of the inhabitants of the fields and wildwood. For all-around sport the fox-terrier doubtless excels any of his genus. He will find you the lair of the fox and the home of "Brer Rabbit," and, indeed, of any other animal—beast, bird or reptile; he has a particularly ill feeling toward snakes, and is very happy when he has become sure that one of these has been killed beyond a doubt. This conclusion he usually arrives at after a lengthy war dance, in which the snake's vertebræ is broken in numerous places from neck to tail. But it is for dauntless courage that he is most distinguished, and I am sure he would rejoice in a contest with a bear ten times his own size. He is apparently composed of equal parts of pluck and animation, and endowed with keen intellect.

During our outings we have discovered that there is still some game left in New Jersey, including rabbits, opossums, quail, partridges, etc. Among the things unearthed by Witty one day was a skunk fully two-thirds as large as himself. Perceiving the smell I discreetly retired to the lee side of the field in which the den was located and awaited developments. It was not long before Witty had persuaded the skunk that he needed some fresh air. Chambers's Cyclopædia, in describing the skunk, states that "dogs flee at once" because of the smell. I can, however, vouch for it that this time "Chambers" has made an error, unless Witty is unusually brave even for a fox-terrier. When he and the skunk emerged from that hole all arrangements had been made for a duel, and it was fought bravely on both sides until the skunk was left on the field a feast for crows. The skunk was jet black in color, with the exception of a small white comb-like triangle on its forehead and a white tip on the end of his tail. Although sustaining only slight bodily injury, Witty had been impregnated with that awful smell. After a few days' treatment with disinfectants, administered by his groom, and liberal bathing, this was overcome, for which the little animal seemed fully as grateful as I, who had been deprived of his society. On another occasion he led me to the haunts of an opossum, which animals, I believe, are rare so far north as New Jersey. It was secured alive, but I regret to say that after two weeks' captivity that 'possum proved too sharp for his keeper, and no longer forms a part of Mr. Page's interesting collection of animals, to which it had been added. C. H. M. Rose.

New York, Aug. 23.

NATIONAL COURSING ASSOCIATION.

WE have received the programme of the semi-annual meeting of the National Coursing Association, to be held at Hutchinson, Kan., Oct. 8 to 12. Two events are on the card. The National Derby, open to the world, with $200 to the winner, $100 to second, $50 to third and $25 to fourth. American sweepstakes, open to American-bred dogs, with $100 to winner, $50 to second, $25 to third and $15 to fourth. Consolation stakes will be arranged for dogs thrown out in the first round if time and weather permit. Entrance free, the Association reserving one-third of the winnings as a general entrance fee. Entries close Oct. 7, at 8 o'clock P. M., at which time the drawing will take place. The address of the manager is M. E. Allison, Hutchinson, Kan.

THE REGISTRATION FEE.

Article XXII. Constitution of the American Kennel Club.—The business management of the American Kennel Club Stud Book shall be subject to the direction of a committee of three, elected by a majority of the delegates present at the annual meeting of the club, and shall render account to the Association annually at such meeting.

AT a meeting of the Stud Book Committee, held Aug. 22, it was deemed advisable to make a public explanation of the reasons for which the registration fee is to be increased after Jan. 1, 1890, to the sum of $1. Two or three protests against the action of this committee having appeared in some of the sporting papers, expressing the hope that the American Kennel Club at its next meeting would rescind our action, makes it necessary to go back to the establishment of the official Stud Book. From Jan. 1, 1887, to March 1, 1888; some fifteen months, the Stud Book was in the charge of and compiled by the secretary of the club. It was an experiment, its future could not be foretold. In order to meet the necessary expenses a large number of the friends of the club advertised in the book, and notwithstanding this increase of its income, the club could not afford to pay even a fair salary for the work the Stud Book entailed. Owing to the increased business of the Stud Book this committee, on March 1, 1888, appointed an editor of the book, and demanded of him his entire time and attention, and yet could not afford to fix and pay a stated salary. The two years' experience of both the secretary and the editor showed them conclusively that the cost of publishing each entry was greater than the amount charged for it, and this induced the secretary to bring the matter before the American Kennel Club at its meeting Dec. 6, 1888. By referring to the official record of that meeting, published in the January issue of the *American Kennel Gazette*, and also in the several sporting journals the week following the meeting, the following extract from the proceedings will be found:

Mr. Vredenburgh called attention to the registration fee, which at present is fifty cents, and advocated in cases of voluntary registration the charge of one dollar. On suggestion of Mr. Hitchcock the matter was left to the Stud Book Committee.

By this action the American Kennel Club evidently thought that the Stud Book Committee was in a better position to determine this matter than the club itself was, and accordingly gave this committee power to act as its judgment dictated. When the fee of fifty cents was originally fixed it was by the action of this committee, which is elected annually by the American Kennel Club, and this same committee was given the power to increase it to one dollar if it was found necessary to do so.

The committee determined to permit the old fee to remain in force for the year 1889, and now gives five months' notice of the increased fee. Our reasons for the increase are the following: The cost of composition, printing, electrotyping, stock and binding of each volume is about 33 cents for each entry. To this must be added the salary of the compiler of the book, a proportionate share of office rent, postage and stationery; these combined swell the total cost of the publication of each entry to a fraction over 81 cents. Since Jan. 1, 1889, the Stud Book has paid its editor a stated salary on the last day of each and every month, together with its share of its other legitimate expenses, and when the present volume is published and paid for the result will be that it has been published at a loss of over 31 cents on each and every entry that the book contains. We desire to state in this connection that the income and expense of the Stud Book is kept entirely separate and distinct from the other departments of the American Kennel Club, and the Stud Book does not pay the *American Kennel Gazette* for the monthly publication of the preliminary registrations that have been assigned Stud Book numbers, said publication being entirely complimentary.

The other resolution unfavorably commented upon has been forced upon the committee. Persons from all sections are continually requesting to be furnished with extended pedigrees of dogs that are registered in the several stud books that are kept at the office of the American Kennel Club. These requests are becoming so frequent, and to comply consumes so much time, that the committee deems it necessary to charge for the work, and fixed the reasonable sum of fifty cents, for which is issued an official certificate of a pedigree, including the fourth generation when possible, and duly signed by the secretary of the club.

Hermann F. Schellhass,
Thomas H. Terry,
A. D. Lewis,
} Stud Book Committe.

DOG TALK.

THE editor of the Barbourville (Ky.) *News* vouches for this story: Mr. Ed. Arthur, of Flat Lick, whose reputation for truth and veracity has never been and cannot be impugned, relates that the dogs were mad with ambition, and around the circuit of about three miles they whirled the fox with such rapidity that poor reynard was soon too hot to take a hole. To continue the chase was disaster to him. What then? Strategy! Strategy a failure, and all would indeed be up with him. Standing on an eminence some distance off, one of the hunters saw the fox stop as if to listen just as the whistle of the passenger engine on the C. V. railroad shrieked for a crossing. Down the mountain he leaped, and through a deep narrow cut just a few feet in front of the dogs; and about 50yds. in front of the train went fox and dogs. The train was running a fifty-mile gait. On it came over dogs and close up to reynard, when that wily diplomat leaped on to the cowcatcher, rode safely through the cut, jumped to the ground and loped leisurely into its accustomed haunts.

George Dunne, of the Burlington's contracting freight office, in Chicago, recently had an embarrassing experience. He was out in one of the suburbs when he saw a fine dog trotting along in the street. Naturally enough he whistled to him, and when the animal came up he patted him kindly. The dog then followed him. After a walk of a block or so Dunne became conscious that he was being followed by a pretty young lady. This was so unusual that he did not know what to make of it, and he did not know the cause until he heard the young lady call the dog. He tried then to chase the animal back, but he would not go. Finally, just as he reached the house at which he was about to call, the young lady met a suburban policeman, and George heard her tell him something about a dog thief. But as he slammed the gate behind him the dog ran back to his fair owner, and the rural officer's services were not needed. As it was, however, Mr. Dunne felt hurt at being mistaken for an ordinary "dog pincher."

A novice writes: "Will some of the readers of Forest and Stream tell me how to train a beagle on rabbits when I have no old or trained dog to use with him, and can a beagle be used on coons? I also want an all round bird dog; one that can be used on all game birds, and in the late fall be used to retrieve ducks."

Here is an opportunity for those of our readers who have successfully solved the problems, to give their experience for the benefit of brother sportsmen.

A new field trial club has been organized in Ohio. The club is composed of influential men, and we are assured that no effort will be spared to make their inaugural trials a success. A hearty local support is promised, and the trials closely follow those of the Indiana Kennel Club. There is no doubt that the participants there will liberally patronize the new club.

Mr. J. F. Smith, of Sheffield, Eng., has decided to dispose of his celebrated kennel of St. Bernards. Among them are the smooth champions Guide, Watch, Keepor, Sans Peur, Belline and Sunrise. Here is an opportunity for American fanciers to procure some winners.

Mr. W. H. Walbridge, of Petersborough, N. H., has recently received seven Schipperkes, three dogs and four bitches, from Belgium.

We are frequently asked to furnish premium lists of the different dog shows, and will cheerfully do so if managers will send them to us.

The Brooklyn dog show next month will not be open on Sunday as has been stated. The dates are Sept. 9 to 12.

There will be no dog show at Baltimore this year, as the club cannot obtain a suitable building.

The Montana Kennel Club hold their first dog show this week at Helena, Mont.

RABBIT BAITING.—We commend the following clipping from the *Stock-Keeper* to the advocates of rabbit baiting: "On the 19th inst., in the House of Commons, the Home Secretary, in reply to Mr. Buchanan, said that he had received memorials as to the practice of rabbit coursing. While greatly disapproving of the cruelty involved he did not see his way, in the present state of public business, to the possibility of amending the law. We have good reason to anticipate that as soon as the present enormous pressure of business eases off Mr. Mathews will take steps to amend the law so as to abolish rabbit coursing altogether. We draw the attention of Mr. August Belmont, Jr., and his friends to this statement of an English Minister, delivered in the presence of a great body of sportsmen, for there has always been a powerful sporting element in the English Parliament. When some months ago we took it upon ourselves to assure our American kinsmen that they were mistaken in taking up rabbit coursing under the impression that it was a British sport, our remarks met with anything but a favorable reception. Mr. Belmont, Jr., having since had time to inquire among his English acquaintances, and with this statement of our Home Secretary before him, will now, we hope, be inclined to admit that he was misled on this subject."

POINTER DOG FOUND.—*Editor Forest and Stream:* There strayed into our place last Tuesday night a large pointer dog. Thinking that he probably belonged to some one living near, I shut him up and made inquiries, but up to the present time I have failed to find an owner for him. Not wishing to keep him myself, I have given him to a friend of mine to keep until some one claims him, well knowing that in the meantime he will have a good home. Some of your many readers may have lost such a dog. Brake is looking wonderfully well, and think I shall show him in Brooklyn next month.—Stanton W. Pentz (Fanwood, N. J., Aug. 26).

DENVER DOG SHOW.—Auburn Park, Ill., Aug. 24.—*Editor Forest and Stream.* The Chicago, Rock Island & Pacific Railway, through its genial passenger agent, Mr. John Sebastian, have kindly agreed to carry all dogs to and from the Continental Kennel Club's bench show, to be held at Denver, Col., in November, free of charge when accompanied by an attendant.—H. L. Goodman.

OHIO FIELD TRIAL CLUB.—The Ohio Field Trial Club was organized last week at Wooster, O. Following is a list of officers: President, Hon. M. L. Smyzer; vice-president, Capt. A. S. McClure; secretary and treasurer, John Bolus; executive committee, John H. Law, F. J. Mullin; C. E. White, J. F. Marchant and A. M. Parrish; committee on grounds, Messrs. Clark, Jones, Lake, Horn, Huffstott and Ebright. The trials will probably be run near Wooster about the middle of November. Only one stake will be run this year, a free-for-all, with $10 forfeit and $15 additional to start. Entry blanks and full particulars can be obtained by addressing the secretary, John Bolus, Wooster, O.

BROOKLYN DOG SHOW.—Brooklyn, Aug. 21.—*Editor Forest and Stream:* Through our printer's error and an oversight the idea has become prevalent that the Brooklyn Kennel Club's show is to be open on Sunday, whereas it does not open until Monday, Sept. 9, but dogs from a distance can be benched on Saturday, and will have every attention.—C. Deckelmann, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Spright. By C. G. Browning, Worcester, Mass., for black cocker spaniel bitch, whelped March 29, 1888, by Ebony (Obo II.—Lofty) out of Jessie (Pompey—Gypsy Girl).

Mabel R. By C. G. Browning, Worcester, Mass., for black cocker spaniel bitch, whelped March 29, 1889, by Billy Obo (Obo II.—Darkie) out of Bessie (Obo II.—Critic).

BRED.

☞ Notes must be sent on the Prepared Blanks.

Music III.—Leader. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Music III. to his Leader, Aug. 14.

Royal Cute—Duke of Vernon. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Royal Cute (Duke Royal—Gala Day) to his Duke of Vernon (Glendale—Spotless), Aug. 22.

Beauty—Kash. R. M. Conway's (Owensboro, Ky.) pug bitch Beauty (champion Joe—Peggie) to A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy), Aug. 9.

Lady Thurman—Kash. Howard Bros.' (Columbus, O.) pug bitch Lady Thurman (Silver Shoe—Dixie) to A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy), July 30.

Spright—Obo II. C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Spright (Ebony—Jessie) to J. P. Willey's Obo II. (Obo—Chloe), Aug. 15.

WHELPS.

☞ Notes must be sent on the Prepared Blanks.

Fair Inez. F. C. Nims's (Painesville, O.) pug bitch Fair Inez (Zango—Nellie), July 27, five (four dogs), by A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy).

Donna. Rosecroft Kennels' (Plainfield, N. J.) English setter bitch Donna, Aug. 25, four (two dogs), by F. Windholz's champion Rockingham.

Beauty. J. F. Campbell's (Montreal, Can.) Yorkshire terrier bitch Beauty (Dandy—Nicey), Aug. 15, two bitches, by H. Smith's Major Halifax (Thornton's Music—Lady Halifax).

SALES.

☞ Notes must be sent on the Prepared Blanks.

Kash—Nun Nicer whelps. Silver fawn pugs, whelped June 20, 1889, by A. E. Pitts, Columbus, O., a dog each to Jas. Lawrence, same place; Fred Morton, Cambridge, O., and Geo. W. Wambach, Baltimore, Md., and a bitch to Mr. Rieke, Paducah, Ky.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

J. W. G. D., Chestnut Hill.—I have a pug dog, age about five years, is suffering from hemorrhoids. The discharge is slight, but causes intense itching. Ans. Get the following:

℞. Morph. sulph. ..... gr. iss.
Plumb. acetat. ..... grs. xx.
Acid tannici ..... grs. xx.
Unguenti rosæ ..... ℥ii.
Mix. Sig. Apply night and morning. This must be forced slightly inside the sphincter muscle.

H., Bordentown, N. J.—I have a mastiff dog, 1 year 7 months old, that had the so-called distemper about six months ago. His being a very light case seemingly, my only treatment was to keep him warm and dry and feed a low diet. Since the attack left him he has had the chorea, and for the last three months his eyes have been very sore, almost closed, and constantly discharging a yellowish matter, though at first it was greenish. I treated him for chorea, with the formula in Hallock's "Gazetteer," but though he seemed to get a little better it did not cure him. Is there anything I can do for his eyes? Can I still help his chorea? Ans. 1. Sponge the eyes with borax and water, teaspoon to the teacup. 2. Give a pill containing ¼ grain of nitrate of silver and ½ grain of extract of nux vomica morning and evening for three weeks. Also give one of Bland's iron pills three times daily.

Rifle and Trap Shooting

RANGE AND GALLERY.

OUR TEAM ABROAD.

[*From our Special Correspondent.*]

PARIS, Aug. 1.—Much comment and criticism has been raised among the volunteers and marksmen attending this year's Wimbledon meeting, at the want of success of the American marksmen, when using in the matches the English government musket, the Martini-Henry. Believing that a thorough explanation will set our friends right on the subject, we venture to start from the beginning. After a perusal of the programme sent to the Massachusetts team by the National Rifle Association of Great Britain, many of the members expressed a desire to take part in the matches confined to the use of the Martini musket. Each marksman having some reputation as being a "good holder" and fair judge of wind velocity, especially at the distances of 200, 500 and 600yds., thought that with accurate shooting Martinis, the chances would be favorable for obtaining a place in the prize lists. On the voyage across the water, the subject being discussed, it was recommended by a member of the team who had had experience at Wimbledon years before, that Martini rifles should be procured from some private manufacturer by each member, as it was his opinion that the majority of rifles winning prizes in the Martini matches were those made by private manufacturers, but according to law, submitted to the Government viewers to be stamped for safety and compliance with certain gauges as to bore and cartridge. This idea was favorably entertained, but was put to flight during the team competitions, the honorary secretary reporting that the N. R. A. would loan the team some Martinis of Government make, and the secretary assured the members that it was conceded on all sides that the "rack rifles" of the Government were superior, and were all right in every way. This, coming from such good authority, was gladly accepted. The team matches following each other so closely, the Americans could not procure the English rifles until Friday morning, and all the time found by the secretary to grant the members of the team practice with these rifles, was to fire 7 shots at 200, the same number at 500yds. This was on Saturday afternoon, and on the following Monday morning the Alexandra match began at 500yds. It will be seen that the Massachusetts men did not have time allowed them to discover very much about the rifles so generously loaned them, before entering into an important competition at 500yds.

It should be said that the member suggesting the rifles of private make had doubts regarding the Government muskets, and made inquiries among the members of the English teams as to the Martinis used by them, and found that about 8 out of every 10 shot with Martinis of private make; yet this did not

weaken the faith put in the promise that the Government "rack rifles" to be loaned the Massachusetts men would be all right in every particular. The honorary secretary went with the team to Mr. Kerr's gun store in London and rifles were selected. Some were stamped on the side "Enfield, 1882," another "1883," and others had "Birmingham, S. A. Mfg., 1886." The skeptical member of the team called attention to this and remarked that the new "rack rifles" had the appearance of being considerably mixed up. He was quieted with the remark that these rifles had been specially selected for the Americans, and were the best to be had. Doubts yet lingered, but they were lulled by the reply of one of the shop keepers to a quiet question put by the skeptic as to the rifles being just out of the Government racks. He replied that these rifles had been to Wimbledon Common for two or three years in succession, to be loaned out there to customers and competitors, and had given good satisfaction in every case. Then the skeptic joyfully selected his own and one for another member of the team, giving gentle sighs of gratitude for the generosity of the English National Rifle Association in taking so much pains to procure accurate shooting weapons for the members of a rifle team that had just scored five successive victories over the flower of the British Volunteers.

Now comes the disagreeable part of the duties of your scribe, and that is to tell your readers just how accurate these rifles—these Martinis, as the honorable secretary was assured and assured the team, were to come right from the Government racks—did shoot in the hands of ten expert marksmen; these marksmen had very recently proved themselves to the English Volunteers to be adepts with good American weapons, and now was their opportunity to "down" the English marksmen with their own musket. I hesitate to picture to you the result individually. It was of the most disastrous description. Some of these selected "rack rifles" when held carefully at the bullseye at 200yds. would shoot their bullets from 12 to 18in. to the left of the center of the target, and others just as far to the right. The rifle selected and used by the writer, when held straight at the bullseye at 200yds., with the sight down to its lowest point, would shoot its bullets into the 3-ring or magpie circle near the top of the target; and in order to get a bullseye or near to it, a fine sight had to be drawn at an imaginary spot 18 to 20in. below the black bullseye. The other marksmen were compelled to aim to the right and left, as the case might be, as much as they could judge necessary from the meager experience granted them to get acquainted with their weapons. The writer's experience at 500yds. was just as bad. With the sight at its lowest possible point, the aim had to be taken with the front sight held on the bank or grass underneath the target. Conditions of this character so suddenly thrust upon the American experts proved demoralizing in the extreme. The entrance fees to the important matches had to be paid in before the opening of the Wimbledon meeting, and once paid in it was difficult to get them returned, especially if the shooter was present on the ground; and in some cases members of the American team gave away their tickets of entrance to some of the matches, being so disgusted with the performance of the Martinis so carefully selected for their benefit. It is the writer's opinion that, if selected at all, the rifles must have been selected for their erratic qualities as regards arrangement of sights and accuracy of shooting. It should be remembered that there is a rule at Wimbledon forbidding the filing or altering the sights on pain of disqualification, so no chance was there to correct these important adjuncts of the rifle.

There can be no doubt but what the rifles loaned the team were samples of the English Government Martini rifles, and if a fair lot, it cannot be wondered at that the Volunteers desiring to win prizes at Wimbledon, and are able financially, provide themselves with rifles of Field or Frazier or other reliable manufacture.

Fancy Maj. Heap or the prayerful (but unlucky in the Queens) Pearce and dozens of other successful marksmen, being provided with the same weapons that were loaned to the Massachusetts men, where would they have landed in the prize lists? Our echo answers "Nowhere." To show a comparative performance of the same ten men at Wimbledon with the Springfield musket, after the old-style sights had replaced the Buffington and the rifle admitted into one match at 200yds., 7 shots from the shoulder, nine of the ten are in the prize list, Huddleson taking first prize with 34, Farrow fourth with 33, Bull and others coming in with 32 and 31. This is mentioned simply to show that the Massachusetts men had not lost their power of "holding" correctly and suddenly gone to "smash."

There are certain points about the Martini mechanism we consider superior to the Springfield for target purpose. Take the stroke of hammer, the shorter the distance the hammer has to fall, it is surely an advantage, and the trigger can be arranged for "pull off" without that disagreeable creep, creep, also present in certain of the "selected" rifles. The accuracy of the barrels of the private makers was proven again and again at Wimbledon, the private makers also put the rough regulating sights on correctly, and if the improvement of a wind gauge could be added it then would become a very formidable weapon to pit against the Springfield, but until this latter improvement is added the Massachusetts team need have no fear for the English Volunteers.

The writer had an argument with certain posted volunteers and military men on the matter of sights, trying to discover what objections could be urged against an aperture sight and a wind gauge for military purposes, and the trigger can be arranged. Tommy Atkins (a favorite name for the English soldier), had not the brains necessary for the correct understanding and manipulation of a wing gauge sight; this was the sum and substance of the objections. Here is what they allow Tommy Atkins as a competitor to carry and use at Wimbledon: Two pots of paint, black and white; two brushes, one for each color, to smear his sights with; one elevating Vernier, to read in one hundred and fiftieth parts of an inch (this is to set the elevation of the rear sights for the different distances, and requires careful eyes and handling); an optometer (this also is a Vernier, a species of quadrant with fine screw adjustment for laying off his lines to the right and left of the zero for wind allowance). These allowances are put on with the white paint brush or a pencil. Next comes the orthoptic, a round disc of vulcanized rubber pierced with holes, having a screw attachment to fasten to the visor of the cap. It is then twisted to allow one of the holes being placed in front of the eye, through which he takes his aim. A rubber tube of any desirable length, with a shell at one end and a horn mouth-piece at the other, completes the outfit. These are allowable to Tommy Atkins in lieu of a sight with side movement and an aperture in the bar. It is most authoritatively stated, but not in these words, that the American Buffington sight is not a servicable sight. Its complicated movements of elevation and lateral screw adjustments are objections insurmountable to the ordinary Tommy Atkins. When the fact of many years' service by the United States troops is urged, the strength, solidity and reliability of the movements shown, and no necessity for paint pots, brushes, Verniers for elevating or marking side lines, and we point to the orthoptic in the sight and the one in the cap visor, it is a crushing blow. But the only reply is the parrot one, it is not a military sight, it is not a serviceable sight, Tommy Atkins, etc., over again and again. It only remains to be said that some of the cross-bow men of years and years ago were provided with better sights than is now on the English Martini rifles. There are samples well preserved of rear sights, with aperture and side adjustment for wind allowances, of the ancient cross-bows, with which the merry men of old England were once armed and fired the fatal arrow.

F. Arrow.

NEWARK, N. J., Aug. 20.—Many marksmen were present at the annual tournament of Our Own Rifle Club, which took place at Shooting Park to-day. The chief event of the day was the team championship shoot, in which there were 12 representative teams entered. The Miller Rifle Club, of Hoboken, were the favorites. The contest, however, was finally won by the first team of the Howard Rifle Club, of Newark. The scores were as follows: First team of the Howard Rifle Club 584, Miller Rifle Club, of Hoboken, 568, first team of American Rifle Club, of Newark, 568, Excelsior Rifle Club, of Jersey City, 558, second team Howard Rifle Club, of Newark, 553, Puritan Rifle Club of Newark, 548, Monroe Rifle Club, of Newark, 542, second team American Rifle Club, of Newark, 531, Rheutia Rifle Club, of Newark, 504, and Hudson Rifle Club, of Jersey City, 494. The members of the winning team each received a handsome gold medal inscribed "Team Championship of New Jersey."

MINNEAPOLIS, Minn., Aug. 22.—The department of Dakota leads all in small arms practice. The average made in the competition which ended to-day was 5,223, which is two points better than any other department. The department of the Platte has usually made the record. Sergeant Scully, who leads the team, made a total of 566, which is the highest score made in the division this year. He completed it to-day by making 122 at skirmish firing, a most remarkable record. To-day was the last day of the rifle contest, and probably the most interesting day of the four. The shooting was skirmish firing, and with very favorable conditions of wind and light. Lieut. Paxton covered himself all over with glory in his first run, scoring a total of 112. The general average of scores was very good, much larger than at any other day's shooting. Much interest was manifested in the firing of Lieut. Clark and Sergt. Scully, the competitors for the first place in the team and the gold medal. The latter was won by Scully, with a total of 566 points, the highest record made in the division this year. Lieut. Clark follows, a close second at 543 points. Following is the score, total points of four days' firing, best twenty men:

Sergt. Scully, 15th inf.	566	Sergt. Guerdin, 25th inf.	490
First Lieut. Clark, 12th inf.	543	Lieut. Gerhardt, 20th inf.	489
Sergt. Newgent, 15th inf.	520	Pvt. Rock, 3d inf.	487
Pvt. Sweinhardt, 22d inf.	511	Pvt. Boyle, 20th inf.	487
Corp. Meeker, 15th inf.	505	Corp. Lang, 12th inf.	485
Sergt. Way, 22d inf.	503	Lieut. Bruce, 22d inf.	481
Pvt. Dillon, 15th inf.	500	Pvt. Irish, 3d inf.	474
Sergt. Hargreaves, 22d inf.	492	Corp. Koulkrod, 20th inf.	474
Corp. Vols, 12th inf.	492	Sergt. Wilson, 15th inf.	468
Pvt. Marti, 3d inf.	491	Pvt. Belle, 12th inf.	465

The team selected to compete at Camp Douglas in the division contest is as follows: Sergeant Scully, Fifteenth infantry; Lieut. Clark, Twelfth infantry; Sergeant Newgent, Fifteenth infantry; Private Sweinhardt, Twenty-second infantry; Corporal Meeker, Fifteenth infantry; Sergeant Way, Twenty-second infantry; Private Dillon, Fifteenth infantry; Sergeant Hargreaves, Twenty-second infantry; Corporal Vols, Twelfth infantry; alternates, Sergeant Guerdin, Twenty-fifth infantry; Lieut. Gerhardt, Twentieth infantry.

BOSTON, Aug. 24.—The shooting house at the range was a busy place to-day, and there were quite a number of new shooters present, who filled the places of some of the veterans now off on their vacations. The weather was good. A gentle wind from 2 to 4 o'clock only served to carry off the smoke from the rifles, and the light was very fair. J. R. Munroe again won the 20-shot rest match. The best scores for the day are as follows:

20-Shot Rest Match, 200yds.

J R Munroe	11 12 10 10 12 12 10 11 9 11	9 12 12 10 10 10 12 12 11 12—218

ST. LOUIS, Mo., Aug. 23.—The seventh tournament of the St. Louis Pistol Club came to an end with the shoot held last Wednesday night. It was not as largely attended as the previous ones, still the interest in the outcome was no less exciting. Mr. O. Neuhaus proved himself the fortunate individual in the contest. He won the medal on the general average and also the handicap prize. Alexander took second and Mohrstadt the third prize. At the last shoot Alexander quit with the top score, and he will retain the medal until next Wednesday, when it will be turned over to Mr. Neuhaus, to be held by him for all time to come. A meeting of the club will be held shortly to arrange for another shoot. For all shooting the club uses a .22cal, pistol and a 20yds. standard American target. The score:

G Alexander	8	7	10	10	7	10	8	10	8	8—86
O Neuhaus	7	9	8	10	10	6	8	9	8	10—85
S G Dorman	8	9	10	10	9	9	9	5	8	7—84
M Summerfield	9	8	10	7	7	7	10	9	7	9—83
W Hettel	9	8	10	7	7	4	10	7	8	8—78
F A Fodde	7	6	8	7	10	9	9	8	6	9—77
A E Bengel	10	6	5	8	7	0	10	9	10	8—73
J A Lee	8	8	9	8	9	5	7	5	5	7—71
J Albach	4	5	4	6	9	7	7	6	6	8—62

The second pistol match between Summerfield and Dorman, both members of the Pistol Club, took place last Monday night. This time Summerfield won, making one each. Another will probably take place shortly. The scores made by both are exceedingly poor and far below what they are capable of. The conditions of the match were 50 shots each at a 12½yds. standard American target with .22cal. pistols. The score is as follows:

M Summerfield	7	9	6	9	8	6	5	9	9	8—76
	7	7	1	0	9	9	7	10	10	8—87
	8	10	5	8	10	9	9	9	5	10—82
	7	8	9	9	8	6	10	7	10	8—81
	8	8	8	6	10	6	10	10	8	9—83—409
S G Dorman	5	9	8	9	9	10	6	8	9	9—82
	9	9	6	6	7	7	10	6	6	9—75
	10	10	10	5	6	8	8	10	10	6—86
	8	7	8	8	8	9	7	6	9	9—79
	7	10	10	9	6	8	8	9	10	9—86—408

WILMINGTON, Del., Aug. 19.—To-day was perfect Monday No. 2, so far as target shooting is concerned. The ground was dry. The weather, compared with the average for several months, was remarkably pleasant, so that out door life was strongly inviting. These conditions, combined with the excitement of target shooting, brought out a fair attendance at Healdmoor Range, and the sport was fully enjoyed. E. J. Darlington added another great score to his already growing list with the pistol. Following are the scores, Standard American target, off-hand:

Pistol Match, 50yds.

E J Darlington	8 9 10 8 10 9 10 9 9 8—90
J Preston	10 7 7 9 10 8 5 10 9 8—84

CREEDMOOR, New York, Aug. 24.—The matches of the N. R. A., shot here to-day, were attended with rain in the forenoon. About 11 o'clock the sun came out hot and bright, and a tricky 6 o'clock wind made it very trying to the competitors, as the light changed continually. However, some very good scores were made. The attendance was good. Following were the winners in the sharpshooters' match:

	200yds.	500yds.	Total.
W A Stokes, Co I, 23d Regt.	23	24	47
G T Musson, Co K, 23d Regt.	21	24	45
H D Hamilton, Co G, 23d Regt.	22	23	45
J H Cockburn, Co D, 12th Regt.	23	22	45
W G Owen, Stf, 12th Regt.	20	24	44
C L Underhay, Stf, 12th Regt.	21	23	44
J S Shepherd, Co D, 23d Regt.	22	22	44
J N Munson, Co G, 7th Regt.	20	23	43

Medal Winners.

H W Jamesen, Co A, 7th Regt.	21	25	46
J Macaulay, Sup Off	21	25	46
W J Underwood, Co H, 7th Regt.	24	22	46

A T Weston, Stf, 22d Regt.	20	24	44
Geo Shorkley, N R A.	20	23	43
J M Maconnell, Co H, 9th Regt.	21	22	43

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Sept. 2.—Amateur Tournament, at Keystone Targets, Elm N. Y. Thomas B. Ward, Manager.

Sept. 3, 4, 5.—Annual Tournament of the Rocky Mountain Trap Shooters, Denver, Colo., Broadway Athletic Park. Inanimate and live targets. Address C. M. Hampson, Denver.

Sept. 10, 11, 12.—St. Paul, Minn., Gun Club Tournament, at Hamilton. F. D. Ponsonby, Secretary, St. Paul.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati; $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 8, 9, 10, 11.—Fred A. Fodde's Second Annual Amateur Tournament, at St. Louis, Mo. Inanimate targets.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

KEYSTONE TOURNAMENT.

THE second annual tournament given by the Keystone Manufacturing Co. was held at Corry, Pa., last week. The programme called for five days at the traps, commencing Tuesday, the 20th, and also announced sweepstake shooting on Monday, the 19th, for the benefit of shooters from a distance arriving ahead of time, and affording them an opportunity to become familiar with the traps and system of shooting. Only a few availed themselves of this privilege, however, as the majority of contestants did not arrive till Monday night. A number of sweeps were shot, but as they were decidedly informal, no record of the scores are given. The Phenix Hotel was the abiding place of the majority of visitors, and on Tuesday morning many familiar faces were noted among the passengers to the grounds. There were E. W. Yerrington, Norwich, Conn.; Rolla O. Heikes, Dayton, O.; E. S. Bescoffen, Huron, O.; H. B. Whitney, Phelps, N. Y.; H. McMurchy and Geo. Siller, Syracuse, N. Y.; J. and W. Ashcroft, Philadelphia, Pa.; C. A. Wagner, Pulney, N. Y.; M. F. Lindsley and E. D. Miller, of New Jersey; N. D. Folsom, New Haven; A. Willey, Hartford; A. Pope, Olcan, N. Y.; Lieut. Geo. E. Albee, New Haven; Capt. T. A. Peacock and wife, Westfield, N. Y.; H. W. Wheeler, Marlboro, Mass.; O. R. Dickey and E. Streeter, of Boston, and many others. The shooting was done on new grounds, much better suited to the purpose than those in use last year. They are situated on the brow of a hill, giving a beautiful view of the surrounding rolling country, and the only objection that can be made is that in their exposed position the wind has full sweep, and by its antics causes the targets to take new and strange flights. This is, perhaps, hardly an objection in these days when so many contestants are able to make astonishingly good scores; anything that adds to the difficulty of hitting them makes a contest more interesting and uncertain.

The Keystone Company must have been at considerable expense in fitting these grounds, for they are supplied with every requisite for the proper handling of a large tournament. On passing through the gate, the first building to the left is a commodious club house with gun racks and numerous lockers; still further to the left is the cashier's office where entries are received and winnings paid; in this building are accommodations for the press. Adjoining it is a large blackboard on which the score of each event is kept as shot. At the right of the club house is another building put up by the ladies of the Episcopal church, who are always prominent at the Keystone shoots. This structure is used as a dining hall and will accommodate 75 or 100 persons comfortably. Here each day these ladies had a good and bountiful dinner, prepared and served with their own fair hands, and that their efforts were appreciated goes without saying. Shooters no doubt can content themselves with a sandwich and cup of coffee when nothing better is to be had, but it is safe to say that they enjoy a good hot dinner no less when away than at home. The fare was excellent, the appointments clean and sweet, the price moderate and the smiling faces of the ladies, Heaven bless them, were good to look at. May they live long and cater for many another Keystone tournament, thereby adding a goodly number of shekels to the church funds. Some of the visiting shooters were accompanied by their wives, among whom were Mrs. Dickey, Mrs. Streeter and Mrs. Willey. These ladies joined heartily with the Corry fair ones, and with Mrs. Penrose, Mrs. Graves and Miss Parsons catered to the inner man by dispensing of lemonade, pop and cigars. Their tent was well patronized and seemed to be a pleasant resting place for the weary and thirsty contestants. The presence of ladies as visitors was a novel and pleasing feature at this tournament. Every afternoon from 100 to 200 were present, completely filling the verandas of the club house and testifying their approval of good shots by vigorous applause.

A new arrangement of traps was in operation, ten in a row, allowing the use of squads of eleven men at a time. While at the score contestants stand on a thick layer of tan bark, under which is a good cinder foundation, so that the hardest rain storms have no effect on it, as the rain filters through and a system of piping conveys the water outside the grounds. The trap screen and pits are solidly built of heavy plank, the trappers have a comfortable place conducive to the rapid discharge of their duties, and in front of each is an electric button by which a signal is given to the puller that all is ready. The pulling arrangement is such that traps can be sprung by a slight touch of the handles, and the puller, Mr. Henry Frazier, won admiration by his ability to work the traps promptly on call when sound asleep.

Mr. H. A. Penrose was a most efficient referee, keeping the squads actively engaged, and his musical voice was anything but that at the end of the week, from the constant shouting of "ded" or "1-o-o-o-st." Mr. C. H. Wetmore, the moving spirit of the Keystone Company, attended to the social duties of the tournament, and right royally did he acquit himself, his courtesy even going so far as to administer a shave in a tonsorial parlor to a friend who could not wait for the call of "next." A sight of the victim after his escape, spoke volumes as to Wetmore's (in)ability to handle the razor, but gratitude forbade any comments.

The Keystone Company were very liberal in guaranteeing money, $1,025 being offered during the four days; each day's programme contained four guaranteed events for amounts from $25 to $100. In addition to this there were four trophy shoots; three of these trophies were cups, which have been illustrated in our columns; one donated by the Keystone Company, one by the Peters Cartridge Company, and one by the L. C. Smith Gun

Company. They are to be held for one year and then returned to the donor for competition at the next Keystone tournament. The fourth trophy was an elegant diamond ring, with a setting in form of a Keystone target. This was offered by the Keystone Company, to be the property of winner, and to carry with it the title of "Champion Rifle Shot of America." All the guaranteed events overfilled and the surplus money after deducting for the birds, was divided among the five contestants making the best averages.

Tuesday, Aug. 20.—The tournament proper opened at an early hour with a good attendance and many crack shots. A new claimant for glory was discovered in the person of Mr. Will Lewis, of the Corry Gun Club. He entered in all the events and shot out every one, till it seemed as if he could not miss. Counting the tie shooting, his score was 103 straight. This, we believe, was the best run made during the tournament, and is the more deserving of praise as Mr. Lewis is a shooter who has only developed since the organizing of the Corry Club a year ago. This was his day, but later on he fell somewhat behind, as do even the best of shots. Some amusement was created during the day at the expense of Mr. Clover, who borrowed Mr. Wetmore's gun to enter in a match for doubles, and only detected that the gun had but one plunger after firing at five or six pair. The five regular programme events resulted as below:

Event No. 1, 10 singles, $50 guaranteed, entrance $2.50:

Lindsley	1001111101 - 7	C Wagner	1111111011— 9
Benscotten	1000111111— 8	Davison	1111011110— 7

Benscotten	1111111111—10		

First shot off and divided by Whitney, Benscotten, Stanton and Lewis, second shot off and divided by Kelsey and Lindsley, third shot off and won by Willey, fourth divided.

Wednesday, Aug. 21.—Promptly at 9 o'clock the guns began to pop, and the day's programme was soon in brisk operation. Lowering clouds gave warning of rain, which later fell in torrents, causing a cessation of hostilities for about half an hour, but owing to the complete system of drainage there were no puddles of water for the unwary to step in. A brisk wind blew right across the traps, and the birds ducked and dodged like live creatures, causing great uncertainty as to the proper place to hold on them. The contest for the Smith trophy resulted in a tie on 49 between H. B. Whitney and H. McMurchy, of the Smith gun. They divided the money, and Whitney breaking one bird took the cup, as McMurchy forfeited his right to shoot.

Second Day.—Event No. 1, at 10 pairs Keystones, $2.50 entrance, $50 guaranteed:

Heikes	11 11 01 10 11 10 11 11 11 11—17

Kelsey	1111111110— 9	Benscotten	1111011111— 9

First and second divided; third shot off and won by Wheeler; fourth shot off and won by Greener.

Thursday, Aug. 22.—Fair weather prevailed, with all conditions favorable to good scores. During the day a tie occurred in one event between three men, one of whom was O. R. Dickey. The prize was a patent baby jumper, donated by one of the citizens. It was decided to shoot the tie miss and out, and as Dickey was sent to the score first, breaking his bird, the other two missing, it looked suspiciously like a job. At any rate, the result caused a laugh which Dickey took good naturedly. A friendly match, with Winchester repeating shotguns, was shot between Lieut. Albee and M. F. Lindsley at four sets of triplets, three birds sprung simultaneously. Albee won with a score of 11 to 10.

Third Day.—Event No. 1, at 10 single Keystones, $2.50 entrance, $50 guaranteed:

Folsom	1011111110— 8	Stanton	1111111111—10

Stanton	1111111111011 —14	Davis	1100111111111—12

First, third and fourth divided; second shot off and divided by Wheeler and Stanton.

Friday, Aug. 23.—The shooters were somewhat later than usual in reaching the grounds owing to an unwonted dissipation the previous night. The citizens of Corry, determined, it seems, to make the stay of the visitors a pleasant one, had prepared a supper and reception to welcome them. On reaching the hotel Thursday evening, light repasts were partaken of and hurried toilets made, and at about 9 o'clock the shooters, headed by a band, marched in a body to the rink, where a committee of ladies and gentlemen, as well as a large number of spectators, were awaiting their arrival. They were soon seated at long tables profusely decorated with flowers and other things equally pleasant to look at but more suitable for consumption. While engaged in disposing of ice cream, cake, fruits, etc., speeches of welcome were made by several gentlemen; among them was one by Attorney C. G. Olmstead, who from his own fondness for both the gun and rod was particularly suited to the task. He recounted stories of his early career in shooting woodducks and other wild beasts, made several telling hits on the peculiari ties of his fellow club members, and succeeded in thoroughly amusing his audience. The band then started in to do their part, and the floor was soon covered with whirling couples in the mazes of a waltz. The festivities were continued until a late hour, and in the opinion of those who participated the reception added much to the pleasure of the Keystone shoot.

Late hours are said to have an effect on the nerves, but a look at the scores made to-day would seem that it stiffens them, or that those who shot in the events were a very hardy set of men. Two events, programmed for Saturday, were shot, in addition to the others, the diamond ring and the team race. Each of these were at 100 birds, and they were run off one right after the other; nearly all contestants were in both, and 200 birds with hardly a rest is quite a strain. The race for the diamond ring resulted in a tie on 97 between Rolla O. Heikes and L. D. Miller; for a while it looked as if Heikes would make a straight, but owing to a slight difficulty with his gun, he lost three birds. Miller was then ahead of him with only one bird missed, and the ring seemed almost within his grasp, but in his last ten he dropped two. Heikes had then ten to shoot at, and it was necessary to break all to tie. This he did in fine style, centering them all. The tie was immediately shot off at 50 birds each Heikes winning with a straight score of 50 to Miller's 46. The winner, thus bearing the title of "Champion Target Shot of America," was heartily congratulated on his nerve and victory.

The team race was an idea of the Keystone Company to determine the supremacy of the East and West, and teams had been picked from men located either side of Corry as the dividing line. There were enough Eastern men on hand, but not enough from the West, so a team was chosen to represent the East, which comprised three men from Massachusetts, one from Connecticut and two from New York. The Western team, so called, had two from Ohio, three from Pennsylvania and one from New Jersey. The most intense interest centered in this race, as it was extremely close throughout. The Western team secured the lead by two birds almost at the start and it then varied from that to five at the highest to one at the lowest; they finally won by three birds, with proof by the best score ever made by any team of six men. When this was finished every one was thoroughly tired, and a quick departure was made for the hotel.

Fourth Day.—Event No. 1, at 10 single Keystones, $2.50 entrance; $50 guaranteed:

Stanton	1110111111— 9	Dickey	111'111111—10
Lindsley	1111111011— 8	F E Mallory	1101101011— 8

Dickey	1111110110— 8	Willey	1111011100— 7
Yerrington	1111111111—10	Peacock	1111111111—10
Benscotten	1111111111—10	Luther	0111111111— 9

First and second divided, third shot off and divided by Miller and Lindsley.

Individual championship contest for the Keystone trophy, a diamond ring, and the title of Champion Target Shot of America, at 100 single Keystones, entrance $5:

W Wolstencroft ..1111111111111111111111111111011111111111101111111111
1111111111111111111111111111

JERSEY CITY HEIGHTS GUN CLUB.—The regular monthly shoot for the cup of the Jersey City Heights Gun Club took place, as ordered by Grand Mogul and Master of the Situation "Old South Paw," on the grounds of the club, at Marion, on the 21st inst., and was another very pleasant affair to the few engaged therein; and some extraordinary shooting was done. They were a fair lot of birds, very few refusing to spring at the falling of the trap, but all the shooters had their best caps on, and but a few birds scaled the fence. Siegler (Old Reliable No. 2) leads the score with 24 dead birds out of 25 shot at, Hughes (Old Reliable No. 1) 18 out of 21, Jones 21 out of 23, South Paw 18 out of 23, Levering 18 out of 21. Burdett was a little off, having many incomers, missing 4 birds out of 16 shot at. Under ordinary circumstances that would not be thought a bad score, but it stood no show that day when Dr. Levering—a duffer among the duffers, whose handicap is but 23yds. (he insisted upon shooting with the others at 28) and who had not shot a pigeon for over two years—came forward and wrested the laurels from such old-timers as Hughes and Siegler and the whole kit, killing his 16 birds straight; and had not his 12-bore shells given out and he been obliged to take a 10-bore and a strange gun for the last shot on the shoot-off, there is no telling what his score might have been. Moral—Always take plenty of your own shells. The following is the score for the cup (Burdett holding it from last month), modified Hurlingham rules (which we think are abominable). Jerry Maher referee and trap puller:

Burdett (27yds)	0100111—4	Siegler (29)	1111221—7
Hughes (28)	1111121—7	Jones (29)	1121212—7
Heritage (26)	1211010—5	Levering (23)	2101201—5

Hughes takes the cup, having made the best score, using the second barrel but once.

First sweep, ties divided:

Jones	1111—4	Heritage	1110—3
Siegler	1111—4	Hughes	1010—2

Second sweep:

Hughes	2111—4	Burdett	1111—4
Siegler	1111—4	Heritage	2211—4
Jones	1102—3	Levering	2121—4

Shoot off for first money, miss and out: Hughes and Siegler 2, Burdett and Heritage 0, Levering 3, and wins first money amid the cheers of the crowd.

Third sweep:

Hughes	0111—3	Siegler	1111—4
Jones	1121—4	Burdett	2102—3
Levering	2121—4	Heritage	1111—4

Shoot off: Heritage and Levering 2, Jones 3, Siegler 4 and wins first. There remaining a few good birds Jerry Maher had three bottles of lemon soda with South Paw that he would score three birds in succession, and Jerry did it. Thus ended a pleasant day's sport. 2, second barrel; o, dead out of bounds.—JACOBSTAFF.

FLORENCE, Mass., Aug. 20.—Norwood Gun Club, 25 single Keystones, 5 Keystone traps:

E E Harris	0010011101100110111010010—13
L Gaylor	1110110100001000011000111—12
T T Cartwright	0010011010001011100110110—12
H H Chilson	0111001100000000101010011— 9
Z Foster	1110000001101000110000— 9
F Nuttleman	1111010000001010101111—14
E Feiker	1010100100000001111101101—11

Double rises:

Gaylor	00	01	01	11	00	11— 6
Nuttleman	00	01	10	11	00	00— 4
Cartwright	00	00	00	01	10	00— 2

Practice:

Gaylor	1101100101111001111010100—15
Cartwright	1001111000101010110100111—15
Chilson	0110001011100110111000000—12
Feiker	10101011000 — 5
Foster	1100100110 — 6

This was the first time the club have shot from 5 traps, which accounts for the poor scores.

Match at 25 kingbirds, 5 traps:

T T Cartwright	0111111101111000001111101—17
F W Twiss	0011000111111110101101011—17

E Feiker	0010010111100101111010010—14
E E Davis	0100110110111100100011100—12

Double rises:

Gaylor	11	11	11	10	11—9
Cartwright	11	11	11	11	01—9

Twiss	10	01	10—3
Nuttleman	10	10	10—3

Practice:

C O Harris	11111 — 5
Cartwright	11001011 — 7
Nuttleman	0011101000101111100010010—13
Twiss	1001111110 — 7
Davis	1101110000 — 4
Gaylor	0011101001 — 5

The club will use five Keystone traps at the tournament Aug. 27.—KOSMOS.

WALNUT HILL, Aug. 21.—There was an unusually small attendance at the range to-day. The weather conditions were good, and some fine scores were made, notably the clean score of 30 birds made in the gold coin match by W. E. Perry. Gold coin match—15 clay birds and 15 keystone targets, keystone squad system:

	Clays.	Keystones.
Perry	111111111111111—15	111111111111111—15—30
Swift	111111111111111—15	111101111111100—12—27
Lee	110011111101111—12	101110111111101—13—24
Bowker	111110111011111—13	111000111101111—11—24
Nichols	101111111010001—11	011011010111111—11—22
Hammond	101010010101111— 9	011111111111101—13—22
Perham	101110111100011—11	001110010001011— 7—18
Thomas	1101010110 Withdrew.	
Hill	0011010111 Withdrew.	

The following named were winners in the sweepstake events: Six standard targets—Nichols and Swift 6, first; Hammond and Perham 5, second. Ten keystone targets—Swift 5, first; Hammond 4, second. Six standard targets—Hammond and Lee 6, first; Swift and Nichols 5, second. Ten keystone targets—Nichols 9, first; Swift and Lee 8, second; Hammond and Bowker 7, third. Ten clay pigeons, keystone system—Swift 10, first; Lee and Perham 9, second; Bowker 8, third. Ten standard targets—Lee 10, first; Nichols and Hammond 9, second; Swift 8, third. Ten keystone targets, keystone system—Bowker 9, first; Hammond and Swift 8, second; Nichols 7, third. Ten standard targets—Nichols 9, first; Bowker, Hammond and Perham 8, second; Lee and Swift 7, third. Ten clay pigeons—Perham and Nichols 9, first; Swift and Perry 8, second; Bowker and Lee 7, third. Ten standard targets—Hammond 9, first; Bowker and Swift 8, second; Lee 7, third. Five standard targets, straightaway, 40 yards rise—Perham and Lee 2, first; Bowker and Swift 1, second. Fifteen clay birds, keystone system—Swift and Perry 15, first; Bowker 13, second; Lee 12, third. Fifteen keystone targets, keystone system—Perry 15, first; Hammond 13, second; Swift and Lee 12, third. Seven Chicago tin pigeons—Swift 6, first; Perham 5, second; Lee 4, third. Ten standard targets—Swift 10, first; Nichols 7, second; Thompson and Perham 6, third. Five Chicago tin pigeons—Perry 5, first; Hill 4, second. Ten clay pigeons—Swift and Perham 9, first; Thompson 6, second; Hill 4, third. Five straightaway standard targets, 40 yards rise—Perry 11000, first; Nichols 00100, second. Five straightaway standard targets, 40 yards rise—Nichols 11000, first; Perry 00100, second. Five straightaway standard targets, 40 yards rise—Nichols 00110, first; Perry 00010, second. The next shotgun competition Sept. 4.

ATLANTIC CITY, N. J., Aug. 17.—The third live bird match between S. B. Vandegrift and Jack Faulkner on one side and Geo. A. Muller and John Rothacker on the other side was shot at the Inlet, the conditions of the match being $50 a side, 15 birds each, 30yds. rise, Hurlingham rules, 50yds. boundary. The weather was very fair for shooting and the shoot was witnessed by at least 500 spectators; the birds, with the exception of a few, very strong flyers. This was the deciding match, as each party had one victory, but Faulkner and Vandegrift carried of the honors, winning two out of three. Following is the correct score of the shoot:

Vandegrift	011211201010011—10	Muller	001210011002111— 9
Faulkner	101212111211112—14—24	Rothacker	111211211010110—12—21

PARIS, Ky., Aug. 21.—John Webb, Jr., and Robert C. Tucker had a match shoot at the Maysville Bridge to-day for $20 a side, 100 clay-pigeons. Webb won the match by breaking 84 pigeons to Tucker's 83. The following is the summary:

Tucker	1011111011100100101111—15	Webb	1111111111111111111111—20
	1111110111111111101—18		1011111111101111101—17
	1111111001011111110—16		1011110111111110101—16
	1110111101110110111—16		1110011011111111160010—14
	1101101111111111111—18		1111011111011111010—17
	—		—
	83		84

BLAUVELTVILLE, N. Y., Aug. 24.—The Spring Hill Gun Club and visitors made the following scores this afternoon. Weather perfect. All events 5 traps, 10 birds, angles, entrance 50 cents, ties divided.

No. 1:

Allen	0111110101—7	Snedeker	0011000010—3

WELLINGTON, Mass., Aug. 24.—Some two dozen gunners faced the traps at the grounds of the Wellington Club to-day, and some good shooting was done in the several matches. In the silver pitcher match, at 8 clay pigeons and 7 blue rocks, Nichols was the winner with 15 straight. The other scores in this match were: Shumway 13, Bond 12, Stone, Melcher and Cowee 11, Sanborn, Chase and Warren 10, Bradstreet and Snow 9, Chapin 8, Bradbury 6. In the merchandise badge match at 15 clay pigeons, Sanborn, Shumway, Bradstreet and Bond tied with 14 each, and in the shoot off Bond won. The other scores in this match were: Bradbury 13, Chase, Chapin, Stone, Melcher and Snow 12, Cowee, Warren and Porter 11, Webster 9. The winners in the sweepstakes follow: First event, 5 clay pigeons—Chapin and Melcher 4, French and Bradbury 3. Second event, 6 blue rocks—Shumway and Chapin 5, Chase and Bradbury 4. Third event, 10 clay pigeons—Chapin 9, French 8, Shumway and Melcher 7. Fourth event, 5 clay pigeons—Chapin, Bradbury, Sanborn and Porter 5, Melcher, Stone and Snow 4, Warren and Webster 3, Bradstreet and Cowee 2. Fifth event, 6 blue rocks—French 6, Chase 5. Sixth event, 6 blue rocks—Snow 6, Chapin and Bond 5, Bradbury and Everett 4, Warren 3. Seventh event, 5 clay pigeons—Bond and Nichols 5, Shumway, Porter, Bradbury and Melcher 4, Cowee 3, Webster 2. Eighth event, 7 blue rocks—Stone and Shumway 6, Bond 5, Bradbury, Edwards and Webster 4, Chapin and Porter 3. Ninth event, 8 clay pigeons—Cowee, Shumway, Bond and Edwards 7, Porter and Melcher 6, Sanborn and Stone 5, Bradstreet and Snow 4. Tenth event, 5 clay pigeons—Webster and Sanborn 5, Bradstreet and Snow 4, Cowee, Warren and Chase 3, Porter 2. Eleventh event, 5 clay pigeons—Bradstreet 5, Chapin and Bond 4, Webster and Melcher 3, Stone 2. Twelfth event, 6 blue rocks—Sanborn 6, Stone, Bond and Chase 5, Edwards 4, Shumway 3. Thirteenth event, 6 blue rocks—Bradstreet and Yellowlegs 6, Chase 5, Warren, Porter, Everett, Bond and Webster 4, Shumway and Homans 3. Fourteenth event, 10 clay pigeons—Sanborn and Edwards 10, Chapin and Bradstreet 9, Bond, Nichols and Warren 8, Stone 7. Fifteenth event, 6 blue rocks—Chapin 6, Bond 5. Sixteenth event, 6 blue rocks—Cowee 6, Chase and Sanborn 5.

CINCINNATI, Aug. 20.—Bandle, Murphy and Ferris were narrowly defeated by another aggregation of three at the East End Club grounds to-day. The losers paid $50 to the winners and the expenses of the match in full and banqueted the delegation, some fifteen, at a prominent first-class Cincinnati restaurant on their arrival in Cincinnati. The match was close and exciting, but landed the men winners as follows:

HUTCHINSON, Kan., Aug. 24.—The Hutchinson Gun Club held their third quarterly shoot yesterday. The shooting was not up to our regular average, as there was a stiff Kansas breeze blowing over the traps, or what some Eastern shooters would call a gale; and I believe we have the swiftest throwing traps in the country, as I have seen nearly all the traps of the gun clubs in this part of the country, and I have seen none to equal them yet; and this fact, together with the wind, made it very difficult shooting. The race was a very interesting one from start to finish. Mr. Fred Burslem, our gun dealer, won the trophy, with a very creditable score, considering the condition of the weather. He used a 12-bore Lefever, under 8lbs., and smoked his birds in good shape. One of the members, after missing three straight, was heard remark, "I would like to see some of the experts break 86 out of 100 over these traps." Conditions of match, 50 single bluerocks: Fred Burslem 38, J. D. George 36, E. H. Young 35, Will Allen 33, E. B. Holly 32, C. H. Menke 32, Miles Taylor 32, Wm. Chamberlain 28, H. J. Winters 24. C. R. Dodds 17.—SHADY.

ROME, N. Y., Aug. 23.—The Rome Gun Club held its regular weekly shoot at the Riverside Park to-day, and the following scores were made in sweeps at 12 birds each, except the last, when it was at 10:

E L Betson	10 11 11 9 5	William Besley	9 6 .. 6
M R Blackman	9 10 10	George Hauk, Jr.	9 10 10 10
J L Farquaharson	8 6	P Smith	7 2
M B Kingsley	9 8 10 10 9	H O Tooker	6 9 6 ..
George Payne	4 4	H H Jones	9 9 6
E C Worden	8 10 8	Suits, Canastota	6 9 4
W P Walker	10 10 8	Roberts, Canastota	12 6

Messrs. Suits and Roberts, of Canastota, reported that the Canastota team could not meet the Romans to-day as intended. They desired a postponement of the friendly shoot agreed upon until a later day. This was granted.

N. Y. SUBURBAN SHOOTING GROUNDS.—Claremont, N. J. Aug. 24.—Shoot for Lefever trophy:

Jones	1111111111111111010111111—23
Sigler	1111111111111111111111111—25
Johnson	0110101111111101111111111—22

Sweep No. 1: Jones 8, Sigler 10, Johnson 7, Apgar 7.
Sweep No. 2: Jones 9, Sigler 9, Johnson 4, Apgar 5, McNeill 3.
Sweep No. 3: Jones 8, Sigler 10, Johnson 5, Apgar 8.
Sweep No. 4: Jones 8, Sigler 10, Johnson 8, Apgar 8, McNeill 4.

Apgar second on shoot off.

Sweep No. 5: Jones 5, Sigler 6, Johnson 6. Johnson took money.
Sweep No. 7: Jones 6, Sigler 10, Johnson 9, Apgar 9. Johnson took second on shoot off.

NEWARK, N. J.—The Southside Gun Club will hold a shoot on the club grounds on Labor Day (Sept. 2), being at 10 A. M. Ten events will be provided at the usual rates, and the prizes will be divided into 40, 30, 20 and 10 per cent.

INDIANAPOLIS, Aug. 19.—There was a shooting match to-day between Ed. Voris, of Crawfordsville, and George C. Beck, this city, on which considerable money was wagered. The terms of the match called for 25 clay-pigeons, 18yds. rise; 25 live pigeons, 31yds. rise; 25 English sparrows, 26yds. rise, and the score shows: Clay-pigeons, Beck 22, Voris 18; live pigeons, Beck 21, Voris 22; English sparrows, Beck 25, Voris 22.

WORCESTER, Mass., Aug. 23.—The principal event at the regular meet this week of the Worcester Sportsmen's Club was the eighth contest for the Norcross trophy, which was secured for the next two weeks by G. J. Rugg. In this contest each man has a possible 30 clay-pigeons. The meet was at the ground of the club at Coal Mine Brook range. The work of each man in detail follows: G. J. Rugg 29, C. B. Holden 27, W. R. Dean 26, E. T. Smith 26, W. E. Johnson 26, E. B. Burbank 26, W. L. Davis 26, A. L. Gilman 25, F. M. Harris 25, M. D. Gilman 24, E. S. Knowles 24, H. W. Webber 24, E. Welch 23, Geo. Sampson 23, F. F. Swan 22, A. B. Franklin 22, C. H. Howe 20, Mr. Ames 20, H. D. Jourdan 19, C. R. Holman 17, F. Forehand 17, J. C. Doherty 14, V. F. Prentice 15, H. Smith 13, Capt. E. A. Hams 5.

FODDE'S TOURNAMENT.—St. Louis, Aug. 24.—Please omit live birds from announcement of my shoot and make it targets exclusively.—FODDE.

ELMSFORD, N. Y., will have an amateur tournament at Keystones, Sept. 2.—THOS. B. WARD, Manager.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Canoeing.

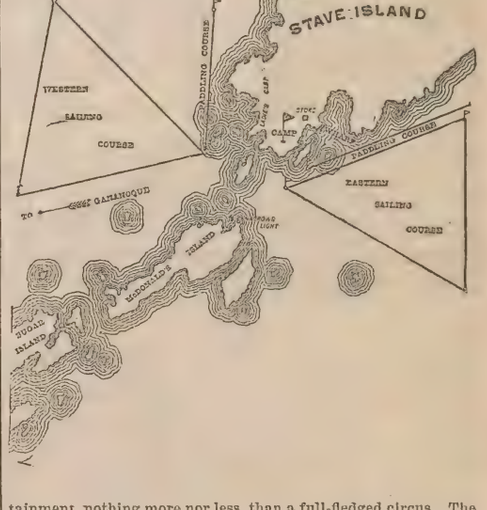
AMERICAN CANOE ASSOCIATION MEET.

TENTH ANNUAL.

Stave Island on the St. Lawrence.

SECOND PAPER.

MONDAY, Aug. 19, P. M.—The combined race was called immediately after dinner. No. 5 on programme, 1½ miles sail and 1½ miles paddle, in half mile stretches. Twelve started at 3:03:07; nine finished. Won by H. L. Quick, of Yonkers, in canoe Evangeline, 3:52:18, thus completing the course in 49m. 41s., the best time ever recorded. W. G. MacKendrick was second (3:54:04). Gage, Brazer, Goddard, Whitlock, Forrest, Fraser and Masten followed in the order named. At times during the race MacKendrick led. Quick did the best work of the race on the last half mile paddle. It was a hard race well contested all through.



No. 9, Tandem, half mile paddle, followed soon after the combined race, four crews. MacKendrick and Wright won with single blades, Cartwright and Putnam came in second, double blades. Torrance and Smillie, single blades, third, and Quick and Masten fourth, doubles.

No. 1, Paddling, Classes 2 and 3 decked, half mile, won by M. F. Johnson, A. S. Putnam second, followed by Masten and Cartwright.

No. 4, Paddling, Class 4, open, half mile, won by H. Wright, second and last J. MacKendrick.

The upset paddling race (No. 11, 150yds.) was then called, although it was after supper time, so as to get as much of the programme worked off as possible. Won by Andrews, as usual, H. F. MacKendrick second, Goddard third, Whitlock fourth. M. F. Johnson did not finish. Open canoes were given half a minute start. Decked canoes won. This event wound up the racing for the day. Six of the fifteen events were successfully worked off.

The big tent, erected for business meetings, etc., in the orchard near the mess sheds, by order of the commodore and committee on camp site, suggested to L. W. Seavey a novel enter-

tainment, nothing more nor less than a full-fledged circus. The idea was splendidly carried out by him and his twenty or more aids, and the show that was given this (Monday) evening will be long remembered by all who saw it or took a part. There have been camp-fires at former meets, lantern parades on the water, practical jokes, mock trials, songs, speeches, and many other evening entertainments, but never before a circus, and a genuine one, too. There was bareback riding, tight-rope walking, gymnastics, contortion acts, bar performances, tumbling, turning, clown business, ringmaster, trick animals, heavy-weight lifting, barrel-turning, handsprings, summersaults, wild men and wild animals, a band, sawdust ring, Deadwood coach and all. The circus was a success as an entertainment, and ten-cent admission paid more than double the money expended in getting it up. Mlle. Jabberwock, in true circus-rider costume, mosquito-netting dress and all—barring a heavy moustache—rode a farm-horse, well tired out after a hard day's work. She (or he) was mounted on a board platform tied on the colt's back over some canoe cushions. The animal was led round the ring by two attendants, and carefully stopped before the hoop-holders to give the lady time to get comfortably through the paper and hand the ring back to the attendant. The tight rope was easily walked by a daring canoeist, who put his balancing-pole over a rope stretched above his head, and then fearlessly ventured forth. The entire programme lasted over two hours and kept the large audience in fits of laughter all the time. The costumes, although impromptu, were clever, appropriate and often artistic. Rubber balls did good service instead of iron ones for the giant to lift, as the latter were not to be had. The show terminated with the taking of a flash-light photograph of the interior of the big tent, audience, band, performers and all. The show was announced in some of the local Canadian papers. On the Wednesday following Manager Seavey received a letter from a young fellow in Toronto, who applied for a position as tumbler in the circus, sending a letter from a temperance society stating that he was of good character. He evidently had been led to suppose that the circus was a permanent organization.

Tuesday, Aug. 20.—Calm. No. 2. Paddling, Class 4, decked, therefore first called. Twelve started and finished. Record race, won by W. G. MacKendrick (Mac), Cartwright (Ilex) second, Colin Fraser (Uno) third. It was by far the best paddling race of the meet, closely contested and exciting all through. No 10 then followed, for club fours, Ubique vs. Toronto, James MacKendrick and his three sons won. Wright, Shaw, Tulgie and Mason, of Toronto, however, fought every inch of the way and lapped the Ubique boat at the finish, where a foul occurred and the Toronto crew were swamped, Shaw having quite a narrow escape. He was so exhausted that he sank at once when the canoe went down. His companions grabbed him, and kept him afloat till assistance arrived. This ended the morning's racing.

The trophy sailing race was called first after dinner, as a light breeze had sprung up which promised to stay. Start was made at 3:35. The twelve who earned their right to race were: Dr. J. A. Gage, Ford Jones, R. F. Broyer, W. G. MacKendrick, Paul Butler, B. W. Wood, R. W. Bailey, F. T. Walsh, W. Whitlock, C. B. Vaux, F. F. Andrews and Colin Fraser. Forrest won place II in Monday's race, but was ruled out for fouling Whitlock. The three invited to compete were Forrest, Douglas (who was 14 on the trial race) and Goddard, who had been upset in the first race by a canoe which fouled him. The wind held light throughout the race. The course was sailed to port. There was no tacking, as the canoes could lay a true course on every leg of the triangle. Dimple was the only canoe having to make a tack in the entire race.

Order in which canoers completed each round:

	1st.	2d.	3d.	4th.	5th.	Finish.
1. Jones	3	3	3	1	1	5 15 40
2. Butler	5	4	4	2	2	5 16 26
3. Douglas	2	2	2	3	3	5 17 50
4. MacKendrick	4	5	5	4	4	5 17 58
5. Goddard	7	6	6	5	5	5 18 39
6. Gage	10	9	7	6	6	5 18 56
7. Brazer	6	8	8	7	7	5 20 52
8. Fraser	8	10	10	8	8	5 21 01
9. Andrews	12	13	11	9	9	5 24 28
10. Walsh	14	14	13	10	10	5 25 08
11. Vaux	13	12	12	11	11	5 27 31
12. Forrest	11	11	14	12	12	5 31 08
13. Bailey	1	1	1	Tiller broke.		
14. Wood	9	7	9	Dropped out.		
15. Whitlock	15	15	15	Dropped out.		

Time of winner over the course, 1h. 40m. 40s.

Cannuck, the winning boat, was the only one in the race carrying standing sails. Nearly all used deck seats.

No. 13. Upset sailing race was called directly after the trophy. Six starters. Andrews righted his canoe first but had too much water in to compete with Goddard's canoe Blanche, which has the cockpit all fenced in. Blanche won by half a length, Andrews second. Forrest could not right Dimple after the upset owing to the very large sails he carried holding so much water that they outweighed him. Douglas, too, had to be towed ashore.

The Central Division held their business meeting right after supper, Vice-Com. Huntington in the chair. Geo. A. Warder, Springfield, O., (the original Jabber) was elected Vice-Commodore, and James Shiras, Cincinnati, O., Purser. Both these gentlemen are also members of the Western Canoe Association. Mr. Warder suggested that the Central Division hold their meet next July on Ballast island, with the W.C.A. This idea met with great favor, nothing was passed formally however till time is given for a conference. The other officers elected were: Rear-Com. Mr. E. L. French of Buffalo, and Ex.-Com., Member, J. S. Wardwell, Rome, N. Y. The proposed amendment to allow 50 members to form a Division (instead of 100, as now written), was sat down on pretty hard, and the members of the executive committee A.C.A. present were instructed to vote against it if it was proposed at the annual A.C.A. meeting Wednesday evening.

The Northern Division also held a business meeting and elected the following ticket: W. J. White, Vice-Com., Montreal; W. J. Read, Rear-Com., Bobcaygeon; Chas. M. Whitlaw, Purser, Montreal; D. B. Jaques, Ex. Com. Men., Toronto. After several ballots had been cast for the different places suggested for holding the meet—and a hot discussion indulged in—Lake of the Two Mountains, near Montreal, St. Lawrence River, was chosen.

Wednesday, Aug. 20.—The cruising race, No. 14, was set for this morning, but a gale of wind prevented it being called. The special Barney cup race, and the special Northern Division cup race were also postponed. No. 8, championship (trophy) paddling race was called. Torrance, Smillie, Johnson, Putnam, Wright and MacKendrick were eligible for it, from the results of the record races. MacKendrick did not enter. Johnson won, Putnam second, Torrance third.

A protest was made by Mr. Torrance, of Brockville, against Messrs. Johnson and Putnam, on the ground that the canoes used by them in the championship paddling were not in accordance with the rule. The two canoes were mere shells, built of ⅜in. planking and weighing but 35lbs. each. They were decked with stuff little thicker than veneering and equipped with ridiculous substitutes for centerboards and rudders, with mast holes too small to carry a reasonably strong spar. The decision of the regatta committe was as follows:

The regatta committee unanimously declare Messrs. Johnson and Putnam ruled out of Race No. 8, as their canoes do not comply with the conditions regulating such race, their boats not being properly equipped sailing canoes. This ruling also applies to all other races in which these gentlemen took part. D. B. JAQUES.
(Signed) R. W. BAILEY.
E. L. FRENCH.

Thus the honor flag was awarded to Torrance.

A subscription has been started to provide a cup for a paddling trophy, to be a perpetual challenge trophy to be raced for under such conditions as the committee my impose. Messrs. Gibson and Whitlock will receive subscriptions.

Torrance won the hurry-scurry (No. 12), with Douglas second. Toronto and Brockville had a tug-of-war. Brockville won first heat; Toronto won second and third.

At the meeting of the Executive Committee in the evening Mr. Henry Stanton, of New York, was elected Commodore for 1890, and Mr. F. L. Dunnell, of Brooklyn, was elected Secretary-Treasurer. The question of a meeting place for next year, within the Atlantic Division, was informally discussed, and a site on the north shore of Long Island, probably Oyster Bay, was recommended as the most desirable. The idea of a salt-water meet near New York city was received with enthusiasm by the Canadian members, and a large attendance is promised. Dr. Gage called attention to the need of a change in the record system, recommending that canoes must start in all three of the record races in order to win a prize. This suggestion was very favorably received, and will probably be acted upon.

After the meeting a large camp-fire was lighted and kept up until a late hour, the banjoes, guitars and a mandolin furnishing good music.

For the first time the record was made up as early as Wednesday night, thanks to the untiring industry of the clerk of the course, Mr. David A. Poe, of Montreal. The full list is as follows:

RECORD 1889.

Name.	Canoe.	Points.
1. W. G. McKendrick	Mac	27.837
2. J. A. Gage	Owl	24.478
3. R. F. Brazier	Ellida	22.479

W. S. Lister	Bat	1.692
R. W. Baldwin	Irene	1.346
D. Strickland		1.000
J. MacKendrick		1 000

Thursday brought a change of weather that promised to be permanent, clear skies and a warm sun. The first race called was Event 14, sailing cruising race; the course being shortened from six to three miles. The start was made with sails on deck, and at the end of the first round they were lowered and hoisted again. The four starters were:

		1st Round.	2d Round.
Evangeline	H L Quick, Yonkers	10 29 09	10 52 37
Hyla	D B Jaques, Toronto	10 32 52	10 58 23
Mac	W G MacKendrick, Toronto	10 36 09	11 01 27
Inez 3d	D A Poe, Montreal	10 39 05	Withdrew.

Mac capsized on first round but righted and finished the race. The next race was for the Pecowsic Cup, a large and handsome vase of burnished copper, made by Granberry & Co., of New York, and presented by Mr. Barney in memory of his son, the late George M. Barney. The cup must be sailed for at each annual meet until won twice by the same man. The winner of the A. C. A. trophy not being eligible for this race. The distance was set at six miles, but for this first race was reduced to three. The summary was:

			1st Round.	2d Round.
Cyrus	Wm. Whitlock	Brooklyn	11 53 37	12 13 15
Owl	J. A. Gage	Vesper	11 53 23	12 15 29
Blanche	D. S. Goddard	Vesper	11 55 17	12 15 30
Alpha	E. Masten	Yonkers	11 55 55	12 16 46
Nenemooska	G. P. Douglas	Ianthe	11 56 00	12 17 30
Drift	J. C. Dempsey	Vesper	11 59 48	12 23 26
Uno	Colin Fraser	Ubique	12 01 28	12 24 20
Fly	Paul Butler	Vesper	11 54 11	12 25 21
Mac	W. G. MacKendrick	Ubique	Broke rudder.	
Chum	H. M. MacKendrick	Ubique	Capsized at start.	
XX	H. Rogers	Peterboro	Capsized.	
Evangeline	H. L. Quick	Yonkers	Mast step broke.	
Ellida	R. S. Brazer	Vesper	Steering gear broke	

Cyrus mistook the flags at the starting line and did not cross properly, so the cup goes to Owl. Owl sailed her last leg, a reach, with her well full of water. Nearly every boat which finished capsized during the race, but was righted by her crew and continued.

A special race, paddling, with turn, for a Brough centerboard, presented by the maker, was won by A. Smillie, of Brockville, with A. Torrance, also of Brockville, second, out of four starters. The day's racing finished with canoe gymnastics, Mr. Forrest taking the prize.

The general meeting of the Association was held in the afternoon, the prizes being presented by the ladies from Squaw Point. The result of the election of officers was publicly announced. The evening was given up to a camp-fire, the ladies being present.

Friday was also clear and bright, and though many were preparing to leave, the Northern Division race for the Orillia cup was called with 10 startors, the summary being:

		1st R'nd.	2d R'nd.	3d R'nd.	4th R'nd.
Uno	Colin Fraser	10 08 00	10 27 00	10 45 45	11 15 00
Hyla	D. B. Jacques	10 10 05	10 31 30	10 55 00	11 16 08
Mab	Chas. Archibald	10 11 00	10 33 40	10 56 15	11 16 45
Mac	W.G. MacKendrick	10 12 15	10 34 40	10 58 00	11 19 30
Levite	W. Lee	10 10 00	10 32 15	10 56 00	11 19 40
Inez 3	D. A. Poe	10 15 00	10 42 15	11 08 00	11 35 00
Grebe	A. H. Mason	10 13 15	10 39 40	Withdrew.	
Petrel	G. E. Sparrow	10 14 00	10 38 10	Withdrew.	
Dixie	H. B. Tillie	10 17 00	Withdrew.		
Isabel	Robt. Tyson	10 17 30	Withdrew.		

Chum was entered, but again capsized at start. Mac's deck seat broke and dropped the crew into the drink, but did not capsize, so he climbed aboard and continued. Uno capsized on third round, but righted, and won. She is better known as Dawn, an old racer.

The prize for the best canoe cooking kit was awarded to James Cartwright, of the Puritan C. C., the other contestants being Messrs. Scott, Quick, Poe, Wilkin, Rice and Judge Dartnell.

A large number left camp at noon, and in the evening only about fifty were left in the main and ladies' camp, most of these leaving on Saturday. The weather, cooler than usual and with a great deal of rain, was very different from that of the three years at Grindstone, but the meet was a success in spite of such a serious drawback.

THE PLAINT OF THE SINGLEHANDER.

AH, woe is me, and, ah, woe is me,
And sad is my dreadful lot;
For, like the tar of the Nancy brig,
I'm crew of a young man's yacht.

At daylight's dawn I the whole crew am,
And I holystone the deck;
I scrub, and scrub, and rub, and rub.
Till of dirt there's ne'er a speck.

Then I put on an apron and cap,
And, lo and behold, I'm a cook;
Though what I don't know about such things
Would fill an enormous book.

And after that the first mate I am,
And report to my cap'n bold,
Arrayed in my togs of navy blue,
With buttons of shining gold.

I've got "Defiance" writ on my cap,
For that's the name of the yacht;
But I nurse defiance in my soul,
For such is my dreadful lot.

The jolly crew of the cap'tain's gig
Is next in my line of parts,
And I rows the captain safe ashore,
Then back to the ship I darts.

And so it goes from morn till night,
Till my brain is all at sea;
And I sometimes has to stop and think
To find out just who I be.

—*George D. Sutton, in Puck.*

THE CORINTHIAN RACES.

MARBLEHEAD, Aug. 24.—The first races of the midsummer series of the Corinthian Y. C. were sailed in light and fluky winds and calms. Rain fell all the morning. The start was postponed until noon, when it cleared up a trifle, and a light wind came in from the northeast. When the yachts were half way over the course the wind died away entirely and for a time the yachts floated about in a dead calm. Only the 40 and 27ft. classes finished, and Minerva had only twenty-three seconds to spare before the time limit was up.

The races included those for the Weld cup for 40-footers, best three in five, Chiquita having already won a leg. A race for 30-footers for a cup valued at $125, given by a club member, and in addition a cup of the value of $100, offered by Saracen's crew for the 30ft. yacht making the best average in the three races for it, Saracen barred, was also sailed. The Corinthian Y. C. also offered a cup of the value of $100 for the yachts, sloops and cutters of the Corinthian club of 21 and not over 27ft. The course for the 30 and 40-footers was from a line between the judges' boat and Marblehead Rock; thence to a mark boat, eight miles southeast, three-quarters south, leaving it on the starboard; thence to Graves Whistling Buoy, leaving it on the starboard; thence to the starting point; distance 24 nautical miles. The smaller class rounded the first mark and return, distance 16 miles.

The yachts were timed around the mark as follows:

Minerva	2 01 00	Chiquita	2 04 00
Tomahawk	2 01 30	Alice	2 12 00

After turning the mark light sails were set and a long drifting match took place to the Graves. On rounding the second mark the wind increased to a good sailing breeze and the yachts made fair time home. They were led by the Minerva. The little cutter increased the distance between herself and the rest of the fleet, and finished some seven minutes in advance of her nearest rival.

Just after the start of the forties, the 30ft. class was sent away. Saracen obtained the advantage and was followed by Shark, Kathleen, Harbinger, Union and Crystal in the order named. Soon after the start Kathleen pushed to the front and obtained a good leading position. Had the wind held she would have finished first without doubt. Shark was second at the time, with Saracen just behind. As they could not finish before the time limit, the race in that class was declared off.

The whistle for the start of the 27ft. class was blown at 12:40:30. The yachts crossed the line as follows:

Wanda	12 41 00	Mopsa	12 42 00
Agnes	12 41 30	Posy	12 42 15
Siva	12 41 45	Ione	12 42 30
Swordfish	12 41 45		

In this class Swordfish was the first yacht to turn the outer mark, and she was followed by Ione 6m. later. Mopsa was just behind, and the others were well to the rear. The yachts held a good wind home, and Swordfish on the run increased her lead and crossed the line many minutes ahead of the class. Following is the summary:

FORTY-FOOT CLASS.

	Length.	Elapsed.	Corrected.
Minerva, C. H. Tweed	46.04	6 00 37	5 57 28
Tomahawk, E. D. Morgan	48.68	6 07 04	6 07 04
Chiquita, A. Hemenway	46.88	6 12 41	6 10 11
Alice, P. D. Wheatland	46.35	6 18 50	6 15 41

TWENTY-SEVEN-FOOT CLASS.

Swordfish, J. B. Paine	31.06	4 16 04	4 06 46
Posy, R. G. Hunt	28.07	4 38 37	4 25 19
Ione, J. B. Poyen	36.08	4 35 08	4 31 51
Agnes, W. E. Cummings	31.02	4 42 33	4 32 49
Mopsa, C. F. Lyman		4 39 03	Not meas.
Siva and Wanda		Times not taken.	

Aug. 26.—The wind was blowing fully twenty miles an hour at the time of the start, and the judges decided to send the boats to windward, making the course ten miles to windward and return. The Xara, under the management of Capt. Tom Sloan, late of the Gorilla and Liris, was first to cross the line, followed by the Tomahawk, Minerva, Pappoose, Chiquita, Gorilla and Alice. The Minerva had only just got under way when she lost her bowsprit, and a few minutes later the Tomahawk lost her throat halliards and tore away her main sheet block, withdrawing from the race. The Xara, which carried all her lower sails and working topsail, made rapid work of it at first. She tacked to starboard at 11:19 and was obliged to keep off, when the Chiquita, her nearest competitor, passed her to windward.

At 11:15 the 30-footers were sent away, the Cape Cod cat-boat Harbinger taking the lead, followed closely by the Kathleen, Mignon, Saracen and Shark. Just after passing Half-Way Rock the Kathleen went by the Harbinger, and soon after the Saracen took second place. Then the Shark passed the Cape Cod boats, and the Harbinger and Mignon were left to fight it out.

At 11:20 the 27-foot class got away, with the Posy leading, the Ione and Agnes a little way behind, and the Swordfish, Moondyne, Wanda, Echo and Madge following. The Ione took the lead and did some fine windward work, outpointing the fleet. At 11:21 the Chiquita tacked to starboard, followed by the Pappoose a minute later. The Gorilla followed suit, going just to leeward of the Kathleen, which was then leading the 30-footers. At 12 o'clock the Chiquita had the lead, with the Gorilla, Xara, Pappoose and Alice following. They turned the outer mark as follows:

Chiquita	1 21 12	Xara	1 25 08
Gorilla	1 23 29	Pappoose	1 31 12

In the meantime the 30-footers were nearing the mark, with the Kathleen ahead a half mile, and they turned as follows:

Kathleen	1 36 39	Harbinger	1 47 00
Saracen	1 41 10	Mignon	1 51 48
Shark	1 44 03		

After rounding the mark both classes set their spinakers and stood for the finish. The Alice tried to send her topmast aloft, it having been housed, but it had swelled so that it would not move, and she was obliged to give up the attempt. On the run home the Chiquita held the lead, and finished at 2:12:39. The Gorilla gained on the Xara and Pappoose, and passed them, finishing at 2:14:28, the Xara coming in next at 2:17:45, and the Pappoose at 2:24:16. Alice did not finish.

Of the 30-footers the Saracen cut down the lead of the Kathleen, and the Snark made a gain of one minute. The Kathleen finished at 2:57:08, and the Saracen at 2:59:30.

The Ione was the first to finish of the 27-footers, with plenty of time to spare, the Swordfish finishing 7½ minutes later.

The race was intensely interesting throughout, the wind holding good. The Posy lost a man overboard, and, after rescuing him, put into Gloucester. Following is the summary:

FORTY-FOOTERS.

	Elapsed.	Corrected.
Chiquita	3 22 39	3 20 34
Gorilla	3 24 38	3 24 08
Xara	3 27 45	3 25 08
Pappoose	3 34 16	3 27 38

THIRTY-FOOTERS.

	Elapsed.	Corrected.
Kathleen	3 42 45	3 42 21
Saracen	3 44 03	3 42 27
Shark	3 49 56	3 47 50
Mignon	3 58 09	3 51 27
Harbinger	3 54 22	3 48 46

TWENTY-SEVEN-FOOTERS.

Ione	2 42 07	2 36 24
Swordfish	2 50 33	2 43 54
Wanda	3 01 37	2 42 41
Moondyne	2 53 22	2 43 51

Posy, Echo, Madge and Agnes did not finish.

Aug. 26.—The 30 and 40-footers sailed over the triangular course formed by Marblehead Rock, Graves Whistling Buoy and the markboat; distance twenty-four nautical miles. The 27ft. class sailed sixteen miles out to the first mark and return.

The wind at the start was strong from the northeast, but shifted to the eastward as the day advanced. It was a day of accidents, and before the first mark had been reached half the fleet was disabled. It was not the wind, but the bad sea that caused the mishaps. About twenty minutes after the start a big wave struck the fleet, and away went the Gorilla's topmast, snapping off about four feet above the masthead and disabling the yacht.

Five miles from the start the Xara was holding a leading position, Pappoose being second and Chiquita third. Heavy seas were met and three more boats were disabled. The spreader of Xara broke and left no support for her topmast. She lowered her clubtopsail and bravely continued the race, but having no show for a position withdrew after rounding the first stakeboat.

The Minerva was the next to meet with an accident. Her port rigging was carried away, but the quick work of her trained crew saved her topmast. This set the Minerva back to last place. Just then the spreader on the Alice broke, and, although she kept on in the race, she was badly handicapped.

During these exciting scenes the Pappoose had gone to the fore and the boats rounded the first mark as follows:

Pappoose	12 10 38	Xara	12 12 20
Chiquita	12 11 19	Tomahawk	12 12 25
Minerva	12 12 09	Alice	12 18 36

In the run to the Graves the wind shifted to the eastward and balloon jibs were set. The boats with larger sails drew up on the Pappoose, and the Minerva passed her about a mile from the first stakeboat. The time at the second mark was:

Minerva	1 30 57	Tomahawk	1 32 22
Pappoose	1 31 17	Alice	1 38 09
Chiquita	1 31 25		

The last leg was a beat home, and the Minerva again showed her superiority over the American boats, and finished an easy winner. The Pappoose slipped into second place by corrected time.

The 30-footers crossed the line in this order: Saracen, Harbinger, Kathleen, Shark and Mignon. Saracen led the fleet over the course. The bad luck of the day struck Shark, and her mast broke 10ft. above the deck. She saved her sails, and lashing her clubtopsail to the stump of the mast, put back to the harbor. After turning the stake the Mignon and the Kathleen drew up toward the irons and passed the Harbinger. On the windward work the New York boat, the Kathleen, immediately began to show her power and took the lead of her class, but she did not get out of her time allowance, and, although she finished first, she was beaten on corrected time by the Saracen and the Mignon.

The small boats of the 27ft. class had a hard time in the choppy sea, but were generally well handled. Ione and Siva were disabled and withdrew. The summary is as follows:

FORTY-FOOT CLASS.

	Elapsed.	Corrected.
Minerva, C. H. Tweed	3 57 11	3 53 15
Pappoose, Bayard Thayer	4 07 29	3 57 29
Tomahawk, E. D. Morgan	4 01 53	4 01 53
Chiquita, A. Hemenway	4 05 12	4 02 04
Alice, C. A. Prince	4 11 52	4 07 56
Xara, James Means	Disabled.	
Gorilla, R. P. Carroll	Disabled.	

THIRTY-FOOT CLASS.

Saracen, W. P. Fowle	4 23 07	4 20 36
Mignon, B. Robson	4 30 20	4 22 28
Kathleen, W. Wurlock	4 32 18	4 22 40
Harbinger, J. R. Hooper	4 33 28	4 23 21
Shark, Morton Prince	Disabled.	

TWENTY-SEVEN FOOT CLASS.

Swordfish, J. B. Paine	3 16 21	3 07 03
Mopsa	3 14 14	3 07 58
Moondyne, Shaw Brothers	3 55 37	3 23 16
Ione, J. S. Perrin	Disabled.	
Siva	Disabled.	

The result of to-day's race makes a tie between Minerva and Chiquita for the Weld Cup. Swordfish wins the Corinthian cup in the 27ft. class. Saracen and Kathleen are tied in the 30ft. class, unless the protest of yesterday is decided in favor of Saracen, in which case Saracen will get the cup.

BEVERLY Y. C.

THE 151st race, third open sweeps, was sailed at Monument Beach, Aug. 24, in a light northeaster.

The day opened with a dead calm, which prevented Climax in first class and Hera (late Creole) in third class from arriving in time to start.

The boats got off in a light northeasterly air, which increased till there was a decent breeze at the finish.

Sirius, in first class, had an easy time in beating Mattie with her short rig. The second class brought out champion Mist, her old competitor Wildcat, Faust from Fall River, Gymnote, Thyra and Widgeon, a new boat just completed by Dunn for Mr. Williams. The latter's sail, just received from the sailmaker, had a tight cloth in it, was baggy, and did not do her justice.

On the run down the boats bunched up. Coming home it was close work among the leaders. Widgeon did very well, while Wildcat beat them all, and Mist was unable to hold either of the leaders. Gymnote broke tacks and lost by it.

In the third class, Daisy, with her big rig, fairly beat Eina, gaining steadily all over the course, though in the last three miles, when it breezed up a little, she only gained 11s.

Result of races so far shows that in a breeze Eina is easily first in her class, but in a light air Daisy, with her large rig, can beat her right along. Summary as follows:

Courses: First and second classes, leaving B Buoy 3, Scraggy Neck Buoy and Bird Island Buoy on starboard and return; 11 miles. Third and fourth classes, leaving B Buoy 3, Abial's Ledge Buoy, judge's boat and B Buoy 3 on starboard and return; 8 miles. Wind N.E., light.

FIRST CLASS.

	Length.	Elapsed.	Corrected
Sirius, M. N. Bray, B.Y.C.	26 06	2 38 13	2 26 56
Mattie, H. Stockton, B.Y.C.	26.07	2 47 48	2 36 31
Climax, F. C. Stetson, Mattapoisett	30.04	Did not start.	

SECOND CLASS.

Wildcat, S. P. Hill, B.Y.C.	25.00	2 33 02	2 19 57
Widgeon, Moses Williams, Jr., B.Y.C.	25.08	2 34 37	2 22 19
Mist, Geo. H. Lyman, Jr., B.Y.C	25.06	2 36 08	2 23 38
Thyra, Paul Bartholow, B.Y.C.	26.01	2 36 55	2 25 05
Faust, E. S. Wright, Fall River	25.05	2 37 11	2 24 35
Gymnote, W. E. C. Eustis, B.Y.C.	25.11	2 44 50	2 32 49

THIRD CLASS.

Daisy, Howard Stockton, B.Y.C.	21.00	2 25 51	2 12 24
Eina, John Parkinson, B.Y.C.	22.00	2 27 39	2 15 16
Petrel, Vice-Com. Richards, B.Y.C.	20.07	2 39 25	2 25 30
Hera, Louis Bacon, B.Y.C.	21.10	Did not start.	

FOURTH CLASS.

Kitten, G. H. Richards et al. B.Y.C.	18.01	2 45 47	2 28 46
Dyonis, Eugene Johnson, Mon. Beach		Not timed.	

Winners: First class, Sirius; second class, Wildcat first, Widgeon second, Mist third; third class, Daisy; fourth class, Kitten. Judge, W. Lloyd Jeffries.

In the account I sent you of the Beverly Y. C. 150th race an error of timing appears. Mosca's time was 1m. slower than I wrote; hence Kathleen takes prize in third class sloops.

BLUE WITH A GOLD CASTLE.

PRESIDENT ELIOT'S GIFT TO HIS PILOT.—President Eliot, of Harvard, was one of the pioneer tourists to the Maine coast, and spent many seasons cruising around Frenchman's Bay in his yacht before Bar Harbor obtained its world-wild celebrity. One year he had a skipper from Waukeag Point, now known as Sorrento, to sail his yacht. In the fall the professor gave him as a token of gratitude a forfeyears a Webster's Unabridged Dictionary, which, as the man could neither read nor write, was as useful to him as a side pocket would be to a toad. The skipper received it with all due gratitude, and left it for safe keeping with the village doctor. Several years passed by, when one day the skipper's wife came to the doctor and said, "I guess I'll carry that ere book home now, for Sammy's ben goin' to school all winter, and he knows enough to read the stories in it now!"—*Mount Desert Herald.*

MARINE AND FIELD CLUB.—The first annual yacht race of the Marine and Field Club was sailed Saturday afternoon off the club house in Gravesend Bay. There were twelve entries, confined to second and third class sloops and one class of catboats, the first class of sloops not having been filled. The course for sloops was from the club house around the bell buoy at the junction of the swash and ship channel, keeping to the eastward of buoys 11 and 13, then to and around buoy 15 and back to stakeboat, in all about thirteen miles. The catboats only went around buoys 11 and 13, about nine miles. The starting gun sounded at 2:06, and the boats went off with the wind at south southeast. It was accordingly a beat out, then a run before the wind over the second leg of the triangular course and a reach over the third leg. The Athlon was somewhat handicapped by having to sail short-handed, while the winner in the class the Penguin, had a decided advantage over the others in being sailed by Capt. Joe Ellsworth. Of all the boats entered the Pengum was the only one sailed by a racing expert, the others being handled entirely by their owners or amateur friends. In the catboat class the Diodon (a cabin cat with fixed ballast) had almost a walkover, there being some confusion apparently in the minds of the skippers of the other two boats as to the location of the stakeboat and buoy 11, both having fouled at the stakeboat, but to right themselves they both started over again, and laid their course for Coney Island Point to escape the first of the flood, while the winner trusted to and found the ebb tide strong in the channel. The race was a decided success, and the prizes handsome, while the hospitality of the club was unbounded. It is to be hoped that their next, or second, annual regatta will be still more of a success, as their efforts are certainly in the right direction:

SECOND CLASS SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Penguin	2 07 00	4 00 58	1 53 58	1 49 01
Athlon	2 11 31	4 01 42	1 50 11	1 50 11
Annie	2 07 07	4 17 08	2 10 01	2 06 51
Amelia	2 07 54	4 30 41	2 22 47	2 15 21

THIRD CLASS SLOOPS.

Polly	2 11 10	4 19 31	2 08 21	2 08 21
Guide	2 12 37	4 37 42	2 25 05	2 23 05

The judges were ex-Commodore Rosenquest, D. E. Tuthill and Charles A. Teshon. J. B. White, E. C. Homans, F. B. Fiske and W. S. Elliott constituted the regatta committee.—H. C. WARD.

WINDWARD Y. C.—Jamaica Bay presented a lively scene on the 25th inst., when the last race of the fall series of the Windward Club was sailed. Two previous races had occurred on the 11th and 18th inst. The prizes were fine silver watches—two for first and second in first class and two for the second class. In the first class W. H. O'Donohue's Clara D. won first, and R. and A. McEvoy's Lizzie R. took second. In the second class H. T. Rigby's Sardine and L. A. McMillan's Martha were a tie, as each had won one race. It was to decide this tie, and also to determine the winner of the consolation cup, that the last race was sailed. The cup is an elegant silver and gold one, appropriately decorated, and was, by far, the most desirable trophy. The club course is from Ruffle Bar dock to the red can buoy at Rockaway inlet, thence back, turning a stake boat at the Black Wall and finishing at the dock—about twelve miles in all. The Sardine and Martha were started first and had a fairly tight race of it all the way; the Sardine finally winning by one minute and forty seconds. About twenty minutes after their start the gun was fired, and all boats which failed to win in the previous races were off for the consolation cup. There were nine of them, and a pretty sight they made, heeled over to a south-easterly wind, with sandbags and crews perched high up to windward. It was a beam wind to the Ledge of Ohaney Bar, and from that to the buoy sheets were lifted a trifle. It was nip and tuck between the Lady Glenmore and the Julita all the way down, and they turned the buoy almost together. As they hauled on the wind the supremacy of Julita at windward work was very apparent as she both out-pointed and out-footed the Glenmore, and in less than five minutes was a boat length ahead. This lead she steadily increased, as it was a close haul back to the stake boat. Turning the stake the Bertha B. followed the Julita, with the Glenmore third. It seemed like a very close race on account of the time allowance given by the Julita to both these boats, but as she started some seconds after them she was by thirty-two seconds. All the boats are cat-rigged; the Julita being 21 feet 4 inches in length and owned by Jos. Hatch, of Brooklyn. She is a Wallin boat, and in her ability to point and work to windward shows the handiwork of her builder. The official time is given below:

	Elapsed.	Corrected.
Sardine, H. T. Rigby	1 13 50	1 13 50
Martha, L. A. McMillan	1 17 39	1 15 30

CONSOLATION RACE.

Louise, Jas. Spencer	Not taken.	
Florence, Windward Club	Not taken.	

MIRAMICHI Y. C., AUG. 22.—The absence of Fisherman from Thursday's race deprived it of interest, as Kilbride was known to be a sure winner in the moderate southwest wind that prevailed. She started with a reef in her mainsail but soon shook it out and gained steadily to the turn. Kitteh made a good fight and gained half a minute on the run home. Blondy, with a jib considerably too small for her, her own having been stolen by a sneak thief, followed the others pretty closely, considering the difference in size. Fedora was nowhere in the light wind, being dead between the puffs, and was further in the rear than usual. When Kilbride was leaving the wharf after the race was over, she came in collision with her owner's steamer, Derby, and broke her mainboom. The next race for the Miller cup will be sailed Thursday, Sept. 12, when it is expected Fisherman will be on hand to compete for the cup. She has scored one for it, Kitteh one, and Kilpride two. The starters and timekeepers were Messrs. John Sadler and L. J. Tweedie. The following is the record:

	Elapsed.	Corrected
Kilbride	2 11 20	2 11 20
Kitteh	2 17 40	2 16 48
Blondy	2 26 10	2 21 21
Fedora	2 59 15	2 35 42
Shamrock	Did not finish.	

The distance was ten miles and the wind light and puffy. The race was started from Chatham while the tide was still ebbing, and it was flood tide at the finish, the boats having some tide against them most of the time. The time of the leader was therefore remarkably fast, ten miles to windward and back in 2h. 11m. 20s.

A DISASTROUS CRUISE.—Sault Ste. Marie, Mich., Aug. 22.—The pleasure cruise of the yacht Celt came to a sudden end 15 miles south of Siskowit Harbor, Isle Royal, and the pleasure-seekers arrived here last night on the steam barge Samuel Mather. The yacht sprang a leak, and sank 15 minutes afterward, giving those on board scarcely time to take their yawl boat. Then began a long pull over Lake Superior for the Sault passage, as the vicinity where the shipwreck occurred is not frequented by vessels. After being on the lake several days they were picked up off Outer Island by the Mather. The occupants of the yacht were P. M. Benser and wife, and N. G. Rodman. They were bound for Ashland on a trip down the lakes.

LARCHMONT.—The fall regatta of the Larchmont Y. C. will be sailed on Saturday, Sept. 7. Members of the New York, Seawanhaka Corinthian, Atlantic, New York Corinthian, American, Oyster Bay Corinthian, New Haven, New Rochelle, Corinthian of Marblehead, Mass., and New Bedford yacht clubs are invited to enter their yachts. For full particulars and entry blanks address E. J. Greacen, Potter Building, Park Row; Otto Sarony, Larchmont, or Chester C. Monroe, 47 William street. The club will give a special race for 40-footers Sept. 28.

PHILADELPHIA, Aug 26.—A race between the tuckups Harry Seigel and the Andrew Rivel, for a purse of $100, took place Aug. 26 on the Delaware. The course was from Riverview to the buoy off Bilingport and return. The start was made at 11:22, lower buoy 12:45, finish 1:57. The Rivel capsized off the Point House. This ruled her out. The crew righted her, bailed her out, and finished three minutes ahead of Seigel.—L. B.

BEECHAM'S PILLS cure bilious and nervous ills.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. O. C.—For game seasons see our last issue.

J. G. S.—Maynard Arms Co., Chicopee Falls, Mass.

F. E. N.—You were right if you did not mean to play it.

X. Y. Z., who wrote for information about telescope sights, will please send his address.

W. J. M., Belmont, Mass.—The addresses of bench show secretaries are given in our kennel fixtures.

S. V. W., Hackensack, N. J.—We gave all the game seasons for New Jersey in last issue. For complete text of law apply to Chas. A. Shriner, Sec'y Passaic County Fish and Game Protective Association, Paterson, N. J.

A. C. H., Hoboken, N. J.—Will you inform me through your paper whether or no the American rifle team were ever beaten? If so, when, where, and by whom? Ans. Yes; the military team of the N. R. A. was defeated at Wimbledon and at Creedmoor.

E. W. CAMPBELL, West Pittston.—1. To organize a gun club go first among your friends, and follow lines laid down in club constitution we send you. 2. There are no discriminations in privileges of shooting game, with respect to citizens and foreigners, in this country.

H., Southwest, Pa.—Is it legal to use live pigeons for trap-shooting in Pennsylvania? Can you give me any plan for capturing English sparrows alive for trap-shooting? Ans. 1. No. 2. Send to Dr. C. Hart Merriam, Ornithologist, U. S. Department of Agriculture, Washington, D. C., for the English Sparrow Bulletin.

C. B. S.—What is the composition of the artificial targets used in trap-shooting, and how are they made? Is either the composition or process by which they are manufactured patented? If so, can you give me dates of patents? Ans. They are made of clay, plaster, pitch and other substances. Targets and traps are patented; we have not the numbers of patents, but the manufacturers would send them to you.

G. F. S., Haverhill, Mass.—The Boston *Journal* reports: "The largest brook trout ever caught on this continent was landed recently at Spring Creek, N. Y. The fish weighs six pounds and two ounces, and its proportions are perfect. This is one of the species of brown trout, the spawn of which was imported from Germany and received at the New York State Hatchery on Feb. 18, 1884, so that its age cannot be more than between five and six years. The largest ever caught previously weighed a trifle over five pounds." I made statement that a much larger specimen of genuine brook trout was preserved in Smithsonian Institute, and was laughed at. Was I wrong? Ans. The Spring Creek fish was a brown trout. The record on speckled brook trout runs up to 11lbs. You were right in your statement respecting weight.

CALIFORNIAN, Los Angeles, Cal.—Can you tell me what a jew fish is? They frequent the waters about the islands off the coast of southern California, also I believe the waters of Florida. I witnessed the catching of several in the last week off Catalina Island, Los Angeles county, Cal. The largest weighed 300lbs. It was caught with live bait, rock bass. The fish is very game and the largest one took the boat for quite a little tow before it got exhausted enough for the fishers to pass a rope through its gills and tow it to shore. The fish is shaped very much like a perch of immense size. There are lots of them round the island and they afford good sport. Ans. The jew fish of the California coast is catalogued as the *Stereolepis gigas;* it is sometimes called the black sea bass, is the largest food fish on the coast, sometimes reaching 500lbs., and ranges from the Farralones to below San Diego. The jew fish of the Florida coast, also named "Warsaw" and "black grouper," is known to science as the *Promicrops guasa;* we have seen a specimen in Florida weighing 300lbs., and it reaches a weight in Cuba of 600lbs. It is perhaps the adult of the black grouper or some closely allied specimen. The name jew fish is in Florida also applied to the black grouper (*Epinelphus nigritus*). The tarpum is sometimes called jew fish.

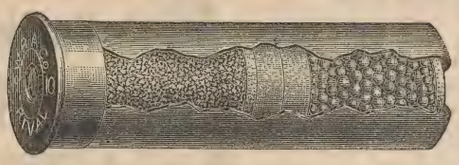
F. E. A., Waterbury, Vt.—We have a good-sized river here, which was well stocked with bass about five years ago, and we are taking a good many now, but never hear of any very large ones being taken or at least very rarely. They grow larger, as several large ones have been seen at one time or another. The general belief among our local anglers is that they run down the river and over the falls in the spring. The falls are four miles below here, and are impassable to any fish coming up stream, and I believe no bass would go down. The river rushes through a narrow gorge, over huge rocks, etc., and in one or two places has a perpendicular fall of, say, 10 to 15ft. The whole volume of the river runs through a narrow split in the solid rock, and for quite a distance above and below the perpendicular fall the water runs at a steep angle. The water is churned into foam all the way through, and it seems impossible that any fish could go through alive. The river falls quite a distance in a few rods—certainly no fish could live there, or go up stream—but some think the bass run down during high water. They have a free run of about 10 miles of river—a dam above here keeping them below it. Do you think it at all probable that large bass would shoot falls such as I have described? Ans. Bass could descend these falls safely, but it is extremely doubtful whether they could ascend them.

New Publications.

BOURGOYNE'S INVASION OF 1777, with an outline sketch of the American invasion of Canada, 1775-76. By Samuel Adams Drake. Boston, Lee & Shepard. 50 cents. This is one of the series of "Decisive Events in American History" and the turning point in the great drama of American Independence. No novel issued from the press during the current year can rival it in intensity of romantic interest.

AN ALIEN FROM THE COMMONWEALTH, The Romance of an Odd Young Man. By Robert Timsol. Boston. Cupples & Hurd. $1.50. This is a fancy biographical sketch of a young Virginian of broken fortunes during his college and early professional and literary career in Northern and Western States. The apparent object of the author is to show that while fastidious sentiments of honor are all very well to the possessor of a million, they are fatally in the way of a young man engaged in the battle of life. The author has, nevertheless, a high appreciation of such impracticable sentiments out of business hours, and after showing that his hero is unfitted for the duties of active life in a narrow sphere he endows him with an inheritance of a million by way of giving him a suitable environment.

In "Sam Lovel's Camps" Mr. Robinson has written a series of very interesting, clever and even valuable sketches which take the reader back to the great period before the beginning of the railroad era, and into a village life which can no longer be studied, because it has ceased to exist in the region here exploited. Nor are there any of the queer people introduced whom we should not be sorry to have missed knowing, for there is a freshness, a quaintness encountered in even the brightest of what are called dialect stories. In the last chapter of "Sam Lovel's Camps" there is an indication of a half formed purpose to bring old Uncle Lisha back from the uncongenial West, and we hope Mr. Robinson will carry out the idea, and thus obtain the justification for a third instalment of his remarkably bright and interesting papers.—*New York Tribune.*



THE LEADING JOURNAL.—Mr. Jas L. Davison, the well known naturalist of this city, has furnished FOREST AND STREAM with a complete list of the birds seen here, the time of their arrival, departure, and other interesting facts about them, as the result of his observations, and it will shortly be published in that popular journal. While we are about it, we may as well report as the result of our observations, that of all the journals of field sports, fishing, natural history, etc., that come to Lockport, FOREST AND STREAM is the most popular and widely read.—*Lockport (N. Y.) Express.*

Boy (to his friend who has fallen down the hole)—Say Tommy, if you should never come out of dere erlive, can I have your bull purp?—*Life.*

BIRD PORTRAITS.
Some Native Birds for Little Folks.
BY W. VAN FLEET, M.D.
A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:
Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.
Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

Canoe and Camp Cookery.
By "SENECA."
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.
NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.
This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.
Large crown 8vo., 380 pages and 16 large folding plates.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, [illegible] of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

We will deliver, free of express charges, either size, on receipt of price.
A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa
Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa
is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.
W. Baker & Co., Dorchester, Mass.

LOG CABINS
AND
HOW TO BUILD THEM.
BY WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 5, 1889.

VOL. XXXIII.—No. 7. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

MITIGATION OF THE MOSQUITO PEST.

THERE is a word of comfort and encouragement to be spoken for the man in camp in the remotest wilderness, to whom these tidings shall come, as he smears himself with repellants, chokes and gasps amid the smudge and does battle against the hordes of humming, buzzing, stinging torments. He and all of his unhappy kind may take heart and hold their own against adversity with renewed determination, for philanthrophy wedded to science extends her promise of a mitigation of the mosquito curse.

Mankind has signally demonstrated by a score of examples its ability to upset the balance of nature, and at will to multiply or obliterate certain forms of animal life. It is a well recognized principle that by the intervention of human agency the natural enemies of a given species may be so reduced as to foster the increase of that species; and the supply of another species may be cut down by simply caring for its enemies; thus we provide protection for certain birds in order that they may increase and prey upon harmful insects. On a precisely similar principle it is now proposed by a naturalist that a systematic effort shall be made to mitigate the mosquito nuisance by giving aid and comfort to its enemies.

The natural foes of the mosquito are the dragon-flies and spiders. The dragon-flies, or devil's-darning-needles, are known to devour mosquitoes in great numbers, and are sometimes called mosquito hawks. Dr. Lamborn has offered a prize for a preliminary study of the habits of the dragon-flies, his purpose being to discover if it may not be practicable to rear them artificially, as fish are cultivated, as an offset to the mosquitoes. This may appear Quixotic, but the proposal has the indorsement of no less an authority that Dr. Henry C. McCook, who in the current *North American Review* expresses an opinion that the project is at least worthy of careful consideration.

It must be confessed that in this scheme, whose fulfillment can come, if ever, only in the distant future, there is at best but a small grain of cold comfort for him who in this present hour is encompassed by mosquitoes as by a cloud. The satisfaction, such as it is, consists in that unworthy trait of human nature which finds a certain degree of solace in the resolve to some time square accounts with one's enemies.

PACIFIC SALMON FISHERIES.

THE depletion of salmon which is so marked on the coasts of Washington and Oregon, is now going on perceptibly in most of the Alaskan rivers, and it will be necessary to provide for their preservation by appropriate legislation, supplemented by fishcultural work. It is to be hoped that wise and intelligent efforts will be put forth tending to foster and preserve the valuable fisheries of Alaska.

As to the salmon fisheries of Oregon and Washington, there is much needed, especially in the way of fishcultural work. Prohibitory measures, closing the fisheries for any great length of time, will not do, as it would mean ruin to a majority of the fishermen. The men employed in these fisheries would be compelled to seek other kinds of work, the nets and seines would be a dead loss amounting to thousands of dollars, and a general demoralization would result. The work of keeping up the supply in the Columbia and McCloud rivers was commenced last year by the turning out of eleven million salmon fry into those streams, and we understand that this work of aiding nature by artificial methods will be carried forward on these rivers, and extended as much as possible in the near future. If these fisheries are properly carried on, and a strict enforcement made of the law regulating the close seasons, we believe that they can be kept up. The close season should cover such a period of time as to allow some of the best runs of fish to reach the spawning grounds. Hatcheries should be established near the mouths of the rivers, and the fish kept in ponds or traps until they become yearlings, and then turned loose into the ocean. If this system were adopted very good results would follow.

It is to be earnestly hoped that these fisheries will not be wholly destroyed. Let Congress enact and have enforced laws protecting the important fisheries of Alaska.

SNAP SHOTS.

THE Kentucky Fish and Game Club, of Louisville, Ky., now enrolls five hundred members. The organization is doing great good. It has procured numerous indictments of parties who have killed fish with dynamite; and that practice has been diminished to an encouraging degree. The club members will try for suitable fish and game laws next winter; and attention will also be given to a revision of the trespass law.

The citizens of Limestone, Tennessee, are making extensive preparations to celebrate the one hundred and third anniversary of Davy Crockett's birthday, on the farm where he was born near that place. Among the guests will be his grandson, Col. Bob Crockett, a former contributor to our columns, who has inherited in large degree the wildwoods proclivities of his grandfather.

Put out the camp-fire before you leave it. Be sure that it is utterly extinguished, not only on the surface but below. At this season of the year a fool can start a fire that an army of wise men cannot put out. Use common sense in this matter.

The deer is legitimate rifle game; to have the right flavor, venison must be secured with a single ball of lead out of a rifle barrel, and not with a charge of buckshot from a scatter gun.

A SECOND CHAPTER OF ACCIDENTS.

THERE is a class of accidents with firearms, which naturally group themselves under the head of those attendant upon the sometimes useful, often foolish and always fascinating practice of shooting at a mark. The class is so comprehensive that under it may be catalogued the case of the small boy in San Francisco, who aimed his parlor rifle at a fly on the door of an out-house and killed a man inside, and that of the United States Navy officer whose shell practice on the coast of Japan killed certain of the natives and gave room for international complications.

A large proportion of the accidents of this class naturally happen on the rifle ranges and in the shooting galleries. A detachment of Illinois militia were shooting on the Highwood range near Chicago, when, after several shots had been fired without any scoring by the marker, investigation showed that the boy had been killed by a bullet which had first passed through the target. In an out-door range in Union Park, in the upper part of this city, a bullet went by the target and killed a boy who was passing. In instances of this character the shooter is clearly not to blame when the casualty is the result of an improperly constructed range. It is to be taken for granted that when a range is opened to the public it is safe, particularly if it is a military range. That a properly constructed open air rifle range may be conducted for a long term of years, where tens of thousands of shots are fired with perfect safety and without accident, is abundantly demonstrated by the record of the National Rifle Association at Creedmoor. No one has ever been killed or maimed by a rifle ball at Creedmoor. There have been other accidents. Markers at the targets have now and then had their hands cut by the splashing lead of bullets; a man was once severely injured by falling on the point of a broken flagstaff, after the manner of Saul upon his sword; and several people have been injured by being caught between the cars and the railway platform when rushing to leave the range; but there is no record of accident by the premature discharge of a rifle nor by a stray bullet.

One of the curiosities of modern journalism is a paper called the *Celestial City*, published in New York, whose contents are largely made up of communications from the spirit world. A recent number contained a letter purporting to have come from a man who had been killed while marking for a companion on a rifle range. The letter read:

> My comrade was not to blame, it was from my own carelessness, and it could not be helped. I did not raise the signal as I should have done. I forgot it; therefore I cannot blame him in the least. It was entirely my own fault, and it is much better that it was me instead of him, for he has a family and I have none. Yes, I had a dream in which I saw myself shot, the same as I found in reality, but I forgot it entirely on that day until the fatal moment. Then it instantly flashed across my mind. O! I am so sorry for Comrade Pope, he is feeling so badly over it. Tell him for me that it is all right with me, and there can be no blame attached to him, for it was purely accidental, and I am all right.

But while the individual shooter, who discharges his gun at a target on a public range, where it is to be taken for granted that the conditions of safety have been complied with, is free from responsibility for casualties caused by defective range conditions, the law makes provision for punishing those who maintain such death traps. A case has just been decided in the Massachusetts courts which it is hoped will serve as a precedent in affixing legal responsibility upon careless managers of rifle ranges and rifle galleries. The case was that of the people vs. Serwyn Gleason and Georgiana E. Gleason, proprietors of a shooting gallery in Worcester. On August 9 an iceman, William A. Pierce, was killed in the street by a stray bullet, which was subsequently discovered to have come from the Gleasons' gallery. They were arrested and tried for manslaughter, the indictment charging them with having induced "a person unknown to shoot carelessly in their gallery, thus causing Pierce's death; also with criminal carelessness in not taking proper precautions to prevent bullets passing through the walls of the gallery; also with being accessory before the fact to Pierce's death." The result of the trial has been to find Gleason guilty and to send him to prison for a year, the woman being acquitted. If a shooting gallery is not conducted without menacing the public safety, it ought not be tolerated for an hour.

The vast majority of accidents attendant upon shooting at a mark result from an amazing thoughtlessness on the part of the shooter himself. Fools with pistols and shotguns and rifles blaze away without in the least concerning themselves about what may become of the missile they let loose on its fateful errand. It was not so long ago that the papers related how a crowd of precious young idiots in an Alabama town were shooting their pistols at some improvised target in the street, when one of the stray bullets striking a glass bottle, glanced, and killed a merchant who was standing in his own doorway. In New York city on the last Fourth of July, three youths set up a target on a roof and fired at it with a rifle until they had killed a little girl some blocks away. This surely is bad enough, but it does not begin to compare with the usual custom certain microcephalous individuals have of celebrating the Fourth and other holidays by discharging the bullets from their revolvers at ran-

dom into the air, to make a noise; they have not even the excuse of shooting at a mark.

The case already alluded to of the boy who shot a fly on the door and killed a man behind the door has many parallels, for the marksman often neglets to ascertain what may be on the other side of the mark he aims at. A Fairfield county, Conn., man kept an old Spencer rifle loaded for burglars. One day he thought it would be a good plan to unload it and put in a fresh charge. He set up a tin can against his neighbor's barn, paced off his distance and fired. The neighbor was in the barn back of the can, and the wound was fatal. And here is a story of what came so near being an accident of this sort that it deserves a place here:

Four Europeans who had been out after tiger in the Maimensing district were, says a Calcutta paper, returning at the close of a very long day, and had almost reached the factory where they were to dine and pass the night, when the Captain ordered a halt. The "line" at once pulled up, and he said, "I hate seeing loaded rifles taken into a house (it was the old muzzle-loading days), more especially where there are children. I propose that we fire ours off." "All right," said another, "but we have not had a shot all day; what do you say to a 'pool'?" "There's nothing to fire at," observed a third. "There's that ghurrah," said the Captain, pointing to an earthen vessel which some ryots, who were working at a little distance, had as usual, brought their day's supply of drinking water in. "Very good," said the fourth, "but what with bad light and the distance, it's by no means an easy shot. I propose we each put a chick on." "How shall we decide as to the order of firing?" said one. "Oh," replied the Captain generously, "commence at your end of the line." The mark was by no means an easy one to hit, for the distance was well-nigh a hundred yards, the guns smooth-bores, and the light that deceptive kind which one gets just between daylight and dark. But on the other hand, the hunters were exceptionally good men, all excellent shots, either of whom could hit a running deer from the back of an elephant twice out of three times. "Fire away," said the Captain. No. 1 grazed the right of the vessel, and it was thought must have hit it. No. 2 went just over it. No. 3 went a little to the left. "Thank you, gentlemen," said the Captain, "I'll trouble you for those twelve rupees." He raised his gun as he spoke, and the next moment the jar was covered with earth, the bullet had cut the ground beneath it. Presently the vessel was seen to wriggle and then to kick, while a feeble cry proclaimed it to be a baby. Consternation was depicted on every face. The elephants bolted, the sahibs jumped down and rushed to the spot, the parents running from the opposite direction. The little mite hadn't been touched and was carried off by the father and mother with great rejoicing. They also took the "pool" along with them, and right glad the sahibs were under the circumstances to part with it.

The Sportsman Tourist.

OUTDOORS.

[*Concluded from page 102.*]

THE most of the bass that I have caught in the Intermediate Lakes were of the large-mouthed variety, while those taken below the dam at Elk Rapids, where these waters empty into Grand Traverse Bay, are usually small mouths, which seems odd. Another queer thing is that, except myself, I have never chanced to see any person take a bass. When long ago I fished in the New England States there were no bass there to my knowledge, and for many years I scarcely ever wetted a line except for trout of one or another sort. Even when at a later period of my life I had the black bass within reach I did not seek them, and it is only since my residence in the Grand Traverse region that I have learned that bass fishing with light tackle is a sport which no angler need despise.

It has never been my fortune to fish where the black bass were very abundant, but in some of the rivers in Kansas, Missouri and the Indian Territory, I have seen the rapids almost crowded with them, many of great size. Excepting spears no tackle was to be had and I caught none.

In these waters I do not much affect the use of the fly or of the minnow in the pursuit of bass. One objection to the fly is that it will commonly capture twenty or more rock bass to one of the larger species, which is tiresome and vexatious. These lakes contain much grass and weeds in many places where fishing is best, and a minnow soon wears out, though attached by the most approved method to the hook. The artificial minnows seem to take better in swift waters than in still. Whatever the bait, if living, I always kill it before placing it on the hook. Probably I should catch more fish if I didn't, but I commonly get all I need.

On the whole I know no better bait than the frog, and if when hooked through the lips, a strip of red flannel is first passed lengthwise round the body, the two ends fastened by the hook, this bait will last a very long time.

Should it chance that some extremely exclusive and highly artistic fly-fisher or minnow-caster has so far smothered his feelings as to follow my discourse to this point, he will probably exalt his æsthetic nose, and pass contemptuously over the remaining portion of the paper. To such, if such there be, I would say that in my judgment it is well enough at times that high art should combine with common sense. If a man fishes unsuccessfully, for days perhaps, with a certain sort of lure which has been pronounced by recognized authorities as the correct thing, it speaks well for his persistence, and also for his devotion to high-art angling.

One, however, naturally infers that the main object of this angler is the display of skill and dexterity, the catching of fish being merely incidental; and the lordly contempt evinced by some of these gentlemen for the man who, though in no sense a "fish-hog," prefers on most occasions as far as may be to consult his convenience and the desire of the fish as well, recalls to mind the stories of duels which were sometimes fought in presence of opposing armies, between Moslem and Crusader. The business of a warrior of either party was, professedly, to kill as many infidels as possible, but when one fellow succeeded in up-ending his antagonist, and, poking the "dagger of mercy" or the spike of a battle-axe under his nose, invited him to surrender; a spirit of complaisance not perhaps unnatural under the circumstances generally induced a prompt accession to the request. These formulæ completed, the fallen man arose, brushed from his sollerets the dust of the tiltyard, and with reciprocal and profound congés the duellists returned each to his own friends. No soul of infidel of either faith had thus been sent to hell—cross and crescent were *in statu quo*—but the best lance of the twain had shown his prowess, and he was well content.

I passed the next day in camp. It was Sunday, and I had several calls. The first of these was from a young man who crossed the lake and came up to my tent, bearing in his hand a large fat coon, just taken from a trap set not far distant. He told me that I "ought ter hev ben with him, half an hour ago, for he see a rousin' big buck jes' t'other side o' ther lake." In order to put my views of the matter on a level with his comprehension, I replied that bucks were worth at that season fifty dollars apiece, which was more that I could afford. He took up his coon, and saying that "he guessed there wouldn't nobody bother me much 'f I shot a deer or tew round there," he disappeared amid the amber glow of the forest leaves.

I finished putting the camp to rights, and sat me down to read. The book was an old favorite, "Norway and the Norwegians," by Miss Martineau, and I think first appeared in the United States in the columns of *Littell's Living Age*. I had not read it in many years, and just as I was beginning to renew my acquaintance with the farmer-fishermen of the Arctic Circle, a shadow fell across the page, and I rose to greet an old acquaintance. He was a woodsman from the start, and many years ago, when worn and wearied with the toils of war, he brought his family into the Northern wilds, and pitched his tent amid these solitudes. The forest went down before his axe, and the beautiful wilderness became a garden. Hunting, fishing, farming by turns, he still lives on the farm he cleared so long ago, and though he has had a hard struggle with fortune, yet was he never known to turn from his door any one who sought a meal or the shelter of his roof. Two dollars, he said, was all he owed, and he could pay that pretty soon. His place was clear of debt, he liked the country, and he guessed he'n the ol' woman 'd lay their bones near by, some day, f'r all the talk o' better countries south."

Declining my offer of a bucket, he seated himself upon the ground, and, chewing the while a piece of elm bark, the old man discoursed of hunting. "When I lived in Saint Clair county the' was me 'n' four Allen boys 't hed a gun in our hands all the time. The' was lots o' ol' pine choppin's plum full o' blackb'ries, 'n' the' was bears till you couldn't rest. One fall the fire got into the woods 'n' drove the bears out. Well, sir, jes' 'soon 's anybody see one on 'em, they'd git on a hos 'n' come over 'n' let us know. We hed enough o' bear huntin' that fall. We' was out day 'n' night, 'n' sometimes we'd get completely tired out. We killed twenty-five on 'em in three weeks."

"You must have understood bear hunting."

"We did. We'd practiced shootin' on the run, 'n' we had a dog 't was sure when onct he struck a trail. The way we ust ter practice was tu git a barrel head 'n' put some cleats acrost it, an' one on us 'd throw it so 's 't 'd roll along the ground. The' was a white spot 'n the middle, an' we got so 't we'd git the ball 'ithin three or four inches most every shot, 'n' pooty often we'd plug the center."

"They use swinging and trap targets nowadays," said I.

"Yes, so I've heerd; but them 's tew stiddy. You see, the barrel head 'ud jump an' jounce, 'n' you had ter be on yer leathers 'f you meant ter hit it center. We hed a rule never to shoot at a bear's head, onless he was sideways to us. Course, 'f he was up a tree, we could plug him anywhus we was a min' ter.

"Nobody thet hain't never see a bear performin' 'th a dog, haint no idee o' ther spring the' is into 'em. No, I don't want no foolin' with 'em at clost quarter, 'n' I want a gun I c'n depend on, every time.

"Our dog was a pretty big one, but he was quick, and he know'd how ter keep out o' ther way. The' was three on us watched him one day 's much 's three quarters of an hour. We was sure o' ther bear, and we wanted ter seem 'em perform. The bear he wanted ter tree, but ther dog he wouldn't let him. Whenever the bear 'd git up, say four foot high, ther dog he'd jump up 'n' give 'm a nip. He was so heavy 't the bear couldn't keep his holt, 'n' down he'd come. Then he'd set up agin the rhuts o' the tree, 'n' the dog he'd play around the back on 't, f'm one side to t'other, 'n' the bear he'd look just this way 'n' then that way, 'n' arter a while ther dog he'd catch him a nip, 'n' the bear he'd jes' turn a summerset—seemed 's ef he'd go twenty foot, but ther dog he wouldn't be there. Finally, the bear he got so tired 't he wouldn't try ter climb the tree, 'n' we jest hauled off 'n' shot him.

"Sometimes a very slight wound apperently 'll kill a bear, an' then again you'll hev to shoot 'em all to pieces. One we killed, the' was fifteen men a'ter him that time, hed fourteen balls through him, 'n' seven on 'em was in his head, 'n' he wa' n't dead then."

"How did it happen that there was so many of you?"

"Why, you see, he come right down into the village, 'n' we just dropped everything 'n' put a'ter him. One feller 't worked in a cooper shop—he hean't no gun, so he jes' grabbed up a pair o' them coopers' adze, 'n' when he come up 'ith the bear, he 's so excited he jumped right astraddle on him, 'n' hit 'im a' awful clip 'ith them adze. It cut his laig half off, 'n' the next crack split his skull."

"That bear didn't have fair play."

"No more he didn't, that's a fact. Well, I declare, I didn't think the mornin' 's so fur gone; I mus' be off. Come up 'n' see us 'fore ye go."

Again I opened the book, but scarce had read a page when another step stirred the crisp maple leaves along the trail. This time the talk was of loans and mortgages, and my advice was sought how best a little farm, almost its owner's sole possession, might now be freed from the incumbrance with which its owner had through illness been compelled to charge the land. He soon departed, taking with him my advice and sympathy. His needs were great, and I did not at once return to my book, but gazed dreamily out upon the placid lakelet and the cloud-swept skies, and thought how many there are among the rich and generous of our land who need but know a case of real distress to straightway send relief. But after all, the very rich are few and far; the poor we have always with us.

Then came a basket-maker, holding by the hand a toddling child, who gazed with wide blue eyes upon my shining reel, and soon slumbered in his father's arms. The sun drew near the western hilltops when the little laddie waked, and, made glad by the gift of a newly-coined nickel, trotted away by his father's side, and soon the rattle of their footsteps died away among the trees.

I stirred the fire, and ate a hearty supper, for the long-sought appetite had come at last, and I was hourly gaining in health and strength. I watched the glimmer of the lake and thought over old times until the fire had burned low, and the spangled skies seemed close above the trees, then betaking myself to my blankets, lay down to pleasant dreams.

Next morning I bade good-by to my pleasant camp, and, paddle in hand, was soon threading the devious waterways of a large and lonely swamp. I had thought to shoot ducks upon this trip, but it happened that I came just between the flights, so that up to this time I had seen but four.

Toward noon a dam was reached, below which for some distance the stream is so choked with logs and similar obstructions as to be difficult of navigation. I accordingly shouldered my fusee and sought the cabin of a neighboring farmer, around whom clustered several incipient hunters, who eyed curiously my gun and accoutrements while I made known my errand.

One of the boys was forthwith dispatched in search of a yoke of oxen, supposed to be "som'ers in the timber," and during his absence I asked the old Scotchman if the wood ducks often nested thereabouts.

"Ay," said he, "there was a richt pretty pair o' deukes biggit i' the hollow tree thot stood oot i' the mowin' lang syne. Ae woonter, I coot it doon for eilding, an' i' the spreng the deukes was fleein' roond, an' a-fleein' roond, to find the auld tree agen. An' had I thocht they wad hae missed it sae, I'd na coot it doon ava'."

The oxen were driven up the lane and attached by a yoke and chain to a sort of sledge, rough hewn from the forest, and made by the axe and auger alone from the curved stems of trees. It served as a conveyance for the boat, which, being placed thereon, was hauled to a cove a mile or so below the dam and launched upon the waters of the Six-Mile Lake.

"The water 's but rough. I doot ye'll hardly wun the foot o' the loch the day," said the old man, as he saw the surges rolling on the point opposite our landing. "Thank ye, sir, good luck t' ye;" and with many a "Wo-ha!" with thump and bump and clank of chains, the clumsy sledge clattered against the gnarled roots of the cedars and soon vanished in the dense undergrowth.

Being undecided as to my future movements, and in no hurry whatever, I kindled a fire and made coffee, the while watching the foaming swells which swept along a few rods from my seat, to break and shatter on the tussocks of a little marsh above the landing. I had been at this place before, and remember that on one occasion a certain greenhorn took post in the marsh, where he did watch for ducks, the sun meanwhile beating furiously on his unprotected head. Toward noon there came from his stand a heavy bang. Another soon followed; and as dinner was nearly ready one of our party took boat and brought the shooter in, hungry and duckless. During our meal he detailed the manner of his firing two sitting shots at the same duck. "I took desput good aim, tew, 'n I dono haow I missed him."

"Is that your duck?" said Marden, pointing to a diver not far distant.

"Ye-es, thet's him—dern the thing."

"Do you want to see him killed?"

"W'y, yes—but yeou caan't dew it. I tell ye I took *desput* aim, an'—"

"You just paddle me over there after dinner, and we'll see," and the hunter resumed his attack on the shoulder of a twenty-pound maskinongé.

After dinner Marden lighted his pipe, took up his gun, seated himself in the bow of the canoe, and with slow and careful strokes of the paddle the greenhorn sent the craft toward the seemingly unconscious diver. The face of the paddler was lighted with a smile, for he expected to see a miss. The duck suddenly disappeared beneath the surface.

"There, I told ye ——"

While the words were spoken the duck again appeared; as its head broke water the gun was leveled and discharged, and a look of blank amazement spread over the countenance of the greenhorn when he saw the bird floating dead upon the surface of the lake.

"Wall, I swow," was all he said; and fishing up the diver the boat returned to camp, Marden merely saying: "You'll know how to do it another time."

The coffee began to simmer, and laying a few twigs across the top of the coffee pot that the beverage might not boil over, I made my simple meal and much enjoyed the same.

A boat was coming up the lake, and I watched her progress as the sail swelled out in the stormy wind, and sweeping round a point she lowered canvas and made the land in safety.

That decided me. A week before I should not have undertaken the job, but now I stowed the cargo and made all secure, using for lashings some lengths of insulated copper "office wire." There is nothing better for this use. You can always untie them, and they cannot easily be loosed or parted by accident.

I shipped the bow-facing oars and pushed out into the lake for my six miles' pull. It was a tough one, but I made it, ran through St. Clair's River and lake, and camped near its foot, where I slept the sleep of a weary man who has earned his rest by a six-mile pull in the teeth of a good, double-reefed breeze.

The next forenoon was devoted to a stroll in company with a sportsman who, with his wife, was passing the season in that neighborhood. Late in the day I moved my camp to a point on Bowers' Lake (the next below). The night was cold and windy, and I prospected for a good camp ground—a favorite amusement of mine on trips like this. There is a pleasing sense of proprietorship in cruising leisurely along, watching the birds, fishes, insects, plants and scenery in general, until some little peculiarity of bank, stream or foliage attracts your attention, while furnishing indications that one or more of the requisites of a good camp ground are waiting your inspection. You give a twist of the paddle to port, and a stroke or two sends the nose of your craft right into the door of your hotel. Course, you haven't a deed of the land; but it's yours all the same. As Curtis long ago wrote in one of those admirable papers in the old *Putnam's Magazine*, "Bourne owns the dirt and the fences." Let him have them, so that you carry away from the

camp you will make good store of pleasant recollections, to which the value of the land where you have camped is as nothing. The money we have had and lost is of no further use to us; but "no one can take from us the remembrance of the good times we have had."

For this camp I chose a spot where a small brook wound along the base of a steep bank, deep bowered in the cedars, and which sheltered me from the wind. Next morning there was ice in the teakettle, and it set me thinking of snowshoes.

Those living in the neighborhood of the Manhattoes during the fearful blizzard of March, 1888, learned to place true value on the accomplishment of snowshoeing, and found that, like the proverbial revolver of the Texan, when you want "rackets" (as my grandmother used to call them), you want 'em mighty bad. Still, the people might have been able to leave their houses and walk over those snowdrifts, had they only known how.

I was once caught in a snowstorm in the forests to the north of Squam Mountains. It was nearly dark when I managed to strike the trail which led to the cabin of an old trapper, with whom I passed the next two days. There came a thaw and a freeze, and on the third morning the shadows of the mountaintops fell across a landscape beautiful indeed, as we surveyed it from the cabin door, but as impracticable for the pedestrian as could well be imagined, unless with the aid of snowshoes. These I did not possess, for it was yet comparatively early in the season, and I had looked for no such storm, having planned to leave the forest before the winter had fairly set in.

As we arose from breakfast the old man said: "This jest about whips the grub, 'n' I've got ter put aout f'r the settlement. My furs hes been all packed tew three days 'fore you come, 'n' 'f 't hedn't a ben f'r this gol darned storm, I'd a ben fawty mild away 'fore this. I kin tramp it on my snowshoes, but I wa'n't a cal'latin' on comin' back 'fore spring. I kin though, 'f you say so, 'n' git ye aout some way."

I thanked him for his kind offer, which I nevertheless declined, and cast about for materials with which to improvise a pair of snowshoes. A couple of "shakes," split from a cedar trunk, were soon fashioned into a pair of "raquettes" about four feet long by twelve inches at the broader part, where the moccasin rested, and the hole was made for the toe to play up and down in traveling, and the sides were slightly tapered from that point fore and aft. The toe-bar and a couple of supplementary cleats of hard wood were lashed across with deerskin thongs, the slings made of the same material, and in two hours' time or so I had a rude but serviceable pair of snowshoes, on which I walked in comfort and safety out of the now half buried camp and over three feet of snow.

With little difficulty I made my way in the trail of the trapper to the nearest settlement, thanking my stars the while for the hint I long before received from one familiar with Indian ways, for it had saved me many hours of severest toil and may have saved my life. Moral—Given a large packing case, old or new, and you have material for snowshoes.

The last breakfast of the trip was cooked and eaten, the fire extinguished, and regretfully we glided away from the last camp of the season, Pleasant are my recollections of that spot. So dense was the thicket of alders which concealed it from the view of those who passed it on the lake, that I had thought it but a swamp; yet nevertheless landed at the invitation of the tiny brooklet, and pushing through the brake, found all things needful for a temporary home. If sight and sinew fail me not, I shall visit it again.

This day I wanted fish, not for myself but for friends. I selected my most seductive lure, put together my little rod and was ready for action. Faithfully I waved that switch over the likeliest spots in Bowers's, Willson's, Benway's, Hanly's and Cedar Lakes, but without result. I did not catch a fish. Perhaps the cold, rough weather was reason sufficient for this want of success.

The cruise was over, the outfit safely stored, and I once more seated myself at the supper table, this time fully prepared to dispose of my share of its burden, and feeling that my outing had not been barren of beneficent results.

I had gone prepared to shoot ducks, and had I killed more than were needed to supply the camp I could have sent them home. It turned out that I had no difficulty in consuming all I shot, but one was enough. I should have no trouble in reloading shells for my next outing.

I was much improved in health, and had bagged much game of that sort which longest lives in pleasant recollections. Yet was I compelled, when asked for the story of my cruise, to make answer in the words of Canning's needy knife-grinder, for in truth I did not think that I had one to tell. KELPIE.

Natural History.

THE WOODCOCK'S WHISTLE.

Editor Forest and Stream:

I am much interested in the habits of the woodcock, and take every chance to observe the same. I believe, with Mr. Brewster, that the variation of the whistle is due to the difference in the rapidity of the flight, having noticed that invariably the note is sharp and clear when the bird is flushed close under foot, and quite light and sometimes hardly noticeable when the bird flushes of its own accord. I have watched (from the top of a large rock surrounded by alders, and dividing a small spring brook) a pair of woodcock which raise their young each year in the same spot, near my old home in Taunton, Mass. They flit back and forth with almost noiseless wings, and the hen is so tame when the eggs are nearly hatched that you can touch her gently with the finger without driving her away. But should you step up abruptly, or should a dog appear, then the whistle sounds clear enough. I cannot believe the note is made by vocal organs, for I have held a bird in my hand by the bill, with the nostrils covered, and am satisfied that the sound made by the wings and the "whistle" were one and the same thing. Can the vocal theorists explain why the note is not heard during the moulting season? I have noticed that a partridge whose wing feathers have been cut with shot will have the same whistle occasionally. Is it not in the construction of the feathers? What say the modern naturalists? Argument and exchange of opinion often bring a brother sportsman pleasure. So does the whistle! May it ever return each year.

H. B. SOULE.

Editor Forest and Stream:

The woodcock has always been a favorite of mine. I have shot a good many of them and shot at a good many more that I failed to take home with me. When I was a boy I used to spend a good deal of my leisure time along the streams and in the swamps of New Jersey, wearing out on an average a half-dozen straw hats each season catching trout to put in our spring and coming home hungry, bedraggled and covered with the swamp mud, that I had succeeded in attaching to my clothes through my desire to know where every woodcock had punched a whole in the swamp mud, on my stamping ground. To find a piece of swale well worked over by the woodcock filled me with greater delight than even to find that my mother was out of wood and wanted to bake.

I think I have heard most of the noises they make and I have seen some of their antics on the mud. It is my opinion that the woodcock does make sounds during flight that are vocal, but only during a short time in the year. I have seen them in the spring leave the ground about dusk, going almost straight up in the air and often attaining a considerable height, I could hear them making a twittering noise that I always considered vocal. After keeping this up for a few moments they would drop like a shot to the ground. I never heard them make this noise but in the spring, and then only at dusk. But I think that the noise made by the woodcock on being flushed is made by the vibration of the wings. I came to my conclusion through this incident. While living on the southern end of Staten Island I started across lots to Princess Bay after ducks. While crossing a marshy spot I flushed a woodcock and, I forgetting that my gun was loaded with heavy shot, up went the gun and down came the woodcock. On going to retrieve it I noticed it crouched at the side of a bunch of grass, and taking a second look found that a large shot had struck it at the base of the bill, cutting both mandibles, causing them to hang down on its breast, giving his lordship a decidedly picturesque look. I stopped to pick him up, when away he went, whistling as merrily as a horsecar conductor, requiring the second load of duck shot to stop him.

ARLINGTON, N. J. F. W.

QUAIL IN DIXIE.

IT may not be generally known that a portion of the southern part of Utah is called Dixie. The name applies to the region lying south of what is known as the "rim" or place where the high tablelands break off, and descent is made into a warm sandy valley sloping down to the Colorado River. The soil and climate of Dixie are similar to those of Arizona and southern California. Beds of lava are seen, and many varieties of cactus.

In this district, lying partly in Utah and partly in Nevada, and ranging only as far north as the "rim," quail are found in abundance. This variety is, no doubt, the *Lophortyx gambeli*, and has its home mainly in the valley of the Colorado below the Grand Cañon and in the cañons opening out on to the Colorado River. In general appearance this bird differs little from the California valley quail. Some differences in its habits exist, and one quite noticeable is in its proclivities for evading its pursuers by running instead of using its wings. Except when suddenly startled or hard pressed it manages to escape without flight. When flushed, each bird, after about the usual flight for quail, runs off by himself, and at a rapid gait. Occasionally by rapid pursuit the covey may be flushed a second time, and then a portion of them are apt to hide, and may then be sought as other varieties. On the soft sands I have sometimes tracked a single bird half a mile or more after the covey had been flushed and fired into.

This species of quail, when not molested, like to stay about the houses and farms of farmers and become half domesticated. I have had them come close to the door of my tent in the morning, and with the most lively chatter pick up such crumbs of food as they found scattered about; and they at one time had a habit of coming on to the back porch of my house to get oats left there. I noticed one other difference between this and other quail. It is in a danger call they give in spring and during their nesting time. My observation would indicate that these quail form a colony at nesting time embracing all the birds of quite an area around. They choose ground covered with high bushes in preference to a rocky hillside covered with sage and small bushes. I was at some pains to observe one of these nesting colonies. On nearing the ground I saw a cock quail perched on the highest of a clump of oak chapparal. When within about three huudred yards he gave what I took to be an alarm call—one note. Immediately the call was repeated from the tops of the different clumps of bushes all about the neighborhood. When I had come within, perhaps, one hundred yards of my first quail he suddenly dropped to the ground and made off at great speed, and I saw him pass over the ridge of a small hill running for dear life, as he no doubt thought.

The call is best represented by the word *Creer*, pronounced in a sharp high key. In a minute after the first alarm note, *creer, creer*, from many throats could be heard over all the neighborhood. The females were not to be seen, nor with the limited time I had for search did I find a single nest. There may be no uniformity in collecting in colonies for nesting; an instance or two does not prove so much with me as to some others, but it looks strongly that way; and at another place about the same time I found a large number of cock quail feeding together, and I have no doubt their mates were near by busy with maternal cares. I would like to know the result of more extended observations on the subject.

There are no mountain quail in Utah, nor any other varieties native to this region. Both the valley quail of California, and the Bob Whites have been planted in the various cañons from Ogden to the head of Utah Lake. They have done well, and are by law protected for two years more. But in fact they are now being shot. If unmolested they would be likely to spread over Utah generally. Now they are confined to the mouth of cañons and will be easily exterminated.

The game and fish laws are not obeyed. Trout are being killed with giant powder. Two days since, at the spot where this was written, I heard from the door of my tent a loud explosion, and saw the water from the creek rise in a column high above the willows fringing the creek. When I visited the spot a little later I was surprised at the perfect destruction made of all the trout in that pool. The larger ones had been carried away by the vandal that did the work, but there were scores of small dead floating or at the bottom of the pool. Half a dozen larger ones had been overlooked in the hurry to get away by the new-fashioned angler. I am afraid we are no better in Utah than they are in Maine in observance of this class of laws. I fear that in all our country there will be no place where deer, grouse or trout will be found except on private grounds. Laws most wholesome and necessary have a place on the statute books, but they do not avail because not enforced. Public opinion must stand in with the statutes.

UTAH. GEO. H. WYMAN.

THE MEXICAN WILD TURKEY.

IN comparing this bird, *Meleagris gallopavo mexicana* with *Meleagris gallopavo*, I meant to say he is more stupid, instead of "striped," as the types had it. Either statement is correct, though one might be led to suppose from the latter expression that the wild turkey of the United States is to some extent striped. This is not so. To write for the readers of FOREST AND STREAM about the difference between the two varieties would seem a useless waste of space, and yet I must admit that it is a somewhat recent addition to my own stock of information. Audubon failed to make a proper discrimination, and confusion on the part of such authority is sure to be perpetuated by many who follow him.

The most remarkable characteristic of *Meleagris gallopavo* is that he cannot be domesticated. The proof of this is overwhelming. Of course individuals can be tamed, but the wild instinct always prevails. Once when a boy I captured a dozen eggs, eleven of which were hatched. As I remember, nine of the chickens survived, under the fostering care of a domestic hen. As they grew toward maturity, however, their nightly resting place in the trees became higher and higher and further and further from the chicken house. They were as tame as ordinary chickens, but active and able to fly well. I was trying to devise some way of capturing them without resorting to the extreme method of shooting them, when after several absences of a night or two they disappeared. The same experience was repeated by almost every family of the Western States. Audubon tells of a gobbler he tamed and made a pet of, in Kentucky, which at the age of more than three years finally left him, though on finding it in the woods afterward it allowed him to approach it.

This untamable nature, together with the persistency of color in his dark bronze plumage, made the development of the domestic turkey from such stock one of the puzzles of my boyhood. I remember to have seen more than once the statement that the turkey is a native of Persia. Such a theory is perhaps the desperate effort of some puzzled soul to escape the difficulty just mentioned. It is gratuitous and entirely unfounded. As Benjamin Franklin once suggested, he might be made our national emblem, for he is as much an American gift to the world as maize, tobacco and "Irish" potatoes.

The domestic turkey is a descendant of the Mexican wild variety. I have not had opportunity to examine this bird personally, but I believe it is generally admitted that even in a wild state his color is not fixed. A Mexican who is in the employ of one of the sub-contractors on the railroad from this city to the Gulf of Mexico, and whose camp is in the midst of a paradise of game, tells me that the turkeys are *pinto*. This word means simply spotted. Whether there is more than simple black and white I do not know. The manner of producing the variations common in the domestic variety is well understood.

The Indians here had a name, still current, for the turkey which was apparently intended to represent his note. A Spanish work on natural history, which I have examined, in a desperate effort to reduce the sounds to writing, produced this, *hucxololt*. If any reader of the FOREST AND STREAM wishes to read this aloud he needn't try to pronounce the word. Just let him give his neck a "yank" and gobble. Anybody can do that, whether he knows Spanish or not. About the commonest color of domestic turkeys here is gray, the feathers dark below and tipped with white. This gives a neutral effect quite common in nature, and I suppose is about the color of the wild ones.

The same man of whom I spoke above, told me of at least two kinds of what I took to be grouse, besides the *chachalaca*, and two or three kinds of quail, the Indian names of which I could not retain. As the railroad is to be completed this fall, giving a busy man a chance to take a run into that favored country, I hope to make the trip and have something interesting to report. Some youthful and ambitious naturalist ought to set his eyes on that section, for, so far as I can ascertain, it is almost virgin soil. AZTEC.

SAN LUIS POTOSI, Mexico.

THE ELECTRIC ORGANS OF THE STAR GAZER.—In the Proceedings of the U. S. National Museum, Vol. 3, p. 18, 1880, Dr. Jordan states that Dr. J. A. Henshall had informed him that the star gazer (*Astroscopus y-græcum*) in life exhibits strong electrical powers, these powers apparently having their seat in the naked skin on the top of the head. Dr. Jordan then adds: "So far as I know, such phenomena have not hitherto been ascribed to any fish of this family. I therefore put this statement on record, in hopes that subsequent observers of this rare fish may be able to verify it." Professor Gilbert informs us that during the cruise of the Fish Commission steamer Albatross along the coast of Lower California a star gazer (*Astroscopus*) was obtained in Magdalena Bay, April 8, 1889, which had the power to give electrical shocks. A man had been ordered to take the fish from the aquarium, in which it had been kept alive, and eviscerate it preparatory to preserving in alcohol. Upon taking hold of the fish with the thumb and fingers of one hand in such a way as to make the necessary incision, he felt a shock, and not knowing what to make of it turned the fish over to Professor Gilbert, who also felt the shock very perceptibly, as did two other gentlemen present. The specimen from the Pacific was a great surprise to Professor Gilbert, as this genus was known only to the Atlantic before.—BAB.

EXPLORATIONS IN ARIZONA AND NEW MEXICO.—Dr. L. Stejneger, of the U. S. National Museum, Curator Dept. of Reptiles, left Washington Sept. 2, for Arizona and New Mexico, where he will make collections of birds and reptiles. The Doctor will first go into the San Francisco Mountains, in central Arizona, and work south. He expects to be engaged about three months upon this work. The field to be gone over is quite rich in objects of natural history, and Dr. Stejneger will probably add much desiderata to the collections of the museum. Dr. C. Hart Merriam, of the Agricultural Department, is now in the same field collecting mammals and birds. Prof. F. W. Knowlton, of the U. S. National Museum, is also working in the same territory collecting plants.

RANGE OF THE WILD TURKEY.—Plainfield, Mass.—Referring to your investigations respecting the range of the wild turkey to the northward and eastward, let me say that I have just learned from tradition that "Gobble Mountain," in Chester, took its name from the quantity of wild turkeys which were once found there. Chester is in the northwestern part of Hampden county, which projects into Hampshire county. This is the furthest limit of *Gallopavo's* habitat which I have heard of in this direction.—CHAS. HALLOCK.

WILD PIGEONS.—Calais, Me., Aug. 26.—After some years we are this summer having some of our old acquaintances in the way of wild pigeons. Several flocks have been about, and I hope they may again become abundant.—GEO. A. BOARDMAN.

Camp-Fire Flickerings.

"That reminds me."

278.

SEVERAL years since the skipper and myself pulled down to Great Marsh before sundown to get a few shots at black duck, which were striking in quite plentifully. The skipper set the stools, while I busied myself in shoving my boat into the edge of the marsh and covering her with sedge so that the birds might not sight me as I lay in her. As soon as he had finished the stools the skipper pulled away to a favorite blind, and by that time I was ready for business. The dusk was set in and we had had no shots, and I had been intently watching for any birds which might fly over, when I glanced at the decoys and saw that the skipper had set more than he said he had. That is, I thought he said seven, and surely I counted eight. My first impulse was to cover that extra bird, and my gun was at my shoulder before I happened to think that possibly it might be that he was mistaken, and that if I filled his decoys full of shot he might not be filled with happiness; and besides, the laugh would never be over with the boys. I wavered a minute between an impulse to "turn her loose" on the outside bird, but he was so quietly resting on the water without a quack or perceptible motion to be noticed through the dusk, that I had not the sand to take the chance of its not being a decoy. No duck had lit, and this extra one might easily be a decoy set by the skipper in excess of the seven he had told me he placed. To solve the problem I gently rocked the boat in the marsh. Whir! Bang! Up got a black duck and off over the marsh he whistled, followed by my right barrel, but too late. The duck must have swam up from some distant part of the marsh, and so quietly that I had not seen him till he was among the decoys. I didn't say anything about my brilliancy to the skipper. He had no delicacy of feeling, and would laugh. F. P. L.

279.

In our engineer corps was Col. Sam H., a very modest and refined gentleman of Irish persuasion, and possessing considerable ability, but so much addicted to the "rosy," that he frequently found himself on the supernumerary list. He was acting in the capacity of draftsman, in which department he possessed considerable skill. Col. Sam stood patiently at his drawing board from morning till night day after day. On one occasion, being invited by some gentlemen to join them the following morning on a fishing expedition, I thought I would give Col. Sam a holiday, so I asked him to take a seat in my buggy. He gladly accepted, as he had not had a smell of the woods for some months. We started at daybreak, and having driven some six miles from the town of Monroe, Louisiana, to the banks of a pretty stream in a swamp, the party of six or eight bivouacked for breakfast. Having built a fire, boiled a coffee pot, and broiled over our cold meats of various kinds, we ate our breakfast with keen relish, and then prepared for fishing.

I had provided a fishing line for Col. Sam, and when all were busy in preparations I produced it and handed it to him. Now Col. Sam had probably never cast a hook in water in his life, nor pulled a trigger. He gazed at the line in embarrassed surprise, then exclaimed, "Me feesh! I—ah—I left me glarsses. I carn't see to bait me ho-o-o-k!" So Col. Sam loitered about the woods until noon, when the party assembled at the camp-fire with a goodly store of black bass, goggle eye, bream and jackfish, wriggling fresh from the water. They were soon transferred from their native element to hot lard in a frypan, when their bright and glistening skins speedily became crisp and brown. Then Col. Sam exhibited his prowess as a fisherman in a manner to excite the envy of all dyspeptics. We continued our sport in the afternoon until the gathering gloom in the swamp admonished us to get out to the "big road" before it became too dark. Then hitching up our "teams" we rattled back to town in merry mood. This was the first and only time that Col. Sam ever essayed to play fisherman.

MEMPHIS, Tenn. COAHOMA.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Game Bag and Gun.

PATTERN AND PENETRATION.

SCOTT, 10-BORE.

THE Scott gun was the make of weapon put to test when the screen was put in use on the afternoon of Aug. 7. The particular arm on trial was the property of a gentleman well known among the duck shooters of the Long Island inlets, and the large 10-gauge Scott which he offered for trial has often done good service across the waters of the Great South Bay. It can hardly be said that it acquitted itself in any very satisfactory shape before this shooting screen. Two sets of cartridges were prepared, intended to run as nearly even as the two makes of powder would permit, and they were loaded by the Schultze powder agent in this country so as to insure the best possible showing for the white explosive.

The day was a very fair one for the trial, a 5 o'clock lifting wind affecting the flying shot but little, and the

SCOTT GUN, BLACK POWDER, RIGHT BARREL, 126 PELLETS.

pellets had a good chance to make the best pattern of which they were capable. Of course, with such charges of powder behind large shot, and chilled shot, too, the penetration ran heavy, and it became explainable how an arm of such poor pattern might yet make a good record if only the shooter put in plenty of charge, for with such a striking force a single shot would drop a pretty fair-sized waterfowl. The gun was well held, since out of five shots fired from each barrel at each distance with each sort of powder, the average distance in inches between the centers of the aimed and struck circles ran as follows:

	Black Powder.		Schultze Powder.	
	Right Barrel.	Left Barrel.	Right Barrel.	Left Barrel.
40yds.....	5in.	4in.	5in.	4in.
60yds.....	5½in.	4in.	4in.	3in.

In not a few instances the advantage gain in the pattern sheet by shifting from the center aimed at was very slight, showing that the aiming of Supt. Moss, who did the firing, was good, and that the gun put its shot as far

SCOTT GUN, BLACK POWDER, LEFT BARREL, 115 PELLETS.

as it was able about the point of aim. The average for the five shots fired in each instance, from each barrel at each distance, and with the two sorts of powder, shows as follows:

	Black Powder.				Schultze Powder.			
	Aimed Circle.		Struck Circle.		Aimed Circle.		Struck Circle.	
	Right Barrel.	Left Barrel.	Right Barrel.	Left Barrel.	Right Barrel.	Left Barrel.	Right Barrel.	Left Barrel.
40yds..	101	99	106	104	81	69	83	74
60yds..	43	50	49	56	38	44	43	46

In noting the averages it should be borne in mind that the opened cartridges showed an average of 276 pellets in each one, so that reckoned by percentage there was not a single average which reached 40 per cent. of the quantity of shot fired, and at 60yds. not even 20 per cent. was reached. The advantage was slightly with the black powder in both distances of the test. Coming to a comparison of penetration, the large quantity of black powder, running up to 132grs. of explosive behind 585grs. weight of shot, showed itself in the hard hitting. The white powder was neatly balanced with the black, so far as force was concerned, as the penetration runs very even, with the advantage slightly with the white powder.

The testing of this gun was an illustration of just how the FOREST AND STREAM gun test is to do its work. It was not intended that trial be made only of sets of guns gotten up as show pieces by the various makers just to display the top notch work of any particular make. These trials are interesting as measurers of what arms ought to do, but beyond this sort of test there is the trials of the arms in the hands of the general run of gunners. Just as in our trajectory test of rifles we asked for

SCOTT GUN, SCHULTZE POWDER, RIGHT BARREL, 124 PELLETS.

stock rifles, taken out of a lot, and not fettled up for a special test; so in shotgun work, and even more so than in rifles, we wish to see what the average gun is doing. In almost every instance the gun shoots better than the holder holds, but this is no reason why a man should bring along a 10lbs. gun and fire away a big load of shot at each trigger pull simply to do the work which an 8lbs. arm properly loaded would accomplish.

In this instance it is not to be supposed that the Scott works will consider the performance of this gun as typical of their entire output, no more so than the Colt works consider our recent trial of a pair of Colt arms as showing what that make of arms ought to do. Yet the owners of those Colts, just as the owner of this Scott, each considered himself the owner of a pretty good weapon, and was ready to back it with his money and time in a trip after game. They were successful in dropping their birds, rather in spite of than because of, any extra aid given by the arms carried. Put to the cold, exact test of a number of figured shots at the paper target, the guns do not figure out largely. Yet in the hands of their

SCOTT GUN, SCHULTZE POWDER, LEFT BARREL, 103 PELLETS.

owners, hopeful zeal took the place of close pattern, and fair success was met with across marsh and meadow.

The Scott gun tried was a heavy, serviceable arm. Shooter Moss said he could not detect any special difference in recoil between the two powders, and this may have a significance in looking at the penetration figures. In one shot the wad over the Schultze powder at 40yds. came down the range and through the paper screen along with the metallic contents of the charge.

Our figures in the record so thoroughly cover the story of the gun's doings, that we will leave them, together with the selected best patterns, to tell the story of the test. In the cuts it should be borne in mind that *A* in each instance is the point of aim, while *C* is the center of the struck circle for greatest pattern.

CLAREMONT, N. J., Aug. 7, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Scott hammer. Cost, 8—. No. of gun, 15,981. Weight, 10½lbs. Length of barrels, 33in. Gauge, 10. Right barrel, full choke. Left barrel, full choke.
Weather—Clear. Direction of wind, 5 o'clock. Force of wind, 4 miles per hour. Thermometer, dry, 75°. Do., wet, 67°. Humidity, 66°. Barometer, 30.1in.
Charge, as given by holder of gun:

BOTH BARRELS.

Shell—U. S. C. Co.'s Climax.
Powder, Brand—Dead Shot.
Powder, Quantity—4½ drs.
Shot—*Make*—Tatham. *Quantity*—1¼ oz. *Size*—6 Chilled.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

BOTH BARRELS.

Loading.		Powder.	Shot.
Card over shot; two B. E. wads and card over powder.	1...135 grs.	588 grs.	275 pellets.
	2...130 grs.	567 grs.	271 pellets.
	3...132 grs.	589 grs.	274 pellets.
	Average 132grs.	581 grs.	273 pellets.

TEST AT 40 YARDS.

Five Shots per Barrel from rest at fixed 30-inch Circle.

ST. LOUIS, Mo., Aug. 31.—The officers of the Missouri Fish and Game Protective Association have determined to put a stop to the illegal sale of prairie chickens in this city, and with this object in view they recently appointed an agent to investigate and report to them the results of his investigation. For a week or more the agent labored hard in the good cause and his vigilance was well rewarded, for he succeeded in having warrants issued against a number of prominent restaurant and hotel keepers who were serving their guests with a delicious article of "owl," and one game dealer suffered a similar fate. They were all arrested and gave bonds for appearance in court. Sportsmen here are highly elated over the splendid showing made by special officer Voris, and they also hope that the violaters will be given the butt end of the law for selling chickens at this time when the open season for them in this State is 45 days off yet.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 27.—We have been blessed with beautiful, World's Fair weather here for the past season, and one could hardly believe that it was summer at all. Some of our shooters who have gone afield for an early shoot report fair weather all through upper Illinois and Indiana.

Numbers of shooters have already gone into the latter State for the ostensible purpose of fishing or snipe shooting, but it is highly probable that next Sunday will see most of them out after chickens, if they do not go before that time. There will be very fair prairie chicken shooting in upper Indiana this fall, unless all the promise of the earlier season be falsified. Some little illegal shooting is reported in Illinois, but it is being kept quiet. Illinois, Indiana and lower Wisconsin are going to afford Chicago shooters really very good prairie chicken shooting this fall, without the necessity of going very far from home. But it will not last long. The guns will be out in thousands after this big, beautiful and easy game bird, and the supply will rapidly fade away. There is no bird so defenseless as the pinnated grouse, and it is the prey of every one, from Zulu up.

Speaking of snipe reminds one that jack snipe made their appearance on our marshes three weeks ago, and came in considerable numbers ten days or more ago. A few of those who were "on to" this have quickly slipped out and made some good bags already. Mr. John Grey, of the Cumberland Club, whom I have once mentioned as a very successful duck shot, told me to-day that he had just got in from the club, and had bagged 44 jack snipe in less than half an hour (he said) on the little flat directly in front of the club house. "I don't think I was gone over 20 minutes," said he, "the place was alive with them. The boys don't know it yet."

Lately I read a lot of learned stuff about snipe in another journal, and supposed I was learning something until I fell to talking with Ed Irwin, of Corry, Pa., who spends his summer on Chautauqua Lake, and who comes out to Koutts, Ind., on the Kankakee River, to shoot snipe for the market, as he has done for the past twenty years. He says that region holds out better than any snipe ground he knows. Mr. Irwin said, "That fellow you are talking about says snipe come in in three separate flights. Well, I have watched the jack snipe pretty close for over twenty years, and I don't think they do anything of the kind. You can't lay down any such rule. Snipe usually come in on the full moon. Your early Illinois snipe came in on the full moon, and you will notice that they will thin out now and not be in to any great extent till the full moon of next month. A good many people write about game who don't know very much about it. I am convinced that if this gentleman had observed jack snipe so long as some of us, he would have changed his mind about the three-flight business."

Golden plover crossed Ohio three weeks ago, and they are on our prairies here now to some extent. I have not yet seen any one who has been out after them, but I will shortly look up Italian Joe. He knows where all the plover are.

Mr. W. T. Best, of the Chicago Tin Pigeon Co., starts this week for Denver, Col., to attend the big shoot of the Queen City club, which will probably result in the further strengthening of the "Rocky Mountain Trap-Shooters," and should be quite a considerable affair. Mr. Best has space offered him in this shoot for his bird, which is one of the new and good inventions which Chicago is all the time turning out for the sporting world. I have tried not to miss mentioning any noteworthy product of that kind during the past year, and believe that the columns of this paper will show that this city has done more in the way of originality and enterprise in that respect than any other in the Union during the period named.

The Standard Cartridge Co. of Chicago is now well settled in its beautiful new offices at the northeast corner of Randolph street and Wabash avenue, and things have a rather explosive look in them, the large floor having the offices of the Standard Cartridge, the Dupont Powder, the Oriental Mills, the Atlantic Dynamite Co., and the Repauno Chemical Co. Mr. C. E. Willard, the superintendent of the Standard Cartridge, has his desk right up in the front, as if he wasn't at all afraid of being seen over at his new place of business. Charlie Willard is so well known that it isn't news to talk about him. He will have to *chasser* around between here and St. Louis, until Chicago annexes St. Louis, which will be before long. Mr. Rice's desk, and the Dupont office, are railed off handsomely just back of this, and the Oriental Mills come next. Mr. Rice's private office, which is furnished with singular good taste for its purposes, lies at the end of the suite, and is a very good climax to the whole. Mr. Rice has a number of heads of big game in his office. He has also a large rug, which I took to be native Mexican, but which he says is West Indian weaving. It is very homely—enough so to be attractive, he says. All these offices are finished in old oak, and all the desks are of that wood. The total effect is one I do not see equalled in similar offices in this or other cities, and shows what dignity sporting interests may assume upon occasion in this city. Mr. Rice and Mr. Willard say that their machinery will soon be in. Both these gentlemen are known in this country, and it would afford absent friends pleasure to behold them in their new quarters, to which they seem now perfectly adjusted.

The actual business of the field is now beginning to assert itself. Our shooters are growing uneasy, and are oiling up their guns. There is a vague suspicion in the air that something is going to happen before long. The anglers hold on, but the shooters will before long outnumber them. The fall, the natural time for field sports, draws on apace. The nights are growing cooler.

Aug. 28.—Some weeks ago a lone highwayman held up and went through a Milwaukee & Northern train at Ellis Junction, securing booty and escaping unharmed. A little while ago the same man robbed a Wisconsin Central train in the same manner, escaping into the great Northern wilderness with equal ease. Yesterday he held up a stage coach which was carrying four passengers from the great angling water, Lake Gogebic, to the station on the Lake Shore & Western road. One of the passengers resisted and fired at the robber, who returned the fire, and has probably killed two of the occupants of the stage, himself escaping once more into the woods, once more to be pursued by a sheriff, a posse and a reward. These things seem interesting to me, as the above are three of our best fishing lines of railway, and the outrages were committed right in the angling territory of which I have lately written. From what I saw of the almost impassably dense and impervious nature of some of that country up there, I should say it was simple folly to undertake to find a man who had five minutes start in those woods, unless the pursuit had trailers, either dogs or men.

Almost simultaneous with this account comes news of a train robbery on the D. & R. G. in Colorado, a country with whose dry and rocky character I happen also to be familiar. Yet in this case the Indian trailers followed the robbers for miles and miles, and captured them, even in spite of their removing their boots and swathing their feet in thick rags. I have seen an Apache scout follow the trail of a deserter over the dry foothills which lie about Fort Stanton, as fast as the squad cared to follow him, and he rarely hesitated. This makes me think that an Indian such as these could run down their bandit murderer for them; and that no one else can.

Our shooters are beginning to ask the old question, "Are we going to have any ducks this fall?" So far, the water in the marshes seems at very good stage, and everything looks prosperous. English Lake men say their marsh is so high that they feel quite safe. Cumberland marsh also reports a good run of water and a good prospect. The high water will make snipe shooting good, almost without doubt.

Our shooters here are to a great extent wildfowl or trap-shooters. Upland shooting has had a swift decadence in this region, although there are a few who still know and seek its delights. We hav till a slight hold upon this most excellent style of spo , and it is to be hoped that our upland birds may gradually be preserved and restored to us, as our pinnated grouse have been by the late close law.

Shooters should bear in mind once more our open date on prairie chickens. It has been lately accurately stated in these columns, and is Sept. 15, not Sept. 1. The daily papers of this city, usually wrong on all sporting matters, have recently wrongly announced this date as Sept. 1. The latter is the date our noble-minded Senate tried to spring on us, although the clerk frustrated the scheme with his lucky stumbling pen. We have got a dandy legislature out here. There are only a few things they don't know, and they are after those few. Every one of them is a Solon J. Daniel, and his intellect would cast a gloom.

AUG. 28.—*Later.*—It seems that the news about the Gogebic stage robber is of more direct interest to FOREST AND STREAM than appeared at first. Mr. A. G. Fleischbein, of Belleville, Ill., was one of the men shot by the highwayman, and he died of his injuries at 6 o'clock this morning. Mr. Fleischbein was a prominent sportsman in his community, and well known in business and political circles. He was also well known as a contributor to the columns of FOREST AND STREAM, which paper must certainly deplore his untimely taking off while on his pleasure trip into the woods. It is melancholy to add that when Mr. Fleischbein fell from the stage in consequence of his injuries, he was deserted by his three companions, and left lying alone in the road so long that the loss of blood caused his subsequent death. He complained of this. He said also that the robber threatened to kill him as he lay crippled in the road.

Aug. 29.—We have had a sensation. We have had two arrests on South Water street for illegal handling of game. We have met the enemy, and we are theirs.

Some time ago a Mr. Bortree and others made complaint to Mr. Fred C. Donald, president of the Illinois State Sportsmen's Association, that there was a large amount of illegal game coming in. Mr. Donald undertook to institute action. He went to some of the leading members of the association, and passed his hat to raise a little collection. He got his hat back. Then he grew a trifle warm, went down in his own pocket, and expended $45 of his own money, for which he will never receive a "thank you," and hired a man to get evidence for a prosecution. We have a game warden out here, but like most game wardens, his whereabouts is mostly shrouded in mystery. Not a member of our State association knew the name or address of our trusted officer; although it transpired later that his name is H. P. Brunsewitz, and his address No. 12 Clybourne avenue. This information was gained from the arrested game dealers. They said that Mr. Brunsewitz came down to them, on South Water street, to ask them what his duties were! It is presumed they told him his duty was to lapse into peaceful silence. Anyhow, he lapsed.

The special agent, Mr. Malcolm McNeil, reported that he found il egal game in a number of cases. "Well, go ahead and make a seizure," said Mr. Donald, "I can't tell you whom to arrest and whom not. Go ahead."

Mr. McNeil went ahead, armed with his little search warrant in the name of the people of the glorious State of Illinois. And he lit down upon just about the two men out of all South Water street whom every sportsman of Chicago would have liked to see let alone. He arrested Mr. Henry A. Sloan, one of the most prominent members of the Mak-saw-ba club, a sportsman beloved by his fellows, and a man who has spent more money in game protection than almost any in the State Association. He found a box of chickens, ducks and quail sitting in front of Mr. Sloan's place, and made the seizure. The other case was against Mr. G. W. Randall, also well-known in the Mak-saw-ba club and in shooting circles here. Ducks and chickens were in Mr. Randall's box, which Mr. McNeil received as it was unloaded from the freight wagon.

Mr. Donald at once informed Mr. Wolfred N. Low, last year president of the State Association, who is constituted by State's Attorney Longenecker, assistant prosecutor in Cook county for cases of this nature, and although Mr. Low hardly liked the look of things, the writs were out and returnable, and nothing was left but to go ahead on the path Mr. McNeil had cut out. A continuance was had by defense on last Saturday, and on Tuesday at 9 A. M. the State vs. H. A. Sloan was tried.

Mr. Low opened the prosecution with a direct apology for his friend Mr. Sloan, of whom he spoke in terms of the highest respect. "Your Honor," said he, "Mr. Sloan will, I trust, be found to be brought before you under some misapprehension. Even should evidence be found against him, I am satisfied that he has received this game, for the killing of which he is not responsible, only at the last resort and as a protection to his business on a street where the general morals are such that action of this kind is almost necessary; for a more active and con-

scientious sportsman we do not have with us than Mr. Sloan."

After this open admission of the inefficiency of our game laws—which bears directly upon the facts set forth by myself last fall and later, to the effect that the conflict in open dates of the great game markets practically keeps all the markets open the year round—Mr. Low proceded with the prosecution to a short extent, Mr. Donald thinking it best to go on.

Defense set up that the prosecuting witness was not a game warden; that only a game warden had power under the statute to search premises for illicit game; that although power to prosecute a fine might lie in the people, action did not lie in this case for the people.

Upon the defense being outlined, Mr. Low dismissed the prosecution. The result was practically a non-suit and not a trial on the facts at all. Defense showed incidentally the name and address of the proper game warden. The Randall suit being of the same nature no appearance was entered in it, and it was dismissed. The Randall birds were sold by agreement. Mr. Sloan left Justice Smith's court in anger and refused to remove the confiscated game, which was put into a freezer by prosecution and watched. Mr. Sloan said he knew nothing of the birds and did not receive them. Mr. Randall said his birds came from Sioux City, Iowa. I am told this box also had quail in it.

Mr. Donald tried earnestly to secure the attendance of a number of our leading sportsmen at this trial, and sent to FOREST AND STREAM an invitation to be on hand. The latter was accepted, but the result of the morning suit caused the dismissal of the afternoon suit, which was the only thing to be expected. Not a soul of our leading sportsmen was there. Mr. Donald said to me, "When I left the room I was so disgusted with the whole affair that I would have handed in my resignation as president of the Illinois State Sportsmen's Association, if I could have found anybody to hand it to." Mr. Donald shall do nothing of the kind. He has nerve enough to make a start, at least, and so he belongs right where he is. Certainly the boys will be piqued and shamed enough by these rather inglorious results to chip in and back up Fred C. Donald, one of their own companions, to the extent of the $50 or $100 necessary to make another proper case, and one which will result in a conviction on South Water street, which will now laugh louder than ever at our "yearly trap-shoot league" of an association, if something is not done. I am ready to stand my share of such a fund. I believe FOREST AND STREAM is ready to stand its share. Every shooter in this city ought to be able to stand his share. The association has no money. Let it not be said that it is all apathy. Not much money is needed. Mr. Low offers his services to prosecute a case at any time. The iron is hot now. There are plenty of summer quail in the market now, and it won't take long to get a case. Besides, you know, we know the name of our game warden now.

Such, so far as I am able to make it, is a plain, unvarnished exposition of the truly delectable state of affairs in game protection in this city. Is it any better anywhere else? Is there any State sportsmen's association which is anything more than a yearly trap shoot? If any, speak, and give our sleeping brethren the benefit of one good example. I have no grudge against the Illinois Association, certainly, but if there is anything on earth I do love in newspaper work, it's facts. I talked with Mr. Low, ex-president, to-day.

"Mr. Low," I said, "a while ago I wrote an article for FOREST AND STREAM in which I tried to rip the State Association up the back a little on this protection business. The paper declined to use so severe an article. What do you think—are we any good, or not?"

"No," said Mr. Low, "we are not, and you were doing no injustice, but a possible good, in stating the facts as you did. There is lamentable deficiency both in the State Protective Association and in the State game laws. Look at the balk made on the prairie chicken law this year. We hardly know how we stand. Judge Caton has just handed me an old decision which makes it at least doubtful whether you can't go behind the law as published. All I can say is, we are mixed, and badly mixed. I once stated for FOREST AND STREAM, and also publicly in an address to our State convention, I believe, that our game wardens had police authorities under the new law; but for the life of me I can't find this clause in the published laws, although I have received congratulations upon its being passed. The amount of it is, that none of us sportsmen can afford to go down to Springfield and stay a whole session to watch a measure through. We can't afford it. The Association makes no appropriation for it. But the South Water street men can afford to have a lobby there, and they do. Result is, they get there, and we don't. No, sir, you may say for me that I love the Association and enjoy its meetings, but so far as being a practical protective association is concerned, our record shows that we have no right to claim it."

Upon being questioned to similar purpose, Mr. Donald, the present president of the Illinois State Sportsmen's Association, said:

"I am feeling pretty sore about this late action. I have had a *bona fide* intention to do something on this line, and I honestly thought I would have backing enough from the boys to give me at least a little moral support in these late cases, unfortunate as they were. I had no support whatever. I am willing and anxious to try again, and do not believe in giving up so easily, at least not until issue has been fairly joined in a well-taken case. I want to go ahead and fight now, if there is any interest held by any other members. But what am I to do? The truth is, our association don't take hold and never did, and it all is very discouraging."

Once we had a president to our association who once upon a time was asked for $5 to aid in a game law prosecution. "If it was for politics, I'd go you," said he, "but for game protection, excuse me!" This man is now high in politics here. In men like Mr. Donald and Mr. Low we have a great deal better material than that, and both these gentlemen have certainly shown themselves generous of their time and money to the last degree. To what good?

We have here, made right to order, a beautiful example of the practical—not the theoretical—workings of the local protection system and the game warden scheme. We can see, not what it might accomplish, but what it does not accomplish. Our law is no good, because it can not show results. Our law is so weak that perhaps all we can do at best is to break it over the heads of the game dealers at the very next suit. Our law, plainly, is worthless. But we are not going to change it. Our State association has no money to employ even one man to try to better it.

Now, here is another side to it. I know almighty well that men like Henry Sloan and George Randall and Col. Bond don't want to sell unlawful game. They would rather not. They would be willing to go into some compromise which would relieve them of the necessity—that is it, the necessity. When will our high and mighty sportsmen, who can't protect anything, and don't want to try, come down from the hill of their own conceit and offer a flag of truce to these game dealers, who can do just what they want to do, and who are desirous in many cases of saving the game, and not of selling it? In such a union there is strength indeed. It is not certain that such a union is impossible, if proper grounds of compromise were determined.

I have written of this before, and have thought of it often. It is my hobby. The present state of affairs does not induce one to think otherwise. There may never be a time when sportsmen and game dealers, East and West, will march on shoulder to shoulder, strong as an army with banners, but until something of the sort is approached or undertaken, do not let the Illinois State Sportsmen's Association imagine that it is an army with banners. Far more like is it to the melancholy spectacle of the lone Knight of La Mancha, mounted upon a bony and tottering steed, clad in armor, becoming yearly more antiquated and unfit for modern use, and waving feebly a rotted, weak and pointless spear.

Aug. 31.—Irving Park Gun Club, near this city, having grown impatient at the continual violation of the chicken law in this vicinity, has made arrangements to prosecute the next instance. So far as I can learn, the approaching of the open date has caused much more violation of the law than was the case last year or the year before. Everybody wants to get in ahead now, and is afraid some one else will get a chicken or so. No convictions. No arrests.

One of the members of one of our prominent clubs here killed six prairie chickens last week, at the club house in Indiana. He is not especially anxious to have this generally known. A grand example he sets!

To-morrow is open day in Indiana. There are numbers of birds along the edge of the Kankakee marshes, or there were a few weeks ago. The marsh hunters, pushers and "swamp angels" generally have been at them steadily for a long time. One pusher at the Cumberland Club, whom I thought quite above such work as that, is reported to have been shooting chickens regularly. No arrests. The Indiana law is a very peculiar one. In order to convict, it is almost necessary that the prosecuting witness shall have seen the defendant kill the bird, no doubt being left as to that fact. Of course, that is a good protective law. It protects the law breaker. Most of our game laws do.

Mr. W. N. Low has received an invitation from his brother at Wall Lake, Iowa, to come out for a chicken shoot. Wall Lake is in Wright county, Iowa, and is in one of the best chicken countries I ever knew. That used to be our Iowa hunting ground, and I have passed many pleasant days about that peculiar little lake. There is fair pickerel fishing in the lake, and there are bullheads till you can't rest. We used to back the wagon down into the lake at night and fish with a lantern hung at the tail gate. The farmers of that neighborhood were very hospitable and friendly in those days, eight years ago. Mr. Low says the chicken supply is still good around there. Mud Lake, in Hamilton county, below there, should also have a few chickens around on the stubble about it, we always used to get all we cared to eat, and that with only a little hunt each evening. All that part of Iowa and also the country still further to the northwest in that State is naturally a grand chicken country. It is shamefully, persistently and unlawfully harried by the market shooters. Local gun clubs are also very bad.

I presume if a party of shooters should head for Ruthven, in northwestern Iowa, they would either get good chicken shooting near there or learn where it could be had. I should not pretend to advise any shooter more definitely than this, because the conditions of a shooting country change very rapidly. Moreover, I should regret very much to send into this or any other country a party of shooters who might, as so many others have done there, simply give full rein to their love for slaughter, and go in to see how many chickens they could kill. There have been thousands of chickens killed in Iowa which never were picked up out of the grass, and thousands which were left rotting about the camps. Add to these the hundreds of thousands shipped to the yawning game markets, and you may well wonder there is a bird left in the State. The law is worthless. No arrests. Open date in Iowa Sept. 1.

Sept. 1.—Into the pleasant life of one whose duties bring him much among sportsmen, whom we may count the best of friends, there comes sometimes an event the more painful through the contrast of its setting. This morning Mr. W. K. Massie writes from Lexington, Ky., announcing the death at that city, on Aug. 27, of Mr. George Williams, one of the best known young sportsmen of that community, and one of my entertainers during my late visit to Lexington. Mr. George Williams was a brother of Roger D. Williams, known to readers of this paper through his connection with greyhound interests. Mr. George Williams was an expert and enthusiast in the sports of the field, and moreover a gentleman, kind and manly. The picture of vigorous young manhood, his death was keen surprise to his friends. During his duties as adjutant at the maneuvers of the State guard, he was overcome by heat, and expired a few hours later in a congestive chill. He and his cousin, Mr. Massie, had just planned a fishing and camping trip together. Few young men would be missed so much in sporting circles, and few so much among the friends who knew him socially. He was a man. E. HOUGH.

MCFARLAND AND HIS DEER.—Keene Valley, N. Y., Aug. 27.—*Editor Forest and Stream:* You may be glad to notice the fact that the game warden of Essex county is doing his duty. A guest of the Adirondack House in this place returned from a trip in the woods about the first of this month with a deer. When told that it was out of season, he replied that he didn't care for that; he should kill a deer whenever he got a chance. The skin of the deer was nailed to dry on the stable door. But word was sent to the game warden at Malone. He came here at once, and the offender, a McFarland, of Philadelphia, paid $100 to settle it. It will teach him a lesson and be a warning to others. A gentleman who came from the Saranac to-day told me they were hounding there, and he saw a party start out with hounds this morning.—CAPIAS.

MINNESOTA, Aug. 22.—Prairie chickens are scarce here, and a great deal of the land is posted. Lawlessness on the part of hunters has driven farmers to this step. Sloughs are so dried up after five dry seasons that there will be little or no fall duck shooting.—Y.

PROVIDENCE, R. I.—Woodcock and partridge are very plenty this season, and the law has been respected better than common this year. The prospects are good for the first of September. I shall try my luck with the rest of the boys.—COHANNET.

THE Ideal Loading Tools are steadily growing in favor among sportsmen, and the manufacturers are kept busily at work in order to supply the demand. The subjoined letter is a sample of many which speak in praise of their value:

One of Thousands.

AUBURN, Me., Aug. 19, 1889.

The Ideal Manufacturing Co., New Haven, Conn.:

GENTS—Enclosed please find $1.25, for which send me a set of your "Ideal Shotgun Loading Tools," SAME AS I HAD BEFORE, 12-gauge, and all nickel plated. Yours respectfully, S. J. BRETT, Auburn, Me., P. O. Box 897. P.S.—Please send as soon as possible. —S. J. B.

AUBURN, Me., Aug. 25, 1889.

GENTS—The Loading Tools sent me Aug. 21 arrived all right. They are the handiest set of tools that I ever owned to take on a hunting trip. Yours respectfully, S. J. BRETT.

Sea and River Fishing.

CAMPS OF THE KINGFISHERS.—VIII.

ECHO LAKE, ONTARIO, CANADA.

I HAD not looked into the little trout stream yet, except at the "Jedge's pool" near the camp, and accordingly next morning, with rod and bait box of worms—fly-fishing was out of the question on account of the "bresh"—I took my way up the rough road leading from the dock along the ridge overlooking the gulch, at the bottom of which the stream found its way among the ragged rocks, intending to first have a look at the abandoned copper mine back in the hills and then fish the stream back to camp.

A matter of half a mile from the lake the stream separated, the road crossing the left hand branch by a rude bridge, and following the other one toward a high, rocky hill a quarter of a mile further on. The left branch we afterward learned from Farmer Ruttle was the outlet of a small lake—nearly a mile long—that was a couple of hundred feet higher than Echo Lake, and might be reached by a trail leading across a distance of a mile and a half from the deep bay, a couple of miles below our camp. He said it was full of a kind of fish that the people of the neighborhood called trout, but from his description we could not make out the species, unless they were the landlocked salmon. A suggestion that we take a light boat across the carry and try it a day or two developed the fact that there was not muscle enough in the camp that was willing to undertake the feat, and the lake was left in its solitude.

The road led along a little brook to a cluster of four or five nearly new and very comfortable hewed log houses, standing on a level spot of a few acres near the foot of the hill, all open and deserted, giving the place a dreary and deserted appearance, that was further heightened by the oppressive stillness that reigned over the scene. A path led off the left from the road up a slight ascent to the level above, and following this I entered one of the most pretentious of the houses and sat down on a pine bench in the main room to rest, for legs will get weary and the breath grow short as the years "silver the crown," and the road had been nearly all up hill since leaving the camp.

Scattered around on a long pine table, on another bench and on the floor, were fragments of "blossom rock," copper ore and other specimens, that reminded me of pleasant days and climbs in the Rockies in years a-gone, when life was young and bright and muscles tireless. Selecting a few to take home, they, with the rod and bait box, were left on the table to be picked up on the way back; and taking another path that led back to the road down past the "root house," I crossed the stream on another bridge and was directly climbing the side hill along a zigzag road—cut in the rock in this manner to ease the grade—to the mine entrance, which we had been told was a hundred yards or more from the cluster of houses. When about out of breath, a level spot in the road gave me a chance to recover my wind and peer into a chasm 20 or 25ft. deep and 4 to 8ft. wide, at the bottom of which the little stream whimpered noisily as it tumbled over its rocky bed on the way to the level below.

Spanning this was another stout log bridge, and on the further side against the side of the hill was a rude shed, under which stood a good-sized upright steam boiler (however, there was no engine in sight) that had doubtless done duty in pumping water from the mine. A steam boiler is not a rare sight, but I marveled much how the mine men ever got that one up that steep, tortuous road.

Two or three rods from the shed I entered the mouth of a tunnel that led straight into the hill, doubtless to the shaft where the copper came from; but after following the drift a few rods it was so dark and gruesome, with little pools of water under foot and the monotonous drip, drip of the drops percolating through the rocky roof overhead, that I turned and came out in the sunshine and free air again, with my curiosity fully gratified without a peep in the shaft or knowing how far it was from the mouth of the tunnel. But the wild beauty of the place was compensation enough for the tramp from the lake, and I sat down on a stone to enjoy it.

At my feet was the deep rift in the rock, seemingly cut by the attrition of the stream during unknown ages; below and to the right spread the little valley where stood the deserted houses of the miners; further on a belt of timber and swamp, out of which came the left branch of

the stream, and at the further side of the woods rose the rocky ridge that reached nearly down to the camp at the lake side. In front, back and off up the gulch to the left, rocks, rocks, rocks; rough, smooth, rugged, ragged, rent and riven, with hemlock, pine and cedar, bushes, balsams and quaking aspens to soften the hardness of the picture—truly the Rocky Mountains in miniature.

After a half hour spent in an "absorbing interest" in the wild scene, I took my way down the road and back to the house where I had left my rod, with a half-fledged notion that the Bible version of the creation of Mother Earth in six days smacked somewhat of a fish story, or that Moses must have mislaid some of his statistics when rounding up the first chapter of Genesis. But the handiwork of the Lord is beyond the ken of man, and old Sam makes it out that, "We must read the great book o' natur', each accordin' to his gifts."

Back to the stream I fished along to the forks and on down to a fall a quarter of a mile or more above the camp, floundering through brush that would have puzzled a bird to get through, climbing over rocks and fallen trees and logs, without getting a bite or seeing anything in the shape of a fish except a few small minnows that doubtless came from the lake back in the hills.

Peering over the ledge straight down into a shallow basin scooped out of the solid rock 20ft. below, one side of which was a vertical wall as high as the top of the fall, I no longer wondered at the absence of trout above, for no fish could have surmounted the thin sheet of water that ended in scattering drops in the pool beneath, without the aid of a good pair of wings.

Picking my way with difficulty down over great masses of ragged rock to the stream across from the wall, I tried the basin—nowhere more than a few feet wide—carefully for a trout, but it seemed that there were none in it, and I went on down the wild glen disappointed, for it was a very likely looking place for one of the elders of the tribe to make his abode. A few rods below the big fall I came to another smaller one of a couple of feet where the shallow water slid over a smooth flat rock and fell into a pool 8 or 10ft. across, but not over a foot and a half deep in any spot. On the further side a great stone of several tons weight hung out over the stream, hiding the bottom for 2 or 3ft. underneath, and near this I cautiously dropped the baited hook. Instantly two trout darted from under the rock, one about 10in. long, and the other fully 6in. longer, but the smaller one was the quicker, and as his jaws closed over the squirming worm a dextrous motion of the wrist fastened the hook, and after a very brief and very sharp struggle he was "histed" bodily from the water and swung out, jerking and twisting over the bank, and just then the score was settled for a barked shin in clambering down around the upper fall. Stringing him on a forked twig and securing it in the edge of the water a rod above the little fall, the bait was adjusted with extra care on the hook and again quietly dropped, with one of old Sam's "curves of expectancy" in my spine, in the pool near the big rock. But the struggles of the smaller one had evidently frightened the big fellow, and the most artful "bobbings" and "twitchings" of the Kentucky worm with a pedigree failed to inveigle him from his retreat under the stone, and I backed away from the stream and sat down on a flat rock to ruminate for half an hour on the "reasoning powers of an old trout," and give him time to get over his scare.

Then I crossed the brook and dropped the bait in from behind the rock, without showing anything past it but the tip of the rod, the shortened line and the baited hook; but it was of no avail; he had made up his mind that the writhing worm in front of him had something to do with the violent and unaccountable capers of his mate a short time before, and his astonishing and unexplained flight from the pool of their choice, and nothing, even a frisky black cricket I caught and impaled on the hook, nor the brilliant anal fin of his partner made to spin in the most enticing and bewildering manner past the rock, would lure him from his hiding so long as the recent mysterious catastrophe was fresh in his mind; and I left the place with my one trout and a lament, resolved to go back another day and have it out with the cunning old patriarch if it took from early dawn to gathering darkness, but something kept turning up to prevent a return to the stream, and for anything known to the contrary he is there yet alone in his glory, the sole occupant of "the big boulder pool."

When I emerged from the bushes an hour later near the camp, six more had found their way on to the forked twig, rather a meager showing for a "famous" trout stream; but I was satisfied, and this goes a good way in the matter of a day's sport, albeit the day had not been one unmixed with some backsets. I had caught seven good trout, came back with a pocket full o' rocks in the shape of specimens, and had greatly enjoyed the wild and rugged scenery. I had also missed looking in the mine shaft, lost a section of cuticle from my right shin, and been outgeneraled by the big trout—these are backsets. Yet withal it was a day to be remembered as one of the pleasant "episodes" of the trip, and I went to sleep that night in a serene frame of mind and full of good will to men.

The next morning I took another maskinonje, which acted as a soothing salve to the poor bass fishing we were having. The Jedge and I had started for a cruise up around the head of the lake to show the boys how to catch bass, the Jedge tacking on the proviso as we left the dock, "if we have luck," and with a bucket of minnows and some fresh frogs caught at the farm a couple of days before, we hoped to make our boast good with a string that would be the envy of the camp, but, "the best laid schemes o' men and mice, etc."

When only about 300yds. from the dock, and before we were fairly settled in our seats after the hooks had been baited and run out astern, a noisy break in the water and a violent jerk at the line brought the skipper to his feet with the old rod in hand and "blood in his eye," waiting for the fish to get a good taste of the bait before gorging it. As it was only a small shiner not over 2½in. long, with no sinker on the line, the signs meant bass, but the reel turned so slowly as the line ran off that the Jedge said, "snake."

However, when the strike was made, a surge that doubled the rod settled the question as to bass, and when a moment later a splendid maskinonje went in the air a hundred feet astern with a leap that made our blood tingle, the Jedge quickly took the oars with a "whoop" that brought the boys out on the dock to see what had broken loose, and then the boat was headed out into the lake a few rods to give us a chance for a fair tussel in more open water.

But the fight proved a tame affair and a disappointment, and not to be compared with the game battle made by Knots's big pickerel two days before. This fellow must have been the poltroon of the tribe, or suffering from a bad fit of indigestion (for lack of something to digest, as we found out when Louis dressed him), for the fight did not last five minutes. A couple of sharp, short rushes after he fell back in the water, just to save the reputation of the family as it seemed, ended the spiritless struggle, and he was pulled alongside like a piece of driftwood, where the Jedge sank the gaff in his back and lifted him in the boat. It was the feeblest exhibition of "game" that had ever come under our notice, and to strike a maskinonje, big or little, and land him without a desperate and prolonged fight, was something we could'nt understand. The almost total lack of fighting qualities displayed by this one was a mystery, but we settled it the best way we could by charging it up to weakness from long fasting, as evidenced by the thorough emptyness of his "innards" when opened.

The Jedge fastened a stringer to his jaw and swung him over the side of the boat, remarking in his easy, dry way, "It's a wonder he had the nerve to tackle that sickly little shiner."

As the gaff had about killed him, and not caring to tow a dead weight, we pulled back to the dock to relieve the suspense of the boys, who, having seen the Jedge lift him in the boat, were, we well knew, "a sufferin' in their minds" to know his size and weight.

He had the length and frame of a 25lb. fish, but when put on the scale his "royal lankness" only pulled the indicator down to 15lbs., whereat old Sam was moved to explain, "From the looks an' gineral thinness o' that feller, the pearch an' sunfish crop didn't hit in his neck o' woods this season I reckon." KINGFISHER.

ON THE OSAGE.

A TRIP of less than 150 miles west by south of St. Louis, and one finds himself in the forest primeval. There are no towering pines and hemlocks, but there are some mighty tall pecans and huge spreading oaks. At the junction of the Anglaise with the Osage River, in Missouri, Izaak, Jr., Mrs. Izaak, Jr., and the Kid—for there is now a Kid—located for a week's outing. And they got it. In fact, they got several outings as well as several innings. This was due to fleas. The primary object of our trip was fishing, but more time was spent in hunting the aforesaid nimble jumpers. The fish in the Osage may not be free biters, but the same can not be said of the flea that inhabits its banks. It is a very free biter, both by night and day. Its industry in that line is enormous. And it is a great jumper. It will jump ten feet into space, and then, like the boomerang, will return to the place from which it started without any intermediate landing. But to my narrative.

It was about 4 o'clock on Wednesday afternoon when we reached our destination and were kindly welcomed by our excellent hostess, Mrs. B., who soon had a meal in readiness whose excellence was a surprise in this wild region of hills and forests, far from towns and railroads. But eating was of small account when there was fishing ahead, and Izaak, Jr., soon had his tackle in trim, and hurried down to the junction of the rivers a few hundred yards away. The Osage is here about 200yds. wide, while the Anglaise is about 50yds. The outlook was not very satisfactory, for instead of finding clear water the Osage was quite muddy, and the smaller stream but little better. But there were fish there sure enough, for I could see them breaking water, and occasionally one would make a big splash. I was soon on a big log by the bank, and with a Seth-Green fly on my line, I began the testing of the waters. After a few casts I felt a vicious pull, but the strike proved an empty one. A few more casts and the line went out as if it was attached to the drive-wheel of a locomotive. There was a slacking up, then a start, and now I give a yank and feel that something is on the hook, but it was a most peculiar feeling; felt as if a puppy had hold of the line and was shaking it. I reeled in my line, and when the critter got to shallow water it just made things squirm, but in a moment more I had it on the bank, and what do you suppose it was? An alligator gar, by the great horn spoons of mud! What in thunder was this tinclad reptile of past geological ages doing up here in the Osage River to spoil my fishing? said I to myself. For I knew where this monster frequents all civilized fish would desert. But I tried again, and in a few minutes more had another tinclad squirming about on the bank. To fish longer in such a spot was no use, and as it was getting dark I went back to the house, and soon to bed to drown in sleep my great disgust.

I had not slept long when I was partly aroused by Mrs. Izaak, Jr., yelling out, "I've got a bite; get up and light the lamp." "Pull up your line," I shouted, for in my half-awake condition I, of course, had fish in my mind; "you don't need any lamp to pull up your line." But a vigorous reply thoroughly awoke me to the awful fact that the bite was the bite of a flea. The lamp was lit, the search begun. Picture it yourself; Izaak, Jr., in his *robe de nuit*, holding the light, Mrs. Izaak doing the searching, and the Kid assisting by vigorous kicks and yells. But I will not enlarge, for you've all been there yourselves. A Kodak camera could only do justice to the scene.

The next morning I determined upon getting some live bait, and accompanied by Boss, I set out over the hills for a small creek where minnows did abound. Boss was the name of a twelve-year-old lad who earned this distinction by bossing everything with which he had to do. But we got along splendidly, secured our bait, and then struck across the country to the Anglaise River some two miles above its junction with the Osage. The water here was quite clear, there was a fair current, and deep pools gave promise of the gamy bass. With a live minnow I again began operations, and soon felt a nip. On reeling in I found the minnow snipped in two as by a pair of scissors. "Helen Blazes," I exclaimed, "more garfish." And it was even so. After a few more trials I caught one of the hideous things, and at once started down stream for a more likely spot. I soon found it in a pool below an eddy, and there near the top of the water lay a big bass, at least he looked big to my longing eyes. I gently dropped a minnow in front of his nose, but he would know it not. Then I tried a nice little frog with the same result, but before I could tempt him with a crawfish he turned tail and sailed away down the river. I fished the pool some more and took a small bass and a channel cat, and this was all I got on my journey down the stream.

But that big bass was still on my mind, and the day after Boss and myself took the boat for a fish up stream, as far as we could go. On the way up to where was my big fish a few channel cat were caught, and when I arrived at the pool I intended the bass should be mine. I had no doubt he was hiding behind a big log which lay in the middle of the stream. With crawfish for bait I made several casts up and down, and finally over the log in the middle of the creek. Sure enough, out rushed Mr. Bass, and, with a swirl, he took the bait; a sharp strike and he was firmly hooked, and was soon safely landed. Its weight was a little over 2lbs., and it was the only decent-sized fish that I took.

The fact is, there was no fish to take, and beyond buffalo fish, channel cat and gar-pike, I do not believe that fish are at all abundant in these waters. The State of Missouri could well afford to offer a premium for every gar-pike destroyed, for they are rapidly driving out all respectable fishes.

But the country at this spot must offer fine sport to the hunter during the fall months. Squirrels are abundant, quails are plentiful, turkeys are fairly numerous, and deer are still found in sufficient numbers to afford good sport. But I saw no partridges, nor did I hear their drumming, though the country is admirably fitted for these birds. The natives say that they are found, but they certainly are very scarce.

Some idea of the backwardness of this section may be inferred when I state that there is not a railroad in the county, and but few bridges. The roads wind up and down, backward and forward, over the hills and valleys, and are marked by blazed trees. A guide is needed to go any distance. If you want to go to a point south of you, you generally start in a northern direction, and to reach an eastern point you take a westerly bearing. Stock of all kinds roam at large through the forests, and the tingle of bells is heard on every hand. It is a pioneer country, with the exception that the pioneers are old settlers who have made but little progress since they put up their rude log huts many years ago.

One can scarcely believe that within 150 miles of St. Louis there is a section of country of so primitive a nature. Most of the houses are simply rude huts of but one room, and the chinks in the walls by no means are well filled. There is but little furniture, only home-made benches and tables. Glass for windows is unknown in most of the houses, the small peep holes being closed with boards when necessary. Some attempt is made at raising crops, but the weeds get the start for lack of cultivation. As might be expected the people are in harmony with such surroundings. Emigrating from North Carolina and Tennessee, one still hears the "we'uns" and "you'uns" of the poor whites of the South, and they have not discarded the shiftless ways of their ancestors. They all use tobacco, big and little, male and female, and cuss words are an integral part of their language, which, of course, is a dialect curious to the stranger. Thus a sack or bag is a "poke;" and, by the way, everything is carried in pokes on horseback, which is the standard of locomotion in this section. A man who lives in a house with two rooms is said to have "two houses." If there are six rooms he has "six houses." The natives are distrustful of strangers, and though civil enough are hard to get information from. They have great curiosity, and my little No. 22 Winchester, and split-bamboo "pole with a wheel on it," were great wonders to them. An old lady who lived on the opposite bank of the Osage said to Boss: "You've got a little gun over there that just goes 'piff.' I'd like to see that little gun." Although Izaak, Jr., wore a jeans shirt and a pair of old pants with the regulation pants, he was still looked upon as a city chap, probably on account of his rod and gun.

It must not be inferred from these remarks that there are no progressive people in this section, for there are a number of really thrifty men who have good houses and farms, and live in comparative luxury. They certainly deserve credit for the way they have risen above their surroundings; and with the advent of a railroad they would then reap the full value of their industry.

But our week's outing is at an end, and pleasant enough it was, even if the fishing was not good. But a true angler always has a good time, fish or no fish. I can not close without extending thanks to our hosts, Mr. and Mrs. B., and their two promising boys, for their many kindnesses to us. They are former St. Louisians, and the husband came to this wild region a number of years ago to regain his broken-down health, and his wife, with heroic devotion, has endured the inconveniences of a frontier life to gain this desired end.

And now back in the city are the Kid, Mrs. Izaak, Jr., and the Lone Fisherman, IZAAK, JR.

ST. LOUIS, Missouri.

FALL RIVER, Mass.—Bluefishing in Mount Hope Bay and Seconnet River has been a failure, as has also the scup and tautog thus far. The tautog are plentiful in Narragansett Bay, however, and are running nearly a month earlier than usual. Word was sent here and to Providence that there were bluefish between Patience and Providence islands, and the boats that got there that day (July 19) did well. But inside of ten hours there were seven poray steamers on the grounds, and the bluefish went the way of the menhaden, which is (like "that of the transgressor") hard. I counted nearly forty fish weirs within a distance of six miles on the left hand side of Seconnet River. Is it any wonder we can't catch fish? —COHANNET.

PROVIDENCE, R. I.—My experience with trout and bass this summer, and the reports from reliable sources, indicate good luck all around. The beautiful Falmouth and Middleboro lakes, in Massachusetts, are yielding more large bass to the eager sportsman than ever before. Both the fish and the number caught are large. All the season nearly the trout brooks were overflowed, but in spite of that setback there have been numbers of fine fish brought in to be admired by those who stayed at home waiting for the brook to get back to its original channel.—COHANNET.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st., Boston; or 199 Fulton st., N. Y.—*Adv.*

THE GAYLORD CLUB.

[Concluded from Last Week.]

ONE very pleasant feature noticeable during the visit at the Gaylord club house, in Wisconsin, was the presence of a number of young folks who were spending the summer there. Messrs. Charles and Lee Fargo, sons of Mr. C. E. Fargo, a member of the club, had neither of them reached the age of sixteen, perhaps, but were both good woodsmen and very clever boys. In the same team, too, was Mr. Charlie Hill, nephew of Mr. Gaylord, who has had the honor of having a whole lake named after him before he was fourteen, I should think. Miss Bessie Shuey, daughter of Mr. W. H. Shuey, one of the directors, was acting lady of the house, and wisely finished her collegiate education with the best of all degrees, that obtainable only in the school of woods and water. This young lady exulted in what was fairly a new life for her. The time is slowly coming when parents will realize the importance of something more than a bank and business education for their children, boys or girls. There was nothing on the whole trip pleasanter than watching these civilized young savages. This shows, too, the advantages of a membership in a club like this. One can send up his children for a summer outing where they will be out of harm's way and directly in the path of health and happiness.

One day I went on a solitary exploring expedition of my own. Rowing up the Inlet about three miles, I should judge, I landed and walked over a little divide to "Charlie Hill Lake," a beautiful little body of water a mile or so across, which lies, like its companions, girt about closely by the deep and solemn forest. I found the lake full of bass, which were jumping continually in the shallow water near the lily pads. I pitched a frog to one and he took it while not 20ft. from me, winking jovially as he did so. He was a big fellow, and in my excitement I struck him so hard that I broke my lancewood bass rod short off at the second joint. I saved the bass however, and then sat down patiently by the side of that leaping water and mended my rod. I built a little fire and burned out the ferrule, but after that I could not get the temper back in the ferrule very well, and though I soused it red-hot into the lake, it remained soft, and bent to nearly 45 degrees each time I landed a fish.

I had on wading trousers, and managed to get out nearly fifty yards from the shore. Standing nearly to the armpits in the water, I cast the frog well out with the casting tackle, and caught my trout creel solid full of bass in a short time with my crippled rod. Then I got disgusted with bait rods in general, for it didn't seem to give the bass chance enough, and I saw I could afford to lose a few. So I waded ashore, walked a quarter of a mile back to my boat and got my sweetheart, the split-bamboo fly-rod, which I love more than almost anything. I caught a lot of frogs, and having no better way to carry them I put them in one of my stockings, which I knotted at the end and tied to a button on the wading trousers. Thus equipped I went back and waded out again, this time with blood in my eye. The little rod would barely carry a frog, but I found I could cast one far enough to get to the bass.

I do not think I shall ever forget the experience I then had. Certainly I never saw such fishing before, nor do I expect to ever again see such. I had bass run 50ft., like a streak of light, and take the bait within 10ft. of me, in plain sight. Twice I had bass run between my legs after they were hooked, and I imagine my efforts to get a leg over the line, standing as I was in the deep water, must have looked very funny. None of the bass weighed less than 3lbs., I should say, and such fighters I never did see. It was next to impossible to stop them short of the last inch of line, and when they started for deep water they made the longest runs of any bass I ever saw. They bit with such ferocity, and made such savage runs and twirls in the water as they struck, that several times I was startled into backing away from them as they came on. It was savage sport. I fished with a leader and a No. 20 hook, and the way they smashed my tackle in the lily pads was a caution. But if I ever got one clear of the lilies, the little rod grew vicious, and usually bested the fish in due time. Again and again I waded ashore to empty my heavy creel. Two bass jumped out of the creel and got away. A third I caught in my hands after he had jumped out. There were two Indians, Pottawatomies, who came upon me as I was fishing, and whom I chartered to catch frogs for me, as I had somehow lost my stockingful.

"Me ketchum muk-a-wa-qua (frog)" said the older Indian. "You ketchum shaw-meek (bass). You give-um me plenty shaw-meek?"

"How much shaw-meek?" I asked.

"Me likum 'bout six," replied he, delicately.

"Get out, you beggar!" said I. "I'll give you two." I did, however, finally give him his six bass.

These Indians laughed at the idea of catching fish on such a rod as the little fly-rod, but they paddled out in their dugout, and at the first bass I hooked they were entirely broken up, and came near falling out of their canoe. Talk of Indian apathy! I never saw two mortals tickled more, and show it more unmistakably. They laughted and shouted and crowded in close as I would let them, and hailed the successful result of each fight with as much delight as I, eagerly handing me out another "muk-a-wa qua," and stroking the big "shaw-meeks" as if they loved them. The coppery beggars quite won my heart. They formed part of a rather unique sporting experience; I believe that, of all such I ever knew, these three hours with the bass formed the very acme in my life.

I caught my last six bass on the fly, and then upbraided myself that I had used anything else at all. My last fish was a 4 or 4½-pounder, I should think. As I hooked him, there were two little boys from the Hamilton & Merriman lumber camp who came and stood on the bank, who stood on one leg each and exclaimed, "Oh, Gee!" as the big fish boiled and whirled around and doubled the sinewy rod down. I traded these boys fish for help in getting my catch back to the boat. I saved in all twenty-three bass. I could have caught a hundred, for they were absolutely rising to every cast when I stopped, at 4 o'clock. The fish were all large-mouthed bass, but in that cold lake they were gamy to an extent I never saw equalled. This was sport somewhat different from picking trout out from under a log. I caught some big trout on that trip, but they were duffers to the bass. A trout tries to spit out the bait, if he finds his timid bite has hooked him, and tries to get away. A bass shuts his mouth the tighter, and fights, unscared. The trout is a prettier fish, but not to be spoken of with such bass as these. Then, if for only once, I had perfect sport; I want no better, and I know I shall never see any better.

The Milwaukee & Northern Railway people—and its officials are mighty nice men, genuine sportsmen, too—have in the past two years and a half put in nearly 300,000 young trout in the waters along their line. That is the kind of railroad they are. Now, if they will only just believe that their liberality is being tremendously abused up there, and if they will get in good wardens and try to keep their country decently treated, they will deserve even more, as they now do very much, the support of our sportsmen. I have stated facts as they exist. There is no trouble about getting sport up there, but the privileges of a grand country have been abused.

The "Soo Line" planted 60,000 trout on its line this year. It needs to, if it is going to send out such parties of officials as it did this summer. Still that is right action and they can't plant too many more.

Many of these trout plants were of young rainbow trout, which we occasionally heard from. Mr. Gaylord said he should favor the hatching of this trout, as it grows more rapidly and becomes larger than the native brook trout. In the magnificent Pike River, properly stocked and properly treated, what fishing, what fishing there could be!

We got to talking about different sorts of trout. I referred everybody up there to FOREST AND STREAM'S Trout Supplement, of April 4, last spring. I do not see how anybody interested in fishing can afford to be without FOREST AND STREAM. There are so many things like that to be learned in it, and it is so pre-eminently the fishing paper of America.

This rambling recountal, necessarily made up largely from my own personal experiences, will serve to show that Gaylord Club offers all the sport any reasonable man could ask at trout, deer or bass, in spite of all past misusage. Moreover, the club will plant wild rice in the inlet swamp, and so cultivate its duck shooting, of which it has a little now. But I cannot write of that, and must stop, although I am sure I could write all week and not say all I wish to say. Following is the list of this novel, pleasant and thoroughly commendable little club: President, M. M. Gaylord; Vice-President, W. W. Auger; Secretary and Treasurer, H. C. Hayt; Directors, M. M. Gaylord, W. W. Auger, W. H. Shuey, A. C. Soper and M. E. Dayton. Members: W. W. Auger, A. A. Augustus, Francis Beidler, B. B. Botsford, H. C. Buechner, G. K. Bulson, H. T. Burnap, F. P. Burnham, W. J. Chalmers, G. H. Christy, Wm. Cuthbert, M. E. Dayton, C. Howard Douglass, W. J. Edbrooke, Galusha Emigh, C. E. Fargo, Wm. H. Fenner, Jr., Erastus Foote, Jr., M. M. Gaylord, H. T. Glover, G. M. Harvey, H. C. Hayt, A. T. Hodge, E. H. Lahee, R. A. Shailer, R. H. L'Hommedieu, C. W. Merriam, H. H. McDuffee, W. H. Shuey, A. C. Soper, J. P. Soper, A. M. Thomson, W. J. Watson, A. W. Wheeler and W. B. White.

CHICAGO, 175 Monroe street. E. HOUGH.

THE SUNSET CLUB.—V.

"ONE of the most important accomplishments and characteristics of a true angler," said the president, after the club was duly opened, "is that when he makes an engagement his companion can count on it being fulfilled. For instance, if I promise to meet one of you at sunrise at a certain place, you will expect me to be there and on time, and if I fail I know how great is your disappointment. A good fisherman is like a prompt business man, both have patience, and their word can be depended upon. An experienced angler will sit for hours at a time in one spot, the more secluded the better, patiently waiting for a strike of a bass or some other gamy fish, and if he does not get a nibble not a sigh escapes his lips; he may 'wet the hole in his mouth' for good luck, but he is as silent as an Egyptian mummy. On the other hand, let a fellow angler disappoint him in the early morning and nothing can ease his mind; he is nervous, miserable, for the brightest hopes of his expectations have fled. The cross accidents of human life are a fruitful source of disappointments, but none can compare to the defeated hopes of a hook and line fisherman. I know there are many here to-night who would like to give some of their experiences relative to this subject, but as I notice Hon. E. D. Potter standing in the rear of the hall, and as he comes at my invitation to say a few words to us about the black bass and other fish of that family, we will postpone any remarks until another time."

Repeated calls were made for Judge Potter, but he seemed earnestly engaged in conversation with Dr. James A. Henshall, who had "dropped in" from his cruise with Judge Longworth in the yacht Minx, and while they were talking a member from the islands said: "Mr. President, seeing Judge Potter in the hall reminds me of an incident which may be of interest at this time. As the Judge and Dr. Henshall are exchanging fish yarns I will relate it. A few years ago the Judge planted quite a number of Hudson River eels in the bay, and you all know from the many reports received that they grew rapidly and that very large ones have been caught, both with nets and hook, showing that they not only find suitable food, but are becoming quite plentiful and of enormous size. A friend of mine who lives on the banks of the Ottawa River, a clear stream tributary to Lake Erie, is so fortunate as to own a well cultivated garden. In a meadow patch he planted quite a number of peas. They grew tall and blossomed, and the vines drooped with the fruit. He watched them with a great deal of interst, and when they were ready for table use he set a day to pick them, but as rapidly as they became ripe they mysteriously disappeared. He was satisfied they were stolen in the night time. Accordingly he laid in wait for several nights, but he failed to see the robber, and the peas began to grow less each day. Neighbors were accused until they volunteered to watch the patch; but all to no purpose; they failed to discover the thief. One morning at the break of day the owner chanced to stroll along the beach, when he was surprised to see a large eel hastening toward the water and *en route* spitting peas at the gardener. This explained the mystery. Eels were stealing his peas. The same afternoon he went to the city, procured a wagon load of sawdust, and after midnight, when he heard the eels shelling the peas, he sprinkled the sandy beach with sawdust, and in the morning he surprised his family and the neighbors by showing them forty-three eels of all sizes wriggling in the dust. He captured the entire flock. I heard him say that if these were the kind of eels the State of Ohio proposed distributing in the waters of Lake Erie, he proposed entering a protest against the introduction of foreign fish into the State."

"That's nothing," said a brother from Massachusetts who had cruised around Nova Scotia. "In Country Harbor, ninety miles from Halifax, the farmers can't raise watermelons. Eels can clean a patch much quicker than colored men can in Mississippi."

As Judge Potter walked toward the rostrum the eel question was dropped, although there were a dozen States yet to hear from. After a few introductory remarks the Judge said:

"The Centrachidæ family embraces bass and sunfishes of the western waters, and are all gamy fish. The family is known by the peculiarity of the dorsal fin, which is situated centrally on the back and so divided as to appear like two fins, while it is but a continuous fin notched deeply in the middle. Of these there are sixteen genera and upward of sixty species; but as I have not time, or inclination for that matter, to go into a scientific description of this numerous tribe, I shall confine myself to that portion of them that are mostly fished for in our Western lakes and their tributary waters. In my remarks before the club, in designating the different species of fishes, I have used the terms familiar to ichthyologists as well as the vulgar names by which they are known to our fishermen, so there can be no mistaking of the fish referred to. My apology for using the technical terms known to scientists is that I observe your secretary taking notes with the design, I have no doubt, of printing them, and remembering that all the world does not speak the English language, and knowing, too, that the reports of your secretary, from their popularity, are very likely to be read where our language is not spoken, I have endeavored to use the common nomenclature of scientists throughout the world.

"To begin with, let us take the black bass; and here I must be allowed a word as to his name among scientists. Cuvier and Valencienes call him *Huro* and *Grystes*. Rafinesque calls him *Micropterus*. I shall adopt Lacepede in treating of this fish, for the reason that he has priority in naming him. The large-mouth or cove bass is known then as *Micropterus pallidus* according to Rafinesque, and *M. salmoides* by Dr. J. A. Henshall, whose authority is entitled to credit. We will adopt this name. He is sometimes called the Oswego bass, and may be known by his large mouth; in color, dark olive green, with a deep notch between the spine and soft rays of the dorsal fin. He is found in coves and sluggish streams where there are plenty of aquatic plants, and is fished for along the margins of ponds and streams, near the grass. In the autumn he is taken with the live minnow or the spoon. He is not a very gamy fish and soon yields to the rod of an expert angler. He is found in all Western and Southern waters, and is probably more generally distributed throughout the United States than any other fish. The small-mouth black bass is called by Gill and Lacepede *Micropterus salmoides*, but Dr. Henshall proves very clearly that he was first described by a Frenchman by the name of Dolomieu, and very justly names him *Micropterus dolomieu*, and by that name I shall introduce him to the club. His color is a dark green, more or less barred and spotted. The notch in the dorsal fin is shallow, the scales and mouth are much smaller than the large-mouth bass. They are found in the great chain of western lakes and streams and all the regions west of the Alleghenies. They are common in New York, from Lake Champlain west and south. They have been introduced into some of the streams and smaller lakes of New England and New York. They were, some years ago, introduced into Otsego Lake, N. Y., but the fishermen there complain that although the "lake is full of them," they cannot be induced to take the hook, except occasionally. This is strange, for wherever found they are vigorous biters and next, if not equal to, the speckled trout in gameness. They take the spoon rapidly; the live minnow in still-fishing, or the dead in trolling. They take the fly, the black cricket being the deadliest lure I ever tried. The fish being mostly found in clear, cold water, is always a desirable table fish. I have taken them with the fly on the north shore of Lake Superior, in Batchawanung Bay, weighing six pounds, and they are mighty ugly fish to handle, requiring the utmost skill to land them. I have played them there for twenty minutes before I could get them in right, and then they would spring two or three feet out of the water, open their mouths, shake their heads, and ten to one cast the hook clear of their jaws. In Lake Superior I have always found their stomachs full of crayfish.

"At this time I will not speak of the rock bass, white bass, speckled or strawberry bass of our native waters, but will say a few words about the *Roccus lineatus*, the marine striped bass which enters the bays on the Atlantic coast. They are taken with seines in great abundance in the Potomac River in the spring of the year. During the summer and fall they are taken with hook and line, baited with herring and other small fishes, and will not refuse a crawfish, lobster or frog. They are vigorous biters, and show all the game an angler may desire. They were formerly abundant at the falls of the Potomac, above Georgetown, D. C., where their average weight was about 3 or 4lbs., sometimes running as high as 25lbs. Mr. Webster, Mr. Crampton, British Minister, and Baron Stoeckel, Russian Minister, often resorted thither for recreation. The last time I visited this place the party consisted of Messrs. Juctice Nelson and Grier, of the Supreme Court, and Gov. Seymour, of New York. We took an early start, Dexter, of the National Hotel, Washington, furnishing the supplies. Justice Grier was an ardent fisherman. Justice Nelson and Gov. Seymour preferred the shade surrounding a beautiful spring of water, on the Virginia side of the Potomac, where our headquarters had been established. I cannot brag much on our success in fishing. I remember I hooked a very large bass that took a sheer and entered the rapids, carrying away upward of 50yds. of a very valuable line, which, I have every reason to believe, he or she (whichever it may have been) carried to the ocean in a hurry, for the fish was going at a rapid gait in that direction at last

accounts. Judge Grier was a good story teller and he had three good listeners, and before night we were in a state to laugh at almost anything the Judge might say. It is amusing to see how grave and dignified judges and Governors can unbend when they go a-fishing. I see you are all interested, and as my half hour has expired and you have several candidates to initiate, I must bid you good evening, and hope some time to tell you something about one of the greatest of fishes, the muskalonge, and a few of the early experiences I have had in capturing this favorite fish."

As soon as the Judge left the room, the president immediately ordered the Grand Conductor to prepare the floor for the introduction of the candidates—Capt. A. G. Shearman, R. McC. Smith and W. S. Brown.

"Are the Passenger Agents still in the closet?" asked the president of the Keeper of the Keys.

"They are waiting your pleasure."

"Prepare them in accordance with our ritual; see that they are well blindfolded and encased in Stromburg sacks."

Mr. S. A. Court, Ohio's Pythian Secretary, kindly tendered his services to assist in the initiation, and the president instructed him to take charge of the floor. To his experienced mind the club is indebted for the prompt workings of the scenery; the fine condition of the Overland Goat, and the general smoothness of the ceremonies. The passenger agents were hoodwinked and properly prepared, when brother Court, in his Oklahoma voice, announced the readiness of the candidates. The hall was darkened and not a sound could be heard. The door was ajar, and out from the swamp stillness broke the Western Traffic Glee Club, engaged for the occasion, in one of their hushed melodies, and when the music died out, much resembling a disappearing freight train, four distinct raps were heard.

"Who disturbs the solemnity of this association," cried the president in a muffled voice.

"Three worldly strangers, who seek admission to our club," replied the keeper of the door.

"Have they credentials?"

"They have, and are approved by the Central Traffic Association, and are properly posted in accordance with the revised laws."

"Why do they come here?"

"To learn to subdue their passions; to become familiar with the secret arts and mysteries of the Sunset Club."

"How do they know they are eligible?"

"By being often tried, never denied, and willing to try again. Capt. Shearman has caught horny suckers, butter chubs, silver sides in the waters of Black River, near Oberlin College, and mermaids in San Francisco Bay. Mr. Brown has flanneled frogs from lily leaves, caught yellow-belly catfish in the mouth of the River Raisin, and seeks admission to this club for the purpose of learning how to land Baw Beeze black bass. Col. Smith is no angler, but has sailed on the centerboard sloop Burns at Elkhart, Indiana, with wonderful results. They are gentlemen withal."

"Let the candidates be weighed," cried the president.

Their average weight was 198lbs. Their button hole bouquets were ordered removed. A long silence then followed. The three passenger agents were led slowly around the room while the glee club filled the spacious hall with melody. This club comprised the following gentlemen: Mr. M. E. Gaul, Cleveland's favorite railroad theatrical agent, as basso profundo; T. J. Clark, passenger agent C. R. I. & P. R. R., smothered tenor; A. G. Robinson, (with diamonds) passenger agent C. & A. R. R., mezzo contralto; D. P. Wheeler, (special) passenger agent F. & P. M. R. R., warbler from Michigan, and W. A. Mc Whinney, passenger agent C. M. & S. P. R. R., saw-filing soprano. These gentlemen were stationed in the shadow of the veteran F. M. Snavely, passenger agent C. & N. W. R. R., who handled the baton with agility, and with the tread of an assistant traveling auditor, glided noiselessly about the group. The music was fine, in fact all the insects in the neighboring district left. When the president noticed the glee club vacillating, and their discordant sounds become more frequent, he motioned for the conductor to stop in front of his station.

"Strangers," he said, as they were filed side by side, "as the sun rules the day, the moon governs the night, so am I invested with the power to rule and govern this club with equal regularity. There are two important things we would impress upon your minds, viz.: a listening ear and a silent tongue. These have the same bearings upon the workings of this club as it does in your business. A few questions. Do you know of any regulation in the inter-State law forbidding your spitting upon the bait used?"

All were silent. Five minutes passed and they made no effort to reply.

"The conductor will do his duty," said the president. "We must have ready replies."

Three inflated bladders were successfully brought to bear upon the uncovered heads of the candidates. Brown smiled. Shearman looked serious. Smith dodged.

"We do not," they responded, after the conductor had whispered in their ears.

"In landing a bass or a pike what system have you found the safer, the long or the short haul?"

Again they hesitated. The president cried.

"Is my question fully understood?"

They nodded assent. Some rumbling noise in their rear caused Brown to venture a reply. He said:

"If a large fish, the long haul; if small, the short haul."

"Capt. Shearman, in baiting your hook do you insert the barb through the 'head of the department,' or do you prefer the 'terminal facilities' at the other end of the minnow?"

"In Black River we string the minny the same as we do worms."

"Col. Smith, do you know a good place to get frogs?"

"Yes, sir; from the track master."

"As the Interstate law positively prohibits reba(i)ting; and in order that you may comply with its provisions, what suggests itself to be done to men in your positions?"

After a moment's hesitation they replied in one voice, "A listening ear and a silent tongue."

There is meaning in this response.

"Strangers," said the president, after a few pointed secret questions, "in all secret societies experience has taught the founders that it is necessary that the candidates should undergo some trying ordeal to test their confidence in mankind. Our club has followed this example and the cabinets are well stocked with implements of torture, which our obligations will bring into use, but you have influential friends in this club who appreciate the great work you passenger men have done to encourage travel to your various places of fishing and hunting grounds, and we appreciate your efforts to advance this noble art to a standard equal to the highest accomplishments of mankind. With this in view our advisory counsel wisely suggest that we permit you to select from the mountain recesses of the western world a goat adapted to your strength and capacity, which you will be required to ride successfully in these halls. The candidates may be taken to 'The Rookery,' the hoodwinks removed, after which they will appoint a chairman, who will receive a salary as compensation for his services, for the minutes served, and taking $25,000 as a yearly basing rate. You will name the person you desire to get the goat."

The candidates were led from the room. In five minutes the president received the following:

"We want a Broncho Rocky Mountain goat from this side of the divide and prefer Mr. Fred H. Lord, of the C. St. P. & K. C. Railway, be instructed to purchase the goat.—W. S. Brown, Chairman."

"Brother Court," said the president, "you will inform the candidates that their wishes will be complied with and the goat will be here in time for the next meeting. They may retire. You will have Mr. John Bastible, the genial representative of the C. H. & D. Railway, accompany them to see that they go directly to their hotel. Before the club adjourns the secretary has received a communication from Baw Beeze Lake, Michigan, asking the club to send one of our members to that lake for the purpose of teaching the natives how to land black bass weighing over three pounds, I will appoint the secretary as a committee to visit the region and report at the next meeting." There being no further business the club adjourned.

J. E. GUNCKEL.

Fishculture.

A BRITISH FISH HATCHERY.

BY AN ENGLISH FISHERY COMMISSIONER.

IN consequence of the depleted condition of many of the rivers in the United Kingdom, rendered so by the multifarious malpractices of mankind, the science of fishculture has become a recognized necessity, and is now resorted to as a means of resuscitating barren locations and restoring decayed fisheries to a condition of plenteousness. During the past few years a steady advance has been made in the science and not only has the number of fishculture establishments increased, but the methods of hatching and rearing fish through the various stages of development have undergone great improvements, so that the science has now been brought within the range of practical utility. At the present time the demands for fish wherewith to stock waters are in excess of supplies, and coarse fish are quite as much needed as trout. Being impressed with the large amount of decay that prevails in our rivers and the depleted condition of waters capable of sustaining fish, and recognizing in fishculture a power sufficient to restore them to a state of plenty, Mr. William Burgess, some years ago, founded a fishery at Malvern Wells, in the Midland, on a large scale, and called it the Midland Counties Fishculture Establishment. The success attending its formation was such as to induce him to considerably extend its scope beyond his original conception, with the result that it has now become the largest establishment of the kind in England. Naturally its object is to develop fish life in the waters of the United Kingdom to meet the dual requirements of food and sport. In order to carry this into effect upon a sound, practical and extensive basis, every facility has been provided for hatching ova and rearing fish in sufficient quantities to meet existing demands. At the present time these demands cannot be adequately satisfied by pisciculturists, and many an applicant for young fish and yearlings frequently cannot be supplied; while there are some who, however desirous of stocking waters they may be, refrain from doing so in consequence of the high charges made, which are frequently prohibitive. It is the desire of Mr. Burgess to raise fish in such numbers as will enable him to supply all the best species and varieties at all seasons of the year.

The location chosen for the establishment is admirably suited to the requirements of fishculture, by reason of its natural surroundings. The water flows from untainted sources, and can be regulated in accordance with the requirements of the fish, be they fry, yearlings or matured forms, or it can be drawn off from the ponds when it is desired to empty them for the purpose of sorting or dispatching fish. One series of ponds is provided for fry, another for yearlings, and another for older fish, some of the ponds being 100yds. in length and 10ft. in depth. A fall is created at each pond, so that the water in passing through is thoroughly oxygenated. In all his operations Mr. Burgess emulates nature as closely as possible, not only with a view of raising strong, vigorous fish, but in order to rear them with the lowest possible mortality.

Two hatcheries exist, one being for the incubation of *Salmonidæ* ova, and the other for those of coarse fish, such as perch, roach, carp, tench, etc. The *Salmonidæ* hatchery is large and roomy, and is capable of bringing to life many millions of young fish. The mode of hatching is that known as the "overflow system," the incubating apparatus being supplied with spring water, which is concentrated in a colossal reservoir, whence it passes through filters into the hatchery. The hatching boxes are slightly elevated one above another in order to provide for a slight fall of water, which has the effect of aerating it throughout. The species and varieties of fish hatched embrace not only all British, Scottish and Irish *Salmonidæ*, but transatlantic varieties as well, the ova of the latter having been courteously granted by Col. Marshall McDonald, United States Fish Commissioner. The ova are laid down in the winter months, and in the spring the hatching house is crowded with struggling masses of young fish. Here they remain until nature deprives them of their self-contained store of food, when they are turned adrift to seek their living in nursery ponds, pending distribution in public waters. Although an ample supply of natural food exists in the ponds, the fish are fed artificially as well, thus supplementing the food store.

In addition to *Salmonidæ* culture, a very large amount of space is devoted to the artificial propagation of coarse fish, such as perch, carp, tench, roach, etc. Hitherto we have heard a great deal about the culture of salmon and trout, but nothing about that of coarse fish for whose benefit fishculture has not been used in the same way as it is for *Salmonidæ*. Recognizing the numerical decrease of these humbler forms and the loss thereby occasioned to the working classes, Mr. Burgess has gone to considerable trouble and expense to create a coarse fishculture department, and he is now equally successful in propagating this class of fish as he is the higher classes. Many difficulties stand in the way of cultivating coarse fish. In the first place, it is no easy work to secure the spawn, which, unlike that of *Salmonidæ*, is adhesive. The ova is very minute and hatch out much sooner than *Salmonidæ* eggs, so that promptitude in dealing with them has to be observed. When the alewives make their appearance from the ova fresh difficulties arise, they being so minute that they soon escape unless prevented. Food must be given them within a few days of their birth, and that of such a nature as can be absorbed by the tiny creatures. This point has been closely studied by Mr. Burgess, whose self-manufactured food meets their requirements.

The practical ability of the establishment has been tested many times lately, and so numerous and various are the wants of the public that Mr. Burgess has had to greatly add to the establishment recently in order to meet them. Every effort is made to breed as great a variety of fish as possible, to suit all kinds of waters, be they open or inclosed, soft or hard in quality, and strict investigation is made into the conditions thereof before planting fish. The enterprise which Mr. Burgess has exhibited in this direction is of no ordinary type, and it is to be hoped that the forward march he has made will meet with the recognition it deserves. Among the species and varieties of fish propagated by Mr. Burgess are the *Salvelinus fontinalis*, *Salmo irideus* and *Coregonus albus*, several rivers having recently been liberally stocked gratuitously in Somersetshire and Devonshire.

FISHERY CENSUS.—Capt. J. W. Collins, who has been appointed special agent of the census office, in charge of the work upon the fish and fisheries, will spend several weeks at Wood's Holl. On his way there the captain will visit Boston and Gloucester to inquire into the fisheries and other matters of special interest to the census. The census work this time, so far as it relates to the fisheries, will be almost entirely statistical, and there will be no attempt to monograph as in 1880. The work of the year need not be repeated and the text, it is expected, will be limited to brief explanations of the tables presented and to a concise review of the present condition of the fisheries in which comparisons can be drawn to show the changes in the fisheries since 1880. The descriptions will be made as brief as possible. No effort will be spared to have the data completed at the earliest possible moment since it is the purpose of the superintendent of the census to publish the results of his work at an early date, in order that the people may be currently informed of the statistical condition of the country.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 9 to 12.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary. Entries close Aug. 23.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary. Entries close 11 A. M., Sept. 9.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager. Entries close Sept. 5

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary. Entries close Aug. 31.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Company, Toledo, O. Chas. E. Rowland, Secretary, Box 423. Entries close Aug. 26.

Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Sec't'y. Entries close Sept. 4.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y. Entries close Sept. 7.

Oct. 8 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary. Entries close Sept. 28.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

COLLIE CLUB STAKES.

RAHWAY, N. J., Sept. 2.—*Editor Forest and Stream:* The Collie Club has initiated a new departure in having the Collie Stakes judged at the kennels of the secretary of the club, at Rahway, N. J. So many breeders of collies refuse to expose their valuable young dogs to the dangers of our bench shows, that it has seriously interfered with entries for the stakes, and the club believes that the difficulty can be avoided by having the stakes judged at the kennels of some prominent breeder.

Mr. Thos. H. Terry officiated as judge of the fall section of the Collie Club Stakes, and his decisions were accepted without any kicking. In dogs, first went to Colonel Scot, bred and owned by the Chestnut Hill Kennels, by Dublin Scot out of Flurry III. Second to Duke of Kalmia, owned by J. D. Shotwell, bred by the Kalmia Kennels, by Surbiton out of Ethel II. Third to The Bard, bred and owned by the Fordhook Farm Kennels, by Smuggler out of Whirlpool. There were but two bitches present, first to Chestnut Hill Kennels' Roslyn Clara, by Caractacus out of Pitch Dark; second to Jas. Watson's Hera, by Strephon out of Juno II.

J. D. SHOTWELL, Secretary.

TOLEDO DOG SHOW.—Toledo, O., Aug. 31.—*Editor Forest and Stream:* We shall have an excellent show as far as quality goes. We have 208 entries; 11 mastiffs, 25 St. Bernards, 4 Great Danes, 4 deerhounds, 3 greyhounds, 30 pointers, 12 English setters, 24 Irish setters, 15 black and tan setters, 6 cockers, 7 bulldogs, 7 bull-terriers, 9 fox-terriers, 6 black and tan terriers, 12 pugs, etc.—C. E. ROWLAND, Sec'y.

WESTERN COURSING NEWS.

HUTCHINSON, Kan., Aug 27.—*Editor Forest and Stream:* The coursing season is just upon us and the long tails are being put to the work preparing for the fall siege, and we have a good promise of some great work from them. The entries will probably include at least fifteen imported greyhounds, among which will be the imported dog Trales, the Glendynes, Little Lady Glendyne and Lady Graham Glendyne, the daughter of the famous Jester. The black bitch, Lady Millie Glendyne, having unfortunately died, lessens their chances for winning the honors, as she proved the fastest from the slips of either of the four. The other three are now in the hands of our old friend Arthur Massey, the American Coursing Club slipper, and they will undoubtedly come to the slips quite fit. Mr. D. C. Luse has also given over his imported bitch, Dick's Darling, and several of her pups to Mr. Massey for training, so that our slipper will have more than a passing interest this season in several of the flyers as they leave the slips. Mr. Allison has several young ones that will make a hard fight for the Derby, they having in their veins the direct blood of Reno Belle and Rowdy, the winner of the 1887 Derby and also champion Sandy Jim and a sister of Mike G. Four of the litter of Joe Burnside, son of the famous California Quicksilver and little Humming Bird, will probably contend for the first honors. So we can safely say that there will be some wonderful speed contests at October meet of the American Coursing Club way in advance of any previous meeting.

The National Coursing Association, of Hutchinson, Kan., has preparations fully made for a grand meeting Oct. 8 to 12. The stakes are so arranged that the winners will bear the burden of the entries and the second-raters will stand an equal show with the best without a sure expense, and many doubting Thomases will be encouraged to enter untried dogs that may prove extra good ones. The park is now well stocked with jacks, and the track, the escapes and everything is in perfect order, and the rabbits go like the wind to the escapes.

The first inclosed coursing meeting will be held on the Jockey Club track at Louisville, Ky., Sept. 4 to 7, and the second meeting will be held at St. Louis, Mo., on the Jockey Club track, Sept. 16 to 21. We make a grand drive in the park to-morrow, with one hundred people assisting, to secure a supply of the strongest rabbits for these meetings; and we will leave for Louisville Wednesday evening, Aug. 28. I have finally joined forces with the National Coursing Association and will assist in pushing the work to success, and hope to see accomplished what I have long desired and worked for—viz., coursing made one of the greatest sporting events throughout the United States.

G. IRWIN ROYCE.

TRAINING BEAGLE PUPPIES.

Editor Forest and Stream:

To comply at length with the request of a novice, regarding the training of beagle puppies, would afford me great pleasure, but at present I can but hastily and briefly give my ideas on that one subject concerning the beagle. In the near future I shall favor—or tire, as the case may be—your readers with a more exhaustive treatise on the beagle in general.

As to the proper way of training a puppy, it is at all times best to start them in with an older and experienced dog, if such a dog is obtainable for that purpose, and there are few places in the country which are without one or more good "rabbit dogs," whether thoroughbred or otherwise. To get a puppy out with such a dog only a few times will suffice: all that is necessary is to show your puppy and make him understand and recognize the game and scent he is to follow. The rest will come to him without any teaching whatever, experience being the only teacher after that. When I had the time I always considered the training of puppies a decided pleasure, and nearly every evening in season would find me along the beautiful shore of our grand river, the Susquehanna, giving the little 'uns their first lessons, but now this is for me impossible, owing to business responsibilities, and Sunday afternoons is now about the only time that I can devote to the training of my youngsters, for which transgression the orthodox portion of your readers, I hope, will not condemn me.

Do not take out more than one good dog with your puppies. After your puppy has an idea of the work before him, and the age or strength to follow a dog or pack, he may then be hunted in such company.

For the benefit of a novice I will assume that an experienced dog is not obtainable for the purpose of training the puppy and we are thrown upon our own resources to break in the little long-eared beauty, and this is not a difficult task by any means, for the hunting of rabbits is to the beagle a natural characteristic of the breed and need not be acquired, and it is only to hasten natural gifts along in their development that any training at all is necessary. Whether a puppy is trained with or without an experienced dog, consideration must be given to the age of puppy, season of the year, time of day, locality, etc. We read of, and have perhaps owned puppies of our own, which were exceptionally precocious, yet I am of the opinion that it is labor lost to commence training a puppy before the age of six months—seven or eight suit me better still—when they will pick up the faster and save a novice much vexation and discouragement.

I prefer a puppy whelped in the early spring, so as to make him anywhere between five and eight months old in the early autumn months, September and October, which is the best time of year for training of puppies, as rabbits, young and old, appear plentier than at any other time. The late afternoon is probably the best time of day, when rabbits come out of their hiding places. Select, of course, a place where rabbits are plentiful, and, if possible, where the formation of the cover is such through which your puppy can get with ease, for, as he will not possess the anxiety and determination of a broken dog, he would not be so willing to go through brush, briers, etc. Let me here say that it will be only half the task if two puppies can be trained together, as a jealousy will exist between them, which at that period will prove of value and hasten their training.

Observe the above hints as to age of puppy, season, time of day and locality and take your puppy—or better, puppies—out an hour or two before sundown without feeding them. Take them to the proper place and do not sit down, but keep moving about, as they will be more eager to hunt than if they see you sitting somewhere, in which case they would be more apt to desire to play with you than to hunt. When opportunity offers, judiciously urge and encourage them. Two or three outings of this kind will start them off all right, and you can depend on rapid improvement thereafter.

This is not a task, but a rare pleasure and a benefit to any one. A beagle trained by your own hands will be more valuable and dearer to you, having attached to him or her the recollections of these early outings, which probably brought to your notice more vividly the incomparable beauties and mysteries of peaceful nature, which at that time may have—and would now if you could enjoy them—proven a balm to both mind and body. Many and dear are the recollections of the past connected with my training of puppies, and could I enjoy the same pleasures now my mind would be less disturbed by care and my health benefited thereby. Alas! close confinement to business prevents and I have little time left for the care of my dogs and I will have little or no chance to follow them afield this season. They have consequently been neglected to a certain extent, and it pains me to admit that at present they are not in the best of condition. Although knowing that many of our best kennels are at this season troubled with flies, skin irritation, etc., to the detriment of their dogs, yet had I the time I could have my dogs in better shape than they are at present. I don't desire to keep my dogs in anything but the best condition and shall therefore dispose of all except a brace or two, and will not keep more till I can do so with proper care.

Champion Bannerman is as spry and puppyish as ever, and many are the times that strangers who have never seen him will ask: "And how old is that little white puppy?" Champion Maybelle II. and Krueger's Dot are about holding their own.

Apropos Mr. Jolley's (Blue Ridge) item in reference to his small specimen of beagle. He requests others to "trot out" their small ones. I have none, nor do I want them, for I have no use for runts. I am an admirer of the small basket beagle, but do not care for stunted specimens of the larger variety. Mr. Jolley's undoubtedly belongs to this latter class, being sired by Banker, a coarse dog of fully 14 or more inches. I do know of another such specimen, which will compare favorably with Mr. Jolley's entry in this race for records for smallness, as far as breeding, hunting quality and smallness are concerned. This little bitch is Queen M., entered at the last Lynn show by the reputable breeders Clark and Rutter. She is by my lamented Cameron's Racket out of the prize winning bitch Vickey, which I sold Mr. Rutter. It will, therefore, be seen that this little bitch is more than seven-eighths Rowett, and equal to the best in the land as far as breeding is concerned, and I have been assured that she is a remarkable performer in the field for one of her size. Yet she is a runt or a freak, the same as Mr. Jolley's, coming as they do from such parents. I have not the exact weight or measurements of this little bitch, yet should it prove of any value to your readers, I am confident that Mr. Rutter will be pleased to furnish that information. A. C. KRUEGER.

WRIGHTSVILLE, York County, Pa.

DOG TALK.

A NEW JERSEY melodrama: Scene First—Our mutual friend Peshall reclining in an easy chair in his sanctum, enjoying the exquisite flavor of his special brand of Victoria Reina, Aristotle in hand and all the works of the ancients within easy reach, a self-satisfied smile overspreading his beaming countenance as he unearths from the musty volume a ponderous thunderbolt to hurl at some friend, when his meditations are interrupted by the entrance of a stranger with an old-fashioned carpet bag which he carefully deposits on the floor beside his chair, and in insinuating tones proceeds to remark, "I hear from everybody that you understand all about dogs and all kinds of animals, and as I don't, I've called to ask you to do me a favor." "Certainly," said our genial friend in his most gracious manner, "I am ever ready and willing to assist a brother sportsman so far as it lies in my power. Now, if you want an apt quotation from the ancients to point a moral or adorn a tale, the material is all here; or if you want a pup, I expect a litter from dear old Jimmie soon, and shall be only too happy—" "No," said the stranger, "I never heard of the ancients, and the old woman is down on dogs; but I'll tell you," pointing to the bag and hitching his chair a bit closer, "I've brought over our tom cat for you to fix so that he won't run out nights." Just then Peshall's pet bull-terrier Baby came bounding into the room, and as she caught a whiff of scent from the feline she uttered a whine of delight almost human in expression, and before you could say Jack Robinson that old-fashioned carpet bag and its frantically squalling inmate were describing parabolic curves that are not laid down in the books. Our mutual friend was nonplussed, indignant and horror-stricken. To think that he, a cherished official of the Society for the Prevention of Cruelty to Animals, should be thought capable of committing the proposed dastardly crime against nature and the cat, was enough to freeze his heart's blood. Speechless he stood, oblivious even to the fun that Baby was enjoying, intent only on administering a fitting rebuke to the fiend in human form who had dared to offer such indignity to him and the cat. At last he partially recovered his self-possession, and with burning words struggling for utterance he turned to the inhuman monster, but, together with the old-fashioned carpet bag and its now feebly struggling inmate, he had taken his departure, and the curtain drops.

Apropos of the reference in "Bits of Talk" last week to a dog thief stealing apples is this from the Boston *Globe*: "It is queer how things fall out. The very day that I was writing a paragraph for this column, suggesting, in a truly Christian and philanthropic spirit, that dogs might successfully be employed as thieves, on that very day two men and a woman were arrested somewhere out west for this identical crime. They traveled about in a wagon, accompanied by a big dog, who caught as many chickens as he could lay his jaws upon and brought them to his human accomplices. The men then wrung the necks of the fowls, and so soon as a sufficient number had been accumulated, took them to the nearest large town and put them on the market at a reasonable price. The woman, it is said, was the leader in this enterprise, and it must be admitted that the scheme does credit to feminine ingenuity. How it fell through is not made plain, but probably the men bungled. She ought to have left them at home."

The judges elected by the American Spaniel Club are A. C. Wilmerding, S. R. Hemingway, James Watson, C. H. Mason, Wm. West, E. M. Oldham, J. P. Willey and C. M. Nelles.

Mr. E. S. Porter will judge mastiffs, bulldogs, bull-terriers, foxhounds and beagles at the Danbury dog show, and Mr. James Watson the remaining classes.

The regular quarterly meeting of the executive committee of the A. K. C. will be held at 44 Broadway, Sept. 19, at 1 o'clock P. M.

There were ninety entries at the dog show held at Helina, Mont., Aug. 28 to 30. A full report will appear next week.

Mr. J. L. Campbell, of Montreal, Can., has been reinstated by the advisory committee of the American Kennel Club.

INDIANA FIELD TRIALS.—Indianapolis, Ind., Sept. 2.—*Editor Forest and Stream:* Our trials promise to be a great success this year. Mr. J. M. Freeman, one of our vice-presidents, who lives at Bicknell, reports an abundance of birds. The club desires to thank the following parties through your columns for special prizes donated by them: Mr. B. Waters, Chicago, Ill., one copy of his "Breaking, Training and Kennel Management"; Ideal Manufacturing Co., New Haven, Conn., six sets of their Ideal shotgun implements; Mr. W. B. Leffingwell, Clinton, Ia., one copy of his "Wild Fowl Shooting"; Upthegrove & McLellan, Valparaiso, Ind., one of their fine hunting coats.—P. T. MADISON, Secretary.

EASTERN FIELD TRIALS CLUB.—Saratoga Springs, Aug. 28.—*Editor Forest and Stream:* The regular quarterly meeting of the Eastern Field Trials Club will be held at 44 Broadway, New York, on Tuesday, Sept. 10, at 2 o'clock P. M.—W. A. COSTER, Sec'y.

THE POINTER CLUB.

NEW YORK, Aug. 27.—*Editor Forest and Stream:* At a regular meeting of the Pointer Club of America held this date the following business was transacted: Maj. J. M. Taylor's application for membership was presented and he was unanimously elected. The resignation of Chas. J. Peshall, Esq., was read and accepted.

The secretary was instructed to announce, "that upon a count being taken of the vote of the members of the club it was found that the following named gentlemen were selected, having received the highest number of votes, for recommendation to bench show committees for 1889-90, as proper persons to judge pointers, in the order named: Mr. F. R. Hitchcock, Hon. John S. Wise, Mr. J. M. Tracy, Mr. Jas. L. Anthony, Mr. Chas. Heath, Mr. Geo. W. La Rue. The selection of any of the above named gentlemen will insure the hearty support of the club.

The report of the special committee appointed to prepare a list of prizes to be given by the Pointer Club was adopted as follows:

For 1890—Open to All.

THE POINTER CLUB PRODUCE STAKES.—$50 added money. For pointer puppies whelped on and after Jan. 1, 1889, the Pointer Club of America add $50. The stakes to be decided at a spring show of 1890, to be hereafter designated. Entries close at the same time as the regular entries of such show. Terms of entry: Litters may be entered previous to Jan. 1, 1890, for $3, provided they are under six weeks old, each of the litter to be eligible to compete. Puppies entered previous to Jan. 1, 1890, at $1 each if under three months old; at $2 each if under six months old; at $3 each if under nine months old at the time of entry. After Jan. 1, 1890, all entries shall pay $5 each. Should an entry be sold, the buyer shall pay $1 in order to compete with such entry. The winner to receive 50 per cent. of the whole stake, second 20 per cent., third 10 per cent., and the breeder of the winner to receive 20 per cent. of the stake. Entry fee must be paid at the time of entry. Competitors must be entered in the regular classes of the show. Entry to be made to the secretary of the Pointer Club of America.

Open to Members Only.

STUD DOG PRIZE.—$10 for best pointer stud dog shown with two of his get, the latter to be not over 3 years of age and not necessarily owned by one person.

BROOD BITCH PRIZE.—$10 for best pointer brood bitch shown with two of her progeny, the latter to be not over 3 years old and not necessarily owned by one person.

$10 for best pointer dog, and $10 for best pointer bitch, that has been placed or won a heat at any field trial run in America. $10 for best pointer dog or bitch exhibited and owned by a member of the club.

In addition to the above the American field pointer cup value $100 (open to all) will be given at a show to be designated by the Pointer Club, to be announced hereafter, under the conditions as published. Entry blanks will be furnished by the secretary upon receipt of application and 2-cent postage stamp. GEO. W. LA RUE, Sec'y and Treas.

239 BROADWAY, New York.

ORIGIN OF THE DOG.—The ancestry of the dog is a topic which has been much discussed of late at the French Academy in Paris. M. Boule maintains that as far back as the pliocene period of geology the canine family showed much the same divisions as it exhibits to-day. There were the wolf, the fox, and the jackal tribes and types, and a fossil jaw taken from pliocene rocks near Puy shows certain characteristics which are seen in our own domesticated dogs of to-day. Are we to assume then that the dogs of our period represent a much more ancient and original type of animals than science would have us hitherto believe? If fossil evidences are trustworthy, the dogs of remote antiquity, so far from having originated from the wolf stock, may be regarded as having possessed a distinct personality of their own. We may probably have to go back into the tertiary to find the primordial stock from which the wolf, fox, jackal and dog may together have sprung. By the way, the statement has been made on responsible bases that there are at present one hundred and eighty-nine varieties of domesticated dogs. What a composite animal they would all make if bred or resolved into one! And would the result truly represent the primordial dog type? And would that unit most nearly resemble the wolf, the fox, or the jackal? Which?—CHAS. HALLOCK.

ST. BERNARD AND PUG IMPORTATION.—London, Aug. 19.—*Editor Forest and Stream:* I shall leave in a few days for the States with 8 St. Bernards, large and small, and 3 pugs. The pugs are dog puppies by champion Loris out of May Queen, the property of Miss A. H. Whitney, of Lancaster, Mass. The St. Bernard dog Sir Noel, by Lysander out of Lady Pauline, is for W. H. Beede, Lynn, Mass. The balance I have purchased for my own kennels, and include the bitch Manon, by Valour out of champion Gretchen, and two of her present litter; Lady Pauline, by Grandee out of Princess Bismark, dam of Sir Noel and Victory, who stands 33in. standard measure: a dog puppy by Refuge II. out of Lady Pauline; a bitch puppy by champion Hesper out of Cologne, litter sister to champion Carmelite, and a bitch puppy by champion Hesper out of Diva; she weighed 24lbs. at 9 weeks. Hesper weighs 204lbs. Diva stands 31½ and weighs 160lbs.—A. R. CROWELL.

ELMIRA DOG SHOW.—Hornellsville, Sept. 1.—*Editor Forest and Stream:* We have received many valuable specials, collected by the Poultry and Pet Stock Association. One of $20, for the best four working cocker spaniels. Entries close the 7th; all entries mailed that day will be accepted.—J. OTIS FELLOWS, Supt.

TORONTO DOG SHOW.—There is a large number of valuable special prizes offered for the dog show to be held at Toronto, Sept. 16 to 19. Printed lists may be obtained of the secretary, Capt. C. Greville Harston, Toronto, Can.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Daisy Dean. By High Rock Cocker Kennels, Lynn, Mass., for black cocker spaniel bitch, age not given, by Shady out of Nellie.

Young Royal Prince, Jr. By H. L. Gilson, Wakefield, Mass., for white bull-terrier dog, whelped May 12, 1889, by Young Royal Prince (Young Royal—Scarlet II.) out of Tillie (Dutch, Jr.—Terry).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Melody—Trailer. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Melody to his Trailer, Aug. 7.

Apollona—Ben Lomond. John Keevan's (Brooklyn, N. Y.) St. Bernard bitch Apollona (champion Apollo—Brunhilde) to E. H. Moore's Ben Lomond (champion Barry—Thetis), June 20.

Lady Bernard—Parson. P. H. Hurley's (Worcester, Mass.) St. Bernard bitch Lady Bernard (Grimsell—Yum Yum) to Contoocook Kennels' Parson (Bello—Thyras), Aug. 25.

Bizreena—Chief. F. L. Cheney's (Pittsfield, Mass.) Irish setter bitch Bizreena (champion Nimrod—Bizorah) to Max Wenzel's champion Chief (Berkley—Duck), Aug. 29.

Daisy—Desmond II. F. L. Cheney's (Pittsfield, Mass.) Irish setter bitch Daisy (Chief—Leigh Doane) to Chas. T. Thompson's Desmond II. (Frisco—Grouse), Aug. 19.

Daisy Dean—Black Duck. High Rock Cocker Kennels' (Lynn, Mass.) cocker spaniel bitch Daisy Dean to their Black Duck, Aug. 25.

Bijou—Black Duck. High Rock Cocker Kennels' (Lynn, Mass.) cocker spaniel bitch Bijou to their Black Duck, Aug. 20.

High Rock Jet—Black Duck. High Rock Cocker Kennels' (Lynn, Mass.) cocker spaniel bitch High Rock Jet to their Black Duck, July 27.

Biddy—Bradford Harry. A. M. Goldsmith's (Chicago, Ill.) Yorkshire terrier bitch Biddy (Bonnie Briton—Lassie) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Aug. 16.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Bess. Geo. H. Sherman's (Poughkeepsie, N. Y.) collie bitch Lady Bess (James—Bess), Aug. 30, eight (four dogs), by M. Harrison's Scotilla (Dublin Scot—Flurry II.).

Vesta. C. A. Altmansperger's (Minden, Ia.) mastiff bitch Vesta (Diavalo—Madge), Aug. 18, seven (three dogs), by Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands).

East Lake Virgie. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (Bradford Ruby—Puss B.), Sept. 1, five (three dogs), by H. Eichler's Joe II. (champion Joe—Viola).

Lakme. F. Kimball's (Worcester, Mass.) St. Bernard bitch Lakme, Aug. 20, eight (four dogs), by E. H. Moore's Ben Lomond.

Apollona. John Keevan's (Brooklyn, N. Y.) St. Bernard bitch Apollona (Apollo—Brunhilde), Aug. 20, twelve (six dogs), by E. H. Moore's Ben Lomond (champion Barry—Thetis).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Bonnie Comedy. Fawn, black points, mastiff bitch, whelped March 24, 1889, by Edwy out of Ilford Comedy, by Dr. George B. Ayres, Omaha, Neb., to E. L. Marston, same place.

Hector—Lakme whelp. Orange and white St. Bernard dog, whelped Sept. 19, 1888, by F. Kimball, Worcester, Mass., to Miss Emma C. Pratt, same place.

Ben Lomond—Lakme whelp. Orange and white St. Bernard bitch, whelped March 11, 1889, by F. Kimball, Worcester, Mass., to Miss Florence Heywood, same place.

Keeper—Regina whelps. St. Bernards, one dog and two bitches, whelped June 12, 1889, by Contoocook Kennels, Peterborough, N. H., to A. N. Rea, New York.

Dude. Liver cocker spaniel dog, whelped May 2, 1889, by Black Duck out of Bijou, by High Rock Cocker Kennels, Lynn, Mass., to E. M. Bassett, Dracut, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

F. B. D., Woodstock, Vt.—I have a pup covered with warts of a flesh color and soft, except on the ends, which are hard and rough; some of them are ¾in. in length; others are large in size and flat. Can you give me any advice as to the cure of them? Ans. The larger ones can be snipped off with strong sharp scissors and the basis cauterized with strong nitric acid or nitrate of silver (lunar caustic). The smaller ones may be burned down without cutting. See a veterinary.

W. G. H., Washington.—Will you please inform me in your next paper what to do for my pug dog? His skin was red in the first place and now he is covered with little bunches all over him and he is losing his hair and has a bad odor. Ans. Use zinc oxide ointment every day, rubbing it in after washing. Keep the bowels open with a teaspoonful of syrup of buckthorn every other day, and give 5 drops of Fowler's solution of arsenic in the food each day. If the dog is very fat get the weight down. Feed once daily, and stop the arsenic at the end of three weeks.

P. J. R., Evanston, Wyo. Ter.—I have a fine Gordon setter puppy six months old. He has had a bad attack of distemper, from which he is just recovering, and is now troubled with a very severe nervous twitching in right foreleg. Local authorities say it is probably St. Vitus's dance. I have been giving him 6 drops of Fowler's solution of arsenic three times a day for the last week, but it does not appear to do him any good. Will you kindly advise me in your next issue what I had better do for him? Ans. Give one-quarter grain of extract of nux vomica in pill form three times daily. You can hide the pill in a bit of meat. Do not feed meat. Keep the bowels easy with teaspoonful doses of syrup of buckthorn. Rubbing with a stimulating liniament like chloroform liniament, will benefit. Exercise regularly. From time to time put the puppy on Fowler's solution for a week, as you have done.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

JACKSNIPE will please note line under heading of this department.

SUBSCRIBER.—For deer go to Meacham Lake, in the Adirondacks. As you do not specify your game, we cannot advise further.

CANONICUS.—The inclosed insect is *Sphærophthalma (Mutilla) occidentalis* (female). The *Mutillidæ* are found running on the ground in warm sandy places; the males have wings, but the females are wingless. They sting severely. The "enormous and beautiful hornet" might have been *Stizus speciosa*.

W. C., Mt. Vernon.—Is there such a paper as the *American Naturalist?* Inform me where and how I can get a diminishing tube made. It must be thin and light and yet strong. Say about 2ft. long and half an inch at one end, sloping gradually to a quarter of an inch. Ans. 1. The *American Naturalist* is published monthly by the Leonard Scott Publishing Co., No. 24 Park place, New York. 2. Any tinman or coppersmith will make the tube.

J. H. W., Fontanet, Ind.—1. Where can I get rules governing the National Rifle Association? 2. Are there any rules in general use for trap shooting? 3. Where can I get Creedmoor targets or others? Ans. 1. Write to secretary National Rifle Association, 5 Beekman street, New York. 2. Write to Major Taylor, American Shooting Association, Stewart Building, New York. 3. Dennison & Co., 198 Broadway, New York, have all paper targets for sale.

I. P. McK., Detroit.—Please inform concerning the famous brook trout said to have been killed in the Saguenay River, Canada, about the year 1838, weighing 22lbs., and exhibited at that time at the old Astor House, New York. A wager was decided on this by the New York *Clipper* some ten or twelve years ago; that paper gave the full history of the fish, and declared it a real brook trout. Ans. The above-mentioned specimen was not examined by competent authority, so far as we are aware. The largest brook or speckled trout of which we have a well-authenticated record is the 12-pounder taken by Mr. Seth Green and Dr. Hoy in the Sault Ste. Marie; the 11-pounder of Professos Agassiz, taken from the headwaters of the Androscoggin River, Maine, in 1860, and the 10-pounder (probably 11 when taken from the water) captured by Geo. Shepard Page in Rangeley Lake.

AFTER BREAKFAST.—You may take the most elegant and complete vestibule train ever constructed, leaving Chicago daily at 10:15 A. M. via the Chicago and Atlantic Railway. These magnificent trains offer unsurpassed accommodations for all classes of travel to New York, Boston and Eastern cities. Pullman dining cars are a feature of this new departure, and run through in either direction between Chicago and New York. Instead of exacting extra charges, for fast time and peerless accommodations proffered, the Chicago and Atlantic through its own agencies and those of connecting lines quotes fares to Eastern cities from $1.50 to $3.00 less than is charged by other routes. Consult your local ticket agent on this important item, or for maps, folders and time cards, giving full information of the Chicago and Atlantic, New York and Chicago Vestibuled Limited carrying all classes of passengers, address for prompt reply, F. C. Donald, General Passenger Agent, Chicago. Inclose two green stamps for an amusing, novel and paradoxically ingenious toy. A harmless, fireless, powderless, everlasting fire cracker.—*Adv.*

Rifle and Trap Shooting

RANGE AND GALLERY.

THE SEA GIRT SHOOT.

OUR next week's issue will contain the result in detail of the Inter-State military shoot set down for Sept. 4, at the New Jersey State Camp at Sea Girt. It is believed that New York will send a winning team to the range. This depends, however, on whether the State of Massachusetts enters its celebrated team in the competition. In such an event the New York team expects to gain second place, since it is hardly possible under the circumstances to wrest victory from a team whose members are safely to be relied on to average 45 points at 200 and 500yds. out of a highest attainable of 50, with a corresponding average at 600yds. All is not harmony so far as the selection of a team to represent New York is concerned. The selection of a team to represent this State has been intrusted by the Commander-in-Chief, through the Adjutant General, to the General Inspector of Rifle Practice, Brigadier General Charles F. Robbins, who has entered upon the task of choosing the twelve men who are to uphold the shooting repute of the National Guard in a systematic manner. He has decided to invite men to accept places upon the team upon the strength solely of past achievement or reputation. The list of sharpshooters throughout the State who have shown themselves competent to score 72 points or better at 200 and 500yds., 5 shots at each distance, has been scanned, and those men have been requested, by letter, to shoot in a stated number of competitions, with a view to demonstrating what they are capable of accomplishing at the present time. From those the twelve contestants will be selected. This course has been found fault with because so-called "reliable" shots have been ignored. It is claimed that the team should be made up in accordance with established precedent; stated days of competition should be designated and no records made in matches of the National Rifle Association be accepted. As this has not been done, it is claimed that failure will follow. To this the friends of Gen. Robbins say, that if the coming match were a competition of minor importance, the claims of the individuals, and of the organizations of which they are the representatives, might properly be considered. But the event is a contest in which New York is called upon to put forward the utmost shooting strength of its National Guard. There are in the State two score reliable "team" men. Of individual shots, capable of making brilliant records upon occasion, there are a great number, but the latter are not available to the present purpose. From present appearance the majority of the team is likely to be taken from Brooklyn. It is doubtful whether the Seventh Regiment will have a representative. Results at Creedmoor of late years have indicated that the Twenty third Regiment of Brooklyn is possessed of the strongest team shooting organization in the National Guard of the State, and eight of the twelve men will be chosen, on their merits, from the Twenty-third. The Sixty-ninth will have one representative, and the First Brigade furnish the tenth man, the two remaining members being drawn from organizations in the interior of the State.

Gen. Robbins, who will captain the New York team, has an excellent roll to select from. The list of experienced shooters and team men from which the twelve are to be selected comprises the well-known names of Shepherd, Scott, Hamlin, Hamilton, Wells, Elliott, Ball and Stokes of the Twenty-third Regiment, Brooklyn; Assistant Surgeon Linsley, Twelfth Regiment; Sergt. Frank J. Stuart, Sixty-ninth Regiment; Corp. John F. Klein, Seventeenth Separate Company of Infantry, Flushing; Major Chas. H. Gaus, Third Brigade, Albany; Lieut. Wm. J. Underwood and Pvt. Alex. Stein, Seventh Regiment, New York city, and Pvt. D. H. Ogden, Twentieth Separate Company, Binghamton. With two exceptions the fifteen experts here named are veterans.

The following members of the National Guard were selected to represent New Jersey in the match:

Col. James M. Van Valen, Assistant Inspector-General of Rifle Practice.

Col. John C. Owens, Assistant Inspector-General of Rifle Practice.

Capt. Wm. F. Decker, Co. C, First Battalion.

Capt. Thos. A. Curtis, Inspector of Rifle Practice, Third Regiment.

Second Lieut. Henry R. Goesser, Co. A, Second Battalion.

Sergt. Alex. C. Neuman, standard bearer, division staff.

Hosp. Steward Frank H. Lalor, Seventh Regiment.

Color Sergt. Chas. Chinn, First Battalion.

Pvt. Alfred E. Conway, Co. C, Third Regiment.

Pvt. James R. Gladden, Co. D, Third Regiment.

Pvt. Chas. H. Townsend, Co. G, Fifth Regiment.

Pvt. Wm. Hartman, Co. B, Seventh Regiment.

Pvt. John Ransom, Co. B, First Battalion.

Pvt. Joseph Coyte, Jr., Co. A, Second Battalion.

Captain—Col. G. E. P. Howard, Division Staff.

Adjutant—Maj. R. Heber Breintnall, First Regiment.

Quartermaster—Capt. Wm. H. Early, Seventh Regiment.

Those who have been selected to shoot on the team have been industriously practicing on the State range, the practice having been under the supervision of Col. G. E. P. Howard, who was captain of the last American military team that crossed the ocean. The members of the team were quartered in tents on the ground at the Governor's cottage. About 8 A. M. daily the men began practicing at the 200yds. range and then fired at the 500yds. range. After lunch the same programme was repeated.

The New Jersey team have the latest model Springfield rifle with "Buffington" rear sight and improved front sight cover, using the triangular open sight at 200yds and the peep sight at 500yds.

The Delaware team arrived at the camp on Wednesday, Aug. 28, and began practising on Thursday morning. The team is as follows: Maj. C. W. Cary, Capt. John S. Willis, Capt. Isaac J. Wotten, Capt. Wiswell, Lieut. Floyd, Lieut. E. G. Boyd, Lieut. J. E. Booth, Sergt. F. Taylor, Sergt. Lunt, Corp. Werner, Corp. Harbert, Private Atwell, Sergt. Amos J. Leitch, Sergt. Howard Simpson, Lieut.-Col. Garret B. Hart. The Delaware team also uses the improved Springfield rifle.

On Monday the New York team arrived at the range from Creedmoor, where they have been practicing for the last two weeks.

ZETTLER RIFLE CLUB.—On the 27th ult. was held the sixteenth annual shooting festival of the Zettler Rifle Club, which was held at Charles C. Wessel's Cypress Hills Park, and the crack shots of the vicinity reigned supreme during the day, for the crack of the rifle began at 7 o'clock in the morning, and the last shot was not fired until fourteen minutes past seven at night. Then a brass howitzer was discharged and the shooting terminated. The entry lists were all well filled and some excellent scores were made, the average being a very high grade of marksmanship. The club officers are as follows: Bernard Walther, President; N. D. Ward, Recording Secretary; A. P. Hunt, Corresponding Secretary, and B. Zettler, Shooting Master. The committee in charge of the festival were: W. B. Hanscom, M. Dorrler, W. H. Bostlemann, H. Holges, L. Flah, G. Zimmermann, G. W. Downs, G. A. Schurmann, J. A. Boyken, R. Busse, William Hayes, C. G. Zettler, J. Coppersmith, V. Steinbach, J. Arnold, V. Dittmar, F. A. Ringler, T. J. Dolan, L. Krauss and M. B. Engle. The festival was one of the most successful ever given by this time-honored organization. A summary of the day's shoot is as follows: Target of Honor—Conditions: Three shots, open to members only, for prizes presented by the judges and members; highest possible number of points, 75. Score:

J Heckling	23	25	23—71	M Fehr	10	23	22—55

Ladies' shoot—Mrs. Downs 44, Mrs. Walther 44, Mrs. Snyder 40, Mrs. Boyken 39, Mrs. Dson 39, Mrs. Engle 38, Mrs. Schumann 38. In shooting off the tie for the ladies' first prize Mrs. Downs won, scoring 15 points to Mrs. Walther's 14 points.

Ring target, highest scores—M. Dorrler 75 points, G. Joiner 72 out of a possible 75. Premium winners—M. Dorrler 351, J. A. Boyken 349, W. H. Beardsley 348 and L. Flah 346.

BOSTON, Aug. 13.—The pleasant weather and fine shooting conditions caused many riflemen to visit the range to-day, and all the matches were well patronized, especially the military medal match. The champion gold medal was won by Mr. Clarke, and the gold medal in the 20-shot rest match was won by Mr. Francis. Following are the best scores made to-day:

Twenty-shot Rest Match.

CREEDMOOR, Sept. 2.—The biggest match day this season at Creedmoor took place to-day. There were matches, and the competitors from the different regiments N. G., S. N. Y., were at the range in full force. The shooting began at 9:30 A. M., and the crack of the rifles did not cease until 5:30 o'clock. The day was a fair one, but was not favored by the marksmen as favorable for shooting. In the morning the sky was too bright for the shooters, and in the afternoon and toward evening the marksmen complained of a tricky, fish-tail wind that blew on either side of the range; consequently better scores have been made. But the officers of the National Rifle Association said the scores were good, and that they were well pleased with the success of the meeting. Large representations from the 7th, 23d, 9th, 12th, 13th, 14th, 22d, 47th, 69th, 71st, 32d, and the 5th separate company were present. The following are the prize winners who previously won medals at 200 and 500yds., making a score of 45 points or more out of a possible 50:

	200yds.	500yds.	Total.
T J Dolan, 12th Regt	23	23	46
A J Vaast, 7th Regt	21	24	45
C H Liscomb, 13th Regt	21	24	45
J N Munson, 7th Regt	22	23	45
H Greenman, 23d Regt	21	23	44
F Van Leonnep, 7th Regt	22	22	44
M E Bunton, 22d Regt	22	22	44

The winners of silver medals to-day are:

R M Dunn, 7th Regt	21	25	46
H T Lockwood, 7th Regt	21	25	46
F M Lotz, 13th Regt	23	23	46
W H Palmer, 7th Regt	21	24	45

The bronze medal winners, making 43 points or more, were:

H M Field, 23d Regt	21	23	44
R M Kallock, 7th Regt	23	21	44
F W Happy, 7th Regt	20	23	43
R Byars, 22d Regt	21	22	43

ST. LOUIS, Mo., Aug. 31.—There was to have been a meeting of the St. Louis Pistol Club held at the Laclede gallery last Wednesday, but had to be postponed because not enough of the members put in appearance to make up the requisite quorum. The meeting was called by the president for the express purpose of making arrangements for the holding of another tourney by the club. An effort will be made to gather the clans next Wednesday night, and if successful there will be no difficulty in quickly arranging the details for another shoot, as the majority are all of one opinion as to how the affair should be arranged.

KIRKWOOD, N. J., Aug. 30.—The match between Mr. George Tyrell and Mr. Ed Travis (the latter to use only one hand), 25 shots each, at 200yds., Standard American target, off-hand, came off here to-day with quite a large attendance. Travis won by the handsome majority of 30 points. When the distance was measured it was found to be 218yds.; the shooting took place in a broiling hot sun. Travis used his special Wurfflein .32-25cal. rifle, weighing exactly 8lbs.

BELGIUM'S ARM.—The Belgium Small Arms Commission have recommended the adoption of the German Mauser if Herr Mauser will consent that the gun shall be made in Belgian factories.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Sept. 3, 4, 5.—Annual Tournament of the Rocky Mountain Trap Shooters, Denver, Colo., Broadway Athletic Park. Inanimate and live targets. Address C. M. Hampson, Denver.

Sept. 10, 11, 12.—St. Paul, Minn., Gun Club Tournament, at Hamilton. F. D. Ponsonby, Secretary, St. Paul.

Sept. 13.—South Manchester, Conn., Tournament. C. R. Hathaway, Secretary.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati; $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 8, 9, 10, 11.—Fred A. Fodde's Second Annual Amateur Tournament, at St. Louis, Mo. Inanimate targets.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 south Delaware avenue, Philadelphia.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

FLORENCE TOURNAMENT.

FLORENCE, Mass., Aug. 27.—Norwood Gun Club's tournament.

First event, 7 straightaway, 5 Keystone traps:

H Keyes	0101111—5	T T Cartwright	0110110—4
J W Russell	1101101—5	Z Foster	0010011—3
F Nuttleman	1010011—4	F W Twiss	0101001—3
C O Harris	0101101—4	L F Gaylor	1100000—2

Ties on 5 and on 3 div.; on 4, at 3 each, Harris 0, Cartwright 1, Nuttleman 2.

Second event, 5 birds:

F Twiss	10111—4	Foster	01100—2
F Nuttleman	11101—4	Harris	00011—2
H Keyes	00111—3	Gaylor	00011—2
Cartwright	10110—3	Russell	00000—0

Ties on 4 and on 3 div.; on 2, at 5 each, Gaylor 2, Foster 2, Harris 4.

Third event, 6 singles and 2 pairs Keystones; ties div.:

Keyes	111101 10 10—7	Russell	000010 10 11—4

Herrick	110011—4— 9	Nuttleman	100011—3— 8
Georgia	111111—6	Duffy	100110—3
Hart	100110—3— 9	Feiker	011001—3— 6
Bolt	000111—3		
Albee	111111—6— 9		

Fourteenth event, 10 birds:

Keyes	0011111111—8	Duffy	1001000111—5
Upson	1111110011—8	Bolt	1011001010—5
Herrick	1011111110—8	Harris	0110011000—4
Brewer	1111011110—8	Mayott	0100111000—4
Georgia	1010011111—7	Cobb	1001100000—3
Albee	0110011011—6	Ellsworth	1100003100—3
Lavanway	1100011101—6	Feiker	0000011010—3
Russell	1101101001—6		

Fifteenth event, 5 birds:

Keyes	10111—4	Cobb	11001—3
Herrick	11110—4	Bolt	11001—3
Duffy	11101—4	Foster	01001—2
Cartwright	11101—4	Twiss	10100—2
Chilson	01111—4	Russell	10000—1
Brewer	01101—3		

For first, shoot-off, Keyes 3, Herrick, Cartwright 2, Duffy 1, Chilson 4. Other ties div.

Sixteenth event, 5 birds, shooter back to trap until he has called pull:

Chilson	11111—5	Cobb	11100—2
Duffy	10111 4	Brewer	11000—2

The club is well satisfied at their first attempt at holding a tournament, and expect in the near future to hold either a two or three days' tournament and put up some good-sized purses. The grounds are well adapted for holding a large tournament, the horse cars running within a minute's walk of the shooting stand. The club house is all furnished, and several of the members have made the club presents of furniture. Every one was well satisfied and there was no kicking whatever, everything running along smoothly. The club are indebted to Col. Geo. E. Albee for many points he gave. The Colonel's style and mode of shooting called out frequent applause. The following makes of guns were used by the different shooters: Dr. Herrick, Parker hammerless; Georgie, Winchester; Hart, Colt hammerless, Gaylor, Winchester; Albee, Winchester; Keyes, Manhattan; Mayott, Daly hammerless; Cobb, Clabrough; Nuttleman, Winchester, Twiss and Foster, Lefever; Harris, Parker hammer; Brewer, Parker hammer; Duffy, Feiker; Russell and Cartwright, Whitney safety hammerless. NORWOOD.

LE MARS TOURNAMENT.

LE MARS, Iowa, Aug. 26.—*Editor Forest and Stream:* The boys had a great shoot and lots of fun for their money. The Le Mars Gun Club comes out in good shape, making ends meet and sending every one away pleased with the treatment received. The threatened rain held off and the clouded sky made it all the better for the shooters. The score shows that nearly one hundred shooters were here from abroad. Geo. Hughes, of Fonda, carried off the most prizes, and Ruble scored $72 for his two days' work.

Tuesday.—Shoot No. 1. 15 Peoria blackbirds: Grim 13, Hughes 14, Edington 8, Clark 12, Cram 11, McF 14, Pinder 10, Gilson 10, Law 8, Schueckloth 10, Slagle 13, H. J. Trotter 12, Haas 9, Yates 11, E. D. Trotter 10, J. A. Ruble 15, Proctor 7, Knapp 11, Moreton 10, E. L. Webster 10, Mayner 12, Van Sickle 10, Bry Renshaw 14, Sampson 14, Lyons 13, Redfern 11, Mickley 10. First, Ruble, $16.20; second, third and fourth divided; total prize $40.50.

Shoot No. 2, 10 live birds: Hughes 10, Ruble 9, Dent 9, Moreton 5, Grim 9, Edington 7, Sampson 5, Clark 9, Cram 8, Forde 6, Yates 5, McF 7, Gilson 9, Proctor 6, Sharp 5, Van Sickle 6, H. J. Trotter 6, Schueckloth 8, Webster 9, E. D. Trotter 8, Hass 6, Watkins 2, Cawin 5. First, Hughes, $23; second, shot off to Ruble; third and fourth divided; total, $87.50.

Shoot No. 3, 10 bluerocks: Grim 9, Gilson 6, Dent 1, Ruble 10, Whitney 4, Edington 7, Schueckloth 7, Slagle 5, Redfern 7, Hughes 10, Mayher 8, Webster 6, McF 8, Hass 8, B. Renshaw 7, Knapp 10, E. D. Trotter 7, H. J. Trotter 9, Lyons 8, Pinder 6, Weldon 8, Cram 9, Yates 5, Clark 8, Sampson 3. First divided, $20; second, third and fourth divided; total, $50

Shoot No. 4, long distance shoot, 45yds. rise, 10 blackbirds: Ruble 1, Forde 3, McF. 1, Hass 2, Slagle 4, Knapp 1, Hughes 5, Proctor 3, Grim 3, Lyons 4, Redfern 4, Dent 3, B. Renshaw 3, Sampson 5, Gilson 1, Yates 3, H. L. Trotter 4, Webster 5, Cram 4, Clark 0, Edington 2, E. D. Trotter 3, Weldon 4, Pinder 6, Schueckloth 3. First, Pinder, $5; second, third and fourth divided, total $12.50.

Shoot No. 5, 5 pair live birds: Grim 5, Dent 5, Forde 1, Clark 8, Ruble 8, Chester 4, Hughes 9, Schueckloth 7, Fritchell 8, H. J. Trotter 5, Gorman 5, E. D. Trotter 4, Moreton 7, Gilson 7, Sampson 7, Slagle 6, Cram 9, Hass 5, Webster 7, Van Sickle 5, Proctor 6, Edington 5, Kelley 7, Renshaw 6. First divided, $24; second, third and fourth divided, total $60.

Shoot No. 6, 10 blackbirds: Yates 7, Webster 7, Sampson 8, Hass 6, Weldon 7, P. Sophy 4, Slagle 9, Edington 4, Dunn 4, Redfern 7, Pinder 3, Cram 10, Priestly 7, Mayher 9, Renshaw 8, Gilson 6, McF. 6, Knapp 7, E. D. Trotter 9, J. T. Brown 5, H. J. Trotter 10, Ruble 7, Clark 9, Hughes 10, Grim 10, Schueckloth 9, Forde 6, Fritchell 9, Gorman 7, Lyons 10. First divided, $18; second, third and fourth shot off and divided by Knappe and Ruble, total $45.

Shoot No. 7, 10 live birds: Forde 7, Kelley 1, Dent 7, Moreton 5, Mack 10, Gorman 8, H. J. Trotter 9, Ruble 7, Gilson 8, Schueckloth 5, E. D. Trotter 8, Grim 9, Clark 10, Chester 4, Webster 9, Hughes 10, Cram 10, Edington 9, Sampson 9, Yates 6. First shot off by Mack, $24; second, third and fourth divided, total $50.

Shoot No. 8, 10 pairs bluerocks: Grim 18, Cram 16, Edington 10, Mayher 14, Sampson 15, Schueckloth 14, Weldon 13, Slagle 16, Yates 12, Hughes 20, Webster 15, Gilson 6, Ford 6, Mack 11, Redfern 18, Fritchell 11, Chester 12, Hass 12, Ruble 12, Lyons 19, B. Renshaw 10, Proctor 7, Dent 11, Moreton 7, Clark 15, Gorman 11. First, Hughes, $16.20; second, Lyons; third and fourth divided: total, $40.50.

Wednesday.—Shoot No. 1, 10 blackbirds: Grim 9, Hughes 9, Mayher 9, Slagle 5, Andrews 3, Yates 10, Fritchell 9, Parker 5, Schueckloth 6, Gilson 10, H. J. Trotter 8, Webster 9, Lyons 8, E. D. Trotter 9, Redfern 9, Chester 8, Moreton 6, Dent 8, Sampson 9, Weldon 5, Ruble 8, Hass 5. First divided, $13.20; second shot off, divided by Mayher and Webster; third shot off by H. J. Trotter; fourth divided; total, $33.

Shoot No. 2, 10 live birds: Grim 9, Dent 4, Chester 7, Moreton 6, Yates 5, Gilson 8, Hughes 9, Mayher 9, Webster 10, H. J. Trotter 7, E. D. Trotter 8, Fritchell 6, Schueckloth 9, Slagle 6, Ruble 7, Sharp 4, Sampson 7. First, Webster, $13; second and third divided; fourth shot off and divided by Ruble and H. J. Trotter; total, $42.50.

Shoot No. 3, novelty shoot, 10 bluerocks: Grim 7, Brown 8, Yates 2, Sampson 4, Chester 3, Moreton 3, Slagle 4, Weldon 6, Dent 4, Redfern 4, Lyons 8, Hughes 7, Howard 7, Mayher 4, Webster 8, E. D. Trotter 8, H. J. Trotter 5, Gilson 5, Fritchell 4, Ruble 6. First divided, $8; second, third and fourth divided; total, $20.

Shoot No. 4, 4 pairs and 7 single bluerocks: Grim 11, Schueckloth 8, Howard 7, Hughes 13, Webster 9, Trottnow 9, Mayher 9, Lyons 12, Ruble 9, Dent 3, Slagle 4, Welden 13, Moreton 4, Redfern 11. First div., $12.20; second Lyons, third div., fourth shot off by Webster; total $28.

Shoot No. 5, 5 pairs live birds: Grim 7, Dent 5, Moreton 4, Schueckloth 6, Slagle 6, Watkins 7, Gilson 3, Webster 4, Ruble 7, Hughes 9, Hass 4. First Hughes, $11; second, third and fourth div.; total $27.50.

Shoot No. 6, 10 blackbirds: Sampson 9, Dent 8, Moreton 8, Grim 9, H. J. Trotter 10, Hass 7, Webster 10, Howard 9, Gilson 8, Mayher 9, Slagle 5, Priestly 7, Schueckloth 6, E. D. Trotter 9, Welden 8, Ruble 10, Lyons 6, Hughes 8, Yates 7, Fritchell 7. First div., $12; second div., third shot off by Gilson, fourth shot off by Priestly; total $30.

Shoot No. 7, 10 live birds: Chester 5, Howard 7, Mayher 8, Ruble 8, Hughes 10, Sampson 7, Gilson 9, Dent 4, Sharp 5, Moreten 6, S. Clark 5, Hass 7, Webster 7, E. D. Trotter 7, H. J. Trotter 10, Welden 7, Slagle 9, Schueckloth 6, Grim 8, Horrigan 5, Trottnow 3. First div., $16.80; second and third div., fourth shot off by Webster; total $42.

Shoot No. 8, 25 bluerocks: Lyons 20, Grim 23, Howard 18, Redfern 15, Hughes 21, Dent 15, H. J. Trotter 22, Welden 23, Moreton 12, Chester 17, Watkins 10. First div., $6.60; second H. J. Trotter, third Hughes, fourth Lyons; total $16.45.

Prizes for poorest shot in each shoot: Joe Watkins, box shells; A. R. T. Dent, same; Tom Adams, keg of powder; B. F. Yates, bag of shot; A. R. T. Dent, re and de-capper; Al Gilson, Fonda, duck call; E. C. Schueckloth, box cigars; C. W. L. Trottnow, 100 paper shells; Henry Moreton, lamp; Dr. Howard, Sheldon, two-dollar hat; O. J. Clark, Sibley, box shells; Slagle, of Holstein, box shells. Poorest shot in all shoots, first day, P. A. Edington, Sheldon, $2.50; second day, Henry Moreton, same.

TRAP AT CHICAGO.

CHICAGO, Aug. 24.—Cumberland Team Shoot—Team match at 25 birds, 30yds., Illinois State rules:

Geo T Farmer	1111122111111111111011221—24
W W McFarland	1111211111111212111101111—24—48
C D Gammon	2201211210010211111111—21
W L Shepard	1111122012111112222121101—23—44

Mr. Nichols and Mr. Farmer shot a side match, the latter conceding 5 birds to Mr. Nichols: 15 birds, Illinois State rules. Score:

H D Nichols...10210202011211—11 Geo T Farmer.12111121111211—15

Mr. Nichols's score stood, by terms, 16, and he won. The birds were a good lot and strong flyers in both the above shoots. These scores and the tie shoots in the Park Ridge contest show what it needs to win in this vicinity. There have been some remarkably good runs on live birds made here lately, and all the boys seem picking up.

Aug. 26.—Pursuant to notice published in these columns by Mr. Fred C. Donald, president of the Illinois State Sportsmen's Association, the undecided trophy shoots took place yesterday, for the Chicago *Herald* diamond trophy medal and the Lefever gun offered by Jenney & Graham Gun Co. There was quite a nice little attendance, and the weather was very pleasant. Mr. John Watson had a good lot of birds on hand, and the shooting was interesting and fairly close. The conditions of the shoot were 20 live birds, 5 ground traps, and by making a sweep of the shoot, with the snug entrance of $20, the boys fixed it so things were interesting in a double sense.

T P Laflin	11221111101111210030—16
W N Low	12111121101102111111—18
W P Mussey	00121222121202202222—15
W E Phillips	11121110212111211110—18
M J Eich	11111122111211111112—20
John Watson	11111102012111101111—17
C E Cahoon	02211110111211111011—17
C B Dicks	10011211210020101112—15
R B Wadsworth	11111110112211211111—18
W W Foss	11111212020222132022—17
J S Orvis	21111211111111211111—20
Tom Stager	21000120220111221 2—15
A W Reeves	12111111221202102110—18

Ties on 20: Eich, 11111—5; Orvis, 10111—4. Ties on 18: Low, 120; Phillips, 20; Wadsworth, 1210; Reeves, 12221—5. Ties on 17: Watson, 11111—5; Cahoon, 11121—5; Foss, 10110—3.

Messrs. Orvis and Eich having tied on 20 straight, agreed to divide the money, $63.20. In the shoot-off for the medal and gun, ties of 5, Mr. Eich won with 6 straight, and is, therefore, holder of medal and gun, whose possession he must maintain through three shoots to own. Mr. Orvis lost his third bird in a singular way. He got a driver, and failing to stop with the right, his left barrel snapped. Ordered to shoot another bird, he killed it with the first barrel. "Hold on," said he, "I didn't kill that bird right. I ought to have shot a blank shell first." Ordered to shoot another bird, first cartridge blank, he missed and lost with the second barrel.

Mr. Reeves won second in shoot-off; Messrs. Watson and Cahoon divided third, $31.60; Mr. Laflin won fourth, $15.80.

There were also some live-bird sweeps, 5 birds, $3 entrance. In the last one, Messrs. Watson, Cahoon, Phillips and Laflin divided first, $5.40; Messrs. Dicks, Reeves, Young and Low divided second, $3.60. The whole occasion was one of those very pleasant ones frequent at John Watson's park. E. HOUGH.

Grand Crossing, Ill., Aug. 31.—Lake County Gun Club medal shoot, 10 live pigeons, 30yds. rise, 80yds. boundary, Illinois State rules:

Wies	1011112102—8	Baumgartner	0100212201— 6
Edbrook	0111112222—9	*Watson	1121212111—10
Koehler	1100210211—7		

*Not member of club. RAVELRIGG.

TORONTO, Aug. 31.—At the Stanley Gun Club's shoot this afternoon on McDowall & Co.'s grounds quite a number faced the traps, the main event being the fortnightly shoot for the President's gold watch. The shooting was good considering the distance from the traps at which some of the shooters stood. The shoot was very interesting, and enthusiasm ran high, as three of the members have already captured the trophy twice each. Mr. Sawden, Sr., who has already won it twice, it was thought, had it, with 23 out of 25, but by steady work Emond slid in with 23, thus beating old Tom by one bird.

MINNEAPOLIS, MINN., Aug. 29.—For the closing badge and sweepstakes shoot of the Minneapolis Gun Club weather and wind were favorable; and the excellent programme called out a large attendance. The scores in the badge shoot were good and the boys struggled hard to procure medals. Mr. Ensign succeeded in landing the two leading badges, *Tribune* and Club Senior, by hard shooting. A delegation of St. Paul shooters were present, and as usual carried off the honors and a good chunk of money in the sweepstake events. The officers of the club are more than pleased with the success that has attended the club during the past season, and the promise for the coming year looks bright.

Tribune badge shoot at 30 singles and 10 pairs, for members winning in handicap shoots during the year:

	Singles.	Doubles.			Singles.	Doubles.	
Ensign	29	15	44	Marshall	27	16	43
Warwick	24	14	38	Lawrence	25	16	41
Murphy	26	15	41	Nicholson	29	14	43
Stokes	27	12	39	Cutter	22	14	36
Dunn	22	9	31				

Ensigns wins badge and retains it as his personal property.

Club shoot at 30 singles and 10 pairs, badges to become the property of winners. Members classified:

Senior Class.

	Singles.	Doubles.			Singles.	Doubles.	
Ensign	27	14	41	Pratt	25	15	40
Joyslin	26	15	41	Murphy	26	15	41
Rockey	24	10	34	Dunn	18	9	27

Junior Class.

Lawrence	25	14	39	Warwick	22	12	34
Cutter	25	10	35	Nicholson	26	16	42
Brady	17	w	..	Pyle	26	13	39
Marshall	25	13	38				

Amateur Class.

Knapp	20	12	32	Boardman	18	13	31
Fox	25	11	36	Goosman	19	11	40
Roxy	12	w	..	L F Kennedy	19	8	27

On shoot-off Ensign won senior badge, Nicholson junior, Fox amateur.

Sweepstakes.—No. 1, at 10 singles, entrance $1: Marshall 8 Quane 5, Daly 9, Pratt 8, Bennett 9, Hamline 10, Mike 4, Hansen 9, Holt 8, Murphy 7, Catamaran 9, Baldwin 7, Ensign 10, Cutter 8, Dalton 8, Lawrence 6, Stokes 7, Shott 4, Dunn 5, M. F. Kennedy 9, Forbes 7, Burke 7. Hamline and Ensign first money, Bennett and Catamaran second money in shoot-off, Pratt and Cutter third money in shoot-off, Baldwin fourth money in shoot-off.

No. 2, at 6 singles and 2 pairs, entrance $1.50: Marshall 9, Dalton 8, Murphy 8, Bennett 9, Hamline 8. M. F. Kennedy 8, Daly 8, Forbes 9, Hansen 7, Baldwin 4, Holt 7, Burke 8, Shott 8, Mike 7, Cutter 8, Quane 7, Pratt 7, Dunn 5, Ensign 10, Catamaran 9, Stokes 8. Ensign first money, Marshall, Bennett, Forbes and Catamaran second money, Murphy and Kennedy third money in shoot-off, Hansen and Pratt fourth money in shoot-off.

No. 3, at 12 singles, entrance $2: Bennett 14, Hamline 14, Daly 13, Dalton 11, M. F. Kennedy 14, Shott 10, Mike 7, Hansen 14, Marshall 13, Murphy 11, Baldwin 12, Holt 13, Cutter 15, Forbes 12, Ensign 13, Stokes 11, Pratt 13, Catamaran 14, Burke 13. Cutter first money, Hansen and Catamaran second money in shoot-off, Daly and Holt third money in shoot-off, Marshall fourth money in shoot-off.

No. 4, at 9 singles and 3 pairs, entrance $1.50: Bennett 10, Hamline 11, Marshall 13, Mike 11, Hansen 14, Dalton 8, Murphy 11, Shott 11, Daly 13, Holt 13, M. F. Kennedy 13, Ensign 13, Forbes 12, Cutter 12, Baldwin 12, Burke 9, Catamaran 13. Hansen first money, Daly second money in shoot-off, Forbes, Cutter and Baldwin third money, Hamline and Murphy fourth money in shoot-off.

This will be the last shoot this season, as a good many of the boys will be out duck shooting this fall and it does not give us a sufficient quorum at the shoots.—CRUTCH.

ST. LOUIS, Mo., Aug. 29.—A good-sized crowd of the Lyon Gun Club assembled last Wednesday afternoon to do battle for the medal, and several good scores were made by the participants. The new star targets, manufactured by Reuss & Co., of Belleville, Ill., were given their first trial in this city and gave entire satisfaction. Medal and sweepstakes shoot, 20 star targets:

Sieminskie	18	Peisinger	17
Schroeder	13	J Busch	8
G Busch	10	Steffen	17
Lenhardt	19	Reuss	14
Hammer	9	Victor	13
Hossfuther	17	Glicker	6
Snow	13	Harris	17
Stussel	16	Hill	19
Lee	14	Koenig	8
Herold	12	O Schroeder	13
Valentine	10	Schenk	13
Isch	12	Lang	11
Stutc	13	Waing	19
Bauman	16	Roy	14
Jaffrey	8		

Roy won medal and first money, Sieminskie second, Peisinger third.

Last Monday was a delightful day for out-of-door sport, and it was happily taken advantage of by the Compton Hill Gun Club to hold a medal shoot. There was no wind to affect the flight of the targets, and good scores were the rule by the members. The contest was conducted under A. S. A. rules strictly. Medal shoot, 25 Keystone targets, A class:

J Sieminskie	1110111001111111111111100—20
W E Field	1101110011111111111111111—20

Smith	1110111001100010101001111—14

Sheer won medal.

NEWARK, N. J., Sept. 2.—A sweepstakes shooting match at live pigeons, open to all at $5 an entry, was held at John Erb's Shooting Park, Bloomfield road, to-day. The first event was a series of 5, 4-bird sweeps, in which F. Class made the highest score, only missing 1 bird—and that the last one of 20—scoring 19. S. Castle scored 17, J. Erb 17, C. M. Hedden 16, E. Francis 16, and William Green 11 out of 18 birds shot at. The ties in this event were afterward shot off by J. Erb, E. Francis and C. M. Hedden, Francis winning with 19 birds. The second event was a 21-bird sweepstakes, straight, which was won by F. Class, who made the phenomenal score of 21, killing every bird shot at. In this event C. M. Hedden and J. Riggot each scored 20, J. Erb and E. Francis 19 each, H. Leddy 17, W. Campbell and William Green 16 each. The third event was a 7-bird sweepstakes, straight, at $5 an entry. In this E. Class again won, scoring 7 straight birds, C. M. Hedden, W. Campbell and J. Erb each scoring 6 out of 7 birds, while S. Castle, William Green, J. Riggot and E. Francis each scored 5. The fourth and last event was another 7-bird sweepstakes, straight, shot by the same competitors in the previous event, with the exception of C. M. Hedden. F. Class, J. Riggott and E. Francis scored 7 apiece, the sweepstakes being divided among them.

The South Side Gun Club of Newark also held a tournament at their grounds on New Jersey Railroad avenue, shooting at clay-pigeons, bluerocks and composition bats. The first event was a straight sweepstake of 10 clay-pigeons. In this W. R. Hunt and J. Cooper scored 10 each. The second event was a match at 5 pairs clay-pigeons, 2 traps being sprung simultaneously. In this M. S. Lindsley and E. A. Jeffrey scored 9 each. The third event was at 10 bats straight. Hunt, Jeffrey, Lindsley, J. Cooper and J. H. Terrill each scored 10. The fourth match was shot at 5 pairs of bats. Hunt and J. Cooper scored 10. The fifth event was at 15 bluerocks straight. Manitz scored 14. The sixth event was shot at 5 pairs bluerocks. D. D. Terrill scored 6 out of 10. The seventh was at 10 bluerocks straight. Manitz and Lindsley scored 9 each. The eighth event was at 20 single bluerocks straight. J. Cooper scored 17. The ninth event was at 10 clay-pigeons straight. Hunt, Lindsley and Jeffrey scoring 10 each. The tenth was at 10 clay-pigeons straight. First money was won by Lindsley, who scored 10.

SOUTH MANCHESTER, Conn.—The Manchester Gun Clbb will hold a tournament Sept. 13, at South Manchester. All purses divided into four equal parts. Entrance from 50 cents to $2.50.—F. E. WATKINS, Pres.; C. R. HATHAWAY.

ELMSFORD, N. Y., Sept. 2.—Irvington Gun Club club shoot, 25 Keystones, 3 traps, 18yds. rise, National American rules:

MADISON COUNTY ASSOCIATION.—The first meeting of the Madison County Trap Shooters' Association occurred at Oneida, N. Y., Aug. 28 on the grounds of the Oneida Gun Club. About 30 of the best shots in the county were present and the best feeling prevailed during the day. There were six contests on the programme, but by far the most interest centered in the team shoot for the $140 trophy lately purchased by Eaton, Oneida, Cazenovia and Canistota to be shot for at each meeting by teams of four, each club entering as many teams as they desire, each man shooting at 15 singles and 6 pairs, at 18yds rise. There is to be a fine badge for the best individual score. Both the trophy and badge were won by the Eaton Club:

Eaton's First Team.

Peet....1111111111110110 10 11 10 11 10 11—22
Richardson....0110011110101111 10 11 10 11 10 01—18

1st Von Lengerke, 2d divided, 3d J. Peck, 4th divided. Fair day, good crowd.

CHICAGO, Ill., Aug. 27.—Mr. Henry Stephen's trap shoot and basket picnic at Los Alamos Park, Park Ridge, Aug. 20, was a great success, and the interest in the result has not yet subsided. As published earlier in these columns, the conditions of the shoot were 10 live birds, 5 ground traps, Illinois rules, shooters classified A, B and C, and prizes four lots in Park Ridge, valued $1,750. Class A had two prizes, value $550 and $400; Class B had one prize, value $400; Class C had one prize, value $400. The score:

C B Dicks....2211211211—10 A Place....1211122210— 9
F O Griffin....0122120120— 7 J O Orvis....2111112212—10
S S Kimbell....1220202001— 6 W N Low....1121121111—10

G S Haskell....1212222111—10 T Stagg....1122221222—10
R B Wadsworth....2121211112—10 C D Gammon....2102021021— 8
W Gillespie....1112111121—10

In class A, Messrs. R. B. Wadsworth, J. H. Ashley, W. G. Payson, J. S. Orvis and W. N. Low tied on 10 straight. This tie was shot off at Grand Crossing, Saturday, Aug. 24, and won by Dr. J. H. Ashley, who killed 25 straight to win. The ties on 9 in class A are Messrs. J. E. Price, G. L. Deiter, W. P. Mussey, W. W. Foss and J. M. Hutchinson, but the tie is not yet shot, owing to the inability of the boys to "get together," Mr. Dieter being absent on his conductor's run on the Milwaukee road.

In class B, Messrs. Henry Sloan and Ben Dicks are tied, but they are afraid to shoot any more because one of them must lose. In class C, Messrs. G. S. Haskell and Tom Stagg were tied on 10, and Mr. Haskell bought out Mr. Stagg's interest in the lot, paying him $125. Remaining results will be announced when decided.

Aug. 28.—In the deciding shoot of the series held by Mak-saw-ba Club for the suit of hunting clothes presented by Mr. Shepard, Mr. R. B. Organ won the suit, which he is now wearing. Scores were handed to Mr. Billy Mussey for conveyance to FOREST AND STREAM, but he done los' 'em.—E. HOUGH.

HAVANA, Ill.—A Peoria blackbird tournament will be held at Havana, Ill., Oct. 16 and 17. Full particulars may be obtained by addressing W. A. Henninger, secretary, Havana, Ill.

NORRISTOWN, Pa., Aug. 24.—The Matsunk Gun Club, of Matsunk, Pa., and the Penn Gun Club, of Norristown, Pa., shot a friendly team match on the grounds of the Penn Gun Club today. The conditions were 18 targets per man, teams of 13, National Association rule. The Matsunk Club won the match in fine style:

Matsunk Gun Club.		Penn Gun Club.	
Cressman	14	Kerper	13
Nefiles	15	Gross	12
Bell	14	Cassel	12
Ritter	12	J Yost	7
O'Brien	11	Kobl	8
Noblitt	13	Mack	13
T Smith	16	Haws	12
Swartley	16	Stranger	14
Miller	8	Taney	11
S Carter	15	Geheringer	10
J C Carter	13	Sheetz	7
J B Smith	11	P Yost	8
Heffelfinger	9—167	Ashenfelter	12—141

A return match will be shot at Matsunk at an early date.

CORRY, Pa., Aug. 29.—At the regular weekly shoot of Corry Gun Club to-day the weather was fair with light wind from the east. A picnic and other attractions made the attendance small, and a new trap specially intended for straightaways made them so difficult to stop that many goose eggs were the result. H. Arnold won gold medal, shooting out Penrose in the tie. Ward won silver medal, and Kellher the leather medal. Score:

Laurie....1101011111111111111100101—20

WILMINGTON, Del., Aug. 30.—To-day was a great day on the grounds of the Wawaset Gun Club, Wilmington, Del. The crack Sportsmen's Club, of Philadelphia, visited this city and were defeated in a match by the home club. The match was at Keystone targets, and the home club won by a score of 214 to 181. The match was the second one between the two clubs, the Wawaset having defeated the Sportsmen in Philadelphia by 13 breaks. The day was perfect for trap-shooting and the three hours of the match were pleasantly spent. The full score follows, 20 birds per man:

Wawaset Gun Club.		Sportsmen's Gun Club.	
C Buckmaster	16	Penn	16
Ritter	16	Davis	17
Sillitoe	14	Gibson	10
Arnbold	17	Hunter	12
Weldin	17	Irwin	11
Stout	18	Harvey	
Nutter	17	French	18
Hartlove	13	Grant	4
Wood	10	Harry	
Fox	13	French	13
Huber	12	Tredway	15
Miller	18	Farnum	16
Woodw'rd	9	Thorn	12
Smith	18	Jefferson	3
W Buckmaster	14	McQuaid	14
M'Kend'k	18	Maher	14
	214		181

The officers of the day were: Referee, Edward Gibson; judges, Dr. Nebinger for the Sportsmen and C. C. Mahoney for the Wawaset; Jos. McKinney scorer for the Sportsmen and W. J. Taussig for the Wawaset.

CAPE MAY, Aug. 31.—The grounds of the Cape May Athletic Club were filled to-day with a large and brilliant audience gathered to witness the shooting contest for the Cape May Athletic Club Cup. The event was open to all amateurs. There were forty entries, but only twenty-four put in an appearance. Each man was allowed 25 birds, 15 singles and 5 pairs of doubles, bluerock pigeons, inanimate, from bluerock standard traps. Three traps were used, 16yds. for 12-bore and 18yds. for 10-bore, National Association rules, 1½oz. of shot. The result of the contest was not reached, although the shooting commenced at 12:30 and continued until the departure of the last train, when some of the contestants were compelled to leave and carry the shoot over until Monday.

H Thurman....11101011111001—10 11 10 11 11 11— 9—19
G W Cattell....1101110110111110—11 11 11 11 00 11— 8—19
R L Low....1111111101001111—12 10 00 11 11 11— 7—19

Eighteen was next highest score, made by Geo. Austermuhl, West Jersey Gun Club, 12 breaks on singles and 6 on doubles; J. T. Armstrong, W. J. G. C., 10 singles, 4 pairs doubles; E. B. Leaming, W. J. G. C., 11 singles, 3 doubles; A. Munch 16, J. S. Leaming 16, E. L. Griscom 15, Leonard Finletter 15, John Mecray 14, Harry Robbins 14, Harry Thompson 1, J. Thurman 13, Harry Hazelhurst 13, C. W. Taylor 13, J. R. Evans 12, D. Mayhew 11. Jos. Freas 11, E. S. Cattel 10. The Physic cup, now held by Mr. Leonard Finletter, was shot off by five of those who had entered for the contest. The conditions for this cup were 25 birds, singles from five traps, under National Association rules. Those shooting to-day were:

Leonard Finletter....1111110101101111101101111—20
Spicer Leaming....0001010111111111111101101—18

Benzet 16, J. W. Moorehead 14, J. R. Evans 14. The other entries were to shoot on Monday, after the tie of the first match is shot off. J. Leaming, E. O. Wagenhurst and J. W. Moorehead officiated as judges; E. L. Dana, T. D. Finletter and Harris Evans, scorers; Hon. John E. Reyburn, referee.

ELIZABETHTOWN, Pa., Aug. 31.—The East End Gun Club, of this place, held their first shoot for the handsome gold medal on Reise's shooting ground this afternoon, Mr. M. Lindemuth winning with a score of 21 out of 25 Keystone targets. Mr. Henry A. Coble, the noted Rocky Mountain ranger, acted as referee, and gave such universal satisfaction in his decisions that the boys have decided to appoint him every time he is in the vicinity. Following is the score:

Lindemuth....1111111101011111111111001—21
Keller....1000100011101101110016001—12

Westhofer....0111110001010110010111100—14

GEO. H. KELLER, Sec'y.

THE MIDDLESEX SHOOT.—The next trap-shooting event of national interest that will occur hereabouts will be the fifth annual tournament of the Middlesex Gun Club, that takes place at Dunellen, N. J., Oct. 8, 9, 10 and 11. The programme, now ready, is an attractive one, and will draw together a large number of expert marksmen from all sections of the country. The first two days will be devoted exclusively to artificial target shooting, the last two to live pigeons. The management have hung up $1,350 to be divided by classes A and B, governed by American Shooting Association rules and classification. Heretofore the Middlesex Club have had as the feature of their tournaments a $1,000 guaranteed sweepstake at 100 live pigeons, $100 entrance. By special request of a large number of shooters who do not feel like entering so large an event, it will be omitted this year, and a sweepstake at 25 birds, $25 entrance, $400 guaranteed, open to the world, will be substituted. This will give all an opportunity to participate, and, as the club adds all surplus money, it will undoubtedly fill to as large an amount as the original race. The programme can be had on application to W. Fred Quimby, 291 Broadway, or W. L. Force, Plainfield, N. J.

SING SING, N. Y., Aug. 29.—A team from the Ravine Gun Club of Peekskill, composed of Pierce, Olmstead, Wygant, Dykman, Everingham and Bonfils, defeated a team from the Sing Sing Gun Club, consisting of Gettle, G. Smith, Pringle, Haines, Capt. Abram Jones and Hitchcock, in a match at 50 Keystone targets each to-day by the score of 228 to 203. Charles Acker of Sing Sing was referee.

NEWARK, N. J., Aug. 28.—At the all-day's shoot of the Maplewood Gun Club to-day, E. D. Miller shoot at 152 targets and broke 144; W. Sigler shot at 132, broke 122; J. Sickley shot at 115, broke 93; C. von Lengerke shot at 50, broke 41; F. Dunnican shot at 82, broke 67, H. Lighthipe shot at 60, broke 50.

WELLINGTON, Mass., Aug. 31.—There was a fair attendance at the grounds of the Wellington Club to-day, and several good scores were made in the various matches. In the silver pitcher match at 7 bluerocks and eight clay pigeons, Sanborn won with 13. The other scores in this match were: Perry and Edwards 12, Melcher, Warren and Bradstreet 11, Bond, Field and Cowee 10, Snow 9, Nichols and Chase 8. In the merchandise badge match at 15 clay pigeons Perry was first with 15 straight, but he not being in the match, the badge was won by Sanborn with 14. The other scores were: Chapin and Snow 13, Chase, Cowee and Field 12, Porter 11, Bond, Peabody, Warren and Dill 10, Melcher and Bradstreet 9. The winners in the sweepstakes follow: 7 bluerocks: Chapin, Sanborn and Bradstreet 6, Melcher 5, Nichols and Porter 4, Parker 3. 8 clay pigeons: Sanborn, Edwards and Dill 7, Bond and Melcher 6, Cowee 5, Chapin and Porter 4. 5 clay pigeons: Chapin, Bond and Perry 5, Warren and French 4, Chase and Melcher 3. 5 clay pigeons: Chase, Chapin, Peabody and Perry 5, Sanborn, Dill and Field 4, Petit, Bradstreet and Cowee 3. Melcher 2. 5 clay pigeons: French, Perry, Snow and Sanborn 5. Chase, Melcher and Cowee 4, Chapin, Porter and Field 3, Warren 2. 6 bluerocks: Field, Chapin and Chase 5, Bond, French and Cowee 4, Porter 3. 5 clay pigeons: Chapin, Bond, Chase and Cowee 5, Field, Melcher, Nichols and Perry 4, Porter and French 3. 5 clay pigeons: Bond, Porter and Perry 5, Chase 4, Field 3. 6 bluerocks: Warren 6, Chapin, Porter and Field 5, Melcher 4, Nichols and Dill 3. 5 pairs of bluerocks: Melcher 9, Warren and Bradstreet 8, Perry and Chase 7, Cowee and Field 6. 5 pairs bluerocks: Chapin, Chase, Bradstreet and Cowee 8, Parker and Perry 7, Snow, Warren and Edwards 6. Peabody and Melcher 5. 10 clay pigeons, Keystone match: Chase and Perry 10, Field and Warren 9, Porter, Edwards and Bond 8, Sanborn and Melcher 7. 6 bluerocks: Warren and Nichols 5, Porter and Edwards 4, Bond and Chapin 3. 5 clay pigeons: Perry 5, Cowee, Snow and Melcher 4, Porter 3.

ELLIOTT VS. WINSTON.—Kansas City, Mo., Aug. 24.—Kansas City is noted for the number of good shots it contains, and I am safe to say that there are more pigeons killed and more clay-birds broken inside its limits than any city in America. One of our most interesting matches was shot the other day. The participants were the well-known trap shot, J. L. Winston, of St. Louis, and our champion of Kansas City, J. A. R. Elliott. Winston having won three out of four matches from Elliott in June, returned for more glory, and no time was lost in making a match at 100 live birds each, American Association rules, for $250 a side. The match took place in the base ball park, and as the wind blew from the southwest the competitors shut it out, and in the inclosure was warm, having a tendency to make the birds fly slow and easy. Winston seemed to have rather the hardest birds in the beginning, though the latter part was about even. Elliott was the first to score; his first miss was his 26th bird, which left him in the lead of 2. Winston failing to score his 12th, 20th and 21st, at the end of 50 Elliott was in the lead of 2; Elliott failing to score his 87th left him in the lead of but 1, and the match was not won until he had scored his last bird. J. L. Winston shot an L. C. Smith hammerless, with 3½drs. Schultze's powder in first, with Laflin & Rand's in second, with 1¼oz. of No. 7s in both barrels. J. A. R. Elliott shot a Greener hammerless, with 3½drs. of Schultze's powder in both barrels, with 1¼oz. of 8s in first, and 7s in second. The score:

Elliott....1111111111111111111111111

in the camp occasionally but stayed in the town. There were nine ladies and a dozen children staying at Ambleside, opposite to the camp, who were connected with members of the Association in attendance.

Roughly speaking, then, it may be summed up thus: Thirty-two members and ten visiting men, making a total of forty-two men; and with ladies and children who visited the camp almost daily at some interval or period, over sixty persons. Considering that the membership of the Association is just about 110, the average may not be considered low. But it is only fair to point out that it is, perhaps, not the wisest policy for a man to say he will join a meet like this when he is uncertain. It would have been better in this case had they promised conditionally rather than have sent a definite acceptance. But perhaps it is somewhat too much to expect of human nature to forego the leading strings of gentle charmers who charmed in several cases much too successfully, and kept men in tow whose hearts otherwise were in the camp.

THE SITE.

A word is necessary here in justice of the foresight of Mr. Livingston who selected the site—a word, that is, of appreciation of the spot selected. Banks sloping gradually out on the lake from the shelving shore up some 15ft. elevation had themselves many natural advantages. Thinly wooded, covered with moss and grass, and backed by a profusion of ferns, the ground was itself perfect; but its position deserves still higher commendation. The view from the camp was the finest in the lake district to our thinking so far as we know. The mountains behind Ambleside, the village itself with its beautiful spire peering above the trees, Longdale Pikes, and the mountainous ridges behind Grasmere, formed a perfect natural amphitheatre placed at sufficient distance to enhance the remarkable beauty not to say grandeur of the whole scene. As the men lay or lounged in their tents or about the camp they saw this lovely panorama; and so far as the beauty of the landscape went, the season that was spent here gave an opportunity of witnessing it under every aspect. The shadows of brightness and of gloom alternately chased each other across the peaks as if in play, while when the valleys were lit up the peaks were in gloom, or vice versa. So it was ever changing; now distant and now near; now hidden in cloud, now sparkling in the bright sunlight. It was a mile and a quarter from Ambleside pier to the camp, and boats and canoes were plying the whole day through, as men went in search of stores, or relief, or change. The strong feature, however, of all was that the camp was protected from almost every wind by a rich, closely-grown forest of the intensest green, that fringed the banks of the "Congo," the tiny sluggish stream behind the camp, so christened by the B. C. A.ites. The number of visitors to the camp was very great. As boat after boat came alongside many landed and were courteously received by the members. These of course were not counted in the modest total.

THE ASSEMBLY.

Several Royal C. C. men and nearly all the Mersey contingent assembled on the Wednesday before Bank Holiday, and thus practically they had the camp to themselves. It was anticipated that the real camp would begin on the following Saturday before Bank Holiday, but as a matter of fact it was announced that the official camp practically broke up on the following Saturday week. This was one of the misfortunes or one of the things that somewhat marred the after pleasure of the main body of the men who remained to the end. But, no doubt, it is a point that will be met another year in some other way. It was generally thought that it will be preferable to start a camp on the Saturday before Bank Holiday, let that come when it may, and to hold the general meeting on the Bank Holiday, so that the men are afterward unrestrained and free for whatever pursuit they choose to participate in. Another thing is worth consideration, and it is, that as the Association grows and the meets get larger, that the very fullest preparation should be made on a proper businesslike footing, so as to prevent misunderstanding, and to add to the moral, social and sanitary comfort of the members.

THE FLOTILLA.

Perhaps this will be the proper place in which to say something about the craft at the camp. It can only be fair to assume that as there were nearly thirty English canoes, more or less, in attendance, there was among them a fair representation of the miniature fleet of the nation.

Many of the canoes were very indifferently fitted. Some had the sails beautifully fitted and perfectly white; others were neither clean nor carefully equipped. The fittings—embracing centerboards, rudders, cleats, hatches and other things—showed here and there good points; but, on the other hand, a great deal was to be desired on many other points.

The canoes which we should like first to mention are the Mersey canoes. It will be news, and indeed a surprise to many to learn that these boats still carry very much of the Rob Roy about them. Small well, with oval ends, a narrow beam, clinch built of light pine, propelled by very small lug sails, but mainly by the paddle. For river work these canoes are perfect, but when it comes to beating in heavy winds on big waters like the Mersey, they must be fearfully handicapped. It is only just that we should add in our notes on these boats that they were very neatly made and finished, chiefly from the yard of Bond, of Birkenhead. Another surprise was that so few of them had adopted the deck position for sailing. The disadvantage, not to say danger, under which these boats labored was apparent in all the sailing races, where, for instance, the Severn did the four rounds of the triangular course before some of them had completed their second, and yet the dimensions of the two boats were not dissimilar. The Merseys run from 27 to 29in., and the Severn is but 27½; they were 11in. in depth while the Severn is but 10. Of course the latter canoe has bigger sails, and the very latest, and therefore presumably best, of fittings. Many of the men were evidently impressed with the idea that they lacked much by not having centerboards, and perhaps Windermere will help to convince them of the necessity for such an appendage.

Two canoes that were perhaps as interesting as any were the double canoes, manned (if we may say so) by Mr. and Mrs. Nisbet and Mr. Fourheard and Miss Drake respectively; raking masts on both, with tan sails on the Dorothy and white on the Irene. The sailing of these canoes was rather disappointing, though in paddling they behaved splendidly, and one of them even came in second in a paddling race against the light Mersey paddling boats, in spite of its weight and length.

One of the very best canoes in camp—a canoe embodying many skillful points both in work, fittings and design—was the Acquilla, owned by Mr. Todd of the West C. C., Sunderland. Taking her altogether, she was among the very best built boats there, the work of an amateur. Every piece of metal about the whole craft was plated, much of the brass work being American. Of these the cleats were least satisfactory.

The canoe which attracted, deservedly, perhaps, a fair amount of attention, was the '89 Severn. Carvel-built, a rakish, smart little craft, she showed a clean pair of heels to everything else on the water, winning, as she did, every race in which she competed, though her skipper passed on the prize to the second man as first and the third as second, believing, as he did, that the boats did not compete on anything like equal terms. The third race, however, in which this boat competed, she lost an expensive polished brass centerplate, and not to be outdone, Mr. Charrington, who is now the proprietor of Mr. Holmes's late Pollywiggle, managed to upset her, in spite of her big beam and stability, and the boat turning completely over, dropped her centerplate through the deck. Thus one plate was lost last year out of a Forth canoe on Loch Lomond, and two disappeared in Windermere Lake. We make a special point of these mishaps, so that care may be taken to so fit and secure centerboards that loss becomes impossible. In the case of the Severn, the aperture for receiving the fine was so small that when two of us were fitting it on at the Harp, we oiled the line to get it through, and in that condition it was spliced without being whipped, and so the oil caused the splicing to slip little by little. When sailing along the upper stretch of the triangular course, running free before the wind, the centerplate up, on rounding the buoy it was suddenly dropped, too literally.

The greatest diversity in type and size hailed from the Tyne. One of the brothers Richardson (vice-commodore) had a rather deep, narrow canoe, while his older brother had a powerful, deep craft, with big sails. Young Laws came with a Tyne canoe about 18ft. in length, with a good beam and depth, looking stanch, a tubby kind of craft, but a splendid one to sail; in fact, with more sail, less wind scour, a foot more length, and carvel built, we believe she would have made it hot for the Severn. Her skipper handled her well, and became deservedly popular as a clever sailor.

One craft should not be overlooked, namely, a canoe that had not been in or on the water until her skipper sculled her across from Ambleside to the camp. We mean the Meyrol, built to the plans of the '87 Severn by Bathurst of Tewkesbury. She is capable of being sailed from deck or below, will carry one or two, can be paddled double or paddled double Canadian or single Canadian, or can be sculled. She looked very handsome on the little peninsula on which her skipper chose to tinker away at her fittings, and developed excellent pace in a gale on her last day on the lake.

FITTINGS.

A good deal might be said in detail of the fittings of the canoes which were very carefully examined. On the whole, there was a great divergence, one might say, between a man's notions as to the strength of the lines for canoe rigs. One man, for the tack of a small mizen, had attached a powerful cord, actually thicker than Mr. Tredwen had fixed on the Pearl for the hoisting of a 67lb. centerplate. Another canoe we examined had for the main halliard a piece of thin woven line the same as we have for reefing the Severn's mizen. Another canoe had for the painter a piece of manilla line ⅜in. in diameter, therefore quite large enough for hoisting the mainsail of a 7-ton cutter. This same painter, by the way, was rove through a ring fixed in the stem six inches below the head and about as much above waterline, both objectionable and unsightly. The little sail of about 45 sq. ft. on this canoe had for a painter a piece of line about half an inch in diameter. Many of those who had adopted deck fillers had somewhat ramshackle arrangements, flimsy, weak and unreliable, and as a result at least one deck apparatus found its way to the bottom. If nattiness and neatness are not necessities, they are at least, from a practical standpoint in boating matters, essentials, that is, if a man wants to be smart and to bear the name of understanding and loving the sport to which he gives his time.

BIG CANOES.

The last canoe that Mr. Tredwen designed, namely, the Pearl, at present owned by Mr. O'Brien, of Belfast, did very indifferently in the races, though a capable and handy craft, very stable in heavy blows. Of the larger type of boat, Mr. Wilmer's Doris, Mr. Holmes's Ethel—nicknamed Pancake, and Mr. Thorpe's Tessa, were the only representations, except a local boat, the Tomtit, owned by Mr. E. P. Wally, an Ambleside resident. We fancy that a greater number of the larger craft will put in an appearance at the next meet, which, it is supposed by many, will be held at Falmouth Harbor.

The small paddling canoe, pure and simple, utterly destitute of anything in the shape of sailing appliances, as a class was conspicuous by its entire absence.

The materials that were chiefly used in canoes were: London and Tewkesbury, mahogany; the Mersey, pine.

CLUBS REPRESENTED.

The clubs were represented in something like the following numbers: The R. C. C. nine members present; the Tyne had three; there were three members of the Wear present; while the Mersey had seven; the Hull Yawl Club was represented by three or four members; twenty-four persons signed the visitors' book in the committee tent, and before the camp broke up thirty-two actual B. C. A. members had put in an appearance.

THE ASPECT OF THE CAMP.

Standing about fifty yards from the main body of the camp was the big bell tent, inhabited by boating men from Liverpool, Southport and New Brighton, who had come on their own account to spend a little time on Windermere. Next, facing the shore and with a splendid view of Ambleside Bay, was Irene Villa, Mr. Nisbet's tent, replete with flags, Chinese lanterns, and Celestial umbrellas and easy chairs. A little landing stage was specially arranged opposite to this camp, while the two rakish-looking double canoes, when not traversing the lake, were moored alongside. We then come to a very novel tent, that of Mr. R. M. Richardson, of Gateshead. The tent is what is commonly known as the Marquee shape, designed by an American, a modification of whose plans appeared in the *Canoeist* two years ago, from which this has been built, together with two others of a similar type, Law's and Charrington's. But Mr. Richardson's was the only one that was watertight and which showed the best proportion. We then come to another tent, inhabited by Mr. W. C. Richardson, which was the ordinary Clyde or house-shape tent, with bedstead and a lamp to heat the tent. The next was that of Mr. Wilmer's, relieved by an extensive display of flags and many houselike comforts, known as Doris Court. Next to that again, Mr. O'Brien's neat white tent, behind it Mr. Law's spotless white Marquee, generally flapping freely with every breath that was wafted through the camp. But if the tent did not sit well or keep out the water very well, its owner at any rate kept it the pink of neatness. Very near this was a large white tent, with a number of the Mersey canoeists ensconced themselves, and behind it was a large club tent lent by Mr. Bartley for the meet, and behind that again the committee tent, at the end of which, to the left, was the galley. Following down the line, we stumble across Bartley's tent, a turtle-shaped canvas construction that gives an infinite amount of room inside, both as to width as well as length. In front of this was the Petrel tent, occupied by Mr. Graves and friend from Stony Stratford. Facing this, but nearer the center, was Acquilla's tent, occupied by Mr. Todd, W. C. C., and Mr. Webster, R. C. C. Behind this again, and on the ridge, was another little terrace of tents, the first of which was occupied by Mr. Wrigley and an unattached friend from Liverpool. Next was the stripe tent, with a stripe awning or fly sheet, of the Dennison brothers; while the extreme end was brought up by a pretty, attractive Marquee tent of the aforesaid American pattern, occupied by Mr. Charrington, who complained bitterly that the heavy rain found its way in. Mr. Rogerson also shared the quarters in this tent part of the time.

The last of the whole series, standing on a little lower ledge by itself, stood the camp that was designated by a blue signpost at the corner the "Severneries;" while the whole plot of ground round the two tents composing this camp was tastily railed in by red posts and a white line bearing the name "Freehold (ing) Farm." This consisted of a new red and white striped tent, with a white fly sheet, the style and shape of the tent being the square or house style. Standing next to it, in the same row as it were, was another tent (with a white fly sheet), made of neat, narrow-striped stuff, the shape being what is known as the A tent. This was designated "Mizzen Lodge," and held the lantern, slides, bags and all spare gear belonging to the Severn's camp, which was occupied by Mr. W. F. Fowler and the editor of the canoeing half of the *Model Yachtsman and Canoeist*. Standing between the two tents was a tall flagpole, from which floated a blue ensign bearing the name in white letters "Severn." The inside of the main tent was decorated with a festoon of fans and photographs, while the floor was laid with a figured scarlet carpet. Several other tents, such as Messrs. Wilmer's, Nisbet's and Richardson's, were carpeted. The practice of naming the tents was not universal by any means.

HOW THE TIME WENT.

A lady visitor to the camp asked, "What do you do with your time? You cannot always be sailing across the lake and back." Her question gives an opportunity of answering. As a rule, nine days out of a dozen it was raining till rather a late hour in the morning, when the men continued their slumbers, hoping it would clear that they might take a comfortable dip. Whatever time they got up there was a plunge, then shaving and dressing. And then there was cooking. As a rule there were generally three or four round the galley from half past eight till ten, and from two to three o'clock, and any time between seven and nine, while "Jack," the genial camp attendant, usually kept the stove in good trim, and paid his periodical visits from tent to tent with his water and Hudson, and washed up smartly.

As a rule the letters were fetched by the attendant about nine in the morning; and after breakfast there was a scattering of the fleet some sailing across to Ambleside for stores, others to answer letters, send telegrams, and generally look after, as far as they were able, business at home. Some went on long photographic excursions, either afloat or ashore; others enjoyed an hour's tinkering at their craft. Many had long convivial conversations over the morning or afternoon pipes.

In this way the whole camp was always behind time, the enemy generally being ahead of everybody.

CAMP AMUSEMENTS.

These were of a multitudinous character, and opened on the first Saturday night in August with an impromptu concert in which Mr. Nisbet very ably took the leading part, assisted by Miss Drake, Mr. Fourheard, Mr. Richardson, Mr. Wally and others.

Then followed the little assemblies in the tents, and the problem of how many men could be stowed into six square feet was put to the test. All these little camp-fires were intensely enjoyed, usually very merry, and always pleasant. Sometimes the hilarity reached a high pitch, and, perhaps, mitigated materially against the slumbers of that portion of the camp who had thought well to turn in.

On the following Tuesday evening Mr. Holding managed to interest the camp in the big tent with a talk about his "Watery Wanderings" trip in Scotland, illustrating the same by about seventy very beautiful pictures thrown on the screen by his lantern. During the camp four of these lantern exhibitions were given, two the first week and two the second, and all appeared to be very much enjoyed.

The second concert took place on Saturday the 10th, a printed programme having been previously got out embracing twenty items. The banjo playing of Messrs. Richardson, Holmes and Nisbet, together with the violin obligato of Mr. and Mrs. Haywood, were really fine. The entertainment was brought to a conclusion by Mr. Nisbet leading in the Eton boat song. The only recitation was by Mr. E. P. Wally, who gave "The Man that Whistled" in inimitable style.

THE RACES.

The first race took place on the Ambleside Bight near the pier, being an alternate paddling and sailing race. It was rather trying to some because the wind blew strongly, and the men had not had sufficient practice for a thing requiring so much skill as to change position, raise and lower sail, and otherwise manipulate their mimic craft with sufficient smartness. At the same time it was spiritedly prosecuted from beginning to end, Mr. O'Brien, R. C. C., taking first prize, and Mr. Laws, T. C. C., second. A good number of spectators witnessed this race.

A series of contests took place the next week of a very interesting and pretty character. The first, on Monday, was a sailing race round a triangular course that had been buoyed out by the Rear-Commodore with red flags near and opposite the camp, so that the whole of the spectators, visitors at camp, and those who did not race could see the flotilla from start to finish. T. H. Holding had brought some handsome flags for first and second prizes, the same gentleman getting up the race lists. The first muster was 14 craft, and a very pretty sight it was. The prizes were won by Laws and Richardson, who came in second and third, after the Severn.

On Tuesday there was a coach ride to Keswick, when twenty joined. It was the finest day of the whole fortnight.

Another race took place on Wednesday in which there were about 9 entries. This was also a sailing race, Mr. Richardson, T. C. C., first, and Laws second. In this race the Severn lost her centerplate and retired, being then in the first place.

The next day (Thursday) another race took place—again a sailing race—and the prizes fell to the same lucky hands.

THE ANNUAL MEETING.

This was held on Saturday at 11 o'clock, with a capital attendance. The whole meeting passed off in splendid spirit. When the site of the next camp came to be voted upon, nine voted for Holland, about the same number for Falmouth Harbor, and seven for Lough Erne, in Ireland. Rob Roy was elected Commodore, Mr. E. H. Richardson (ex-rear-commodore) taking the Vice-Commodoreship, and T. H. Holding was elected Rear-Commodore. Mr. Percy Nisbet was enthusiastically re-elected Secretary. Messrs. Wilmer, Fourhead and Bartley were added to the executive committee.

It was reported that there was nearly £20 balance in hand, out of which much of the camp expenses would have to come. The beautiful Year Book was again to be brought out on a similar scale of taste and excellence to the present year's edition.

After the meeting there was some very pretty racing. The first was a maneuvering race, three rounds, which was won by the Severn, the first and second prizes going to the brothers Richardson. Then followed a paddling race, which was won by Mr. Haywood, M. C. C., Mr. Fourheard being second. The upset race which followed had but three entries, Messrs. Nisbet, Laws and Edwards. The former won.

After the camp broke up the whole body of ladies and gentlemen were grouped and photographed by Messrs. Wilmer, Dennison and Holding. As it is estimated that between two and three hundred plates were exposed at and near the camp by the canoeists and friends in attendance, it is almost certain that a fine selection of pictures of an interesting nature will be made and will be on sale to the members later on. The photographs taken at the last year's meet had a large sale.

LESSONS FROM THE CAMP.

We cannot more fitly bring to a close this somewhat lengthy account of the '89 B. C. A. meet, than by naming out a few points in which another year's experience may be turned to profitable account, learning, as the men will, from the experience just passed through.

First—They will probably be careful to secure their centerboards from the possibility of either dropping through below or, in the case of a capsize, dropping out above.

Second—They will see that their tents are so made and fitted that they shall neither be draughty nor wet, as many tents displayed both these defects. They will, therefore, if they are wise, have such tents as pertain most to the house form, with walls to the side; and they will go to the expense and trouble of having fly sheets extended over them, the said fly sheets coming well forward of tent, so that the campers may dress and undress outside their tents, when it is raining, if necessary.

Third—They will pay such attention to their sails and fittings that they shall work safely, securely and well, so that in racing or in sailing they may participate in this splendid exercise without fear of a mishap.

Fourth—That some regulations will have to be made for the better observance of the hours of closing. When a considerable body of men are assembled, if one-half should turn in to sleep, there must be some regulation to prevent a section, though awake themselves, from disturbing the rest, always made and provided that the said turning-in hour is fixed at a reasonable time.

Fifth—The galley must have a portable house that shall protect the stove and the cooks from downpours of rain, and be so arranged that it may shield the wind from any side.

Sixth—The sanitary provision for health, order and decency will need the committee's marked and special attention another year.

Seventh—Such races, sports and excursions as are contemplated should be planned in a set form as far as possible beforehand, so that individuals in making private arrangements may not find their interests clashing in any way.

Eighth—Proper approaches to the camp and proper landings should be erected before the camp assembles.

On the whole the B. C. A. meet for '89 was a success, and we trust in '90 it will be eclipsed. Four men only were upset, though the winds were variable and trying. Seven canoeists ascended the "Zambezee," *i. e.*, Windermere's chief feeder. It was rough work over the rocks and up the rapids, but was voted our best day.

SEVERN.

ROYAL CANADIAN Y. C.—A race for skiffs and canoes was sailed on Aug. 24 in a light S.E. wind, the starters being: Puritan, skiff, N. B. Dick; Uneasy, skiff, W. H. M. Bonnell; Ruby, skiff, J. Stovell; Mac, canoe, W. G. MacKendrick; Sardine, canoe, S. V. Baldwin. Ruby carried a topsail and led the fleet, with Mac second, until Puritan passed her on the second leg. On the next leg, to windward, Mac made a long lead, holding it to the finish. The times were:

Mac	2 31 00	Ruby	2 40 00
Puritan	2 38 00	Sardine	2 41 00

Uneasy not timed. Mac takes the first prize of $12; Puritan second, $8, and Ruby third, $4. The success of the canoe is not specially gratifying to the owners of the skiffs, and there is some talk of an attempt to bar them out of the skiff class.

OTTAWA C. C.—The annual race for the handsome sailing challenge cup will take place on Saturday, Sept. 7. The race is open to all amateur members of recognized Canadian canoe clubs using canoes of Canadian build. The canoes must come within classes A and B of the A. C. A. Sails must be made so as to lower, and no deck seats extending beyond the sides of the canoe can be used. The regatta will take place during the week commencing Sept. 9 and includes a seven mile tandem with single blades, a gunwale race with a turn in it, an upset, a double blade, a single blade and a double blade tandem.

IANTHE C. C.—The annual regatta of the Ianthe C. C. will take place on the Passaic River at Newark, Sept. 14, at 2:30 P. M. The programme consists of ten events. Trains leave foot of Chambers street on the Erie R. R. for Woodside at 1, 2, 3:30 and 4:22 o'clock, returning at 5:21, 6:22, 8:02 and 11:06 P. M. Depot only two blocks from club house.

A. C. A. MEMBERSHIP.—Northern Division—John C. Iredale, Fred V. Massey, Toronto; Elbert L. Fish, Cobourg, Ont.; A. Torrance, James Smellie, Brockville; George Gillies and George Wilson, Gananoque, Ont. Atlantic Division—Wm. H. Martin, Rochester, N. Y.

MARINE AND FIELD CLUB.—The first canoe regatta of the Marine and Field Club, of Bath, Long Island, will be sailed on Sept 14, off the club house at Gravesend Bay, there being races for seniors, juniors and novices, under A. C. A. rules. Entries should be made as soon as possible to Russell Bleeker, 108 Front street, New York.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox, By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 25 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE LAKE Y. R. A. ROUND OF 1889.

FROM its location and many advantages Long Island Sound has long held the first place as the leading American yachting ground, and as a part of the great thoroughfare between New York and Boston it must always play a prominent place in yachting, but it has some formidable rivals in the great inland lakes, and the day will yet come when the lake fleets will equal those of the seaboard in numbers and quality. Although there is a large number of pleasure craft and many races are sailed on the chain of lakes between Superior and the St. Lawrence, yachting is yet for the most part in its infancy, and has hardly gone beyond the preliminary stage, depending for its success on the efforts of individuals, and of a few scattered clubs, rather than on any strong and general movement in its behalf. Year by year, however, the interest is extending, the sport is one that appeals strongly to Americans, and as it becomes better known it grows rapidly in popularity. The great international races about New York have played a most important part in awakening a pride and interest in yachting, and nowhere more than in isolated localities where really good yachts were seldom or never seen. As might be supposed, the sport is most advanced in the East, decreasing through Lake Erie and so to the West, being most backward on Lake Michigan. On the first of the great lakes, Ontario, it has become a permanent institution, boasting of a large body of yachtsmen and a fine fleet.

The lake itself is perhaps the best for yachting purposes of the entire chain, a body of water 180 miles long and 50 miles wide, twice the dimensions of Long Island Sound, free from outlying shoals, with bold shores, and a depth of upward of 100 fathoms. The fresh blue water is free from tides, with only a slight current, and practically at the same level from year to year. The shores in many parts are picturesque, in some unusually so, while there are a number of small harbors with almost draft enough for a modern American forty-footer. The first seeds of yachting on the lake were planted on the Canadian side about Toronto, which has boasted of two large clubs for many years, but within half a dozen years yachting has become more popular on the south shore, under the care of such clubs as the Oswego and Rochester. To the yachtsmen of Lake Ontario is due the first earnest and successful effort to establish a definite system, rather than to allow matters to run themselves, to the inconvenience of all concerned, as is the case on the Atlantic coast. The yachting interests of the lake are in the hands of the Lake Yacht Racing Association, a union of the different Canadian and American clubs, that has been in existence for six seasons, during which time it has done much for the advancement of yachting. The clubs interested are the Oswego, Rochester, Hamilton, Royal Canadian (of Toronto), Bay of Quinte, and Kingston. All of these clubs use the same rule, that first introduced by the Seawanhaka Corinthian Y. C., the regattas being open to all yachts enrolled in the Association. A series of five or six regattas is sailed every year at the different ports in the course of the two weeks' cruise known as the lake round or circuit, each under the management of the club at whose port it is held. The fleet includes some 50 yachts between the sizes of 25 and 70ft. l.w.l., among them being the new Smith schooner Oriole, the Atalanta, once a contestant for the America's Cup, and the fast centerboard sloop White Wings, built by Cuthbert, the builder of Atalanta and the other challenger, the Countess of Dufferin.

The most peculiar feature of the lake fleet is the family of Scotch cousins that has come together at different times, and largely by chance, there being four Watson boats and one Fife. The largest of the lot, Aileen, 55ft. l.w.l., was designed by Watson and built at Toronto, a moderate cutter but with hardly draft enough for good windward work. The old Verve, built by Mr. Watson in 1877, has long been owned in Toronto, and this year her younger sister, Verve No. 2, built in 1881, has been bought by Com. Boswell of the R. C. Y. C., after being on Lake Michigan for several years. Last year Madge, after a varied career about New York, was purchased by four Rochester yachtsmen, and has been racing against her sisters this season. The poor little lassie had fallen into vandal hands while in New York, and has been converted into a sad travesty of the trim little ship that skipper Duncan took such good care of when he brought her out here in 1881. Her low, light rail was replaced by a solid bulwark of about 3in. thick and 1ft. high all around her, the bitts and bowsprit were raised up on chocks, high in the air, while below she was fitted up in steamboat fashion with no end of heavy mahogany joiner-work, marble basins and similar truck, until the original hull was nearly sunk out of sight. To complete the fell work, her topsides, including the copper, were painted white from the waterline up. With a few similar improvements in the rig the work of spoiling her was completed. Her present owners have rid her of a good deal of the stuff inside, and cut down the rail, but she is still nowhere near her old trim, nor can she come near to the newer Verve in most weathers. The prettiest and dumpiest cutter of the lot is the little Cyprus, an old Fife boat of 5½ beams, 30x5ft. 4in. Though a bit *passé* and showing her age, the model has less of the lean and flat-sided look than most of her kind, and in the heyday of her youth she must have been a very handsome boat. Even now she proves too much for the wider boats that race with her.

This year White Wings was left alone to represent the skimming dish interests, the old flyers Atalanta, Iolanthe, Garfield and Cygnet not doing any racing. That she is well able to do it is fully proved, as she met with but one defeat, at Rochester; while last year she scored nine firsts to the same number of starts on lakes Erie and Ontario. No doubt a great part of her success is due to excellent handling, though her crew is composed almost entirely of young Corinthians. The new order of things is represented by the Burgess compromise, Merle, 34ft. l.w.l., a boat of the general type of Nymph and Verena. She has been very successful, but has met few boats good enough to test her merits fairly.

The lake fleet as it stands to-day has been gathered from all quarters; the narrow cutters from the Clyde race side by side with the old McGiehan skimmers from the Jersey flats about Pamrapo; the Boston keel boats, wide and deep, are found there, too, while Cuthbert has built a number of fast centerboard sloops of shoal draft. Besides these a number of boats, good, bad and indifferent, have been built by other parties about the lake, some from designs by Watson or Smith, some from amateur designs, and more from no designs at all, they have simply "growed." Some have been built under the old Thames rule, some under a length rule, a few under the present length and sail area rule, and many without any regard to rules or measurement. Under these conditions it has been a hard matter to grind down the fleet into any kind of racing shape, and many difficulties have been met. Naturally many of the older boats have dropped, and entries are small in some classes; but the racing each year is very satisfactory, all things considered.

The conditions which maintain on Lake Ontario are different from those on the Atlantic coast or in Great Britain, and none of the imported boats are fully suited to them, nor has any serious effort yet been made to build a yacht to meet them. When this is done by some skillful designer, either amateur or professional, who is thoroughly familiar with lake yachting, a great improvement in the fleet is likely to follow. The danger of over-sparring and of too much power has been foreseen by many of the lake yachtsmen, and this spring a movement for a heavier tax on sail was inaugurated, but after discussion all action was postponed until the annual meeting of the L. Y. R. A. in November. The classification by corrected length is advocated by many, and it is not improbable that it may be adopted.

The sixth annual round, just finished, included five regular races in addition to 200 miles of cruising from port to port with the fleet, to say nothing of the distance traveled by most of the yachts to the rendezvous, and then home from the final race. The programme this year included a rendezvous at Rochester, New York, on Aug. 14, a race on the following day, then a run of 120 miles to Hamilton, Ontario, a race there, followed by a run of 31 miles to Toronto, racing there, then on to Coburg, 65 miles, stopping for a race, and across the lake to Oswego, 90 miles, for the final race, leaving some of the yachts 150 miles from home when the cruise disbanded. The original programme included a race at Belleville on Aug. 20, the intention being to drop Kingston this year, and to race alternately at the two places in the future; but at the last moment a change was made, and Belleville dropped out, Coburg filling up the lake offering a regatta instead. The completion of the new Murray canal, lately opened, has greatly shortened the route to Belleville and the Bay of Quinté, and will enable the fleet to reach Belleville in the future without making a long and tedious detour.

Rochester, First Regatta, Aug. 15.

By the evening of Aug. 14 a number of yachts were at anchor at Charlotte, the port of Rochester—Aileen, Atalanta, Verve No. 1 and 2, White Wings, Madge, Cyprus, Merle, Amelia, Majel, Velnette, Deerhound, Vision, Rivet and others.

The course was a peculiar one, the start being off the piers at Charlotte, and the three arms of the course, each 4 miles, being laid out N.W. by N.; N.E. by N.; and E.½N., in the shape of a fan. The 50ft. class sailed out to the N.W. mark, back to start, then out to E. mark and back, and then out to N.E. mark and in to start, 24 miles. The 36, 30 and 25ft. classes sailed around the N.W. mark and back, then around the N.E. and to start, 16 miles. The prizes were: 50ft: class, $75 to first and $50 to second; 36ft. class, $50 and $25; 30ft. class, $40 and $20; 25ft. class, $25 and $15. Two to start or no prize, three to start or no second prize.

On Thursday morning there was half a gale of wind blowing from S.W., with a very heavy sea running, a short, steep chop, such as the quiet Lake shows in a little while under the impulse of a strong breeze. The large class had no starters, Aileen not racing this year, but the 50ft. class brought out Verve No. 2, owned by Com. Boswell, Royal Canadian Y. C., of Toronto; Verve No. 1, owned by Mr. Norman B. Dick, of Toronto; White Wings, owned by Capt. E. Jarvis, Hamilton Y. C., and Madge, owned by Messrs. Golding and Cartwright, of the Rochester Y.C. All started under lower sails, the times at the line being:

Verve No. 2	10 43 00	Madge	10 46 45
White Wings	10 43 30	Verve No. 1	10 47 25

Owing to a delay with the gun, Verve No. 2 and White Wings were obliged to make a second start, being timed as above. When a little way out, the spinaker boom of White Wings, a short stick that passes under the forestay, broke its lashing and fell, going aft between the main shroud and topmast shroud, the end dragging in the water. Much time was lost before the spar, with 4ft. broken off the end, could be hauled inboard, the heavy sea making all work on deck very difficult. Verve gained greatly on this round, leading White Wings by 7m. at its conclusion. She gained during the remainder of the race, finishing a few seconds ahead, but failing to save her time. Madge started her chain-plates and withdrew. Merle sailed a good race in her class, and Cyprus beat her two wide rivals badly. The full times were:

FIFTY-FOOT CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Verve No. 2	10 43 00	2 18 54	3 35 54	3 34 40
White Wings	10 43 30	2 18 30	3 35 00	3 35 00
Verve No. 1	10 47 25	2 20 22	3 41 57	3 36 01
Madge	10 46 45	Disabled.		

THIRTY-SIX-FOOT CLASS.

Merle	10 54 20	1 17 21	2 23 01	2 21 09
Deerhound	10 53 10	1 24 38	2 21 28	2 21 28
Vision	10 58 10	1 48 28	2 50 18	2 44 17

THIRTY-FOOT CLASS.

Cyprus	11 03 11	1 42 45	2 39 34	2 39 34
Amelia	11 03 33	2 05 05	3 01 32	2 58 06
Majel	11 06 27	Not timed.		

TWENTY-FIVE FOOT CLASS.

Velnette	11 13 55	2 19 00	3 05 05	3 03 28
Mary E	11 14 05	2 50 35	3 35 35	3 35 35
Lady Eva	11 14 00	Withdrew.		
Edna	11 15 05	Withdrew.		

Majel was not timed owing to a blunder in fiuishing. The steam yacht Siesta was offered by Mr. H. H. Warner to the regatta committee, Messrs. Warner and Baker being the judges. The regatta committee included Messrs. Matt Cartwright, chairman; J. J. Leary, J. R. White, A. T. Hagen, E. J. Woodbury and H. G. Thayer.

In the evening a reception was held in the handsome house of the Rochester Y. C., just completed, Com. Newell presiding and presenting the prizes. Next day a number of the yachts sailed for Hamilton, but the sea was so heavy that they returned, starting anew on Saturday morning and reaching Hamilton next day. The schooner Oriole, of Toronto, joined the fleet, and also the Wasp, of Cleveland. The latter yacht was built in Chicago in 1882 by John Townshend, being originally a sloop of 64ft. l.w.l., 19ft. 10in. beam, and 6ft. draft. In 1887 she was purchased by Com. George W. Gardner, of Cleveland, and lengthened to 70ft., being deepened 8in., while her rig was changed to a schooner. A match was made between her and Oriole, designed by Mr. A. Cary Smith, both being the same on l.w.l.

Hamilton, Second Regatta, Aug. 19.

The courses for the Hamilton regatta were for 75 and 50ft. classes, 24 miles; 36, 30 and 25ft. classes, 16 miles; 20ft. class, 8 miles. The prizes were: 75ft. class, $100 and $50; 50ft. class, $100, $50 and $30; 36ft. class, $40 and $25; 30ft. class, $80, $40 and $25; 25ft. class, $50, $25 and $15; 20ft. class, $50, $25 and $15; steam launches, $40, $20 and $10.

The starters were: 75ft. class, schooners Wasp and Oriole; 50ft. class, White Wings, both Verves, Madge, Condor and Aggie; 36ft. class, Merle, Coquette, Psyche and Vision; 30ft. class, Echo, Cyprus, Alert, Surge, Nadia, Laurel, St. Elmo, Majel and Amelia; 25ft. class, Greyhound, Vandetta, Neptune, Kelpie and Stella. The start was made at 11:30, with a fresh S. W. wind, dropping to a calm later on and being variable all day. The times were:

75FT. CLASS.

	Start.	Finish.	Corrected.
Oriole (Toronto)	11 31 40	4 35 50	4 54 10
Wasp (Cleveland)	11 33 08	4 34 17	4 50 32

50FT. CLASS.

White Wings (Hamilton)	11 31 07	5 26 51	5 04 16
Verve No. 1 (Toronto)	11 34 25	5 24 47	5 45 50
Verve No. 2 (Toronto)	11 32 10	5 19 55	5 46 25
Aggie (Oakville)	11 31 55	Not timed.	
Condor (Toronto)	11 32 25	Not timed.	
Madge (Rochester)	11 33 28	Not timed.	

36FT. CLASS.

Merle (Toronto)	11 46 55	3 44 30	3 57 35
Vision (Coburg)	11 46 00	4 01 50	4 12 59
Coquette (Hamilton)	11 43 45	4 05 48	4 18 39
Psyche (Hamilton)	11 47 05	4 24 22	Not t'd.

30FT. CLASS.

Alert (Hamilton)	11 50 51	4 08 07	4 16 59

Cyprus (Hamilton)	11 50 52	4 35 42	4 44 50

25FT. CLASS.

Vandetta (Hamilton)	12 03 45	4 31 34	4 27 50
Stella (Hamilton)	12 01 50	4 49 53	4 48 03
Neptune (Hamilton)	12 17 00	5 43 20	5 26 50
Kelpie (Toronto)	12 02 50	5 35 50	5 33 00
Greyhound (Hamilton)	12 03 12	Not timed.	

20FT. CLASS.

Caprice (Toronto)			2 27 55
Aleda (Hamilton)			
Aideen (Hamilton)			

A race for steam yachts resulted as follows, the corrected time and winner not being known:

STEAM YACHTS.

	Start.	Finish.
Beckett (Hamilton)	2 15 00	3 53 30
Marguerite (Hamilton)	2 15 00	3 57 53
Electric (Toronto)	2 15 00	Withdrew

The officers of the regatta were: J. F. Monck, Com.; John Stewart, Vice-Com.; Æmilius Jarvis, Captain; J. H. Fearnside, Hon. Sec.; G. F. Birely, Hon. Treas.; H. Lee, Meas.; R. A. Mathesius, Time Keeper; Sailing Committee—Æmilius Jarvis, chairman; J. F. Monck, J. H. Fearnside, H. Lee, W. H. Judd, H. A. Mackelcan and R. A. Mathesius.

The prizes were presented in the evening at the Ocean House, Com. Monck presiding, and Com. Boswell, of Toronto, making the presentation. The run to Toronto was made next day in a light air.

Royal Canadian, Third Regatta, Toronto, Aug. 21.

The course for the Royal Canadian Y. C. regatta was the usual 15-mile triangle in the lake, the 75 and 50ft. classes sailing two rounds, the others one. The prizes were: 75ft. class, $125 and $75; 50ft., $125, $75 and $50; 36ft., $100, $50 and $30; 30ft., $60, $40 and $20; 25ft., $50, $35 and $20. The Murray cup for 50ft. class, and the Lorne cup for 30ft. class, were offered for yachts enrolled in the R. C. Y. C. only.

The wind was fresh S.W. at the start, falling light for a time, with a heavy squall near the end. No schooners started, and White Wings, the leading boat, failed to find the first mark, overstanding considerably, so that Verve No. 2 made the mark ahead of her. In the squall White Wings broke her gaff and was compelled to lower sail and fish it with a pair of oars, but she finally won, the times being:

50FT. CLASS.

	Start.	Finish.	Elapsed.	Corrected.
White Wings	10 00 55	3 30 50	5 25 50	5 23 57
Verve No. 2	10 08 00	3 54 20	5 49 10	5 46 42
Condor	10 16 30	4 17 30	6 12 30	6 08 00
Cygnet	10 05 00	4 14 50	6 09 50	6 09 50
Verve No. 1	10 02 20	4 26 30	6 21 30	6 18 04
Aggie	10 09 40	Withdrew.		
Whistle Wing	10 30 00	Withdrew.		
Madge	10 18 15	Withdrew.		

36FT. CLASS.

Merle	10 17 00	1 10 05	2 53 05	2 53 45
Vision	10 31 10	1 37 00	3 17 00	3 14 20
Psyche	10 16 50	1 38 15	3 21 28	3 26 43
Escape	10 16 30	2 17 16	4 00 04	3 54 43

30FT. CLASS.

Cypress	10 31 40	2 14 30	3 42 50	3 42 50
Amelia	10 17 40	2 35 30	4 00 30	3 50 54

25FT. CLASS.

Nadia	10 50 00	2 53 30	4 03 30	3 54 31
Stella	10 50 00	3 00 16	4 10 10	4 10 10
Kelpia	10 50 00	4 19 20	5 29 20	5 27 46
Mischief	10 53 20	Withdrew.		

20FT. CLASS.

Aileen	Not timed.
Caprice	Not timed.

Aileen won in this class, but no time was taken. Undine, steam yacht, Mr. F. B. Polson, was used as the judges' boat.

The officers for the day were: Judges, Thomas Baugh, H. C. Dumas, F. B. Polson; starters, C. W. Postlethwaite, W. Dickson; timekeepers, L. H. Robertson, J. E. Robertson.

The yachtsmen were entertained in the evening by the R. C. Y. C. at its island house, where the prizes were presented, and on the following day the fleet sailed for Coburg with a fresh S.W. wind.

Coburg, Fourth Regatta, Aug. 23.

Though Coburg has but few yachts there is great interest taken in the L. Y. R. A., and no effort was spared to make the stay of the yachtsmen a pleasant one. The courses were triangular, just off the harbor, and the prizes were: 50ft. class, $60, $40 and $25; 36ft., $50, $30 and $20; 30ft., $25, $15 and $10; 25ft., $15 and $10. Oriole, Aileen, Atalanta and Condor arrived too late to start. The wind was light and fluky until near the end, when a squall struck the fleet, carrying away the topmast of the Verve No. 2. The times were:

50FT. CLASS.

	Start.	Finish.	Elapsed.
White Wings	10 35 00	5 26 09	6 51 05
Madge	10 32 43	5 28 43	6 05 00
Verve No. 1	10 34 13	5 40 44	7 16 31
Endie	10 35 00	5 56 06	7 21 06

Verve No. 2 did not finish.

36FT. CLASS.

Merle	10 55 00	5 02 20	6 07 20
Psyche	10 52 23	5 52 12	6 59 49
Vision	10 55 00	5 59 31	7 04 31

30FT. CLASS.

Alert	11 12 39	4 29 40	5 17 01
Amelia	11 11 38	4 30 20	5 18 42
Majel	11 12 13	Did not finish.	

25FT. CLASS.

Nadia wins	Not timed.

The prizes were presented in the evening at the Dunham House, after which a ball was given in honor of the yachtsmen at the Arlington. Saturday was spent in harbor, several of the yachts going out with ladies on board, and in the afternoon the yachtsmen attended a garden party. The fleet left Coburg during the night and early in the morning, but there was little wind and a swell outside the harbor. Some of the yachts sailed direct for Oswego, ninety miles distant, while others put in to Charlotte or Sodus, all reaching Oswego by Monday afternoon. The Oswego Y. C. was waiting to receive them, and in the evening a hop was given in the parlors of the Doolittle House.

Oswego, Fifth Regatta, Aug. 20.

The course for this race was laid out off the breakwater, starting between it and a buoy, being five miles to leeward and return, three rounds for the 50ft. class, two rounds for the 36 and 30ft. classes, and one for the 25ft. class. The prizes were: 50ft. class, $60, $45 and $25; 36ft., $50, $40 and $20; 30ft., $30, $15 and $10; 25ft., $20, $10 and $5. The championship pennant, given by Mr. J. T. Mott, was also sailed for by the yachts of the Oswego Y. C.

The Lake was smooth with a strong S. wind, and the course was laid nearly north. There was too much wind for clubtopsails at the start, but it fell when half the race was sailed, being very light at the finish of the large yachts. White Wings took the lead at the line and gained steadily on Madge and the two Verves over the whole course. The run out was made with spinakers to starboard, Madge tearing hers badly at the start. The second, fourth and sixth legs were nearly dead to windward, Verve No. 2 was next to White Wings, but could never catch her. Merle won easily in her class, beating Vision and Katie Gray. Cyprus beat Amelia in the 30ft. class, and Volante, a 20ft. cruiser with yawl rig, won in the 25ft. class. The full times were:

50FT. CLASS.

	Start.	Finish.	Elapsed.	Corrected.
White Wings	10 02 55	3 12 01	5 09 45	5 09 45
Verve No. 2	10 04 20	3 27 45	5 23 20	5 20 52
Verve No. 1	10 01 40	3 33 35	5 31 15	5 22 49
Madge	10 03 05	3 54 45	5 51 14	5 48 39

36FT. CLASS.

Merle	10 13 35	1 25 20	3 11 45	3 11 45
Vision	10 10 40	1 39 20	3 28 45	3 25 05
Katie Gray	10 10 35	1 41 35	3 31 00	3 25 25

30FT. CLASS.

Cyprus			3 32 55	
Amelia			4 07 10	

25FT. CLASS.

Volante	Winner.
Magic	Second.
Fleda	Capsized.

In the evening the large boat house of the Oswego Y. C. adjoining the handsome club house was cleared of the boats and fitted up with tables, supper being served there to all the visitors after Com. McMurrich had presented the prizes. After some songs and speeches the party broke up, and next morning the fleet dispersed, some going to Rochester, some to Toronto, and others to Hamilton and Coburg.

HULL Y. C. OPEN REGATTA, AUG. 30.

IT was expected that the forties would turn out in force for the open regatta of the Hull Y. C., but the hard racing of the Corinthian Y. C. had told on the fleet. Tomahawk had gone to Lawley's to strip and lay up, Gorilla and Minerva were off for New York, where they will race at Larchmont, and Chiquita did not appear. Pappoose and Alice were on hand in the morning, but there was a dense fog, so the start was delayed, and when finally decided on, at 2 P. M., both had left the harbor. As the start was not made until 3:20 but one round, 12 miles, was sailed, the course being: Across the line between the judges' steamer off Point Allerton and boat bearing red flag, leaving judges' steamer on port; thence four miles southeast by east, leaving boat flying white flag of Bare Rock on port, to and around flagboat flying Hull Y. C. pennant, leaving it on port; thence four miles northeast, one-quarter east, to and around flagboat flying Hull Y. C. pennant, leaving it on port; thence four miles west-southwest, one-half south, leaving Harding's bell buoy on port, flagboat flying white flag off Point Allerton on starboard, to and across starting line, leaving judges' steamer on port.

The starters were divided into keel and centerboard classes, Shadow being sailed by Capt. Crocker, Kathleen by Mr. Crowninshield, with other Marblehead amateurs, and the new Burgess centerboard 30, Shark, by Mr. Fowle and Saracen's crew. There was a good breeze at the start, lasting through the race, Shadow led her class, winning easily, while Kathleen left the thirties from the start, beating all on elapsed time, though Harbinger would have taken the prize on corrected time had the keels and centerboards been classed together. As it was, Kathleen came within 15s. of beating the famous centerboard Shadow, 4ft. longer and 4ft. wider, without time allowance. The new centerboard 30, Shark, was 3m. astern of the keel Kathleen. The times were:

FIRST CLASS—30FT. AND LESS THAN 35FT.

	Length.	Elapsed.	Corrected.
Shadow, John Bryant	33.11	2 07 39	1 38 41
Albatross, J. J. Henry	34.02	2 10 35	1 41 51
Nimbus, J. J. Souther	34.05	2 12 13	1 43 49
Magic, E. C. Neal	31.02	Withdrew.	

SECOND CLASS—CENTERBOARDS, 24FT. AND LESS THAN 30FT.

Harbinger, J. R. Hooper	28.01	2 09 13	1 34 28
Shark, Morton Prince	30.11	2 10 59	1 39 13

Mignon, H. Babson	28.07	Withdrew.	
Breeze, Geo. Martin, Jr.	30.00	Withdrew.	

The judges were B. W. Rowell, J. A. Stetson, J. R. Chadwick, J. B. Forsyth and W. E. Sherriffs. A protest was entered by Nimbus against Shadow and Albatross for measurement, but the result of the measurement will not affect the prizes.

CORINTHIAN Y. C. RACES AT MARBLEHEAD.

THE result of the three days' racing reported last week gave Minerva and Chiquita each two legs for the Weld cup, as it was supposed; while, as Kathleen was disqualified for passing inside of the can buoy on South Breaker in the first race on Monday, the club prize for the 30ft. class went to Saracen and the Saracen cup to Mignon. In the 27ft. class Swordfish won the cup. The regatta committee, after announcing Minerva as the winner of the first race on Saturday, decided on Tuesday that there had been no race, the finish having been made 23s. after sunset, instead of 23s. before. It is stated that though she crossed before the gun was fired from the Fortuna, the gun was some seconds behind the time of the observatory at Cambridge. As it fortunately happened, the only result was to give Minerva an extra chance to show how much faster she is than all the American boats of her class; but had she met with any mishap in the extra race, and the Weld cup gone to the next boat, Chiquita, 18m. astern, a grave injustice would have been done to Minerva by such a decision. It is right enough to have a time limit and to adhere to it to a second, but in this case, instead of a provision that the race should be sailed within a certain number of hours, there was an arbitrary limit of sunset. As the start was delayed for an hour through no fault of Minerva, it would have been very unfortunate and unfair had she lost the cup and the honors of such a fine series of races. Had a protest been made against the race being awarded to her the committee might have been obliged to entertain it, but after the way in which she has outsailed them there is not one of her rivals that would have denied Minerva the race on purely technical grounds.

Aug. 28—Fourth Day.

The wind on Wednesday was light, E.S.E., with a long swell left from the sea of the preceding day. The course was 10 miles to windward and return, starting from Half-Way Rock. Gorilla was unable to complete repairs in time to start, and Tomahawk had lost interest in the racing and gone to Lawley's to lay up; so only five yachts started, crossing the line as follows:

Xara	11 25 54	Pappoose	11 26 22
Minerva	11 26 01	*Chiquita	11 26 30
Alice	11 26 18		

Xara had the lead, but Minerva soon passed her for the day. Before the turn was reached Pappose had worked into second place, the times at the turn being:

Minerva	1 55 58	Xara	2 11 51
Pappoose	2 05 50	Chiquita	2 12 45
Alice	2 10 29		

The run home was made under spinakers, with booms well forward, Pappoose made 47s. on Minerva in the running, but lost the race by 5m., corrected time. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Minerva	11 26 01	3 37 31	4 12 31	4 09 54
Pappoose	11 26 22	3 46 36	4 21 36	4 14 56
Alice	11 26 18	4 03 31	4 38 31	4 37 54
Chiquita	11 26 30	4 05 14	4 44 40	4 28 09
Xara	11 25 54	4 10 52	4 40 42	4 43 05

Aug. 29—Fifth Day.

The ownership of the Weld cup was pretty well settled by Wednesday's race, but a little secondary excitement was infused into the last race on Thursday by the contest for the Carroll cup, offered for a race at Bar Harbor in July, but not sailed, and now open to Gorilla, Pappoose and Alice, the only forties that made the cruise to Mt. Desert. The wind was fresh, N.E. by E., and the course was a triangle from Marblehead Rock around the Whistling Buoy off the Graves, then 8 miles to windward and around a mark boat and home, 24 miles. The start was made at 11:39, a wait being made to accommodate Gorilla, whose new topmast was not quite set up. The start was timed:

Minerva	11 30 17	Gorilla	11 31 04
Pappoose	11 30 26	Alice	11 31 35
Chiquita	11 30 52		

There was some sea and a good breeze at the start, but during the race the wind fell off somewhat.

On the run to the Graves, partly under spinakers, Minerva only gained 3 minutes on Chiquita, the times being:

Minerva	12 40 35	Gorilla	12 44 44
Chiquita	12 43 16	Alice	12 45 23
Pappoose	12 44 37		

On the next leg, of only 8 miles to windward, she gained 14 minutes on the Burgess centerboard Chiquita. On this leg Pappoose tried a little jockeying with Gorilla, the former being on port tack and the latter on starboard. Gorilla held her course, and Pappoose just failed to clear her, catching her bowsprit under Gorilla's boom. The spar held, though it bent badly, but the topmast was pulled out of the little Indian baby, leaving her under lower sails. She cleared away the wreck and continued, making a good race in spite of the breakdown. The times at second mark were:

Minerva	2 38 00	Pappoose	3 00 20
Chiquita	2 55 10	Alice	3 05 50
Gorilla	2 55 47		

The run in was devoid of incident, Minerva holding her lead easily and winning by 18 minutes from Chiquita. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Minerva	11 30 17	3 33 56	4 03 56	4 00 00
Chiquita	11 30 52	3 51 13	4 21 13	4 18 05
Pappoose	11 30 26	4 02 02	4 32 20	4 22 25
Gorilla	11 31 04	3 53 10	4 23 10	4 22 02
Alice	11 31 35	4 03 27	4 33 27	4 29 31

Pappoose takes third place from Gorilla under the allowance table of the Eastern Y. C., but in the race for the Carroll cup, sailed under Seawanhaka allowances, Gorilla beat Pappoose. The five races, constituting in all one of the most interesting and instructive series on record, reflects great credit on the Corinthian Y. C. The management of the series was in the hands of Messrs. H. H. Buck, H. E. Van Nostrand, W. A. Harvey, F. A. Seamens and E. W. Hodgkins.

NEW YORK Y. R. A., FIRST REGATTA, SEPT. 2.

THE young New York Yacht Racing Association, formed last winter, sailed its first regatta on Sept. 2, the event being a success in every way. The entries numbered 132, and though 50 did not start, the remainder made a very large fleet, 83 in all. The start and finish was off Liberty Island, the courses being: For Classes A, B, C and D to and around Buoy No. 8½ on southwest Spit. Classes E and F to and around Red Bell Buoy at end of Swash Channel. Classes G, Nos. 1, 2, 5, 6 and 7, round Buoy No. 13, off Swinburne Island. Classes 3, 4, 8 and 9 round Buoy No. 15, leaving it on port hand, thence to and around Fort Lafayette.

The yachts were rated under a plain and simple rule "with no plus in it"—length on waterline added to length over all, and the sum divided by 2. There was a whole sail breeze up the Bay and Narrows, making a beat out and run home. The times were:

CLASS D—CABIN SLOOPS OVER 38 AND UNDER 45FT.

	Start.	Finish.	Elapsed.	Corrected.
Dudley	12 24 53	Did not finish.		
Avalon	12 24 11	Did not finish.

The winners were—Class D, Gertrude; class E, Mergus; class F, Forsyth; class G, Lurline; class 1, Amateur; class 2, James T. Corlett; class 3, Rival; class 4, Lone Star; class 5, Bessie; class 6, Nina; class 7, Edna; class 8, Pauline B.; class 9, Bon Ton.

The regatta committee included Messrs. Puhlman, Cameron, Gibson, Tucker and Parkhill. Judges were Messrs. Petersen, Simms and Gartland.

RHODE ISLAND Y. C. ANNUAL REGATTA.

THE annual open regatta of the Rhode Island Y. C. was sailed on Aug. 27 in a strong N.E. wind, the courses being:

For classes 1, 2 and 3, from judges' boat and signal off club house, stakeboat off southeast of Warwick Light, leaving same on port, thence around stakeboat off Rumstick Point, leaving same on port and return to starting point, 20 miles.

For classes 4 and 5, from judges' boat and signal off club house around black spar buoy off Greene's Island, leaving same on starboard, thence around black spar buoy between Silver Spring wharf and north end of Starve Goat Island, leaving same on port, thence, leaving black spar buoy opposite club house on starboard, back to starting point, crossing line from south to north, 9 miles.

For class 6, from judges' boat and signal off club house, to and around signal southwest of Bullock's Point wharf, thence around black spar buoy off Gaspee Point, between Silver Spring wharf and north end of Starve Goat Island, thence around signal off Bullock's Point wharf, thence around buoy off Gaspee Point, back to starting point, turning stakes to be left on starboard, 10 miles. The times were:

Voma, H. Wheeler	14.08	2 40 25	2 14 25
Trudy, A. Wheeler	13.08	2 18 14	2 46 20

EASTERN Y. C.—The fall regatta of the Eastern Y. C. will be sailed to-day off Marblehead, open to 40ft. yachts of any club. The prizes are $200, with a second of $100 for 5 starters and a third of $50 for 7 starters.

CORINTHIAN Y. C.—The Corinthian Y. C., of Narragansett Bay, will hold its first regatta on Sept. 1.

BEVERLY Y. C.

THE 152d regatta, fourth open sweepstakes, was sailed at Marblehead on Aug. 31, in a rather moderate easterly breeze, rather stronger in harbor than outside, only the best boats entered.

First and second classes had a beat to Half Way Rock, a long and very short leg to S.E. Breaker, a reach to Gales Ledge and the wind on the quarter home.

In first class Shark and Elf for some reason did not start; Ione broke gaff just before start, leaving Kathleen, Mignon and Harbinger to fight it out.

Kathleen got the best start, Harbinger being under her lee and Mignon astern, the latter was not good enough and fell astern. The Cape cat gradually ate up to windward while footing with her competitor, and was first at Half Way Rock, which she rounded at once, standing toward S.E. Breaker, Kathleen stood on a little, but when Harbinger tacked for the Breaker she crossed the sloop's bow; on the reach Kathleen passed her, but running home the cat held her own and won easily on allowance.

In second class Hazard and Black Cloud sailed a close race, the latter winning by a trifle. It is to be regretted that the absence of Swordfish's owner kept her out of the race.

In the third class Tom Cat appeared with a large catboat rig, and was looked on as a winner in the light air. Heron sailed her first race and her big rig made her formidable. The crack C. B. jib and mudsail had a walkover, but sailed over course to try the others; she started reefed. Kiowa appeared with a new and very poor mast that buckled badly.

Boats crossed in a bunch on gunfire. Heron ran well but fell to leeward, while Kiowa took lead of windward division. Wraith tacked to southward as she cleared the point, others went to northward of Cat Island. For several tacks Kiowa crossed the bows of Mosca and Kathleen by gradually increasing distances, Eureka crawling up, and others dropping astern.

Outside of Cat Island there was a little sea. Tom Cat dropped back to Heron; Kiowa increased her lead on all but Eureka, who had shaken out reef as breeze became very light.

Kiowa rounded Half-way Rock first, then Eureka, then Heron, Kathleen, Mosca and Wraith in a bunch, then Tom Cat, followed by Roxy.

On the run in Eureka's big rig carried her past Kiowa, the latter having a small cruising rig, but she could not save her allowance. On the whole, it was a good day for Cape catboats. In the fourth class Rocket easily beat Dolphin. Summary as follows. Judges, Wm. A. Jeffries and A. S. Hardy:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Kathleen, Wm. Whitlock	40.00	2 16 01	2 15 01
Harbinger, J. R. Hooper	33.00	2 16 04	2 11 10
Mignon, H. Babson	34.09	2 21 39	2 19 07
Shark, Morton Prince	Did not start.		
Elf, W. H. Wilkinson	35.11	Did not start.	
Ione, J. S. Poyen	Did not start.		

SECOND CLASS.

Black Cloud, C. Brown	30.09	2 30 55	2 24 10
Hazard, Pierce & Moody	29.07	2 32 58	2 25 11
Fraud, H. T. Hutchings	28.00	Not timed.	

THIRD CLASS CATS.

Kiowa, W. A. & W. L Jeffries	22.01	1 43 04	1 33 17
Tom Cat, C. H. Lockhardt	21.11	1 47 57	1 38 01
Heron, F. E. Cabot	21.02	1 48 05	1 37 31
Pixy, F. W. Chandler	21.04	Not timed.	

THIRD CLASS SLOOPS.

Kathleen, R. S. Peabody	25.07	1 49 53	1 42 42
Mosca, C. H. W. Foster	24.06	1 50 37	1 42 40
Wraith, H. P. Benson	22.03	1 51 00	1 41 20

SPECIAL CLASS.

Eureka, E. B. Rogers	25.06	1 41 52	1 34 38

FOURTH CLASS.

Rocket, H. M. Faxon	18.04	1 55 03	1 41 45
Dolphin, Royal Robbins	18.00	2 05 59	1 52 20

First prizes won by Harbinger, Black Cloud, Kiowa, Wraith, Eureka and Rocket; second prize by Heron. Kathleen, 3d class, asked for remeasurement after race, report not yet received, but it cannot change prize.

The first open race and 153d regatta was sailed at Monument Beach on Sept. 2, and was the most successful race that has been sailed for years in the Bay. The entry was large and made up of the pick of the Cape boats, the wind was true and strong enough to make a good race, and the result in the various classes very close.

Day opened with a dead calm and fog, the B. B. Y. C. being unable to sail their race, advertised for 9 A. M., on time; but about noon a high S.S.W. breeze struck in, and by 1:30 there was a nice, whole sail breeze, increasing steadily through the race.

In first Quisset and Climax sailed a good race, both of them beating A. P. E. In second Crawl had just her breeze and took advantage of it, coming within 13s. of Climax on corrected time, with Mist, Wildcat, Widgeon and Defiance close up. Widgeon's new sail is very baggy; she could not point with the others, but reached very fast; when in trim she will be heard from. Gymnote had just received a new and larger sail, but it fitted so badly that it could not be used.

In third class Petrel and Eina appeared with new and larger sails, bound to beat Daisy if possible. The latter sailed a very plucky race. Shad cracked her mast badly on Saturday, and could not get a new one; she restopped it, turned part way round, and started to race till mast went.

Daisy led off, Eina about half her allowance behind; it was very close work, but Eina finally caught up with Daisy, but could not pass her, as Daisy had weather gauge. They finished first round together, Daisy 2s. ahead; Eina finally passed her, but too late to make up her allowance.

The little fellows also sailed a close race, Edith winning by 35s. Kitten protests Reba for fouling Buoy 3. Protest not yet decided.

In the special class Reliance beat Ramona handsomely.

Courses—First and second classes: From starting point, leaving Black Buoy No. 3 on starboard, Bird Island Buoy No. 13 on port, Scraggy Neck Buoy No. 10 on port, to judges' yacht; 11 miles. Third class: Leaving Black Buoy No. 3, Abial's Ledge Buoy, judges' boat, and Black Buoy No. 3 on starboard, and return; 8 miles. Fourth class: Leaving Black Buoy No. 3, judges' yacht and Black Buoy No. 3 on starboard, and return; 6½ miles. Sloop class: Leaving Black Buoy No. 3 on starboard, Scraggy Neck Buoy and Black Buoy No. 3 on port, and return; 13¾ miles. Wind, S. S. W., whole sail breeze.

FIRST CLASS.

	Length.	Elapsed.	Corrected
Climax, E. C. Stetson, Mattapoisett	30.05	2 08 16	2 00 53
Quissett, J. L. Stackpole, B.Y.C.	29.06	2 10 52	2 02 37
A. P. E., Dan'l Crosby, Osterville	27.04	2 15 42	2 05 15
Violet, G. H. Richards et al, B.Y.C.	27.06	2 26 26	2 16 10

SECOND CLASS.

Crawl, G. E. Phinney, Mon. Beach	26.04	2 12 39	2 01 06
Mist, G. H. Lyman, Jr., B.Y.C.	26.08	2 14 07	2 02 56
Widgeon, Moses Williams, Jr., B.Y.C.	26.10	2 16 14	2 05 14
Wildcat, S. P. Hill, Mon. Beach	26 04	2 16 23	2 04 50
Defiance, H. E. Perry, Mon. Beach	26.04	2 17 21	2 05 48
Gymnote, W. E. C. Eustis, B.Y.C.	26.10	2 20 34	2 09 34
Thyra, Paul Bartholon, B.Y.C.	26.11	2 22 15	2 11 20
Lestris, Joshua Crane, B.Y.C.	24.02	2 26 08	2 12 01
Beatrice, W. E. Curry, B.Y.C.	24.10	2 31 24	2 18 06

SLOOP CLASS.

Reliance, N. H. Emmons, B.Y.C.	35.05	2 52 04	2 48 05
Ramona, M. N. Bray, B.Y.C.	36.00	3 04 00	3 00 32

THIRD CLASS.

Eina, John Parkinson, B.Y.C.	22.09½	2 04 14	1 52 34
Daisy, Howard Stockton, B.Y.C.	21.01	2 05 41	1 52 19

Petrel, Vice-Com. Richards, B.Y.C.	20.07	2 09 25	1 55 30
Ulula, W. H. Winship, B.B.Y.C.	21.02	2 28 02	2 14 46
Trojan, W. H. Tolhurst, Mon. Beach	22.10	Withdrew.	
Racer, John Rider, B.B.Y.C.		Withdrew.	

FOURTH CLASS.

Edith, Irving Chapman, B.Y.C.	16.05	1 30 30	1 18 00
Kitten, G. H. Richards, et al, B.Y.C.	19.10½	1 34 15	1 22 12
Iola, J. C. Dexter, Mattapoisett	15.08	1 35 19	1 18 35
Reba, W. K. Berry, Mattapoisett	16.00	1 35 26	1 19 18
Polly, Richard Codman, B.Y.C.	18.05	1 36 50	1 22 22
Nymph, Geo. G. Amery, B.Y.C.	17.01	1 38 36	1 23 38
Dyonis, Eugene Johnson, Mon Beach	not m.	1 45 39	. . . .
Rena, A. M. Hiller, Mattapoisett	not m.	1 47 00	. . . .
Mab, F. B. Beamont, B. Y. C.	16.07	1 47 11	1 27 10

Class one, first, Climax; second, Quissett. Class two, first, Crawl; second, Mist; third, Wildcat. Class three, first, Daisy; second, Eina; third, Laura. Class four, first, Edith; second, Iola; third, Reba. Special class sloops, first, Reliance. Judges, W. Lloyd Jeffries and Lawrence Tucker.

BLUE WITH A GOLD CASTLE.

WATCH HILL.—The annual sailing race for yachts and boats was sailed on Aug. 27 over 12-mile course in a stiff N.E. wind, the times being: Dawdle, 2:12; Louie Maud, 2:13:15; Rosina, 2:17:09; Ariel, 2:24:08; Orient, 2:24:35; Onward, 2:19:05; Ripple, 2:28:00. Admiral Rowe, U. S. N., and Captain F. Clarkin were the judges.

MINERVA.

THE wonderful success of Minerva, the first and only effort of one designer opposed to the largest and finest racing fleet that has ever been seen, is likely to have a most important influence on the yachts of next season. That her wins have been entirely on merit is fully conceded by all the papers which have for so long upheld the extremely wide and powerful American type. We quote the following as showing the present feeling.

"It is something for Yankee yachtsmen to ponder on, that while they have beaten England with the latter' special class of boats, the monstrous sloops, and have maintained the supremacy of the special Yankee type of big boat, the schooner, by the victory of Sachem over Minerva three seasons ago, and that while Titania could in all probability show her stern to Valkyrie in the 70ft. class—it is something to ponder on that the Yankees have been beaten in their most numerous and most representative class by a little Scotch ocean voyager, and that, too, when the class was filled by an extraordinary number of new and fast boats. Minerva's work is a marvel and a source of a good deal of surprise, to tell the truth."—*Providence Journal.*

"Even more completely has the superiority of the Minerva been demonstrated in the series at Marblehead, Ideal racing weather has been met, ranging from a light air to half a gale, and in every race in which she has sailed the Scotch boat has won first place. As far as performance goes, she has won four races out of five, though the first is not an actual race, as it was not finished before sunset.

"But the fact stands that the Minerva, designed by a Scotch designer, is faster than any yacht of home production in her class. American designers have been worshipping the fetich of big power so blindly that they have been unconscious of the possibilities of yachts of small power. This is not to be wondered at, as the successes of the past few years of America cup yachting have been wrought by superior power of model. It is well that our eyes have been opened by a yacht of the Minerva's size, as her success will give our designers a chance to learn before they are called upon to beat a boat of Minerva type and excellence in the America Cup competition."—*Boston Herald.*

"The Scotch cutter Minerva is certainly a wonderful boat, and the way she defeated the Burgess favorites in heavy weather and in light, is somewhat startling. The popular notion that the triumphs of American vessels over British craft were due principally to the centerboard is now stowed away. It is the shape of the boat, and not the drop of the board, that does the business."—*Boston Morning Post.*

"The Minerva picked up the tugboat in three tacks. The Chiquita, though standing out further than the Minerva, did not fetch so high, and had to make one more tack than the Scotch boat. The Minerva had opened a great gap between herself and the second boat, Chiquita, and she worked out to windward, almost bare of wind, so close was she sailed.

"It was the worst beating ever received by the fleet of 40-footers. The Minerva beat the Chiquita in a true breeze and head sea over two minutes a mile, and the Chiquita is one of Mr. Burgess's best forties. If some of the doubters of the abilities of the Minerva had been out yesterday looking at her wonderful performance, 'seeing, they would have to believe.'"—*Boston Herald.*

The following remark is credited to Mr. Burgess by the New York and Boston papers, and is now going the rounds of the press: "The Minerva is a racing machine, and if anybody wants that type of boat, I can design it. She is no such boat as our forties."

Mr. Burgess is too well posted to believe any such story as this, and we doubt very much whether he has been correctly reported. It is idle to call Minerva a racing machine when she has safely made an ocean voyage that such boats as Nymph, Yerena, Gorilla, Liris and Chiquita would never venture on. She is apparently built with a view to strength rather than extreme lightness, and if she is not as heavy as the American forties it is on account of better material and greater skill in her construction. As to her accommodation, while no attempt has been made to crowd the cabins of a 55ft. yacht into one of 40ft., she has very good room, two cabins, toilet room, large forecastle, galley, etc., with draft of 9ft., she is certainly better for cruising than such craft as Helen Tomahawk and Liris, drawing 10 to 11ft. When the record of the season is made out, a full list of starts, wins, and broken spars and lost centerboards, it will be readily seen that she is no such boat as the American forties; a fact that would be still better proven by the expense accounts of the various forties for new sails and spars, alterations to hull and ballast, and money spent in the fruitless effort to win prizes. Minerva is a hard fact, but one that cannot be disputed. The only fair and rational course is to concede freely her speed, her seaworthiness, her moderate cost of running, her comparatively large accommodations, and to seek for the means of improving on them.

THE AMERICA'S CUP.

THE following letter has lately been received by Secretary Oddie. The London edition of the New York *Herald* on Aug. 23 contained the same letter, with a lengthy explanation designed to clear up the muddle due to brief cables from each side:

ROYAL YACHT SQUADRON CASTLE, }
COWES, Aug. 16, 1889.

DEAR SIR—I have this day sent you the following cablegram:

Have anxiously awaited definite reply to Squadron's last cable. Even if satisfactory answer be received, no time to prepare to cross and race. Valkyrie, therefore, can't sail this year. Have written.

It would take me at least a fortnight to prepare my ship for the voyage, and two or three weeks on your side to get ready to race, and at this advanced season of the year, when a quick run across cannot be anticipated, it is obvious that even if any answer satisfactory to the Royal Yacht Squadron is returned to their cable of the 4th inst., I cannot now be in time to race. I am, therefore, reluctantly compelled to recognize that, owing to circumstances beyond my control, a match is out of the question this year.

You will pardon my pointing out that if the committee and the New York Y. C. had agreed to either of the propositions made in my letters of May 4 and June 24, the result would have been different. In my letter to you on May 4 I begged that a match might be sailed, and any difference between the two clubs as to the terms upon which the cup was to be held in the future, be settled afterward; and in my letter to Mr. Smith, of June 24, I said that if the New York Y. C. found themselves unable to offer the Ameriea Cup as a prize, I was anxious to sail against whatever yacht would have been selected to defend it, either for a prize of equal value or for nothing at all. I cannot but express my great regret that neither of the propositions was accepted. Had they been so, and assuming, as is suggested in your letter of July 16, that the difficulty about the new deed of gift could be overcome, the matches would have taken place. I am sorry that the New York Y. C. looked upon the letter of the Royal Yacht Squadron, dated June 27, as a withdrawal of my challenge. The Royal Yacht Squadron refused to confirm the challenge subject to certain conditions affecting future challenges to which it took exception. Such a conditional refusal to ratify could, I should have thought, be looked upon as a definite withdrawal only on the supposition that the conditions objected to would be insisted upon if the opinion of the New York Y.C. committee as expressed in Mr. Smith's letter to me of July 16 is correct—namely, that "if an opportunity had been offered, the difficulties in the way of completing the arrangements for the match might have been removed."

I am only expressing my great regret that the opportunity was rendered practically impossibie by the dissolution of the committee.

Notwithstanding the impossibility of racing this year, I hope the New York Y. C. will reconsider the cablegram of the Royal Yacht Squadron of the 4th instant, and if a satisfactory answer is returned I trust that my challenge may be considered as merely postponed.

In that event Valkyrie will be ready next season to meet any vessel that could have sailed against her had the match taken place at the time originally proposed.

I have the honor to be, sir, yours very faithfully,

DUNRAVEN.

It appears that the issue between the challengers and the holders of the Cup is as complicated as ever, and that it will take lawyers rather than plain yacht sailors to decide the many trivial points that have arisen. The real question has evidently been lost sight of entirely—whether the conditions under which the Cup is now offered are fair or unfair; and if the latter, in what particular. Until this is settled it is a mere waste of time to quibble as to whether the challenge was or was not withdrawn, or to dicker over the "conditions governing the Volunteer-Thistle races."

If Lord Dunraven will make up his mind finally on two points it will save him considerable time and expense in writing and cabling. The New York Y. C. will not give him a race for the Cup on any terms unless the club under whose flag he challenges shall accept the last deed of gift as valid and binding. Secondly, if no match is arranged for the America's Cup, the New York Y. C. will not aid in settling up another trophy in place of the Cup. If Lord Dunraven had wanted only sport and good racing he should have crossed early in the year and given battle to our 70-footers, or if he will only be satisfied by a meeting with the champion yacht of America, he should build a 90ft. yacht and meet Volunteer. It is very clear now that no 70-footer will be put forward to defend the America's Cup, nor will the New York Y. C. do anything toward the placing of the 70ft. class on the same plane as Volunteer.

Rumors of new challengers are already rife, Col. North, owner of Deerhound, is spoken of as likely to build, or even to buy and alter Thistle. Mr. John Jameson is said to have offered Irex for sale with a new Watson cutter in view, while Mr. Hodgens, owner of Vreda, may have a new Watson cutter of large size. If any of these gentlemen are desirous of challenging for the America's Cup, and would avoid the disastrous fiasco which Lord Dunraven and the R. Y. S. have made, we would advise them to procure at once authentic copies of the original deed of gift and the two so-called deeds of 1882 and '87, and to study them carefully. There is not a great deal of time left, as the design of the yacht must be completed and its principal elements mailed from England by Dec. 1 at latest in order to sail a race next year.

LYNN Y. C., OPEN REGATTA, SEPT. 2.

THE open regatta of the Lynn Y. C. was sailed in a light E. wind on Sept. 2, the courses being: First Class—From starting point to Egg Rock, leaving it on starboard; thence to Whistling Buoy, off Graves, leaving it on starboard; thence to Winthrop Spar Buoy; thence to flagboat, off Grover's Cliff, leaving it on starboard; to and across line between judges' boat and flagboat. Fourteen miles.

Second, Third and Fourth Classes—From starting point to Whistling Buoy, off Graves, leaving it on starboard; to Winthrop Spar Buoy, leaving it on starboard; thence to flagboat off Grover's Cliff, leaving it on starboard; to and across line between judges' boat and stakeboat. Ten miles. The times were as follows:

FIRST CLASS—CENTERBOARDS.

	Length.	Elapsed.	Corrected

SOUTH BOSTON MOSQUITO FLEET.—The third championship race of the Mosquito Fleet Y. C. was sailed on Aug. 31, off City Point, in a fresh E. wind. The times were:

FIRST CLASS.

	Elapsed.	Corrected.
Minnie, J. Bateman	1 07 03	1 06 58
Enigma, J. F. Small	1 10 00	1 09 16
Skipper, J. R. Tufts, Jr	1 09 32	1 09 27
Sprite, H. M. Wells	1 09 30	1 09 30
Lucy, W. H. Ransom	1 10 05	1 10 00
Nellie, A. J. O'Leary	1 12 05	1 12 00
Nina, J. P. Bullard	1 11 30	1 11 25
SECOND CLASS.		
Grace, F. Borden	1 16 55	1 13 25
Snag, J. W. Robinson	1 16 55	1 13 10

Baby and Sadie withdrew. Minnie wins first class cup. Grace protests Snag on measurement. The judges were Messrs. F. T. Merry, James Bragdon and W. O. Elliott.

Open Regatta, Sept. 2.—Course, triangular, Dorchester Bay; distance 5 miles. Weather, clear. Wind, S.E., very light:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Enigma, J. F. Small	14.04	1 22 55	1 22 11
Victor, C. A. Borden	14.10	1 27 50	1 27 39
Minnie, Jas. Bertram	14.10	1 30 37	1 30 26
Lucy, W. H. Ransom	14.11	1 32 55	1 32 50
Skipper, J. R. Tufts, Jr	14.11	Did not finish.	
Nina, J. P. Bullard	14.11	Did not finish.	
SECOND CLASS.			
Grace, F. Borden	12.02	1 49 07	1 46 17
Edith, G. F. Mayhury	12.07	1 49 27	1 47 02
Bunty, J. F. Cooper	12.11	1 55 38	1 53 09
Baby, J. W. Bragdon	12.11	Did not finish.	
Mascott, F. Whitman	12.02	Did not finish.	

Winners: Class 1, first, Enigma; second, Victor; third, Minnie. Class 2, first, Grace; second, Edith; third, Bunty. Judges, James Bragdon, W. O. Elliott, T. O'Leary.

LARCHMONT OYSTER BOAT REGATTA.—The sixth annual oyster boat race of the Larchmont Y. C. was successfully sailed over the Captain's Island course on Aug. 24 in a moderate S.E. breeze. The times were:

CLASS 1—CABIN SLOOPS 35FT. AND OVER.

	Elapsed.	Corrected
Stella, G. H. Guest	4 09 27	4 01 42

QUINCY Y. C.—The third championship regatta was sailed on Aug. 31 in a fresh E. wind. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected
Erin, John Cavanagh	26.10	1 57 13	1 13 05
Posy, R. G. Hunt	22.02	1 43 26	1 15 06
Moondyne, H. W. Shaw	24.08	1 41 32	1 16 44
Adolph, Henry Moebs	22.07	1 46 24	1 18 29
Secret, E. F. Linton	22.05	1 53 52	1 24 47
SPECIAL CLASS—JIB AND MAINSAIL.			
Diadem, L. A. Hayward	18.02	1 40 08	1 11 14
Nereid, Chas. F. Colby	20.09	1 40 37	1 14 29
SECOND CLASS.			
Mabel, E. L. Dunne	19.11	1 38 21	1 11 22
Pet, Jas. McFarland	19.08	1 51 47	1 24 33
Undine, W. H. Doble	19.06	1 54 24	1 26 59
THIRD CLASS			
Flora Lee, Lanning and Bockers	16.10	1 50 23	1 19 50
Guenn, E. Horton	17.08	1 54 29	1 22 59

Judges—John Sanborn, Chas. French and ex-Com. J. H. Slade. Mabel and Diadem each win a championship prize, while Erin wins one leg, to be sailed off with Posy.

BUNKER HILL Y. C.—The twenty-first annual regatta of the Bunker Hill Y. C. was sailed on Sept. 2, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Thelga, Hall & Johnson	21.03	1 22 02	1 03 40
Unida, Webber & Schwab	27.00	1 35 20	1 30 20
Beulah, E. Esson	25.07	1 43 45	1 28 02
Why Not, P. J. McLaughlin	23.00	2 01 00	1 43 48
SECOND CLASS.			
Cora, J. H. Harvey	18.00	2 30 00	2 09 12
Tabitha, T. H. Broman	16.00	2 05 00	2 27 32
THIRD CLASS.			
Flash, C. A. Winters	15.01	1 33 20	1 19 12
Sprite, P. J. Henchy	14.10	1 40 10	1 25 52

The judges were Messrs. G. B. Thomas, G. H. Barrows, P. M. Bond, H. Leadbetter and F. A. Dodge.

WEYMOUTH, LINTON TROPHIES.—The third race for the Linton trophies was sailed on Aug. 22, Erin winning, White Fawn parting her peak halliards. In the second class Madge won, taking the cup; while in the third class Rocket withdrew and Diadem beat Atala, taking the cup. As White Swan, Erin and Echo each held one leg in the first class a sail-off was necessary, and it took place on Aug. 29, in a fresh N.E. wind, the course being 9 miles. The times were:

	Length.	Elapsed.	Corrected.
White Fawn, W. C. Cherrington	31.01	1 48 45	1 25 04
Erin, John Cavanagh	33.01	1 47 49	1 25 32
Echo, E. L. Burwell	28.09	1 57 14	1 32 44

The judges were Dana Smith, Edward T. Jordon, N. F. Hunt and T. D. Bagley. At a meeting on Aug. 20 the protest of Echo against Moondyne, for sculling with the rudder, was not allowed, but Echo's protest against White Fawn, for not giving room, was sustained, the race being given to Echo.

GREAT HEAD Y. C.—The championship sail off of the Great Head Y. C. took place on Aug. 24, in a light S.W. wind, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Owl, J. S. Cushing	25.00	2 23 32	2 15 06
E. W. D., E. W. Dixon	25.01	2 26 00	2 02 02
Vivid, F. E. Richardson	28.11	2 31 20	2 10 23
SECOND CLASS.			
Eureka, E. B. Rogers	20.07	2 23 32	1 55 22
Nellie May, T. J. Young	21.00	2 35 43	2 07 59
Thera, J. W. Bryden	15.00	Not timed.	

NEW STEAM YACHTS.—Aug. 24 the steam yacht Sparkle, built by Enoch Moore for Col. W. L. Singerly, owner of Restless, steam yacht, was launched at Wilmington, Del. Robert Wetherell & Co., of Chester, will build the engines. Harlan & Hollingsworth, of Wilmington, Del., have contracted to build a steam yacht 185ft. long for Mr. H. M. Flagler, of the Standard Oil Co., present owner of the old schooner Columbia. Mr. Fredk. Gallatin, owner of the sloop Bertie, will also build a steam yacht about as long as Com. Gerry's Electra.

FREDONIA AND HESPER.—At the conclusion of the New York Y. C. cruise a challenge was issued by J. Malcolm Forbes, on behalf of Fredonia, to race any of the other fishermen. As a result a match has been arranged between her and the well-known Boston pilot boat Hesper No. 5, to sail a 45-mile triangular course on Sept. 26, for $3,000 per side. Hesper is now being fitted with a larger main boom and bowsprit and a new suit of larger sails.

BROOKLYN Y. C., FALL REGATTA, SEPT. 2.—The full regatta of the Brooklyn Y. C. was sailed on Sept. 2, over courses on Gravesend Bay, the times being:

CLASS A, OPEN MAINSAIL BOATS UNDER 20FT.

	Start.	Finish.	Elapsed.	Corrected.
Carrie	11 43 03	1 31 44	1 50 41	1 50 30
Alma	11 49 40	1 31 40	1 51 00	1 51 00
CLASS B, OPEN MAINSAIL BOATS OVER 20FT.				
Manhattan	11 31 07	1 55 47	2 24 40	2 20 34
Panchito	11 31 53	2 29 15	2 57 22	2 54 21
Henry Grav	11 34 44	1 56 04	2 21 20	2 54 21
CLASS C, OPEN JIB AND MAINSAIL BOATS UNDER 25FT.				
Faustina	11 33 46	2 01 04	2 27 18	2 27 18
Effie	11 32 47	Did not finish.		
Alice	11 34 27	2 11 26	2 36 59	2 32 57
CLASS 1, CABIN SLOOPS AND CUTTERS UNDER 25FT.				
Priscilla	11 33 24	Did not finish.		
Seminole	11 31 26	Did not finish.		
Rhada	11 31 56	Did not finish.		
Lotus	11 32 08	Did not finish.		
Mamie	11 32 25	Did not finish.		
CLASS 3, CABIN SLOOPS UNDER 35FT.				
Nydia	11 31 32	3 06 28	3 34 56	3 34 56

The winners were Carrie in class A, Manhattan in class B and Faustina in class C. The regatta committee included Messrs. William Dodman and John J. Welsh.

MONTGOMERY SAILING CLUB.—Semi-monthly regatta, Sept. 1.—Course, Norristown to Indian Creek and return. Distance, 5 miles. Weather, clear and fine. Wind, fresh easterly. Summary:

	Length.	Corrected.
Playford, tuckup	15.00	1 22 40
Volunteer, tuckup	15.00	1 26 00
Nellie, tuckup	15.00	1 26 40
J. S. Frith, tuckup	15.00	1 29 15
Vesuvius, tuckup	15.00	1 32 30
Igidious, tuckup	15.00	1 32 55
Gracie, skiff	12.00	1 34 30
Iola, ducker	15.00	1 34 55
J. S. Lever, tuckup	15.00	1 36 20
Priscilla, tuckup	15.00	1 38 35
Starlight, canoe	16.00	1 42 15

It was a run to the buoy, 2½ miles, the Gracie being first to round in 33m. from the start. The tuckups were set back 10m. at the start; but they more than made it up in the beat to windward, 2½ miles, in short tacks. Judge, Wm. Alcorn.

MAYFLOWER, schr., has been laid up, and is offered for sale.

KNICKERBOCKER Y. C. FALL REGATTA, SEPT. 2.—The annual fall regatta of the Knickerbocker Y. C. was sailed on Sept. 2, from Port Morris around the Gangway buoy, 20 miles, in a light and variable S.W. wind. The times were:

CLASS 1.

	Start.	Finish.	Elapsed.	Corrected.
Nyssa	11 25 00	5 06 50	5 41 20	5 33 50
Mascotte	11 25 00	5 09 51	5 44 51	5 39 06
Jennie	11 25 00	5 07 55	5 42 55	5 42 57
CLASS 2.				
Black Hawk	11 25 00	4 44 38	5 19 38	5 19 38
Jessie	11 25 00	5 14 36	5 49 36	5 43 21
CLASS 3.				
Nanita	11 23 30	4 13 00	5 49 30	5 48 20
Marvel	11 25 00	5 41 36	6 16 36	6 15 00

CLASS 4.				
Rosetta A.	11 19 50	5 11 58	5 52 08	5 52 08
Torino	11 20 00	5 46 32	6 26 32	6 20 59
Fannie	11 16 30	5 48 32	6 32 02	6 25 14
CLASS 7.				
Mayotta	11 19 10	5 09 40	5 50 30	5 48 42
Surprise	11 19 30	5 13 45	5 54 15	5 54 15
Alice	11 20 00	5 25 42	6 05 42	6 05 32

Winners—Class 1, Nyssa; Class 2, Black Hawk; Class 3, Nanita; Class 4, Rosetta A.; Class 7, Mayotta. Black Hawk carried away spinaker boom, but won the pennant for the fastest time over the course.

ROYAL CANADIAN Y. C.—A race for the 20ft. class was sailed on Aug. 31 over a triangular course, the times being:

	Elapsed.	Corrected.
Woos	2 42 50	2 42 50
Caprice	2 43 00	2 44 05
Elida	2 43 10	2 45 25
Molly	Withdrew.	

QUEEN CITY Y. C.—The Queen City Y. C., a new Toronto club, sailed a race on Aug. 31, the times being:

	1st Round.	Finish.
Alliance	4 24 00	5 49 00
Rambler	4 30 00	6 09 00
Come Again	4 37 00	6 15 00
Koh-i-Noor	4 39 00	6 17 00
Hunter	4 41 00	6 17 15

SAGAMORE, steam yacht, has been sold by Mr. J. N. Slater to his cousin, Mr Wm. Slater. The latter gentlemen purchased the Talisman when Sagamore was built, and now gives her back in part payment. Mr. J. W. Slater will use her until he can build a new yacht 130ft. long, 23ft. beam, and 6ft. draft.

RIVERSIDE Y. C.—The ladies' day regatta of the Riverside Y.C., of Greenwich, Conn., was postponed from Aug. 31 to Sept. 2, on account of the wind, being sailed finally in a good S.W. breeze. Each yacht carried several ladies, those on the winners being presented with gold pins as prizes. The times were:

CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Eleanor	2 47 32	5 55 09	2 11 32	2 11 32
CLASS B.

Canoe and Camp Cookery.
By "SENECA."
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.
NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.
This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.
Large crown 8vo., 380 pages and 16 large folding plates.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Killdeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

PREMIERE QUALITÉ,
Our New Cigarette.

As the result of long labor and careful study we have this superb Cigarette to offer. It cannot be surpassed in purity or excellence; and is a novelty, unique, chaste and dainty. It is from the highest cost Virginia and North Carolina leaf.

The finest Smoking Mixtures are of our Manufacture.

Hand-Made Havana Cigars.

MADE IN TWO STYLES AND SIZES.

LONDRES PERFECTO, 5in. long @ $7.00 per 100
CONCHAS ESPECIALS, 4¼in. @ 6.00 "

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

No Chemicals.

W. BAKER & CO.'S Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

LOG CABINS
AND
HOW TO BUILD THEM.

BY WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, [illegible]s of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

ANSWERS TO CORRESPONDENTS.

THE STATE SHOOTS.

IN our columns this week Minnesota, Pennsylvania and New Jersey appear side by side in rivalry, each State displaying the doings of its militiamen at the butts. Canada sends down the story of her Colonial Wimbledon, and next week will come the narrative of the scores made at the annual fall meeting of the National Rifle Association at Creedmoor. This is good so far as it goes: but instead of having less than a half dozen States holding shoots, the list should run through the entire Union, and every section show what it can do in comparison with its sister Commonwealths. In any National Guard a system of rifle practice once started is sure to be a very popular feature of military life. The men will be sure to keep it up, provided the official heads of the Guard give even a half-way support. The old-time enthusiasm, which expended itself, at the annual musters, in showing how this separate company could beat another separate company in marching ramrod fashion and in going through the manual of arms like well-greased automata, finds a far more sensible outlet through the rivalry of the contests at the targets; and all the time the men, instead of becoming a fine-looking and obedient uniformed machine, are trained into self-reliant fighters, for no man has yet been able to find any royal road to becoming a good shot. Practice, *practice*, PRACTICE, is the one pathway to success and fame as a marksman, and an intelligent private does not need an officer at his elbow to tell him how to practice.

That rifle practice has come to stay; that it is to become more and more a feature of regular as well as militia military life, can hardly be disputed. The competitions now in progress between members and teams of the various army departments and divisions are really of far more national importance than many other subjects given more notice in the public eye, and many a man in blue is glad of the break in the monotony of his enlisted life which comes through rifle practice. Enough States have taken up rifle practice to show that it can be carried out with the most satisfactory results, and at a minimum of cost. In those States where as yet nothing has been done, the neglect can only be explained on the ground that the official heads are either negligent or incapable. It is easy now to study what the pioneer States have done, what they have learned by experience to leave undone, and so devise a system of practice which shall at once produce the best results.

On the whole, the records are satisfactory. Massachusetts has spoken for herself in magnificent fashion on several English ranges, as she had previously ruled the roost on this side. Of the other States, each shows that there are good shots wearing the State uniform, and no longer can be truthfully uttered the taunt flung at our soldiers scarce a decade ago, "You are very pretty, but you can't shoot."

A THIRD CHAPTER OF ACCIDENTS.

IF it were possible to collect data for a comprehensive study of shooting accidents, it would be found that most casualties of this nature would naturally fall into groups, each group having a distinct classification. Thus two weeks ago we made note of numerous instances where human beings had been mistaken for various species of game and deliberately shot at by hunters; and last week we spoke of the fatalities caused by stray bullets and the recklessness of shooters who do not stop to discover if there are human beings in range of their shots. A third class is of the purely accidental ones which result from the carelessness or clumsiness of shooting companions.

This is the season of the year when the accident insurance companies expect to be called on to pay insurance on men who have been maimed or killed by their field comrades. Last week a member of a deer-hunting party in Sullivan county, in this State, was killed by the accidental discharge of a companion's gun; the men were walking in single file, the one ahead carrying his gun on his shoulder pointing downward at the stomach of the man behind; a twig caught the trigger, the gun went off and the man behind died within an hour. Only a week before this came the report of the accidental killing of a prominent Iowa banker by his son while they were out hunting. These instances are multiplied again and again, and they constitute a distinct class of shooting accidents.

A judicious person will hesitate before venturing into the field with one whose shooting habits are unknown to him; and the older a person grows and the more he sees of field shooting and field shots the less inclined is he to risk his person and life with careless gunners. Few of us would be persuaded by the assurance of the German baron who invited an English guest to shoot with him on his preserve. "I have shot tiger in India," said the Englishman, by way of excuse, "and your German hunting is not exciting enough, don't you know?" "Ah!" returned the baron, "you love dancher, do you? Den you should go shoot mit me. Only an fordn'ght ago I shooted mine bruder-in-law right through de shtomach." No less reassuring was that reply of the keeper of an English estate, when a guest who had heard of his host's carelessness in the field, asked just as they were starting out, "Has Mr. —— ever wounded anybody?" "Oh yes," replied the keeper solemnly and in a whisper, "Mr. —— shoots a man every year." Such men have not learned the first principle of sportsmanship, for no man has a right to count himself a fellow of the craft until he has learned above all things caution in handling his weapon.

The simple rule never to point a gun at the person of a human being is the only safe maxim; nine of every ten accidents in the field are caused by a violation of it. The Utica, N. Y., young man who when trying to remove a cap from his gun, blew off the head of a boy standing by; the Milltown, Me., hunter, who when about to aim at a target, accidentally pressed the trigger of his rifle and put a bullet through the thigh of his friend with fatal results; the Kenosha, Wis., gunner, who when bringing down the barrels of his gun after loading it, discharged it and shot three children; the Leavenworth, Kan., man, and the Newport, R. I., gunner, who caused their friends to perish by similar premature gun discharges; all these and scores of others would not have been "prostrated with grief," "crazed" and otherwise made to suffer the tortures of self-reproach and condemnation, had they but observed this simple and with the exercise of only a slight degree of thoughtfulness entirely practicable rule. A gun is a deadly weapon; death is the purpose of its use; and there is no excuse for those who, forgetting or disregarding this, bring death to their fellows.

There are other accidents which are due to pure awkwardness and want of skill on the part of the shooter. From such wounding one is not safe in the city streets. It is notorious that when a policeman discharges his revolver at a fugitive, it is not the fugitive but the man on the other side of the street, or the child in the fifth story window who most often suffers. A policeman in New York the other day tried to shoot an alleged mad dog; the dog escaped, but a thirteen year old boy lost an eye. A compact item in a Jacksonville, Fla., paper, from an Ocala correspondent told a similar story in a nutshell: "Sunday as our meat man, H. M. Fowler, was attempting to slaughter a beef at his slaughter house, he accidentally shot his man Ben in the arm."

This proclivity of bullets aimed at one object to strike another has long been recognized, as appears from an old advertisement wherein it was ingeniously turned to account by an aggrieved owner of an ass thus, "Whereas, several idle and disorderly persons have lately made a practice of riding on an ass belonging to Mr. ———, now, lest any accident should happen, he takes this method of informing the public that he has determined to shoot the said ass, and cautions any person that may be riding on it at the same time to take care of himself, lest by some unfortunate mistake he should shoot the wrong one."

The paragraphers find frequent subjects for jest in the doings of careless gunners. When the Emperor of Germany while shooting at Buckow accidentally wounded a citizen of Berlin, who was looking on, this incident, coming after the peppering of three Scotch game keepers by Prince Henry of Battenberg, prompted the New York *World* to suggest, "If active hostilities of this kind continue in Europe the Universal Peace Society will have to interfere. No reasonable person insists that the aim of royalty should be high, but it ought at least to be accurate." A Bridgeport, Conn., man was shot through the foot by the discharge of a friend's gun; the *Standard* of that city reported that the charge "tore a hole in the foot six inches in diameter," whereupon the Danbury *News* commented, "This will give the reader an idea of the tonnage of the Bridgeport foot."

It must be confessed that this is unseemly joking on a serious subject, which has in it less of humor than of pathos. The lapse of twenty-five centuries has not deadened the touching appeal to sympathy in that story of Adrastus, the son of Georgias, the son of Midas, who in the year 550 B. C., having first killed his own brother by accident at home, and then with a javelin aimed at a wild boar having slain the son of his patron Crœsus, waited in silence and solitude until after the funeral, and then, "knowing within himself that of all men he ever heard of he was the most burdened with calamities, slew himself upon the tomb."

SNAP SHOTS.

BY the death of Hon. S. S. Cox, in this city last Tuesday, the friends of the National Park have lost a powerful, consistent and valued ally. Mr. Cox had an intelligent interest in the Park, and what was in the highest degree a patriotic concern for its conservation as a possession for the people for all time. In its defense against the plottings of railroad schemers Mr. Cox took an active part on the floor of the House, and it was in large measure due to his exertions that the purposes of the grabbers were balked. By his services in this course he made himself worthy of grateful remembrance. His voice and his influence will be missed in future legislation respecting the Park.

The complaint by our correspondent "Podgers" has a substantial basis. He went fishing and has returned not full of elation over the big string of fish captured, but cast down by the cruel treatment endured at the hands of the swindlers who prey on his kind. It is a complaint, too, that will find an echo in the hearts of numerous others who have fared in the same way. It is within the experience of most men who go from home on shooting or fishing excursions that the expenses of such outings are constantly growing, and this is not because more services are demanded, but because the demands for services rendered are becoming exorbitant.

Ira Paine, the famous pistol shot, died in Paris last Tuesday.

The Sportsman Tourist.

SHOOTING ON MOUNT OLYMPUS.—IV.

(Concluded from Page 103.)

THE following morning, some half hour after daybreak, our little party, consisting of five packmen, the guide, Tamayanes and myself, filed out of the village and commenced the ascent of the hill behind it.

Ahmed Khan and several of the villagers followed us with their prayers, not so much perhaps because they expected them to do us any good, but as a matter of pious custom.

Our course was an easy incline until we reached the ridge of the hill, up which we toiled wearily for a couple of hours, until we came to a long saddle, which turned our course at right angles. The crest of this saddle was bare, but on either side a deep wooded ravine had its source, and I could not help pondering on the possibility of escape from my dilemma, if I were to plunge down either of them and work my way down to the sea. A day's journey would surely bring me into the cultivated lowlands.

Whether it was that I did not trust my followers, or that I suspected that the bandit's men were lying in hiding near at hand, or that I shrunk from the undignified position in which I should be placed if taken while trying to escape, or whether it was that, having made up my mind to the sacrifice of the money, which would otherwise have been spent in holidaying, I was fascinated by the romance of the situation and saw in it possibilities of compensation for my contracted tour, I hardly know. It may be that all of these considerations had their measure of weight in determining results, but at any rate, although I looked both to right and left, I pressed "onward, right on."

Arrived at the end of the saddle, we plunged into open pine forest; there was no trail, and the hill before us being too steep for a packman to breast easily, we tacked away to our left until we came out on a precipitous opening, with no vegetation but raspberry and blackberry bushes among the shattered rock masses.

High above us in front we got a glimpse of the grass-green mountainside, dotted with gray granite rocks; but there was an indistinctness of detail which convinced me that we had still a great deal of climbing to do before we got there. Then a laughing exclamation from one of the packmen, and we turned, and, lo! there was Broussa nestling at our feet, the sea of Marmora laving her shores, and idealized by distance into a perfect earthly paradise.

The packmen threw down their packs, and we sat and looked down on the scene, so seemingly peaceful from our point of view, in the calm, clear sunlight, and the balmy atmosphere of the pine forest, an atmosphere which I at once proceeded to vitiate with my pipe.

Again we started, and after an hour's hard struggle reached the top of the hill. Before us spread a vast expanse of rugged treeless mountains towering skyward, but between us and the mountainside was a deep ravine, how deep we knew not, a ravine into which the sun rarely penetrated, so cool was the air; there were even traces of snow under some of the rocks.

And now downward we toiled through the forest for nearly an hour, guided by the descent and by the murmur of what at first appeared a brawling brook, but which at closer quarters proved quite a river, and evidently a formidable one in flood. Big boulders were scattered over its bed, and logs laid down for crossing from boulder to boulder, betrayed the handiwork of man.

The water had that delicious freshness always appreciable in granite mountains, but was too cold to drink much of, and as we resolved to camp here for dinner, a fire was lighted, food cooked, and the aroma of coffee soon pervaded the scene. We appeared to be all alone, no sign of man or beast intruded itself upon us.

"Perhaps," said Timayanes, "the bandits were lying in wait for us below Ahmed Khan's village, but even if so they are already on our tracks."

Weary indeed was that march up the hill. It was 4 o'clock before we emerged from the forest, and we had still a couple of miles to cross along its upper edge to the camping ground, where we found water, fuel and protection from the elements under shelter of some overhanging rocks.

As we sat around the camp-fire in the evening after supper I instituted inquiries and learned that these mountain wilds are not wholly uninhabited, but are roamed over by bands of shepherds, who are given to dispute with each other about their feeding grounds, and to settle their disputes with the club, but who, since Futteh Ali's residence among them, have been accustomed to look up to him as the representative of absolute power and dispenser of justice.

No one knew just how many followers Futteh Ali Shah had. There might be hundreds or even thousands in the organization. The little band that he had brought to the mountains was variously estimated at from thirty to fifty, but most of his adventures were in Broussa and Stamboul.

The villagers spoke in quiet respectful terms of him, as they would of any one having authority. The mere fact that he was for the present outlawed by the government at Constantinople did not affect the merits of the case in their estimation. He still made good his right to live his own way, and to dictate to others the terms on which they should live. He was evidently a man to be looked up to.

For myself, I was from the first satisfied that he was not an ordinary footpad, who would rob you of what you might have on your person, and then cut your throat to prevent your telling tales. He was from all accounts a gentleman and man of honor, a man who if he promised to send your head down to Broussa, unless its price in sequins were sent at an appointed time, would fulfil his promise with the most punctilious exactitude.

A comfortable couch of fir boughs was spread under the rocks, and spreading my blanket on this, I slept the sleep of the just, while the other members of the party were still passing round the pipe.

The morning broke bright and clear. There were no signs of life outside our own party, and, breakfast disposed of, we started on the hunt, leaving Timayanes behind to cook for himself and me, and one villager to bring wood and water, and cook for the rest of the party.

What a bed of wild flowers was the grassy slope up which we plodded for some two miles from camp! It terminated at length in a rocky peak which stretched down from above, and as we came to the edge of the tableland to avoid this, the mountainside sloped away down from us for thousands of feet, a treeless tract, with scant herbage, and broken up into hill and ravine and rugged precipice, while high above the snow-clad peaks shone brightly in the morning sun.

Here I took out my field glass and scanned the whole hillside, and for a long time in vain. At length far away and considerably below the level on which we stood, a thousand feet at least, I saw a dark object which I made out to be a chamois, recumbent upon an exposed point of rock; a little further search showed two more on a ledge of the rock, perhaps 50ft. below him. I had considerable difficulty in bringing them into the field of the guide's vision. He had never used a telescope before, but at length he sighted them, and grasped the situation. Then he laid down the glass and announced that they were a long way off.

"We can reach them in an hour," I said.

"No, Effendi," said he with an inward chuckle, "it is not a straight line from us to them. We shall do well to reach them in two hours: but there they are, and not likely to move until toward evening, unless disturbed. There is plenty of time."

It was a more rugged journey than anything I had any conception of, steeper in places than I supposed it possible for man to climb, but the villagers went, and I followed. My head was clear enough, and a very little tuft of grass, I found, would help one over a very bad place.

And so we went on, down the declivity again, until we stood on the edge of a sheer precipice of fifty, a hundred, perhaps two hundred feet fall, and had to turn, and cross ridge and ravine again, in quest of a more feasible descent.

An hour from the start we paused on the edge of a precipice, and got another good view of our game, now just visible to the naked eye, and the guide endeavored to plan out a line of approach. Now for the first time we noticed that away deep down in the hollow there was a sea of vapor, with arms rolling up the channels in the mountains. It was clear sunlight above us, but if we once got enveloped in the cloud, as we now certainly would, we could make little progress until it should clear off again. I was feverishly impatient to reach the chamois before they would become enveloped in mist.

And so we struggled on for another hour, and saw the sea of dense mist spread out under our feet, and still slowly rising, until at length the guide who was in advance reached a point of rock from which he stepped back noiselessly, then motioned to me to come and get a peep.

How my heart throbbed as I peeped over and saw three big bucks quietly chewing the cud, about a hundred feet below me, and only about a hundred yards away, while some fifty feet lower was a herd of fifty or more, half enveloped in the upper edge of fog.

I paused a moment to recover breath, then sank on one knee, rested my elbow on the other, and took a very deliberate aim.

The shot rang out, the report echoed and re-echoed from hill to hill, I saw where the ball struck the rock about a foot too low, saw the buck spring to his feet, and had an indistinct vision of other forms springing up from the ground, realized that the distance was greater than I supposed, raised the sight, pulled the trigger again, saw the buck rise on his hindlegs and wheel partly round, make a couple of plunges forward, try to save himself on the edge of the precipice, stagger a moment, and then topple over headlong into the sea of cloud.

All this required but a few seconds; at the moment the buck fell I saw innumerable figures plunging downward in all directions, and twice more my trusty Winchester rang out, aimed at two beasts, at the very edge of the mist, but with what success I knew not.

It took at least a quarter of a mile's clambering before we reached the spot that the chamois had alighted on, at the foot of the precipice. We were now enveloped in the cloud, and although we could pierce the gloom for a radius of ten or fifteen feet, we could discern absolutely nothing beyond that distance.

There was no buck there, but the guide pointed out the great pool of blood, where he fell, and the track which he had made sliding down the incline. We went down this carefully, for about fifty feet, and came on him dead, on the very edge of another fall of unknown depth. All hands set to work and dragged the carcass to a more level piece of ground, and at once proceeded to skin him, preparatory to cutting him up, for in no other way could we have got him to camp.

While this work was in progress, the guide and I tried back, and after some search found blood on another trail, which we followed for half a mile at least. At length the quarry loomed up big through the mist, but broke away so suddenly, that although I pulled the trigger, I believe I missed him at five yards.

There was a big pool of blood where he had lain, and I was fit to kick myself at the thought that I had not exchanged my Winchester for the smoothbore, while going through the fog. I made the exchange now, and again we went on through the fog, tracking the blood stains, until we came to a place where he had fallen, rolled over, and then slidden down the hill.

He had not gone far. We sighted him some fifty yards below trying to struggle to his feet, but I was too quick for him, a ball through the shoulders settled him, and my guide was soon astride him with the knife.

The guide now made me understand that he wanted me to remain by the buck, and skin it, while he went for help, and signifying my assent, I lighted my pipe, drew my hunting knife and motioned him off. I suppose I was nearly an hour getting off the skin, but the task was finished at length, and as I turned round to look for a restful seat, I was startled by some big object going by me through the fog.

All was now clear below me, the bottom of the cloud had just reached my level, and I immediately sprang for my smoothbore, but the beast was heading upward, and was already lost in the cloud before I could raise my weapon. But instantly there rang out the report of a gun quite close to me, the angry growl of a bear, a second shot, a woman's scream, a man's more distant shout, and while this was transpiring I was rushing up the hillside, and saw through the mist the wounded and enraged bear rushing on the man who had just fired his second shot and turned to flee.

The bear rose to his haunches and was in the act of striking with his paw, when, fearing to fire high, lest the ball should go through to the man, I let go at his haunch.

This brought him around with a rush toward me, and as he came within five yards I fired from my side and sprang around a point of rock. The bear dropped, but endeavored to crawl to me, growling savagely; happily the incline was steep, and he slipped down it some ten feet before he could stop himself. In that interval I was fumbling for my cartridges, and had got one into the breech and closed it, but before I could raise the gun to my shoulder another hunter was at my side, and had sent a ball into his open jaws that paralyzed him.

Pausing a moment to see that his work was done, he at once turned, and without a word to me sprang up the hill. I followed, and a few strides sufficed to bring us in sight of the young man, a mere boy, who had fired the first shots. He was seated on the ground, looking very haggard; and his jacket, torn and matted, with blood at the shoulder, showed where he had been wounded. The bear was grasping him by the shoulder when I fired.

He smiled feebly as we approached, and the second hunter knelt over him, and spoke in very tender accents, and to my astonishment bent over and kissed him.

I looked at the wounded boy, at his clear fair skin, his delicate features, and at the contour of his heaving bosom, and then remembering the woman's cry, I said to myself, "Here is a romance." Then as I looked at the clear, bold, falcon eye, the lithe figure and reckless look of the handsome fellow who had come last on the scene, I knew beyond a doubt that I was in the presence of the noted bandit chief, and of some disguised lady love who shared his wild life with him.

I spoke to him in English involuntarily, and he turned and asked me in French if I knew anything of the leech's art, and on my replying that I had studied it, he asked me to examine the wound.

Ripping the sleeve of the jacket, I removed that first, and then cutting away a portion of the muslin robe beneath, I laid bare the wound, which was considerable, but hardly dangerous. The bear had grasped her shoulder and my shot had made him let go before he had fairly closed his grip, but not in time to prevent his raising the skin and flesh, and laying bare the quivering muscles.

Water was soon brought, and having washed the wound, I took off my shirt, washed it out, and making a wet pad of the linen front, I laid it on the wound, after laying the skin in position, made a partial bandage of the remainder of the shirt, then borrowing the chief's silk sash, which he wore round his waist, I completed the bandaging satisfactorily.

The patient then drank some water, and after thanking me with her eyes, and exchanging a few words with the chief, the latter sounded a horn, which soon brought answering echoes from above, and in ten minutes or so there was half a score of picturesque looking ruffians on the scene.

Before their arrival I had told the chief that the wounded girl would have to be carried to camp, and apparently the task of making a stretcher was a familiar one to them, for they very soon had one constructed of their muskets and waistbands, and we were soon ready for departure.

I then mentioned my chamois to the chief, and was able to point it out to him, for by this time the cloud had lifted high above us. He remarked that the road was rough, and that all his men would be wanted for the stretcher, but that he would send back a party immediately for the chamois and bear skin. Then on second thought he detailed one of the party to remain behind, and take off the bear's pelt.

We came up to the tableland just at the spot from which we had descried the chamois in the morning, and as we reached it we could see in the distance, my men toiling like ants up the ascent, with their loads of meat. We made no halt, but one of the chief's men was told off to wait their arrival. What his instructions were I could not, of course, understand, and I could not bother the chief with inquiries.

I judged from the direction we took that the camp was about two miles from my own. It was down in the forest, on the bank of a stream. The litter was taken to a ledge of rock, differing from my shelter of the previous night only in respect that it formed quite a large chamber, which had been, perhaps in part, hollowed out by man.

The girl was able to stand, and alighted and walked a little, leaning on the chief's shoulder, but a light cot was brought, rug and pillow adjusted, and she was easily persuaded to repose, for indeed she looked rather faint, although she smiled and occasionally spoke cheerfully.

To my astonishment Timayanes and the villager were at the camp, with all my belongings, and he told me in a few whispered words that the chief had arrived some two hours after my departure, ordered the removal of everything to the camp, left a man as guide, and then set out in my tracks.

I stuck to my post as surgeon, and asked for vinegar. This was happily forthcoming, and removing the heavy silk sash from the wounded shoulder, I sought to allay the inflammation by the continued application of vinegar and water, the first experience of which made the poor girl wince, but she bore it bravely with set teeth.

The chief called me, and asked if I knew how to treat the wound, and if I had all that was necessary, for if not he would at once dispatch a dozen men to Broussa, capture a doctor and bring him up, but that he was unwilling to resort to such a step unless it were absolutely necessary; unless, in fact, life were at stake.

I told him that I thought there was little danger, that the torn parts had been placed in position and would soon reunite, and that the only thing to do at present was to keep down the inflammation by cooling applications. I added that an ointment would then be required to heal the wound, but that if he could procure a lot of resin drops from pine trees, I could, from that and olive oil, compound a very healing ointment.

This evidently comforted him. Timayanes was called up and asked about the yellow pine resin. Several of the men knew what was meant, and I added that if enough could not be found outside the bark, a number of trees near camp should be wounded and the resin collected in the morning.

Half an hour after our arrival the first chamois came on the ground, with my men. These fraternized very amicably with the bandits, for such they really were, and cooking was soon in progress. Later still, the other

chamois and the bear skin being brought into camp, and the whole party assembled, everything went merrily.

Among the party was one of the mountain shepherds with five sheep, and I saw that, owing presumably to there being so much meat in camp, he was being sent away; but I recommended to the chief to retain one sheep and have it killed, as its flesh would be much better for the patient than venison. This was done, and I gave orders to have some mutton broth made from one of the legs, and the fat removed when cold.

On the whole, I thought matters had taken a favorable turn, but the chief, though polite, was rather formal than cordial, perhaps not without a certain measure of anxiety as to the disposition of his followers. They all knew that I had cut loose at the right moment, and saved the girl; but that was rather the chief's concern than theirs.

A camp was allotted to me, and I supped alone, the chief sending me a bottle of Cyprian wine of approved vintage. After supper and a smoke, during which several of the bandits strolled around, and chatted and joked with Timayanes, the chief sent his salaam, and asked if I would come to his camp.

I found the patient a little feverish, and prescribed wine and water, and spoke cheerfully to her, telling her that her wound would be quite healed in a week, then sat on, and tried to make conversation with the chief, which was difficult, as neither of us had a familiar knowledge of French, and we sat for a time in silence.

"We have been watching you for some days," said the chief, at length, "and while I am myself under obligations to you, these rascals will expect to be paid for their trouble. My own finances are low, too, or I would gladly barter with them for your liberation. Something they must and will have."

"I am entirely in your hands," I replied, "and ready to be guided by your advice, and from what I learned yesterday, you know exactly the state of my finances."

"We know certainly the state of your letter of credit with the banks, but as to what property you may have in your own country, we have no knowledge."

"That," said I, "is easily told; my only possession in the United States is my citizenship. I have five hundred sequins, and with these I meant to visit Egypt before returning to my own home. Now, I propose to get you to buy me off from your followers for half the sum. For yourself, I will ask you to accept my repeating rifle, and on my return home I will send you sufficient shells to last you a lifetime. And now, being here and having a patient to attend to, I should like to spend a couple of days hunting the mountain sheep."

"It is good," said the chief; "sit with the patient while I go out and hold council."

After he was gone the patient summoned me to her side and gently slipped a ring into my hand. I saw the diamond sparkle as she did so, and closing my hand on hers with gentle pressure, I thanked her as well as I could.

The chief was absent fully an hour. When he returned his brow was clear.

"I have arranged with them," he said, "more easily than I expected. You will write a check in the morning for 125 piastres and remain here hunting and attending to our patient while the messenger is absent. This is a loan to me, which I will repay as soon as I can command funds. You shall not lose your trip to Egypt. I am myself of Egyptian origin, a descendant of the Pharaohs, the Om Rah, the Lords of Light, the builders of the Pyramids."

And now let me bring my story to a close. I gave the check the next morning and almost immediately started off on a hunting tour, accompanied only by my own villagers. A flock of mountain sheep was found with the telescope, high up under the snows, and hours spent in crawling up to them. I did not know just how far we were from them, as we toiled up a steep ravine, when my guide motioned me to climb the bank. I did so, and there, not 20yds. from me, stood a big ram with a flock of twenty at rest around him. We stared at each other, and alas! in that decisive moment, buck fever or some other fever took possession of me, and with a film over my eyes my ball went astray. As the flock sped away toward some precipitous rocks, I let loose again four times, and one sheep fell, but regained his feet immediately, and in two minutes more the flock was gone.

On our way down we almost ran into a herd of chamois and I dropped two of them, which greatly raised all our spirits. I reached camp to find my patient doing fairly well under the weak vinegar treatment, in good spirits and with fair appetite. Nearly a pound of resin had been collected, there was olive oil in plenty, and while my supper was being cooked I melted and skimmed the resin, added the oil and prepared an unguent which I set aside to cool.

The next day was devoted to idleness. I removed the bandages from my patient's arm, washed the wound and put on a large plaster of the unguent. The wound had begun to heal, and although there was some inflammation I was satisfied it was doing well, and spoke encouragingly, and she, for her part, became quite cheerful and made light of her wound.

The next day we went on the wild sheep chase again. I dressed my patient's wound before starting, and found that there had been considerable discharge, but that the inflammation was subsiding. This day, too, it was an all-day climb to reach the sheep, but we got there. There was no 20yd. shooting this time. I got into cover at about 120yds. and knelt there and rested, until I had in great part recovered my breath; then I drew a steady bead upon one old ram, and cut loose. I heard the welcome thud, and then as the stricken beast began to plunge around in a circle, I knew there was no need to fire at him again, so I gave my attention to the retreating flock, dropping two of them, a young ram and a ewe. It made a heavy load for the party, and I had to carry the head and skin of the bighorn myself, a burden that makes my shoulders ache every time I think of it.

That evening some shepherds brought in two fine pair of old horns and skins, which I purchased for a sequin to our mutual satisfaction. My patient was doing well, and I enjoyed my mutton chops with an appetite which made me think that on some future occasion, if fortune favored me, I should willingly enough give a hundred sequins for such another day's toil, to be closed with such another supper, eaten with such an appetite, and such another bottle of Cyprian wine. Futteh Ali Shah—your very good health! I will seek you out when I next come to Turkey.

The following morning the messenger returned from the city with the proceeds of my check, which the chief distributed equally among his followers, and my patient having got over the shock to her general health, wanted to get up, but I insisted on her lying quiet, and drinking her mutton broth, for another day or two, which she consented to the more readily, that I promised to spend another day there.

I had heads and skins enough to satisfy me, but during the last two hunts we had put up several flocks of ptarmigan, and as I had brought along a hundred shot cartridges, I determined to spend a day among the birds, and was well satisfied with the results, although I got only seven birds.

Returning early, I put the chief through a course of drill upon the Winchester, which I formally presented to him, and in the evening, the last evening we spent together, he grew communicative and friendly, but not a word in allusion to the history of the gazelle-eyed Fatima.

At daybreak the following morning I breakfasted, and while Timayanes attended to the packing and dispatch of my impedimenta, I visited my fair patient, dressed her wound, which was almost healed, and pressed her hand as we took one long keen parting glance. Then bidding cheerful adieu to the rough band, and shaking hands with the chief, with a quiet earnestness, as if we were attached friends, I began the descend of the Olympus.

Facilis descensus. We took our midday meal with Ahmed Khan, and at eight o'clock that evening, bathed and refreshed, I sat down to dinner at my inn at Broussa.

The authorities had been making some demur about my shooting trip, and this the U. S. Minister at Constantinople straightened out without difficulty.

Ten days later I received a bill of exchange drawn by Futteh Ali Shah, on the banker Suleiman Buksh, in my favor, for one hundred and twenty-five sequins. So I got well out of the hunting adventure without losing my trip to the Pyramids. Fatima claimed the bear skin as her right by law of the chase. A.

Natural History.

AQUARIA NOTES.

[Occasional Observations on the Fishes of the Aquaria of the U. S. Fish Commission at Washington.]

BREEDING AND NEST-BUILDING HABITS OF THE TWO-SPINED STICKLEBACK.

A NUMBER of nests of the two-spined stickleback (*Gasterosteus biaculeatus*) were built during the month of April, and the young were duly hatched. The operation of building the nest is quite different from that of the four-spined stickleback (*Apeltes quadracus*), not being so complete an example of fish architecture.

The eggs are deposited in a little nest-shaped accumulation of alga on the bottom of the aquarium, or among the alga growing on a stone. They are then covered with bits of alga, the male fish drawing himself over them from time to time with a slow, quivering motion, the spines extended and the fins vibrating with the greatest rapidity. This was supposed to be the process of fertilization until closer observation showed the addition of several fine grayish threads after each operation. It should be mentioned that from the time of the act of spawning the male is the sole actor, the female at once taking her departure or being driven away. In a small vessel she would be killed.

The head of the fish is used as by the four-spined stickleback in fashioning a hole through which circulation may be kept up among the eggs.

The addition of the alga and repetitions of the spinning process alternate until the nest is of sufficient size. Large pieces of alga are thrown carelessly over the nest with the evident intention of concealing it. After the nest is completed the threads binding it together may be plainly seen, giving it the appearance in some cases of a loosely-constructed cocoon, but it is not the neat and compact structure of the four-spined stickleback.

The nests are about the bulk of a hemisphere one inch in diameter, but more or less irregular in shape. The efforts of the male to induce or compel the female to visit the nest and spawn are highly interesting. The nuptual coloration of the male fish is very beautiful, being pink and blue-fleeked with pearly and bronze tints.

Circulation is kept up (among the eggs) during incubation by fanning with the pectoral fins and by drawing or forcing water through them with the mouth.

After the young are hatched the male still keeps up a vigilant warfare upon anything approaching their vicinity, even fiercely and incessantly attacking a net or glass pipette put down to capture some of them.

The male parent himself darts at the young when they emerge from cover with the evident intention of frightening them into hiding. They dart under the alga like a brood of chickens at the appearance of a hawk, but soon troop out like a lot of merry children at play to be again and again driven under cover by the anxious father as he returns from his fierce and tireless forays against intruders into his claim.

HATCHING THE HORSESHOE CRAB.

Some hundreds of the eggs of the horseshoe crab (*Limulus polyphemus*) were mailed to Dr. Smith of the Fisheries Division of the U. S. Fish Commission, by E. S. Howell, of Dias Creek, N. J., in the month of August, and hatched rapidly on being placed in a tank of seawater. In a month they were examined and some of them were found to have doubled in size. Their food in the aquarium is apparently limited to decaying ulva and probably some infusorial life.

AN EXAMPLE OF VORACITY.

A rock-fish (*Roccus lineatus*) about 3in. long, not having been fed for two days, on being given a bounteous supply of worms so gorged itself that the end of one worm protruded from its vent about a quarter of an inch and squirmed about vigorously, withdrawing and protruding for some time, until it finally disappeared for good. WM. P. SEAL.

AUDUBON MAGAZINE.—We wish to procure copies of the *Audubon Magazine* of the dates of February and August, 1887; the original price will be paid for them. Address the Forest and Stream Publishing Company.

THE WHISTLE OF THE WOODCOCK.

Editor Forest and Stream:

There seems a great diversity of opinion among sportsmen as to the manner in which the woodcock produces the peculiar whistle, some maintaining that it is caused by the sharp cutting of the air by their pinions, others (myself among the number) that it is through the instrumentality of the bill. Why should every other bird have its distinctive note and the woodcock alone be mute? The woodcock's cousin, the English snipe, has his cry as he starts from the boggy meadows, why should one make that peculiar noise with the wing and the other not? I have repeatedly flushed woodcock as I have snipe, and both have started on the wing without any noise whatever; then why should they be silent at one time and make their peculiar sound at another, when equally started, if the wings produce the sound? Again, I have held a wounded woodcock in my hand and he has made a twitter, while grasped about the body without the possibility of moving the wings. Again, while going along country roads, where no fright was involved, and with nothing to call for unusual speed, I have heard the same cry or whistle. I know that in the fall I have flushed birds that have gone away at such a speed that if the whistle were in the wing they went fast enough to make it equal to my dog whistle, but still with no note. I may be dead wrong and a numbskull of the first water, but after forty years of woodcock shooting I still believe in the bill. If I am proved to be in the wrong I had better go slow, keep dark and put the shot in first. C. H.

The above are the views and opinions of my fellow sportsman and friend, Mr. Charles Hinkle, manager of the art department of the *Illustrated Sporting News*. I know of no man more observant, trustworthy or experienced in woodcock shooting, or a better field shot on the wing or more true sportsman. His views and experience coincide with my own. I am certainly not of those who hold to the idea that the noise is produced by the woodcock's primary quills.

If this whistle emanates from the startled swiftness of sudden fright-flight, through action of rushing air and by action of wind on the primary or pinnated quill, how is it then that you gentlemen all hear this said-same twitter or whistle by the wounded and enfeebled bird's weak flutter in your hand, precluded from wind action, which you claim is its sole cause? Again, how is it that this whistling note is given out frequently through the entire moult season? This has been carefully noted by friends of mine who spent the month of August last roaming the hills and woods of Litchfield, and at all times noted the whistle sound given out on startled intrusive flight. And often in the shades and shadows of its feeding solitude, when disturbed while feeding, and as you all say and bear witness never on alighting or on its flight for food. The whistle is vocal and guttural beyond question, as witnessed by "F. W." in letter of your issue Sept. 5 last, where he said he had shot the bird's bill away at its base, and then his "horsecar conductor" gave full proof that he had yet a vocal note.

On the border of a wood spring rill were found on the 30th day of August just past two woodcock sitting on nests not two hundred yards apart. Now, gentlemen, with this fact staring you full in the face, from a section that has been personally preserved by its owners for several years past, what have you to say as to the cruel and unsportsmanlike July mid-summer shooting of this most delicious game bird? CANONICUS.

NORTH NEW YORK.

NOTES ON BACK NUMBERS.

Editor Forest and Stream:

In reply to your correspondent "H. W. D L.," who wonders if man's sympathy for God's creatures increases as he grows older, I would reply that it does. At least, that is my experience; and I observe the same trait of compassion in the majority of mankind. From my youth I have been a lover of the gun and the rod; and, although a comparatively young man, I have so much feeling for the animal and feathered tribes, that I do not do half as much hunting as I formerly did. A great writer has said: "God is in everything; be cruel to none; neither abuse anything by intemperance."

I never heard that the eggs of the great horned owl were forty-six days in hatching. If that is true, the owl exceeds all our domestic fowls in length of time required to develop the little owls, and comes near to the time of the ostrich, which averages near fifty days, according to the owners of California ostrich farms.

A recent writer in this journal made inquiry if the eggs of wild birds and fowls ever fail to hatch. Yes, most assuredly. This summer I found a quail's nest containing fifteen eggs. Wishing to know how they succeeded, I revisited the nest in a couple of weeks, and found all the eggs but one had sent forth Bob Whites. I also found a nest of twenty-two eggs. These were all taken by some person, as they were near a frequented path. Where there are as many as twenty or more eggs, two or three will fail to hatch.

Angling for bullfrogs is a pleasant diversion with rod and line, if the frogs are tolerably plentiful. A small piece of red flannel serves for bait, also white worms. It is curious to see how savagely a big bullfrog will bite at almost anything which is offered to him.

On Aug. 14 I observed a true Southern mockingbird here in 40° north latitude. This is the rarest bird we have. Have any of your readers observed the Southern mocking bird north of this latitude?

As the subject of albinos is always of interest to the general reader and the naturalist, I will add my share to the list of curious freaks of nature. Some years ago a trapper of this locality caught a white mink in a steel trap. Being unaware of the digression which nature sometimes makes in developing a specimen of either fowl or animal perfectly opposite in color to the rest of its species, the trapper would scarcely believe he had caught a real mink. Not long since I observed a common henharrier that was almost white. But most noteworthy of all the albinos that ever came within my direct observation was a turtle dove which remained in this region for some months a few years ago. It was a beauty; so white

and pretty. I noticed it several times, and have often wished I had added it to my collection of natural history specimens. JASPER BLINES.

ALEXANDRIA, Mo.

A RARE DEEP-SEA FISH.—On Aug. 2, the schooner Pathfinder, of Gloucester, captured a halibut on the eastern part of George's Bank in 175 fathoms of water, in the stomach of which was found a specimen of *Malacosteus niger* (?), a rare deep-sea fish. This species was first described by Ayres, in the Boston *Journal of Natural History* in 1849, page 53, from a specimen 8½in. long. The specimen here noticed is about of the same length. This fish is strictly a deep-sea form and shows that halibut have the habit of going down many fathoms. This specimen was presented to the U. S. Fish Commission at Washington by Mr. John Davis, through Capt. S. J. Martin. It is one of the few donations made by New England fishermen to the National Museum and Fish Commission. Many rare and curious fishes as well as other objects of zoölogy have been brought to light and preserved by the fishermen of the New England coast.

A TWO-HEADED SNAKE.—Aukland, Md., Sept. 6.—A boy in coming to town on last Saturday, Aug. 31, found a small snake, supposed to be a garter snake, having two perfectly developed heads. The snake is about 6in. long, and the heads are joined to the body about three-quarters of an inch back on its neck. Each head is perfectly developed. Upon teasing it with a pencil or stick it will strike viciously, sometimes with both heads and sometimes with only one. It seems to have perfect control of both heads and moves them independently of each other. It has been in captivity now about a week, and is apparently as lively as when captured. Is it a common thing for snakes to have two heads? This is the first one I have ever seen or heard of.—S. L. [It is a rare freak of nature.]

WOODCOCK AND WORM.—Until the recent discussion I supposed every one who when a boy dug earth worms for bait-fishing was familiar with the fact that they will come to the surface if the ground is thumped. Whether they do so thinking it is rain or because, as I think more probable, they find the vibration uncomforable, I do not know. Nor do I know anything of the habits of woodcock. But I have often seen results similar to these produced by the "woman stick" of the Hupa Indians.—AZTEC (San Luis Potosi, Mexico).

MR. CROWLEY.—A plaster cast of the bust of the celebrated chimpanzee, "Mr. Crowley," late of Central Park, New York, was made by Mr. Richardson, and now occupies a prominent position in the mammal hall of the U. S. National Museum at Washington.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Two kusimanse (*Crossarchus obscurus*), one lynx (*Lynx canadensis*), one sooty mangabey (*Cercocebus fuliginosus*), two Tamarin marmosets (*Midas ursulus*), four Abyssinian guineafowl (*Numida ptilorhyncha*), one darter (*Plotus anhinga*), two blue-bearded jays (*Cyanocorax cyanopogon*), nineteen banded rattlesnakes (*Crotalus horridus*), nine copperheads (*Ancistrodon contortrix*), one blacksnake (*Bascanion constrictor*), one copper-bellied snake (*Tropidonotus sipedon erythrogaster*), three ring-necked snakes (*Diadophis punctatus*), one banded watersnake (*T. fasciatus*), one two West African pythons (*Python sebæ*), three hog-nosed snakes (*Heterodon platyrhinus*), one hog-nosed snake (*H. platyrhinus niger*), one hog-nosed snake (*H. platyrhinus atmodes*), four Valeria's snakes (*Virginia valeriæ*), four fence lizards (*Eumeces fasciatus*), nine slimy salamanders (*Plethodon glutinosus*), two chameleonlike lizards (*Chamæleolis chamæleontides*), five equestrian lizards (*Anolis equestris*), one ribbon snake (*Eutænia saurita*), three common watersnakes (*Tropidonotus sipedon*), two corn snakes (*Coluber guttatus*), one garter snake (*Eutænia sirtalis*), and one green snake (*Cyclophis æstivus*). Presented—Two gray foxes (*Canis virginianus*), one Cuban iguana (*Cyclura nubila*), one bonnet macaque (*Macacus radiatus*), one red fox (*Canis vulpes fulvus*), six opossums (*Didelphys virginiana*), two barn owls (*Strix flammea americana*), one bald eagle (*Haliætus leucocephalus*), one red-tailed buzzard (*Buteo borealis*), one sharp-shinned hawk (*Accipiter fuscus*), two screech owls (*Megascops asio*), one black duck (*Anas obscura*), one redstart (*Setophaga ruticilla*), one great blue heron (*Ardea herodias*), thirty newts (*Desmognathus miniatus*), two pine snakes (*Pityophis melanoleucus*), one painted terrapin (*Chrysemys picta*), four musk terrapins (*Aromochelys odoratus*), one green turtle (*Chelonia mydas*), one alligator (*Alligator mississippiensis*), one Marcy's garter snake (*Eutænia marciana*), two striated turtles (*Chelopus insculptus*), one red-bellied terrapin (*Pseudemys rugosa*), one box tortoise (*Cistudo carolina*), and one Leconte's snake (*Rhinochilis leconteï*). Born—One Indian antelope (*Antilope cervicapra*), one beaver (*Castor fiber canadensis*), and one zebu (*Bos indicus*).

Camp-Fire Flickerings.

"That reminds me."

280.

SPEAKING of fishing reminds me of an amusing little incident that occurred in my family last spring. My wife shares with me a passion for fishing, and during the season we frequently take a boat and row out to the mouth of the river to fish for pike and white bass with minnows. Some unscrupulous person has told my wife that male fish will not bite a hook held by a man, and *vice versa;* so that one lovely evening toward the latter part of June, when we had dropped our anchor on our accustomed fishing ground, I said, "Now, my darling, we will soon see whether there is more he or she fish in the creek." We had hardly assumed the easiest possible position to await the bites, when my wife, in her accustomed energetic manner, succeeded in landing a 2-pound white bass. She did not say "First blood," women are so funny, you know, but I am sure she thought it. A weary half hour dragged away. No bite. I began to think my minnow must be off, and pulled up to see. While adjusting the bait a mean but brilliant idea presented itself to me, why not catch her fish over again? As her back was partly turned, and she was intent on fishing, the plan seemed feasible. I put her poor little he bass on my hook and slid him gently in. I had hardly got my line out before I pulled it in again. I said, "We are even." This scheme worked like a charm; so that, by the exercise of considerable tact and by working hard, I succeeded in hauling that fish in seven times before dark. I dragged him (or her) all over the river. "Mostly she fish to-night," I said. She said, "Let's go home." As I had been having quite a good time I did not object. Well, when we came to string those fish there was but one in the boat. Only the sound of the oars broke the stillness in that boat as we rowed home. C. W. R.

Game Bag and Gun.

TEXAS GAME LAW.

VICTORIA, Texas, Aug. 30.—*Editor Forest and Stream:* I notice in a recent number of FOREST AND STREAM what purports to be an abstract of the game laws of this State, and find therein so many errors that I venture to correct them in order that readers of this journal may not be unwittingly led into violating the laws. Article 426 of the penal code reads as follows: "It shall hereafter be unlawful for any person to kill, ensnare or trap, or in any way destroy any wild deer in the period of time embraced between the 20th day of January and the 1st day of August of each year." After providing penalties for violation of the foregoing clause, the article further provides that any "butcher, huckster, marketer, carrier or express agent, or any person found in possession of fresh-killed venison one day before the above specified open season begins, or ten days after the open season has closed, shall be deemed guilty of the violation of the provisions of this article, and liable to the same proceedings and penalties herein provided." The open season for prairie chickens is from the first day of August to the first day of February. Quail from Oct. 1 to May 1. Wild turkeys Sept. 1 to May 1. GUADALUPE.

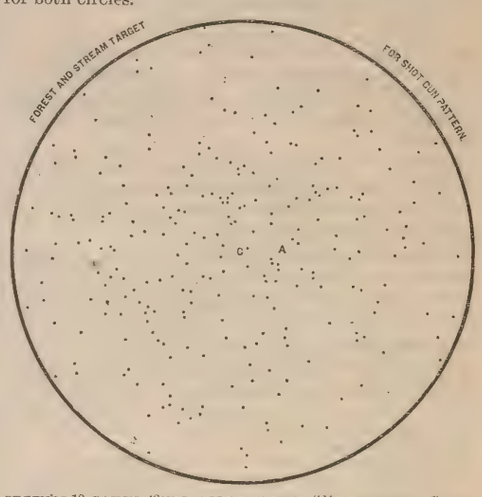
PATTERN AND PENETRATION.

GREENER, 10-GAUGE.

WHEN Mr. J. N. Such, of South Amboy, read the report of our Greener gun test in his FOREST AND STREAM, he felt that his favorite arm had not done itself credit. A gunner for years, he had gone through a deal of testing himself. He had purchased this, that and the other make of arm, had found some better, others worse, and had finally settled upon a Greener 10-gauge of the last model as being the best ducking gun he had come across, and one in every way meeting his intelligent demand of what such a gun should be. "I would like to shoot my Greener, which I feel confident will hold its

GREENER 10-GAUGE, 40YDS., RIGHT BARREL, 373 PELLETS, NO. 8 SHOT

own with any arm you can bring to your testing screen," said Mr. Such. "Load some cartridges and come along," was the reply of FOREST AND STREAM, and early on the morning of Aug. 8 the range was visited. It was a perfect morning for a gun test, and well did Mr. Such remark, "If the gun don't do good to-day, it certainly is not the fault of the weather conditions." The atmosphere was laden with moisture almost to the point of saturation. The wind came quartering down from the rear right hand in a lazy fashion, and once or twice during the shooting it started in to rain.



Mr. Such had loaded three sets of cartridges; one was No. 8 chilled shot and the other No. 7, and a third with No. 1 soft. The last is his favorite charge when out on Barnegat and Raritan Bays after the heavier fowl there. The loading of the charges had been most carefully performed, and the analyses show how evenly the powder

GREENER 10-GAUGE, 40YDS., LEFT BARREL, 362 PELLETS, NO. 8 SHOT.

and shot figures run. In crimping down the 7s and 8s shot cartridges, Mr. Such had not used the usual complete turn over of the upper and free end of the shell; instead he had followed the rule of having the card over the shot as light as consistent with good holding, so as to allow the shot charge free run from the barrel. After having put the card over the shot, he pressed down two opposite sides of the shell top with his penknife back, and left the shell with two projecting points. The charge was well held in, sufficiently so, at least, for carrying in the pocket, and for use by a careful gunner. The charge of the No. 1 shot, as it filled the shell close up to the mouth, was crimped down in the ordinary way.

The gun acted in the best manner throughout, and no special incident marked the firing of the sixty shots of the entire triple test. How close the gun held and how well the aimed circle corresponded with the struck circle is shown in the following tally sheet of each shots pattern for both circles.

GREENER 10-GAUGE, 40YDS., LEFT BARREL, 275 PELLETS, NO. 7 SHOT.

At the 60yds. distance an interesting trial was made. A few of the black powder cartridges used in the Scott gun test of the day previous were brought out, and two shots from each barrel were fired through the Greener gun. How they behaved is shown in the following tabular comparison between the doings of these two shots and the average at this distance by the Scott gun as given in the FOREST AND STREAM of last week.

Scott Gun, 60yds.. Average.

Right Barrel. Aimed Circle.	Struck Circle.	Penetration.	Left Barrel. Aimed Circle.	Struck Circle.	Penetration.
43	55	16	50	63	17
Greener Gun, 60yds., Two Shots.					
68	79	27	87	81	15
78	100	20	96	88	18
Av...73	89	23	92	84	17

In a recent number of the FOREST AND STREAM, it will be remembered, our statistical correspondent "Nick" took up the gun test tables to date and drew some general averages. This showed an average of 60 per cent. for ten tests at 40yds., with the maximum test reaching 72 per cent.; while at 60yds. the general average was 25 per cent. and the best trial 35 per cent. In the Greener gun under discussion it will be seen that in the No. 8 shot the figures for the entire gun were 69 per cent. and 31 per cent. for the 40 and 60yds. distances respectively, and 68

per cent. and 32 per cent. for the same distances of the No. 7 shot. It would seem, then, that the faith of Mr. Such in his Greener gun as a close hitter was not misplaced, while its power as a hard hitter is shown by the figures of penetration in the formal record of the entire test.

The record of the No. 1 shot will be given in the next number of the FOREST AND STREAM.

CLAREMONT, N. J., Aug. 8, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Greener Ejector Hammerless. Cost, $350. No. of gun, 35,937. Weight, 10¾lbs. Length of barrels, 32in. Gauge, 10. Right barrel, full choke. Left barrel, full choke.
Weather—Cloudy. Direction of wind, 9 o'clock. Force of wind, 3 miles per hour. Thermometer, dry, 73°. Do., wet, 69°. Humidity, 82°. Barometer, 30.15in.
Charge, as given by holder of gun:

BULLETS FROM SHOTGUNS.

Editor Forest and Stream:

In your paper for August 1 you give a description of a trial of Dr. Merrill's shotgun with bullets, and state that he is desirous of securing a weapon good for both shot and ball. There are two guns sold in London, either of which would probably suit. One is the "Paradox," by Messrs. Holland, and the other the "Colindian," by Charles Lancaster.

The former, while made of only 7lbs. weight, is stated upon the best authority to be as accurate with bullets, up to 100yds., as an express rifle, and to throw shot extremely well. I have seen no accounts of any trial of the "Colindian," but doubtless it is also very good with both shot and ball.

During many years, when in countries where both large and small game abounded, I made numerous experiments in order to find out the best method of loading shotguns with bullets. Gunmakers usually recommend using them naked, of such a size as to just touch the barrel all around, and pouring melted tallow over them after pressing them down upon the wad. Loaded in this way they rarely do any harm, but on one occasion a bullet scored the barrel of a valuable gun, belonging to myself, with a long spiral mark which could not be taken out, so I carefully avoided naked bullets afterward.

A very celebrated gunmaker in this country advised me to use them one size larger than the bore, assuring me that they would not do the least harm. This might, perhaps, be a good plan with barrels of extra thickness at the breech, so as to be safe from bursting.

I have found no method to give greater continuous accuracy than having bullets one size smaller than the bore, wrapped in patches of strong thin linen. At first I used to tie the patch very tightly round the bullet with strong thread, cut off the neck as closely as possible, dip it into melted tallow and place it with the neck exactly in the center of the felt wad before pushing wad and bullet down into the shell. This method gives excellent shooting up to 40yds., and in some guns 50yds.; but I afterwards found that 20yds. could be added to the range by using loose patches of such a size that their edges will barely meet over the center of the bullet. After the ball is pushed home the edges of the patch should be brought together and fixed there by pouring tallow over them. It then remains round the bullet during its passage up the barrel, and drops off a little in front of the muzzle when fired.

The following points are worth attending to in order to make a smoothbore do its best with bullets:

1. The balls should be perfectly round and smooth. This is more necessary than with a rifle.

2. They should be hardened with about one-twentieth part of tin, so that the spherical shape may not be altered by the explosion of the powder.

3. The powder should be of large grain, because the blow to the bullet will not be so sudden as with fine grain.

4. The wad should be of thick, soft, well lubricated felt.

5. The "cut off" part of the bullet should be in the center of the wad.

6. The patch should be free from any threads of uneven thickness.

7. The tallow should be distributed as evenly as possible all round the angle where the bullet touches the inside of the shell.

8. Turning down the edges of the shell upon the bullet diminishes the accuracy considerably. As a rule, if it fit with proper tightness, the tallow will hold sufficiently firm; but when otherwise, a crimper should be used, which indents the shell all round, just above the bullet, and keeps it in its place.

Barrels for ball shooting should be rather thicker than usual at the muzzle, and those with a straight taper all the way from the breech are more apt to shoot well than those which are made thin half way from the muzzle, like ordinary shotguns.

Theoretically a cylinder-bore ought to be the most accurate, but a recess choke can be made to shoot quite as well. Some years ago I had a gun made with a full choke (on the recess principle) in the right barrel, and the left a perfect cylinder for bullets. After long and careful trials I found that the left gave no better shooting than the right, so had it turned into a full choke like the other, and there is now no difference between them. They both carry ball very truly up to 60 or 70yds., but the left is slightly superior with shot.

Mr. Lane, a very noted authority upon shotguns in this country, wrote some time ago to the London *Field* about firing bullets from smoothbores. He recommended drilling a hole in the bullet and fixing a piece of string, about as thick as a trout line, in it with a wooden peg, then cutting off the string so as to leave it 6in. long. This is coiled in the shell upon the wad, the bullet is pressed home and fastened by pouring hot grease all over it until covered level, but the shell is not crimped. Mr. Lane says, "Thus loaded, a 6in. bull may be struck an indefinite number of times at 60yds., and very fair shooting can be got at double this distance."

I believe that much of the inaccuracy of smoothbores with bullets is due to their having no hind sight. This can be proved by removing that sight from a rifle and trying to what extent the shooting is spoiled. In cases where ball shooting is required from a shotgun it would be well worth while to fix a short Lyman sight to the grip. And here I would suggest that if Mr. Lyman would make some very small sights, giving elevation for only about 150yds., they would probably have a good sale for use upon rifles for small game. The short sight which he has already brought out is so thick that it looks clumsy upon a rifle of 5 or 6lbs. weight, but its advantages are very great. In combination with the ivory bead foresight correct aim can be taken at rabbits in the twilight, when the notch of the open hind sight is almost useless.

J. J. MEYRICK.

DUBLIN.

CHICAGO AND THE WEST.

CHICAGO, Ill., Sept. 7.—The season being now open in Indiana on prairie chickens and also on wildfowl, a great many of our shooters, especially members of the shooting clubs who have properties in that State, have gone down during the week for a few days at the early birds. There are considerable numbers of local ducks on the marshes, among others a good many wood ducks and teal. That chickens have bred very plentifully along the Kankakee marshes this season seems to be the opinion of almost every hunter who has been down. Numbers of these beautiful big birds have been brought in. Mr. L. K. Waldron got a very good bag near the Mak-saw-ba Club. He located the birds the first day, killing only three, and on the following day had very good sport.

Mr. J. B. Hosmer, of D. S. Munger & Co.; Mr. John Howley, of the Scottish National Insurance Company; Mr. John L. Jones, of Powell & Jones, and Mr. Henry Durkee, are just back from a chicken shooting trip in Minnesota. They stopped at Ortonville, and found it necessary to go out only six or eight miles from that town. The party bagged about a hundred birds apiece.

The main interest of our shooters just now is centering in the exceptional and really remarkable jacksnipe shooting, which is so abundant everywhere. The brown-streaked little fellows seem to be scattered all over the country. Messrs. Henry Sloan and F. P. Taylor have been down on and near Mak-saw-ba marsh nearly all the week, and have had good sport at snipe. Billy Mussey got 17 one day in the first of the week, and was forced to stop shooting on account of the extreme heat which there prevailed. At the same time Tommy Miller got about a dozen birds, Mr. C. B. Dicks about a dozen and a half, and Mr. Joel Kinney about as many. Mr. Waldron also had good luck, and four Hoosiers of the great unwashed class shot nearly all day long, and must have had a number of birds. Nearly all of the above shooting was done on a strip near Rat Island, above the club house. Mr. Mussey tells me that the birds were in hundreds, and by good steady work a man should have bagged at least fifty per day.

Cumberland marsh has had plenty of jacksnipe also; and there have been numbers killed at Water Valley, lower down on the Kankakee. I have not heard from the great snipe ground near Koutts, Ind., but should think the shooting there must be fine now. The birds are reported as fat and lying close.

Yellowlegs are in our country in great abundance, but we do not hear very much of the golden plover just now. There was a flight of the latter bird in a while ago.

If anything can be foretold at this date we are apt to have an early winter this year. The dispatches from St. Paul, Minn., this morning, say that the migratory birds are beginning to move south, and this, coupled with the heavy frost in that country, is taken to mean an early advance of winter's rigors. Another fact of greater significance than this is the action of our local ducks this fall. I have before this mentioned the fact that our native-bred ducks here band up and go north late in August or early in September, returning south with the main migration later in the season. This year no such northern migration has taken place, and it is thought that this is because the country to our north is very dry. The presence of the jacksnipe so early is considered additional poorf of this. Whether it is dry or cold that is starting the game down, the result will doubtless be well for our shooters, for our marshes are now at good stage and bid fair to remain so.

The great duck marsh at Horicon, Wis., is probably the greatest shooting preserve of this part of the country. No spring shooting is allowed on that marsh, nor any until after Sept. 1 in the fall, no matter what the State law may be, for the club makes and holds its own laws. There are thousands of ducks on the Horicon marsh already, and the shooting has begun on them. Early this week Mr. Percy Stone, a member of Horicon Club, bagged 33 ducks in one day, 17 of the bag being mallards. At the same Mr. Jack Pierson got 46 and Mr. C. E. Felton 22. From this it is inferred the shooting must have been good. Redheads, mallard and teal are in on the Horicon marsh.

Mr. F. M. Howe got 10 ducks in about an hour on Tolleston marsh last Monday morning.

Mr. J. A. Sharp and a friend got 51 ducks at Water Valley on opening day. They had a very nice little bag, all shot out of one blind. They also got a lot of snipe.

Mr. R. Turtle has been having a lot of fun with the snipe, and says he killed some not very far from Englewood, eight miles out of town. Almost all the boys who have gone out have had good fun and good success. There is some go in this place yet as a shooting resort.

E. HOUGH.

WORCESTER OPENING DAY.

WORCESTER, Mass., Sept. 7.—Monday was about as good a day for opening as could be expected at this season of the year, at the same time it was about as hard a day to hunt as could be imagined. The sun was partially hidden by fog and smoke most of the day, but old Sol was doing business right along. Scarcely a breath of wind stirred the leaves, and the air was perfectly lifeless. The sportsmen were out in force and in some localities shooting was pretty brisk. A good supply of birds is reported, and considering the difficult shooting good bags were made. Vegetation of all kinds is unusually rank this year, probably owing to frequent rains early in the season. This tends to lessen the number of open shots one can get, but gives promise of better sport later on. That the birds bred well there is no doubt, and the reports of their being found in bunches would seem to indicate that less illegal shooting than usual had been done. Adding the month of December to the close season, thereby leaving more old birds to breed another year, is also proving itself a wise move.

The following are some of the bags reported, though there are doubtless many others not heard from: G. J. Rugg and Robt. Mason got 12. E. T. Swan and A. J. Warren, 9. W. R. Dean and Levi Moore, 8. E. T. Whittaker and C. H. Morse, 7. E. T. Smith and C. H. Howe, 6. W. S. Perry and A. Perry 9. S. Parker and J. H. Locke, 3. E. S. Knowles, Nathan Harrington and Geo. Walker, 3. Chas. Crompton and J. Doherty, 1 each. F. Houghton and E. Warren, 3. Of this number 44 were partridges and 18 woodcock. Only two small partridges were reported, the young ones mostly being three-quarters grown and able to keep the shooter guessing.

HAL.

RIFLE FACTS AND THEORIES.

Editor Forest and Stream:

I note a claim that the .22cal. is deficient in its killing qualities, and writers advocate .25, .27 and .30cals. Now a .25cal. is only .03 of an inch larger than the .22, and when you get to the .27 it is only .05 less than the .32, and .30cal. is only .02 of an inch less than .32. The difference is so small that it seems like splitting hairs.

Does not the killing power depend greatly upon the proportions of the cartridge, that is the amount of powder used to drive the bullet? Will not the .22cal. bullet with a good charge of powder kill game more quickly than the same bullet driven with a smaller charge of powder? I believe a strong charge of powder will drive a bullet more rapidly and greatly increase its killing power.

The first gun I ever owned was a muzzleloading rifle, about 36in. barrel, round ball, 265 of the bullets weighed 1lb. avoirdupois. This rifle was cut one turn in 42in. There never was any trouble with its killing power. I have shot many squirrels with this gun and the bullet made a hole big enough to run your finger through it, even at 80 or 100yds. We used comparatively a large charge of powder and the bullet always did its work satisfactorily, why will not the .15-45 cartridge .22cal. do its work effectively? The twist in the rifling of the muzzleloader did not make the difference, if it did the present theory is all wrong. If quicker twist increased killing power, the Springfield and Bullard with their twist one turn in 22in. and others with from 18 to 20in. ought to do better than the old muzzleloader with its twist of a turn in 42in.

Referring again to the demand for an additional caliber between the .22 and .32. If the .32cal., 100 or 115gr. bullet, is too large, it is very easy to make it lighter by shortening it without changing the bearings in the groove of the rifle. The diameter of the .32cal. bullet is not too great, and it seems to me that for all-around shooting at small game a .32 20 100 to 115grs. bullet will fill the bill if the gun is a good one. I would like the cartridge better, I admit, if it had 35grs. of powder to the 115gr. bullet, and believe it would make a lower trajectory, increase the range and increase the killing power. In fact, there is no doubt in my mind that one great fault of most breechloading guns is that there is too little powder used to give the range and accuracy the different calibers ought to have—say a proportion of one-third the weight of the bullet, to give the weight of the powder necessary to get the greatest range and accuracy in any caliber. I think that is about the rule for long-range heavy-rifled artillery. It is claimed that the rifle bullet (with that loading) might jump the groove. If this argument is correct, might not a longer twist be used with advantage in range, and in all other respects, and so diminish the tendency to jump the grooves and lead the barrel?

The manufacturers of shooting and target breechloaders seem to be at sea on these subjects, and their own catalogues show that they are not consistent and not settled about the proper proportion of the powder charge for the weight of lead they use. They started with a rim-fire cartridge, 28grs. powder, 200grs. lead for .44cal.; then center-fire cartridge, 40grs. powder, 200grs. lead, for 44cal.; then a 38cal., 40grs. powder and 180grs. lead; then 45cal., 70grs. powder, 405 to 408grs. lead. Thus:

28grs. powder, 200grs. lead, powder proportion 14 per cent.

40grs. powder, 200grs. lead, powder proportion 20 per cent.

40grs. powder, 180grs. lead, powder proportion 22⅔ per cent.

70grs. powder, 408grs. lead, powder proportion $17\frac{32}{204}$ per cent.

It is hardly worth while to go through all the calibers, but when you come to express rifles, .50cal., you get .50-95-300, .50-115-300 and .40-82 260, giving the weight of powder in these cartridges 31⅔ per cent., 38⅓ per cent. and 31-7/7 per cent. respectively. Now, if these percentages are good for the calibers named, why not the correct thing for all calibers?

That the writer is not alone in some of the opinions advanced, is shown by the paper written by W. W. Kimball, U. S. N., and published in *Scribner's Monthly* for September. It is worth reading. Allow me to quote an item or two. Speaking of the French military rifle (the Lebel), he says: "Ballistically it is good. It shoots well because the caliber is good, because the bullet is fairly well proportioned, because the rifling is good, because the recoil is light, and, above all, because the charge makes the bullet go fast." Again: "If a big, heavy bullet could be made to go as fast as a light one, it would, of course, hit harder." Again: "The small bullet leaving the muzzle of the French Lebel gun strikes a blow one-third heavier than does the big one of the Springfield."

I am at a loss to understand these quotations if they do not refer to a greater proportion of powder to weight of the bullet in the French Lebel and British Lee rifles than the proportions used in the Springfield or other military rifles using a smaller charge of powder in proportion to their bullets.

I hope you will excuse the length of this article. I don't know much about these matters, and want to learn if I can; and hope some of your correspondents who like the rifle and have studied it and know more about it, will enlighten others who want to know more than they do.

SENEX.

Editor Forest and Stream:

I have made a test of the 22-5-30 cartridge and two others, using my Maynard rifle, 26in. barrel, quick twist, made expressly to shoot the U. M. C. "long rifle" cartridge. The shooting was done in the back position, without artificial rest. At 100yds. a third-class Creedmoor target reduced to one-half size was used. At 50yds. the target was reduced to one-fourth size. All of the targets, except the last one at 100yds., were shot in a wind blowing at the rate of about five to fifteen miles an hour from the 10 o'clock quarter. When the last target at 100yds. was shot the wind was so light that its direction could not be determined. In the following summary the first column shows the kind of cartridges used, the second column the number of points scored in five shots, Creedmoor count, on reduced targets. The third column shows the diameter of a circle inclosing the five shots, and cutting the centers of the two bullet holes furthest apart. The fourth column shows the diameter of a circle similarly inclosing four of the five shots. The rifle was sighted as nearly right as possible for the long rifle cartridges, and no change was made in the sighting when the other ammunition was used. This was not doing full justice to the .22 short, as far as points are concerned, as the groups from this ammunition averaged about four inches low on the target at the longer distance. It is, however, quite fair to compare the size of the group with that of the other cartridges.

		Points.	Groups, inches.	Cluster 4 shots. inches.
100yds.	.22 long rifle	25	1¾	1
	.22 long	9	..	..
	.22 short	20	4½	..
100yds.	.22 long rifle	24	3¼	1 1/16
	.22 long	20	14	..
	.22 short	22	5½	..
100yds.	.22 long rifle	24	3	23/16
	*.22 long rifle	24	3¼	23/16
50yds.	.22 long rifle	24	1⅜	⅞
	.22 long	21	5¾	..
100yds.	.22 long rifle	25	2⅜	1¾
	.22 long	19	9	..
	.22 short	21	5¾	..

*Shot by Geo. Ritter.

In the first test of the .22 long, the size of the group could not be ascertained as three of the five shots missed the target, 14in. wide by 22in. high. All of the cartridges were of U. M. C. make. The rifle was cleaned two or three times during the shooting. At one time 25 shots were fired without cleaning. There were no keyholes on any of the targets. The "long rifle" cartridges showed great accuracy and were but slightly deflected by the wind, not more than one point being required on the wind gauge at any time. The .22 long gave such irregular shooting that I could not decide as to the proper elevation or windage to use. The sharp twist of the rifling kept the bullets point on, but the shooting was less accurate than I ever obtained from any combination during upward of twenty years, and experiments with many different weapons.

E. A. LEOPOLD.

NORRISTOWN, Pa.

Editor Forest and Stream:

We have too great a mixture of rifles, guns and ammunition on hand at present. If one wishes a little stronger, I should say more deadly rifle, that he can feed very cheaply, let him use the .32 with everlasting reloadable shells, with the buckshot and five to twenty grains of powder in his repeater used as a single-loader. They won't work through, I should say, from the magazine. As I said, I used this load for hundreds of shots in a .32 Winchester with perfect satisfaction.

All such small-bore rifles should be of full length and weight, the barrel 30 or 32in. long, or in other words the sportsman's rifle should be of the same weight as his gun. A 30in. .22 does not make nearly so loud a report as one of 19 or 20in. In fact that is one of the prime beauties of the arm; if a fellow happens to miss, the game don't know that there is a man around with a gun; it does not take the little whiplike crack to be the voice of a gun, so one often gets a second shot.

It should also be kept in mind that the .22 is a dangerous weapon. A short time ago in San Francisco a man shot at a fly on a door, with one, and instantly killed a man behind the door. On another occasion I found a party of boys shooting at a mark on the side of a barn, the balls went whistling through both sides of the boarding of inch pine in a thickly settled neighborhood. Again a party of us were shooting "for blood" at a target with one 80yds. We placed our target on a great cottonwood plank 2½ft. wide, 8ft. long and between 2 and 3in. thick, and had "Billy" for target keeper and referee. After Frank and I had fired two shots a piece, I went up to see the result. Billy reached the plank just before I did, at the back of the plank. As he came up to it he stopped and his face paled. "Why Billy," said I, "what is the matter?" Said he, "My first impression was with you dare devils shooting this way, that the only safe place for me was behind that big plank; I heard the bullets whistle over the hill after each shot and supposed of course you had missed the plank, but blame my skin if every bullet has not come right through." He was right, they had, and if he had taken refuge behind that plank to be out of danger, they would have gone into and perhaps through him.

There is another good point about the .22, it neither kicks nor deafens one. A nervous man can learn to shoot with it. I could never have made anything of a shot with a kicking rifle with a loud report. I was too "narvous," too liable to shut both eyes and "dodge" when I pulled trigger. The world surely does move, and we "old uns" are being left in the shade, for during six or seven years of constant rifle shooting over a wide extent of country, and with hundreds of men, during three years of which time I never once "got left" in all around shooting, I never saw as good targets made with any rifle, by any person, as FOREST AND STREAM has reported lately, as being made with a revolver, off-hand, at 22yds. Eight shots, 22yds., that could be covered with a twenty-five cent piece, beats my best, beats us all, in my rifle shooting days.

BYRNE.

PETALUMA, Cal.

Editor Forest and Stream:

I have noted with interest from time to time the remarks on the .22cal. rifles that have been made by many of your correspondents, and it is a subject upon which a great deal can be said and then "the half will not be told." I have tried a great many rifles and different cartridges made by different factories, and the most satisfactory results that I have yet reached have been made with the following arms and ammunition. The best and finest shooting rifles that I have yet seen were made by the J. Stevens Arms and Tool Co., and by the Massachusetts Arms Co. The latter company are the manufacturers of the well known Maynard rifles. Both these factories are located at Chicopee Falls, Mass. These are, I think, the only two factories that make rifles that handle the .22 long "rifle" cartridge successfully, as they give them a quick twist (16 to 18in.), which insures extreme accuracy. For target work these rifles and cartridges, the latter made by the Union Metallic Co., stand without a peer, and I have seen many a clean score of 100 made with them at 40yds. in gallery shooting upon the standard target. They are cheap, convenient and can be obtained almost anywhere that guns are sold. For a light gallery-practice cartridge this one is unexcelled, and although the .22 short is a fine shooting one, the long "rifle" cartridge beats it at long or short range.

The rifles "hunters' pet," pistols, etc., that are made for the above named cartridge, will also use the .22 short and give better results than with the slower twist used in most of the other makes. Both these companies make rifles to use the well-known .22-10 grain central-fire cartridge, and when a reloadable shell is desired this one is sometimes preferred to the rim-fire cartridge. While the 10-grain is an excellent one for squirrel shooting, etc., the long rifle rim-fire is perhaps the most accurate, if extremely fine work is desired. There is also another cartridge, the new .25cal. center-fire, that is now being made by these people, and the writer saw a target a few days since at the Massachusetts Arms Company's factory of seven successive shots at 200yds., all of which were inside of a 2in. circle. This cartridge is the equal of the .32cal. at 200yds., and for small game is much better for many reasons that are obvious. The .25cal. is here and has come to stay, and while it has been delayed somewhat on account of difficulties in drawing a good solid head shell, the U. M. C. Co. have finally mastered it, and another good cartridge has been added to the list from which the lover of rifle shooting may choose. The Stevens Company are also ready to furnish these rifles, and for geese, turkeys, ducks, etc., that have to be shot at long distances, these guns will, I think, prove to be the correct thing.

Now that sportsmen have the calibers of rifles graded from .22 to .38 and .40 caliber, and graduated so finely, it seems as though they should be happy. A Maynard rifle of .25cal. (with the shells and bullets) is before me as I write this. The bullet is three-quarters of an inch long and weighs 85grs., composed of one part tin and forty parts lead. The shell is 1⅝in. long, slightly "necked," and has a solid head, is reloadable many times, and holds 20grs. of powder. This cartridge will be known as the .25-20-85. It has a flat trajectory, is very steady in the wind for so small a bore, and does not tear up the game like the larger sizes. The writer has eagerly watched the development of this new rifle and cartridge, and while he has "kept still and held his breath" up to the present time, is now ready to "talk right out in meetin'." With these three or four little cartridges to choose from, the lover of the small-bore should be satisfied. The .25cal. is a more powerful cartridge than might be supposed, for the writer has been informed upon good authority that deer have been dropped "dead in their tracks" by this bullet that weighed but 64grs. The penetration is good, all that could be desired, and as the curve is low it makes a most excellent cartridge to use over the water, where, as almost every one knows, it is so difficult to judge distances. "Long may it wave."

IRON RAMROD.

SOMERVILLE, Mass.

A TRIP OVER CLIP.

THE opening of the bird shooting season is always anticipated by sportsmen, but by none more than by Will and myself. As usual, the sun found us astir on the morning of Aug. 1, because we knew that others would be in the brush, and we purposed to have our share of the fun. Six o'clock finds us on the road, and after a drive of about three miles we come in sight of the Alder Run. With what joy Clip bounds at our side while we are hitching our horse to the road fence, and when he hears the shells rattle and sees the guns come from the case he can only be quieted by the firm command "charge," while we plan the attack. Clip, by the way, was suffering from a severe bite in the shoulder received some two weeks before, and I had endeavored to protect this by a stout breast blanket. He is less than two years old, and has the most "get there" in him of any dog I ever saw in the brush. I hesitated, after Will got his position, to give him the word for fear of a flush. But walking to the edge of the cover I peaked in and saw fresh signs of the work of the longbills. Cautioning my friend to be on his guard, I motioned the dog in. He had not gone far before he made game, and with a few steps more he was stiff. It took but a few steps on my part to flush a woodcock, and as my mind was more on the action of my dog than killing the bird, I failed to shoot; but felt sure he would have a warm reception when he broke cover on the outside. And, sure enough, I heard two barrels in quick succession and a call for me to come in that direction. I obey, and, as usual the question comes, "Did you get him?" "Don't know," is the reply. We follow up the line, and soon the dog comes to a point, and I failing to flush, he is coaxed on, and picks up the bird only winged.

We continue on up the run, and to my surprise find only two more woodcock. One of these Clip points in elegant form, standing with one front foot upraised, while the other rests upon an old mossy log; a straight-edge placed on his nose would have touched every inch of his spinal column to the end of his tail. While Will crowds through the brush to admire the dog, up jumps the bird and comes directly toward my face. I let him pass, and turning, dropped him inside of fifty feet. As he struck the mossy bank another one, frightened by the fall, takes wing, and with a loud whistle, goes up like a rocket. With gun at position I follow him until he breaks cover and is just straightened to fly, when the left barrel cut the twigs and he drops within six feet of the other. While I am having this little picnic Will and Clip stand mute spectators. Clip springs to my side eager to fetch dead, while Will congratulates me with, "Well done, old boy." After quieting the dog's nerves, he is allowed to retrieve.

We then seat ourselves near a beautiful spring and eat our lunch. After an hour's rest we start in a new direction to work back toward the horse, and for the next half hour we saw no less than twenty young partridges. They were so plenty that after I would flush one for Clip he would sometimes point another before I could call him twenty feet. I at last got disgusted trying to look for woodcock where there were so many grouse in the way, therefore I took the dog by the collar and led him out of the brush, and as soon as I saw Will coming I knew what his first sentence would be, and sure enough it was, "Mark this spot down for September 1," and I did.

Sure enough that day found us in the same cover, and after a varied succession of misses and good shots, we bagged sixteen grouse. This was the largest bag made by two guns in this section during the early season, but sixteen birds on September first do not begin to fill my eye like one-half that number of glossy, brown, plump fellows killed in October.

WING.

ADIRONDACK NOTES.

LEWIS COUNTY.—While floating on Mud Pond recently, Henry Bock killed two deer at one shot. He was using a single barrel shotgun and saw the deer standing quite near together. Picking out the largest he fired, the one shot at dropped in his tracks, the other ran about five rods, where he fell. On coming up with him they found that two shot had hit him, one breaking a foreleg, the other piercing his lungs. When out with parties in years past Henry has always managed to kill the largest deer, but this time he outdid himself.

Woodcock are not as numerous on their favorite haunts this season as formerly. Probably on account of the very wet season causing them to leave for higher ground. Some very fair bags were made on the opening of the season at the expense of a thorough wetting, as shooters were compelled to wade most of the time. One score was eighteen birds for two men and two dogs. This is the best heard from to date.

Ruffed grouse are reported as scarce by woodcock shooters.

An incident happened while shooting on the first of August that seems worth relating. We had come out of the best cover, not having found a bird, and were approaching a narrow stream bordered for a rod or so on either side by alders, when the dogs, which were rather wild, rushed into the alders and flushed a bird, which was shot and killed. My friend had not seen the bird and asked what I was shooting at. I had just time to ejaculate, "woodcock," when another bird flushed, followed in a second by a third. We both shot. My bird fell, while my friend's flew across a road, which was near, into a lane used for driving cows to water. We both got into the road as soon as possible, where we could see the bird standing under a bush with his head partly toward us. We tried to get the dogs to flush him, but they refused to hunt alone, so my friend tried to flush him by throwing stones; the second one hit him fair, killing him. He had only been slightly wounded in one wing. My friend remarked, "We will have the best score to-day. Why, we can kill them with stones."

OSCEOLA.

DUCKS IN SOUTH DAKOTA.

LAKE PRESTON, Dak., Aug. 30.—I am on the banks of Lake Preston, which is seven miles in length by one mile in width. The water is quite low at this season of the year and is filled with rushes, which make good screens for ducks. There seems to be no lack of them now, and prospects for many more in three or four weeks, when they will be coming in from the north.

Aug. 31.—Went out to Lake Ponset, twenty miles northeast of Lake Preston. Drove over with livery. Passed Lake Badger on the way, a small lake of clear water too open for good shooting. Arrived at Lake Ponset 3 P. M. This is a fine lake, seven or eight miles by one to one and a half, full to overflowing with fish and plenty of geese, ducks, pelicans and brant. Had lots of fun to-day.

Sept. 1.—Went to church and listened to the Rev. Mr. Mason. The elder is small of stature, but like the lamented Dick Yates, has a master brain. Put in Sunday evening loading shells.

Sept. 2.—Visited Lake Whitewood, some three miles south and east of Lake Preston. Whitewood is a considerable body of water, no fish in it but ducks, ducks, ducks. Everywhere. Also geese and pelican. Killed fifty ducks to-day, teal and mallard.

Sept. 3.—Went out to Lake Thompson, some two and a half miles south and west from Lake Preston. This is rather a mud lake, but later in the season will be good shooting ground. Struck several coveys of chickens to-day and a few snipe.

Sept. 4.—This is a fine duck and goose roost; has a fine little natural grove of timber around its borders and is quite a picnic resort, with small boats to let at reasonable prices. Am enjoying myself highly. One can get all the ammunition wished for at Lake Preston. Lake Preston has good hotel and livery; the Lake Preston House is the hunter's delight. If any of my Eastern friends should wish to enjoy a vacation they can do no better than to come to Lake Preston and shoot for a few weeks.

J. S.

THE CONNECTICUT ASSOCIATION MEANS BUSINESS.—The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish has elected these officers for the ensuing year: President, A. C. Collins; Vice-President and Treasurer, Dr. N. W. Holcombe; Secretary, Hon. George P. McLean. Directors—Hon. Geo. P. McLean, Hartford; Hon. J. C. Chamberlain, Bridgeport; Dr. J. W. Alsop, Middletown; A. L. Kurau, Tolland; F. W. Whitlock, Waterbury; Samuel A. Eddy, Canaan; Geo. A. Reed, Chaplin; Z. R. Robbins, Norwich. Executive Committee—A. C. Collins, Dr. N. W. Holcombe, C. H. Smith, Jr., A. E. Hart and Geo. P. McLean. A circular issued by President Collins says: "The crying need of the hour is money to carry on our good work. Gentlemen, we want your sympathy—but sympathy will not pay the printers, postage and detectives. We have shown the past year that the game and fish laws can be enforced. We have successfully prosecuted over twenty violators of these laws, we could have captured as many more if the sportsmen and anglers had furnished more money—and less sympathy." Sept. 4 Mr. Collins arrested Frederick Brooks and Elmer Talmadge, both of Southington, for shooting woodcock. The men were taken before Justice Ephraim H. Andrews, of Southington, who found them guilty of killing one woodcock each and promptly imposed a fine and costs, amounting to $26.78 for each.

GAME IN THE HUDSON RIVER GLADES.—On Thursday last my son, John W. Evers, returned from his vacation at West Point to the city. In the early morning he took a two-hours' run in the dell, and brought home as the result of his work with the dog and gun seven woodcock and one wild pigeon. He reports game abundant in the river hills of Orange and Putnam counties.—CANONICUS (North New York City, Sept. 7).

QUAIL IN GEORGIA.—The quail in Georgia have bred well this season, and with the exception of too much rain in several localities drowning the young, the crop promises to be good. The young are now two-thirds grown, and fully able to take care of themselves.—X.

ST. LOUIS, Mo., Sept. 7.—An effort is being made in this city to put a stop to the illegal selling of prairie chickens. Capt. H. C. West, a member of the Missouri State Fish and Game Protective Association, is at the head of the movement, and he hopes to bring all the violators to justice. Warrants have been taken out against several hotel and restaurant keepers, and also one commission firm. There are others here who are handling prairie chickens, and the Captain says he will not rest until he has brought every last one of them to justice. The cases against those already arrested were to have been tried the past week, but were upon motion of the defendants' attorney continued till next Thursday.

A BIG BEAR.—Blair, Neb., Aug. 24.—The *Advertiser*, of this town, reports that "one of the largest bears ever killed on earth was shot a few weeks ago by a Wyoming Indian. It weighed 2,280lbs. and measured 12ft. in length and 10ft. wide. The hide was purchased by E. Meshey, the Cheyenne furrier and taxidermist, who is now engaged in stuffing it. Representative Dorsey, of Nebraska, during his recent visit to Cheynne, saw the hide, and offered Mr. Meshey $300 for it when stuffed. The offer was accepted, and the biggest stuffed bear on earth will be shipped to Mr. Dorsey's home at Fremont, Nebraska. Mr. Dorsey is a banker, and will probably use the animal to adorn one of his large plate glass windows." I am going over there to see it.—DR. E. A. PALMER.

THE Epop Gun Cleaner, advertised in another column, is a handy and effective tool which all those who use a gun should possess. It does its work quickly and effectually, removing both lead and powder without scratching the barrels. Its price is moderate and the satisfaction it gives is complete. That it is thoroughly appreciated by shooters is proven by the large number seen at every trap tournament.—*Adv.*

Sea and River Fishing.

A WEEK IN THE LAURENTIANS.—II.

[*Concluded from Page 109.*]

THE worthy *habitan* who had charge of Scott's camp was very much exercised over the news that I had been privileged to fish in Griffith's waters at the foot of the rapids. He said that the reputation of Scott's section of the river was at stake and liable to be prejudiced if I should make a bigger creel than I had hitherto made, so taking my Kentucky friend and his boatmen into consultation he arranged that they should fish the rapids to an island some five miles down the following day, and taking a lunch with them spend the whole day fishing there, and my friend was enjoined to do his best to eclipse me.

They started betimes, and after lingering awhile in the hope that my man would turn up, I got into the canoe with the boy and trolled about in the neighborhood of the camp for an hour or more without getting a rise. At length we returned to camp to inquire, and finding that he had not arrived I asked the boy whether he knew Griffith's waters, and whether he thought he could manage the canoe alone. He replied confidently, and no other man being available I started with him.

The big pool was at no great distance and reached without difficulty. The water was at first smooth, but as we neared the side of the current it was in a state of ever increasing commotion. I had two rods with me, one of them a big trolling rod, which has landed a great many hundred pounds of good fish during the seventeen years it has been in my possession. I bent a cast of flies on each, and holding one in each hand was prepared for whatever might turn up.

My first strike was with the big rod, a 3lb. fish, which felt like a lively minnow on a rod which I had rarely handled with fish less than 7 or 8lbs. He was safely landed and soon followed by another of twice his weight, when my guide conducted me to some rocks, which he pronounced a famous place for big ouinanish.

There I landed and whipped the water patiently for half an hour, getting only one half-pounder, which I returned; then taking to the canoe afresh, we made several rounds of the pool, taking one or two fish every round, the biggest being a two-pounder. By and by I got on one that felt somewhat more ponderous and played with him for about a quarter of an hour. Finally getting into still water, I wound in and led him alongside the canoe from stem to stern; the excited boy made a fierce lunge at him with his net, and the fish, running out some twenty feet, made a good leap of some six feet in the air. I kept a tight strain on him, but, alas! my rod was stiff, and I failed to preserve the happy medium between a loose line and a too heavy strain. Just before the fish touched the water again the hook broke loose. There was no mistaking the sensation, he was but lightly hooked, and I lost him by want of delicacy in handling. He was a fish between four and five pounds weight.

We continued our course, hooking a fish at almost every visit to the edge of the rapids, and towing him to somewhat smoother water to lift him. This took time. As soon as the fish was in the canoe he and the boy appeared to be all over it at once. In the end the boy always triumphed and sat down to disentangle the casting line, which he invariably got into a snarl, but I took care not only not to aggravate matters by a passing comment or word of advice, but to put on a sweet smile intended to imply that these little contretemps were a source of pleasurable amusement to me. Occasionally he succeeded in knocking one clear of the fly with the frame of his landing net, and on these occasions I encouraged him by remarking that it was only a little one.

It was about noon and we had gone a little further into the turbulent waters than on any other trip, and were turning back again without a fish when an electric shock ran down my big trolling rod into my arm, and I realized that there are great fish in the waters now as there were in the old days when with the self same rod I landed the lordly mahseer in the rivers of Upper India. "Seven pounds if he is an ounce," I muttered inwardly, "and I will act on the defensive and let him do all the fighting. He shall repay me for past mishaps."

With my stout rod well arched, and the butt toward him, he carried out about 20ft. of line, but I believe he simply held his ground or water while the boat advanced that distance. The ouinanish does not turn and flee, his tactics are to hold his own, put on a steady strain, leaping occasionally into the air in the effort to shake himself free.

There was nearly a hundred feet of line out, and leaving it to my guide to cross into still water as usual, I took my fish in tow, keeping a light finger pressure on the line and letting him have a yard or so occasionally. The fish was behind me, and I gave my whole attention to regulating the tension, and manipulating the line with delicacy, for stout as was my rod, I had a new twisted linen trout line on, which had already betrayed poor quality, and I knew that I must give my fish all the time he wanted.

Suddenly, to my utter astonishment, the canoe grounded, the guide jumped out, and turning my head to one side, I found that we were grounded on the point of an island, after crossing just above the head of some shallow rapids, and that my fish with a hundred feet of line out had gone down them.

I sprang up and limped ashore as well as I could, when I saw—oh, horror of horrors!—that about midway between me and the fish the line passed under a boulder and was jammed. I gave out slack and called to the boy to clear it. There was no great depth of water in the torrent, and but for my game leg I would have been in promptly; but it would have availed nothing, the fish gave a dead pull and snapped the line under the stone. The next instant he sprang into the air, lifting clear out of the water a fish apparently 2lbs. weight, which probably took hold in the rapids; and as I surveyed his fair proportions, I exclaimed inwardly, "Oh, that Morell *père* had been with me in place of Morell *fils!*"

"Did you see him?" exclaimed the boy, turning toward me open-mouthed and with extended eyes. "He was so big," extending his hands a full yard apart.

I was too full for utterance, and returning to the canoe I bent on another cast of flies, made one more round of the pool and then stopped for dinner.

My morning's catch embraced ten fish, aggregating 14lbs. Enough to satisfy any reasonable man's needs, but I would have liked to carry home the giant of the pool.

In conversation with Mr. Griffith later, he told me that he had never taken a ouinanish over 5lbs., and John Morell gave 7¼lbs. as the biggest fish he had seen taken.

I went again to the pool after dinner, but the fish were not biting freely, the boy showed an indisposition to go outside of still water, and the clouds portended a storm, so I took my rod apart and started for the house with only two fish. Scott's waters triumphed that day at the hands of the worthy Kentuckian, who brought back a creel of forty fish ranging from 1lb. to 3lbs.

The following morning I packed my traps all ready for departure. I might have done half a day's fishing, for the steamer was not due until afternoon, but the fever had abated. I could have lingered on there for weeks in the calm enjoyment of the scene and of the balmy atmosphere, and from time to time it would have been a pleasure to do an hour or two's fishing sufficient for the table, but a whole day's fishing has never been with me more than an occasional indulgence.

And so I went out and stretched myself on a grassy slope, and basked in the joyous sunshine, and let my eye wander over lake and river, and rest upon the numerous islands that studded the inlet, and was content. No certain prospect of a 7lbs. ouinanish could have lured me away from my indulgence in the *dolce far niente* that bright morning; no thought that the present moment was a fleeting one disturbed me, no pensive reflection suggested that the scene spread before me was one I never might see again. I looked neither forward nor backward. It was one of those rare delicious moments of gentle languor in which the mere sense of existence is all sufficing. If I had reflected I might have said to myself, "This is what I came for, this is rest;" but it was no time for reflection, I lived and enjoyed living, perhaps, just as the satisfied beasts do. Well, no matter. Then came the whistle of the steamboat and the bustle of departure. I was sent ahead to make sure of my passage, and Mr. and Mrs. Griffiths followed in another boat. There was little delay after arrival at the steamer, our adieus were spoken, the steamer got under way, and casting my eyes forward they alighted on the falls of Ouiatchewan, clearly visible as a white streak on the dark hillside at this distance of twenty miles.

Three hours later I took mine ease in mine inn, in the roomy quarters of the Robervale, a handsome and well kept hotel, such as few would expect to find so far from the familiar beaten tracks of travel, but the fact is the Lake St. John is an old and important, although hitherto isolated settlement, and now that the Quebec & St. John Railway has opened communication between it and the outside world and brought them within twelve hours' journey of each other, Lake St. John in the wilderness promises to become a popular summer resort, not only for the good citizens of Quebec, but for all the world and his wife, for the fame of its ouinanish waters has gone out into all lands; the lake scenery is beautiful, the forest shows only as a feature of the background, and with the climate of the Adirondacks, there are all the appliances of a vigorous settlement at hand.

It will be remembered that I wrote of the smallest ouinanish in the Grand Discharge as somewhat less than half a pound, and of fish of this size as comparatively rare. From this it would be pretty safe to infer that the Grand Discharge is not its spawning grounds.

As far as I could ascertain, the ouinanish, in company with the pickerel, and possibly other fish, pass down the rapids in their spring floods, remain in the Discharge all summer, returning in the fall to the depths of the lake, and passing into the spawning rivers in spring. These spawning rivers are the larger feeders of the lake. The principal spawning bed is said to be the river Au Salmon, although there is not much doubt that large numbers of the fish go up the Peribonca, the Mistassini, the Metabetchuan, and other of the main feeders to spawn.

In the three rivers named, trout and ouinanish are found in company, and that the lake is the proper home and point of departure of the ouinanish appears to be evidenced by the fact that the Ouiatchewan, which falls 280ft. into the lake, and is a considerable stream, has no ouinanish, although it is reported a first-class but little-frequented trout stream.

The trout, on the other hand, although they come down the rivers into the lake, do not go down the Discharge. Some very few exceptions only prove the rule.

The ouinanish is no more so plentiful as it once was. The Indians say they were formerly so abundant in the

river Au Salmon that they could be scooped up in a landing net, and very much of this decadence is attributed to the fact that a dam, which shuts out the fish from their principal spawning bed, was thrown across the river some years ago. It is quite probable that this view is a sound one: this fish is exposed to numerous enemies in the lake and Discharge, and perhaps more fatal than pike or doré is the sucker when it gets access to the spawning beds, and the barrier in the Au Salmon has possibly excluded a great body of the fish from what, for good reasons, was their favorite spawning bed, and led to their gradual decrease. Only the most prolific reproduction could compensate for the ravages of the deadly pike, to which may be safely attributed the fact that so few ouinanish reach an advanced age.

The land on both banks of the river Au Salmon has now been purchased by Mr. Nazarre Turcotte, and as this gentleman is reputed to be a sportsman, let us hope that he will at once put in a fishway or raze the dam. If he show no disposition to move in this direction, it may be hoped that the Quebec Government, realizing the amount of money which the opening of the Lake St. John region is bringing into the Province, and that the continuance of this influx of visitors with well-lined purses is dependent on the maintenance by the region of its reputation as a fishing resort, will follow the lead of the New York Legislature in this matter.

I am by no means sure that the Quebec Government is fairly awake to the importance of this problem. It has given a lease of some islands at the mouth of the Discharge, and the lessee, a Canadian named Trombly, for and in consideration of the sum of thirty-six dollars annually, coin of the Dominion, has license to stretch his nets from island to island and intercept the ouinanish on their passage to and from the Discharge. It seems incredible that this rare and highly-prized game fish that has carried the fame of the St. John waters into all English-speaking lands, should be exposed to extinction for such a paltry sum; but Mr. Trombly has his license to show, and although he is under the patronage of John C. Eno, of the "American Colony" in Canada, there is no question as to the genuineness of the license. Nets must be tolerated in the lake for the taking of pike, dore, whitefish, suckers, etc., and if a proportion of ouinanish get taken along with them it is fisherman's luck; but no net should be tolerated within half a mile of the cluster of islands at the entrance of the Grand Discharge.

I endeavored to impress on Messrs. Griffiths and Scott and on Mr. Baker of the Robervale Hotel, who is no less interested in the perpetuation of the fishing, that a well managed hatchery is the price of succes in this direction, but there is little probability of their taking the matter in hand, and it is sincerely to be hoped that the Quebec Government, realizing the interests at stake, will take the necessary steps to perpetuate the well deserved popularity of the fishing waters of the region.

I am told that there is very good ouinanish fishing in the Mistassini below the first falls, within three miles of the lake, and they are sometimes taken readily with fly among the islands opposite Chamford, where they appear to congregate at certain or uncertain seasons, while in the Peribonca they show little appetite for fly, and are trolled for with spoon or minnow, but as a matter of fact I dare say our knowledge of their habits is only very superficial.

The lake will not be leased to clubs, and will continue open to all having a fishing permit from the Commissioner of Fisheries, but if any of the rivers which contain ouinanish are still unleased in whole or part, we may be sure they will soon be taken up.

Fishing clubs, of course, will be very conservative in the treatment of their waters, but there must be some holders of fishing rights under riparian law, who, like Mr. Griffiths, will be willing to give fishing privileges for a consideration. The ouinanish may be described as the most elegant and graceful of the Salmonoides; the back is of a deep steely blue, which breaks up first into bars on the sides, and lower down into spots of the same color; the belly is silvery white, the caudal fin unusually large, and the whole figure indicating a fish of exceptional activity. It is a fish especially adapted to seething torrents, swift currents and foaming eddies, and although it may do well transplanted into other waters, there can be little doubt that lakes with access to rapid rivers are essential to its highest development.

But although the Commissioners of Fisheries of Quebec might easily provide for the spread of this excellent game fish over the whole waters of the region, the fact remains that he has at present only a very limited habitat, but mauger his absence, the lakes and rivers of the region are among the finest fishing waters of the Province. The trout is everywhere, and I believe no larger trout are to be found anywhere than in this region. I left Quebec on Tuesday, the 23d July, and although an excursion train went out before us, the regular cars were crowded. The good people of Quebec, both sexes and all ages, were going fishing. They got off at St. Gabriel and St. Raymond to fish the neighboring lakes and rivers, and while I suppose that rivers so near such an enthusiastic angling population must be in course of depletion, it seems certain that there must be some fair catches to maintain the enthusiasm. Some of the party I believe were bound for Lake St. Joseph, which is said to contain some large fish.

The principal clubs which have already secured leases of the fishing waters are: The Little Saguenay Fish and Game Club, the Talbot, the Laurentides, the Tardivel, the Stadacona, the Paradise Fin and Feather, the Metabetchuan, the Ecarté, the A. L. Light, the Quaquakamaksis, the Springfield and the Winniniche Fishing Club (Scott's), and these occupy but a small portion of the available waters.

I got out at Lake Edward, allured by the published stories of the size of its trout, but a little inquiry made it clear that it was useless to fish with the fly or to troll. The fish were at the bottom, and bait and sinker were the recognized methods of capture. Moreover, as is the case with many places of repute, the other end of the lake was the best. A little steam tug was available, and my fellow travelers, three Minneapolitans and a Bostonian, with whom I was loth to part, determined to take the steam tug and their canoes and go into camp for a few days at the mouth of the escape. For myself I determined to stay a day and try the river with fly.

I found the trout all under eight inches, generally from five to eight; they took the fly readily enough in suitable holes, but they were not very numerous. There were but few places in which one could get access to the river, and the black flies attacked in legions.

I returned to dinner, took a boat and tried trolling on the lake without success; and as I did not care to go on to St. John until my fellow travelers returned, I spent the next day on the river.

They had also whipped the main escape and one of the feeders, getting nothing better than I; but two of the party devoted themselves to deep bait-fishing, and got fair creels of fish ranging up to 3½lbs. I reported my catch of the previous day as "seventeen fish, *all* under 4lbs."

There are unquestionably some large trout in Lake Edward, and with not a pike or dore in the lake there should be. The scenery of the lake, too, has a certain wild charm about it; being 1,200ft. above sea level and in the heart of the woods, it affords a refuge from the heat of the cities, and the hotel being commodious and well managed, it makes a pleasant place for a few days' rest; but as a fishing resort it has not justified the flourish of trumpets with which it was heralded. Still, the whole region is one of great interest to the angler and tourist, and even if the Quebec Government fails to take timely measures to keep its lakes and streams perennially stocked, its big trout and its ouinanish will doubtless survive in song and story, and their legends be told and sung by the quarrymen ages hence as they hew their blocks of gneiss for the monuments and sculpture of a coming age.

C. F. Amery.

[We understand that Capt. R. L. Ogden is about establishing a fishing club at Lake Edward, having leased of the Canadian Government valuable concessions. The club is to be limited in number of members and not to be expensive. We presume a few gentlemen desiring membership could "come in," although we do not know, as the list may be already filled.]

CAMPS OF THE KINGFISHERS.—IX.

ECHO LAKE, ONTARIO, CANADA.

AFTER the capture of the lean maskinonje we got in the boat and went back to look for the mate of the one just taken, but after fishing carefully over an acre or two of water in the vicinity where he was first struck, without success, we gave up the search and went on around the head of the lake in just the right humor to jerk the jaw off the first Canada pike that tampered with our bait.

We fished on down to the rocky point near the island, crossed the lake and got back to camp in the afternoon with some pickerel, nothing else, and we began to think the bass had all run out into the St. Mary's River, or we had forgotten how to fish for them.

Some of the boys were still out down the lake, but they came in toward sundown with a jug of water from the spring, a big loaf of bread, a bucket of milk and some more pickerel, which old Sam said "was a mighty good day's sport if they'd jest leave the picker'l out o' the count."

We began to wish the wheels of time would jump a cog or two and land us somehow into the middle of September, the time when every one in the region had told us both bass and maskys were in their best biting humor, but the cogs kept right on working the same old way, and the pickerel fishing went on as usual, with no signs of the supply giving out.

The Jedge and I had not been satisfied with our day out together, and the next morning we went down to the farm for milk and some more pickerel. At the outlet near the spring we caught a bucket of minnows with hook and line, among them a few fine chubs with which we hoped to inveigle a bass or two on the way back, but we fished all along the rocky shore across from the island with our minnows towing idly astern, without attracting the notice of bass or longsnout, and at the point where we turned into the deep bay, where Sam had taken the first maskinonje, we stopped and still-fished for nearly an hour, casting up and down shore occasionally to vary the pastime and keep our arms in practice.

But we got nothing here to reward our patience, save a solitary goggle-eye that mustered up energy enough as we were about to lift the anchor to fan lazily out from behind a rock and swallow the Jedge's minnow as it settled slowly to the bottom after a short cast in shore.

"That settles it," said the Jedge, when he had extracted the hook and tossed the red eye back in the water, "I'd rather catch snakes than rockies, any time; let's move."

Around in the bay we took five pickerel, which were duly and artistically knocked on the head with the club, and then we moved on again toward camp at a good pace, paying little heed to our minnows, which, owing to the speed of the boat, and having no sinkers on to keep them down, were twisting and skipping along at the top of the water 60 or 80ft. astern in a manner that would have set an old Tippecanoe River bass wild.

As we passed a point of bulrushes near the high cliff we saw the water fly just where the Jedge's chub was dodging from side to side in the wake of the boat, and a tug at his line that nearly jerked the rod from his hands roused him out of a drowsy daydream and brought him to his feet wide awake, while the boat was stopped suddenly and the skipper's line reeled in to be out of the way. As pickerel frequently break water when they make a dash at a bait or troller that is barely under water we felt little interest in the impending controversy, the Jedge merely remarking as the line ran off the reel, "Another Canada snake." When a short time had been given to swallow* the small chub, the Jedge gave him a "feeler" in the shape of a smart twitch with the rod, and then began a circus the like of which we had not enjoyed since we were boys, and for the next half hour we hadn't time to show any lack of interest in the final result of the struggle.

After three or four seconds of sharp, fierce play a finely marked maskinonje went in the air as high as an ordinary man's head, which brought a "hooray" from the Jedge that might have been heard at camp; and with eyes snapping with excitement he cautioned the skipper, "Handle the boat carefully, old Hickory. I wouldn't lose that fish for twenty dollars." (Mem.—Anent the leaping proclivities of the maskinonje, my individual experience with them has been, they have all left the water after being struck. I have taken several, big and little, in the past ten years, and others of the party have taken perhaps twelve or fifteen in fishing the waters of Upper Michigan, and all, save one, have left the water high out, from one to four times. The solitary exception was a 23-pounder taken in Central Lake (one of the Intermediate Chain) that never made a ripple in the water till towed by the line out on a shallow, sandy beach and struck with the gaff.)

He was using for the first time a little 7oz. all lancewood rod of his own make (the Jedge was quite an accomplished amateur rod maker), and a half dozen times during the dispute for the mastery it looked as if it would certainly go to pieces; but it was a wonderful stick, and stood a strain that would have smashed nineteen rods out of twenty, as rods are made.

Three different times the fish dashed under the boat so suddenly and without warning that the skipper hadn't time to swing it around and give him a free line; and each time, laboring under the excitement and nervousness of his first battle with a maskinonje, the Jedge held on to the reel handle with grim determination, preventing the running of the line, till the almost overtasked little rod was actually, not figuratively, doubled, with the tip under water, and nearly in sight on the further side of the boat, a catastrophe being only averted by a violent stroke of the oars in opposite directions, and some mighty warm-tinted language addressed to him on the impulse by the skipper that would hardly bear a reproduction in these chronicles.

Once, as the fish rushed past the bow of the boat, the line caught on the bow-stem as it went by, and for a moment we thought the sport would end right there; but the Jedge was induced by a few well-selected and very brief remarks to take his thumb from the spool for an instant and give the rod an upward flirt, which cleared the line without cutting; and the game fellow kept on out in the lake under a pull that called on every fiber of line and rod to do its share of the work, so determined was the Jedge to give the new rod, as he said, "a fair test."

Again the fish went in the air with wide open jaws, to rid himself of the hook as it seemed, only to fall back still full of fight and swing away around astern shoreward in dangerous proximity to the rushes; but by the combined stubbornness of the rod and the Jedge, he was held away and headed back for the boat.

He was swimming slower now than at the start, but he went by us close to the stern in plain sight, with his "propeller" working four or five strokes to the second; and as the line pulled taut and the little rod got down to its work, we followed him under an easy strain 50 or 60yds. out in the lake into deep, open water, where he was at last worn out with the ceaseless pull and brought alongside, when the skipper jerked the gaff in his lower jaw and lifted him in the boat, the bravest and gamest and best fighter for his size that ever lost his life at the hands of any of the Kingfishers.

He flopped and "thrashed" around in the boat till exhausted for lack of water, when he lay gasping quietly, while the Jedge secured him with a stringer, cut the line above the gimp, leaving the hook in his throat, and hung him on the pocket scale where he registered just 10lbs., not an ounce more, for the Jedge was too honest to take advantage of the fish-market method of "slanting the scale," and then we wondered where all the strength and dash and fight were concealed in so small a fish. The difference in the hustling qualities of this one and the one taken the day before was so marked that we could hardly believe they belonged to the same tribe, but the Jedge settled it to our satisfaction by laying it, in the case of the other and larger one, to "a dyspeptic and empty stomach, while this healthy, well-fed fellow, if you'll notice, has a belly on him like a beer brewer." He swung him over the side and tied the cord to the seat rail; and then we hooked on a couple of fresh chubs and pulled back near the rushes to see if we could get another one, with the Jedge in such great good humor with himself and so elated over the performance of his rod that the little boat seemed almost too small to hold him.

We ran over the water half a dozen times without feeling a symptom, and then pursued our way upshore with a twinge of disappointment racking us, for it always seems that where one good fish is taken there ought to be another.

A quarter of a mile further along I struck and wore out a 3½lb. small-mouthed bass, and although the battle was much shorter than that with the maskinonje, it were hard to tell which was the most inflated with "tickle," the Jedge or "James Mackerel," for it was the first bass I had taken in the lake (it was the last one as well), and it was an event to feel good over; besides, it was proof that there were good bass in the lake. But another half hour of patient fishing failing to raise another, we reeled up and started to camp, more than ever convinced that the black bass of Echo Lake were fuller of whims and crotchets and perversity than our grizzled comrade of many years, old Knots, and after all, this was making out rather a mild case against the bass.

When we got back to camp we found Knots sitting out on the end of the dock in his camp chair, so lost in the tangles of some new figures he was abstractedly weaving in his landscape across the lake that he barely noticed us as the keel of our boat grated on the beach back of him; but when the Jedge held up the maskinonje and called to him, he left his chair and came out, and surprised us by really admiring the fish without harrowing our souls with the expected, time-frosted query, "Where did you buy him?" whereat the Jedge was moved to say in an "underground" tone, as he furtively watched Knots to be sure he was not overheard, "The 'old lady' must have confined himself to a water diet to-day," but happily the pleasantry failed to reach Knots's ears, and the Jedge saved his scalp.

The others were still out, Sam and Charley back somewhere in the hills with their guns, and Dan and the "kids" up near the head of the lake fishing; but they were all in at supper time, the hunters with a bluejay and a chipmunk and the anglers with a few more pickerel, but they had seen a big maskinonje in the shallow water across the lake, and old Dan was almost as happy as though he had brought him to gaff.

But we were getting tired of pickerel, and began to yearn for some old-time sport with the bass and the tangles of the trout streams of northern Michigan.

Kingfisher.

* The ninnies that go to the woods in knee breeches might possibly feel easier in their minds were the word gorge used.

The revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

TAKING IN A BIG ONE.

AWAY back in 1863, then a sixteen-year-old boy, I first visited the Androscoggin Lake system, so generally miscalled the Rangeleys. While the visitors were by no means as numerous as to-day, they made up in lawless wastefulness of the trout for the less number as compared with to-day. The bulk of the fishing was done on the spawn beds in autumn, and tons upon tons of those huge trout, for which the region is noted, were snatched off the beds by all sorts of barbarous means, and in many cases left to rot in piles upon the banks of the streams. The party, of which I was one, found their way to the "big" lake, as the Mooselucmaguntic is locally known, by way of the town of Byron, going with teams to the borders of civilization to the Romantic House, then owned and kept by old Mr. Houghton, father of the present proprietor. This Mr. Houghton, the elder, was a large owner of timber lands in the region east of the big lake and south of Rangeley Lake. He early saw the sporting advantages of the region, and was among the first to endeavor to attract travel. At large expense he cut a path through the primeval woods twelve miles to the mouth of the Bemis stream, where the New York camps and Capt. Barker's establishment are now located. Some carrying of supplies over the rough path had been done with ox teams, using sleds, as it was impossible for a wheeled vehicle to get over the road. Our party, however, hired several of the backwoodsmen to carry huge loads of provisions and camp supplies, while each of the party made up a load for himself of blankets and camp impedimenta of such weight as he thought himself able to carry. And how those packs did grow in weight and unwieldiness before that twelve miles was tramped over! Arrived at the mouth of the Bemis, camp was quickly arranged, and a couple of boats belonging to Houghton hunted up, and the campaign against the trout commenced. It was early September and but few trout were in the stream, hence most of the fishing was done in the lake off the mouth of the stream. Sufficient trout of good size were caught to supply the party, but none of the big ones we had heard so much of.

Up the lake shore, a short distance above the mouth of the stream, a tree had either fallen into the lake or had lodged there at some time of high water, and the roots lay on the shore, the top extending out into the lake. I had noticed large fish rising just beyond the outer branches a number of times, and had fished from the tree once or twice each day, but with little success, as the big fellow which I had seen rise there would not take the lure. One day had been so windy as to preclude any fishing in the lake, until about sundown, when the wind went down. Taking my rough outfit I proceeded to the tree and worked my way out to a fairly secure footing among the outer limbs of the tree. The action of the water had broken off most of the limbs at or near the body of the tree, leaving only one or two of the biggest limbs of any length. The trunk of the tree being slightly crooked, there were several feet of the trunk under water, and these were very slippery. Beyond, the trunk again reached the top of the water, and the springing out of limbs near the end made a fairly secure standing place. I saw my big fish roll up near the top of the water, and his huge dimensions revealed in the glimpse made me determined to catch him if I stayed on that old tree during the rest of my time at the lake. I fished with good courage until nearly dark, and had turned to pick my way over the submerged portion of the log, still leaving my baited hook in the water, when just as I had placed both feet on the slippery under-water section of the tree I got a tremendous strike at the hook behind me. I struck as well as I was able, and tried to turn and face the music, when my feet slid off the greasy log and I gently proceeded to compare my height with the depth of the very cool water. I went in up to my breast, but had instinctively kept my rod upright, and my fish was still hooked. I bawled for help at my loudest, but do my utmost, I could make no one hear. Then I tried to get back upon the log, but it was impossible to do that and at the same time keep my rod sufficiently upright to control the fish.

Between where I stood and the shore there was but one limb projecting out from the tree far enough to interfere with wading ashore. That limb, however, was 8 or 10ft. long, and projecting from the tree at an obtuse angle of course led out into somewhat deeper water, and I was fearful that it might be over my head. Deciding to try it I worked my way to the limb, and putting my left arm around it began working my way along toward the end, hoping to be able to get around the end of the branch, when it would be easy to get ashore. But this was not easy by any means, with a big trout pulling like a mule at the end of the line, and, mind you, no reel. The rod was a four-joint bamboo, sixteen or more feet long, and its spring made it possible to control the fish, with the stout line and large hook, which completed the rig. I worked my way slowly along the limb, the water deepening with every step and my heart sinking much more rapidly. I had caught sight of a broad tail, which astonished and delighted me at the same time, also increasing my misery to the point of despair. But perseverance had its reward, and I finally succeeded in rounding the end of that branch, though I could barely keep my mouth out of the water. Once around the limb, a few steps gave me good foothold, and I quickly pulled in my big beauty, who was pretty well exhausted, and I was not much better. Halting thigh-deep in the water I drew the fish to me, secured a solid grip in his gills and waded ashore triumphant. Laying my prize down on the beach I viewed him over, and every angler will understand my exhilaration. I felt fully rewarded for my tremendous ducking and was not at all affected by the cold.

Taking up my fish I made my way to the camp. On arrival there, and holding up my prize in the light of the camp-fire, for it was then nearly dark, such a shout as went up was a further lift to my feelings, and I felt like a hero of old. A gun known to weigh 9lbs. was hung by the guard on a stick, my fish on the other end, and balancing the stick in its center, the fish was decided by all to weigh nearly as much as the gun. The next morning we were visited by a New York man and his guide, who had been windbound on the way from Trout Cove, at the outlet, to the Bemis, and had camped on the beach over night. In his kit (which, by the way, was the first fly-fishing outfit I had ever seen) was a pair of spring balances. My fish weighed 8½lbs. I have since caught another which weighed the same, though weighed within thirty minutes after being taken from the water, instead of fifteen hours after, as in the case of the first; but I shall never accomplish anything in the sporting line which can so completely satisfy my ambition as did this first big trout. All the circumstances attending that capture are perfect in my memory, and the picture of that tree lying out in the lake, with its surroundings, and the picture of the group of astonished faces at the camp, lit up by the glow of the camp-fire, will never fade.

NOR'EAST.

ABOUT LAND SHARKS.

NEW YORK, Aug. 4.—*Editor Forest and Stream:* Does salt-water fishing "pay?" is a quettion I have been revolving in my mind; and the conclusion I have come to is, that it don't if one is dependent on hiring boats at the various points along the coast where there is supposed to be any possibility of successful fishing.

I have just returned from a coastwise cruise (on shore), during which I visited Nantucket, Martha's Vineyard, New Bedford, New London, Newport, Block Island and Fire Island; but I found that unless one was prepared to enjoy the sport at a cost to render it a question of how much money one could afford to squander in the uncertain pursuit, and unless he was prepared to be victimized to the tune of $10 or $12 a day, he had better not undertake to gratify his fishing proclivity. At all the places named, I found plenty of boats on hire, but the owners or sailing masters demanded universally $10 a day for the use of the boat, with perquisites in the shape of "treats," lunch, and the fish caught. Add to the hire of the boat the cost of bait, lunch, sundry bottles of beer, ice, etc., and what it leaves of $12 is represented by 0.

The time was when $5 a day was considered quite enough to pay for a boat, but this summer the price has been advanced to $10 universally, and it seems as if every man having one to hire tried to see just how much of a swindle the public would stand. Of course where there is a party of 8 or 10 the tax is lightened, but it does not mitigate the swindle, and moreover who wants to go out with a party of that size? Some get sick and want to go home early in the action, some get tired or discouraged, and it is anything but pleasant.

In the height of the season, for a month, perhaps, there are parties enough to give business to boats even at such a price, but I saw boats lying at the landing at Nantucket and Martha's Vineyard the entire day without a job, because sensible people would not pay the price, while at moderate rates they would have been constantly employed, netting much more money in the end. But it has got so that every man having a boat or a horse to rent considers it his special privilege to gouge and rob to the fullest extent, until it has become a question whether it is not better to abandon the attempt altogether to indulge in salt-water fishing, as uncertain as it is at best; for it is a remarkable fact that one finds that he is always a day too late, or the wind or tide or something is wrong. It is either too late or too early. You are told that you should have been here last week, and then follow the usual yarns of the number of fish old John Brown caught, or the hundreds of pounds a gentleman from New York (name given being a mythical one) raked in. You are encouraged to try it again to-morrow, and expend another $12 for the benefit of the boat owner.

I met a gentleman at Nantucket who assured me he had expended three days' time and a matter of $36 in pursuit of bluefish and other kinds, and the result was one fish each day, one bluefish, one flounder and one 'cunner," costing $12 each day, and he gained a nose so red as to jeopardize his character as a prohibitionist. Newport is as bad or worse. A boatman charged me a dollar to take me over to Fort Adams (he at first wanted $2), the usual price in past times has been 25 cents. It don't seem to make much difference where you go. It is swindle and gouge—robbery is a more appropriate word for it, and, unless a man is a millionaire, it is sheer folly to undertake to go to the sea coast to fish. If one contemplates remaining in one place any length of time it is cheaper to purchase a small boat and be his own boatman, and at the end of the season sell at the best price he can, or store it away for another year.

I for one am disgusted, and henceforth shall give all these places a wide berth and turn my face inland or to the western rivers and lakes, where summer seaside fashions have not yet penetrated. No more Martha's Vineyard or Nantucket for me.

PODGERS.

ST. LAWRENCE FISH PROTECTION.

IN taking the presidency of the Anglers' Association of the St. Lawrence River, Mr. H. H. Warner, of Rochester, announced his determination to head off illegal netting. He said:

"Sixteen years ago I built my cottage on what is now known as Warner's Island. During the first year or two of my sojourn I became wonderfully attached to the spot and spent several seasons there, enjoying the magnificent fishing which was then without equal in America. The quantity and quality of the fish were superior to any other locality. I continued my visits annually for several years, but I could gradually see that the fishing was becoming less and less. About ten years ago I came to the conclusion that unless the people became aroused—the sporting men of the country—fishing at the Thousand Islands would soon be among the things that were. During that time I protested against the wanton slaughter of game and fish, in and out of season, but was looked upon as an interloper and intruder, from the fact that I was continually agitating the question of protecting the fishing grounds. In my journeying among the islands I could see dotted here and there, nets of all kinds, set for the purpose of securing what it was claimed was a livelihood for a few. Perhaps half a dozen may have earned a pittance, to the injury of the many. This practice has been more or less continued up to the present time, although since the organization of the Angler's Association much has been done for the purpose of protecting the fish for the benefit of masses. In the immediate locality of Alexandria Bay the laws are now ample, but it is very important that the distance for protecting these fish be extended, and I give you my positive assurance that I, as president of the association and as a private citizen, will use my best endeavors to see that a proper law is drafted and presented to our next Legislature, and I have every reason to believe that the entire Thousand Islands will be properly protected in the near future. I am very glad to know that the Anglers' Association has the hearty co-operation of the largest and best part in and about the Thousand Islands, and of the State and entire country. This famous fishing resort can no longer be claimed as belonging to Jefferson county of New York State, but it is one of the favorite resorts of the people of the whole country. I believe it is now generally conceded that the Thousand Islands and the river St. Lawrence form the most beautiful and attractive summer resort in the world, and with reasonably good fishing, such as we had in former days and before the conveniences of railroads and distribution of fish by the netters, which has in a measure almost reached a point of what you might term extermination, it will long continue so to be. As to the remark that I have often heard made, that it would be impossible to exterminate the black bass of the St. Lawrence, I desire to say that from the best information possible this wonderful game fish would undoubtedly have been exterminated by this time if it had not been for the zealous efforts of the Anglers' Association to protect them as far as possible. In conclusion, allow me to say that during the term of my office there will be very little netting and violation of the law by people along the river, be they Americans or Canadians, and I will give the Association my positive assurance that during the coming winter they will find it very unprofitable to attempt to fish through the ice. Neither will they be allowed to make any pretense of notifying the game officials to witness the raising of nets for the purpose of assorting and pretending to return to the waters what are considered game fish. I will say emphatically that all such courtesies as allowing nets to be set for any sort of fish will not be permitted."

HENDERSON BAY FISHING.—*Editor Forest and Stream:* While casting about for a short vacation it was my good luck to decide upon Henderson Bay, Jefferson county, N. Y., and my further good luck to secure quarters with Mr. E. Tyler, probably well-known to many readers of the FOREST AND STREAM as having taken an active part in securing good protective laws for the fish which abound at the bay. During my stay of two weeks, I did not come in contact with a single "fish hog" nor a single gentleman who was not perfectly willing to put back—after having landed—all black bass of less than 1¼lbs. and all pickerel of less than 2½lbs., according to the request of Mr. Tyler and his guides. There is a fully equipped work shop provided here where broken gear, or unsuited tackle can be made good on the grounds. Many thanks are due Mr. Tyler for his carful watch over the interest of sportsmen. It is my earnest desire to see this moral law more generally enforced with respect to fish and game, as I earnestly believe that from it come all good statute laws, and in it lies the greatest protection to the game and fish of the future.—SID BROMLEY.

LOCKPORT, N. Y.—The Lockport *Express* has this on three local anglers: "Lockport has many of the best anglers in western New York, and among the most successful of the number are District Attorney D. E. Brong, ex-County Clerk John A. Merrit, ex-Supervisor C. W. Hatch and Master Mechanic Frank N. Trevor. As piscatorial artists they have often surprised the most successful disciples of Izaak Walton and created envy among the professional anglers of the town. They studied the almanac carefully, watched the weather reports, gauged the thermometer and barometer and most everything else, including the phonograph, and came to the conclusion that Tuesday, Aug. 27, was the identical day for unprecedented success, and Oak Orchard Harbor the place of destination. The story of yesterday is soon told. They left town on the early train for the east some time before daylight, and returned on the 12 o'clock train last night. They fished all day vigorously and vivaciously and did not get a bite. To-day they are posting up their expense accounts, but no estimate can be made of their wounded feelings."

SUSQUEHANNA BASS.—Athens, Pa., Sept. 5.—Mr. Tom Stonier and F. M. Frost returned last night from a day's fishing on the Susquehanna at Mehoopany, Pa., and brought back as trophies of their skill nearly 75lbs. of fine bass. The largest black bass weighed 6½lbs., while several Susquehanna salmon, "yellow bass," were taken which were nearly as heavy, small bullheads being the principal bait.—P.

THE NIAGARA RIVER BASS FISHING IS CAPITAL.—On Aug. 28, off Fort Niagara, these scores were made by trolling: P. H. Buckley of Niagara Falls, Ont., took 25; H. R. Buckley of Philadelphia, 30; H. L. Coryell, Philadelphia, 27; Joe Gresy, Forest Avenue, Black Rock, 55; Fred Smeading, Buffalo, 30; George Keller, Buffalo, 32; J. L. Alberger, Buffalo, 35; Calvin Phelps, Buffalo, 50.

Fishculture.

FISH BREEDING IN CANADA.*

WE gather the following interesting facts concerning fish breeding in Canada during 1888 from Mr. S. Wilmot's report, as Superintendent of Fishculture. Mr. Wilmot finds that owing to the increase of population and improvements going on it is found that the food-fishes of Canada are decreasing, and that it has become necessary to protect them by proper legislation and the introduction of improved methods for the restoration of this important food. He states that "This desideratum has in a large degree been reached by the greater portion of the civilized governments of the world, by adopting the science of artificial fishculture, an industry which thus far, wherever introduced and extensively carried on, has produced most satisfactory results by restoring many waters to their original standard of fish wealth; and replenishing others with the higher orders of fishes by the acclimatiaztion of young fish reared in public fish-breeding institutions." There are twelve fish hatcheries in Canada. The output of fish fry during 1888 exceeded that of any previous year. The kinds and numbers of fish planted were as follows:

Atlantic salmon (*Salmo salar*)	8,156,000
Pacific salmon (*Quinnat* and *saw-quai*)	5,807,000
Salmon trout (*Salvelinus namaycush*)	7,320,000
Brook trout (*S. fontinalis*)	176,000
Pickerel (doré, *Stizostedium*)	25,000,000
Black bass (*M. dolomieï*)	1,000,000
Whitefish (*Coregonus albus*)	40,650,000
Grand total	88,109,000

* Report on Fish Breeding in the Dominion of Canada, 1888.

The whole number of fry planted since the commencement is 636,844,900. Of these 463,709,000 were Salmonoids, and the others of Percoids and Centrarchoids (pike, perch and black bass).

Mr. Wilmot pays a grand compliment to the fishculturists of the United States. He says: "While nearly all the countries of the Old World are actively engaged in the art of artificial fishculture, it is found that in America also the industry has been entered into with more vigor than elsewhere, and nowhere has the same amount of effort been put forth to utilize the science of fishculture for resuscitating declining fisheries in the general interests of the inhabitants, than is shown to be the case in the United States of America, where, by the almost unbounded liberality of the Federal Government, and by the larger proportion of individual States of the Union, this work is generously supported and extensively carried on; and large sums of money are annually granted from the public treasury for the erection and maintenance of Federal and State fish hatcheries, and for employing professional experts, who are well versed in ichthyology, and also appointing persons having a practical knowledge of the wants in each State as Fishery Commissioners, whose duty it is to look after the fisheries and fishoulture, and husband the work to its fullest extent. Over and above this Government patronage and support, fishculture is now being extensively carried on by private enterprise in many parts of the Union. This is shown by the fact of the numerous advertisements of proprietors of fish farms, so to speak, offering for sale fish eggs and young fish of various kinds, bred in their private nurseries."

In conclusion Mr. Wilmot states that the Canadian fish hatcheries, their apparatus and appliances are in good working order, and that the large output of young fish during the past season has been safely and satisfactorily accomplished, also that the eggs now in the hatcheries present a healthy and vigorous appearance; that the reports from the different hatching stations indicate that fishculture as pursued in Canada is active, progressive and successful up to the limit which it has reached, but he is fully convinced that the enterprise has not yet become sufficiently expanded nor is it placed upon such a broad and satisfactory basis as its importance demands, and closes with the following words: "I therefore fully indorse the sentiments of the leading fishculturists of the United States, and the policy of that country when it is said that 'Public fishculture is most useful when conducted upon a gigantic scale—its statistical tables must be footed up by tens of millions. To count young fish by the thousand is the task of the private propagator: and that the prosperity and wealth of the fisheries of the present day are entirely under the control of the fishculturist to sustain or to destroy, and capable of immense extension.'"

FISHCULTURE IN ILLINOIS.—The work of restocking the streams of Illinois, which was commenced in 1887 on a large scale, has been carried forward during the past year and the present summer. This year much has been accomplished, thousands of fish have been seined out of sloughs and holes and transplanted in suitable waters. The species handled are principally black bass, large and small-mouth; crappie, two species; sunfishes, white bass, perch, pike-perch, pike, pickerel, buffalo fish, and catfish, several species. These are taken from the seines and placed in live boxes, to be kept until the arrival of a transportation car, in which they are carried to their final destination. The cars are loaded by the U. S. Fish Commission, and are especially fitted for such work with large boxes holding from 80 to 100 gallons of water. The cost of transporting these fish is comparatively small, as the railroads throughout the State haul the cars free of charge. This method of stocking streams will undoubtedly result very successfully. These fish, varying in length from 3 to 14in., planted in suitable waters, will soon mature and breed, and should multiply in numbers very rapidly. The Commissioners of Illinois deserve the support of their Legislature and of all others interested in the subject of fishculture.

FIXTURES.

DOG SHOWS.

Sept. 9 to 12.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary. Entries close Aug. 28.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary. Entries close 11 A. M., Sept. 9.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager. Entries close Sept. 5

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary. Entries close Aug. 31.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Company, Toledo, O. Chas. E. Rowland, Secretary, Box 423. Entries close Aug. 26.

Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Sect'y. Entries close Sept. 4.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y. Entries close Sept. 7.

Oct. 1 to 3.—Third Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. F. C. Barnes, Secretary.

Oct. 8 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary. Entries close Sept. 28.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

REGISTRATION IN THE GAZETTE.

Editor Forest and Stream:

In answer to the communication which has appeared in the several sporting papers signed by the Stud Book Committee of the A. K. C., upon their action in increasing the fee for registration in the Stud Book from fifty cents to one dollar, and in answer to a letter from Mr. Anthony (who is one of the advisory committee of the A. K. C.), permit me to say that from the commencement of the publication of the Stud Book by the A. K. C., and which was published every three months until Jan. 1 last, the income derived therefrom, which was fixed at fifty cents for each registration, was found sufficient to defray all of the expenses for the publication of the same, notwithstanding the fact that at and during said time a rival register was being published by the Forest and Stream Publishing Company, and notwithstanding the fact that during a portion of said time a rival club was in existence, composed of about two hundred breeders, and during that time less than half the number of clubs than we now have were members of the A. K. C.

On Jan. 1 last the A. K. C. commenced the publication of the *Kennel Gazette*. The rules were so changed that only dogs whose pedigree could be traced unto the fourth generation could be registered in the Stud Book, while any mongrel could be registered in the *Kennel Gazette*. An upper and under secretary were employed by the Kennel Club, the former receiving a salary of $1,500 a year, while the second agreed to be satisfied with $1,000. The duty of the first was to edit the *Kennel Gazette*, while the second became editor of the Stud Book. The registration in the *Kennel Gazette* was fixed by the rules at twenty-five cents per dog, while the registration in the Stud Book had previously been fixed at fifty cents. The first number of the *Kennel Gazette*, after many barks and a few howls, dawned upon the doggy world in January last. From an examination of that issue I find that there were 45 dogs registered whose sire and dam were known, 3 that were half orphans, and 4 mongrels without any pedigree whatever, making in all, during the month of January, 52 dogs.

The income to the *Kennel Gazette* from the registration of these 52 dogs was $13; the income for advertising I will estimate at $100, which, with the $13 for registration, make a total of $113 income. The expenses are: Salary of secretary, $125; rent, $15; cost of the *Gazette* as per treasurer's report, $365.64; postage and stationery, say, $20; making a total of $525.64 expenses, from which take income, leaving a net loss to the club of $412.64 for the first month.

Now we will take the eight months, and we find that 1,904 dogs have been registered from Jan. 1 to and including the August issue of the *Gazette* as follows:

January	52
February	510
March	534
April	464
May	299
June	33
July	6
August	6
Total	1,904

Now, the income derived from the above amounts to $476. Let us now submit the following statement of income and expenditures, which, I believe, will be found to be very nearly correct for the eight months now past:

Expenses.

Salary of secretary	$1,000
Office rent	125
Due associate members for two registrations in Stud Book	327
Due associate members 327 Stud Books at $3	981
Due associate members 327 *Kennel Gazettes* at $2	654
Publishing the *Kennel Gazette* at, say, $200 per month	1,600
Incidentals, including stationery and postage, say	300
Total	$4,987

Receipts.

1,904 dogs at 25 cents	476
Advertising, estimated	800
Received from associate members (if all have paid)	1,635
Total	$2,911

Showing a net loss to the club of over $2,000 for the eight months.

Mr. Anthony says that the *Kennel Gazette* is the money making end of the A.K.C. I have great respect for Mr. Anthony's opinion, but will he kindly give us the figures? I will venture this: If Mr. Vredenburgh will make a report of the financial status of the A.K.C. at their next meeting a deficit will appear, showing substantially that I am correct.

Now we will take a look at the Stud Book, and we will find that since January last there have been registered 1,875 dogs, for which the A.K.C. has received $937.50.

The expense to the club is the salary to the under secretary for the eight months, which is $666.67; rent, say, $125; stationery and incidental expenses, say, $200, making a total of $991.67; so we find that the office expenses have so far more than absorbed the revenue received for this account, and evidently there is no money now in the treasury to publish the book on Jan. 1 next. The big drain on the Stud Book has been the *Kennel Gazette*. Taking out about 20 per cent. of the dogs registered in the *Kennel Gazette*, which are classed with pedigree unknown, and then, say, 30 per cent. more whose pedigrees would not go to the fourth generation, this would leave about one-half the dogs registered in the *Kennel Gazette* to be registered in the Stud Book, and the Stud Book account would be increased by doing away with the *Gazette*.

I am of the opinion that breeders will not pay the one dollar to register their dogs, and when I see that the Westminster Kennel Club, which is annually able to come out thousands of dollars ahead, the richest club in the country, having millionaires among its members, to save the paltry sum of twenty-five cents on the registration, will register the get of that grand little dog, Naso of Kippen, out of their well-bred Kate VIII., and attach the name of Westminster Ben to one and Westminster Cato to the other and have them published as registered pointers by the A. K. C. in the *Kennel Gazette* with Belle II., whose sire was unknown; with Columbus Nig, whose sire and dam were unknown, and with Dan, whose pedigree is unknown, and with Fan, whose pedigree and date of birth is unknown, and with Fanny and Fanny II., both without a pedigree, and Frank and Guy, whose pedigrees are unknown; while Spot II. and Spy came into the world and into the *Kennel Gazette*, with the same uncertainty, their pedigrees being unknown, I also find in the same *Kennel Gazette* of March, registered with this collection of mongrels, published to the world as registered under the head of pointers, not only the two above named, the get of Naso of Kippen, but the get of Bang Bang, Donald, Tammany, Mainspring, Sensation, Nick of Naso, Robert the Devil, Lad of Bow, and other well-bred pointers.

Now, if the Westminster Kennel Club, to save 25 cents, are willing to class their well-bred dogs, with their kennel name affixed, with the above designated collection of mongrels, what are we to expect from the struggling breeder who lives upon the mountainside when the A. K. C. increases the registration fee to $1? When rich breeders like the Rutherfurd Bros. will register their well-bred fox-terriers in the *Kennel Gazette* among a lot of mongrels to save the 25 cents, what shall we expect from the poor breeder when the A. K. C. increases the registration fee to $1?

The object of a registration is to preserve the pedigree and thereby improve the breeding, and by stages increase the certainty of pure blood. The Stud Book should be published quarterly, and no dog should now appear therein unless the descendant of previously registered dogs, or with a pedigree going back to the fourth generation; and the registration fee should be made so cheap that every one who owns a well-bred dog would avail himself of the opportunity to register it. At the next meeting of the Executive Committee I hope the secretary will make a detailed statement of the financial condition of the A. K. C., and that the delegates will see the wisdom of doing away at the earliest moment with this costly and useless publication, the *Kennel Gazette*, and the necessity of cutting down the expenditures and publish the Stud Book every three months. Also the necessity for doing away with the associate membership, which is undermining the local clubs throughout the country that give the shows.

If a member of the New Jersey Club who pays $10 a year dues as well as his proportion of losses in giving a show, as well as his time, which is necessary to the club, wants to register two dogs, he pays the fee to the Kennel Club, which is now $1. If he wants a *Kennel Gazette* for the year he pays $2; if he wants a Stud Book, when it comes out, he pays $3.

The associate member, who pays nothing for dues to the local club, takes no liability for show losses, gives none of his time, gets now back what the A. K. C. charges the member of the local club $6 for, and when the raised registration fee goes into effect $7, for $5. My estimate of the deficit now in the *Gazette* and Stud Book accounts is about as follows: $2,076 in *Kennel Gazette*, $54.17 in Stud Book. This deficit will be considerably increased during the balance of the year, and if it were not for the associate members the Stud Book would be more than self-sustaining. I am glad to see that breeders are realizing the worthlessness of this *Kennel Gazette*, for I find that during the month of June there were only 33 dogs registered in the *Kennel Gazette*, 10 of which were mongrels. In the month of July there were only six dogs registered in the *Kennel Gazette*, two of which were mongrels. In August only six dogs were registered in the *Kennel Gazette*, three of which were mongrels. Is it worth while for the dog breeders of this country to contribute about five hundred dollars a month for three months to the *Kennel Gazette* to register these forty-five dogs registered in June, July and August, and do not the figures convince every thinking dog breeder that the time has arrived when I should have the opportunity, which I have long desired, to write the obituary of the *Kennel Gazette*? The pen will not be steeped in gall.

The venture was made upon the deliberate judgment of almost every delegate of the A. K. C. They believed that it was not only practical, but for the best interests of the club. I have no fault to find with any delegate for the course he has pursued. I am as strongly and firmly convinced as ever that the A. K. C. and the Stud Book are necessities; that they should not be torn down, but built up. And upon reflection, the experiment having been tried, is it not a palpable fact that we should now make this change?

PESHALL.

JERSEY CITY, N. J., Sept. 7.

GERMAN MASTIFF OR GREAT DANE STANDARD

CHICAGO, Ill., Sept. 7.—*Editor Forest and Stream:* All breeds of dogs have their distinctive features and characteristics, by which the particular family to which they belong may be recognized and judged. Of the various breeds, none are more imposing nor distinguished in appearance than the German mastiff, or great Dane, or the Deutche dogge, which in early times was commonly called the boarhound. Later, the heavier-bodied specimens were known as the Ulmer dogge, and the lighter-bodied as the Daniske dogge, or great Dane, now known in Germany, the home of the breed, as the German mastiff, but better known in England and America as the great Dane.

The enormous size, splendid proportions, great strength, fine action, dignified and elegant carriage, superior intelligence, courage and fidelity of the German mastiff or great Dane, mark the breed as approaching the perfection of the canine race.

This dog, as the name boarhound (originally applied to the breed) indicates, is particularly adapted to animal hunting, and in early days was used to hunt wild boars and other large game. But, while splendid on the hunt, as a companion or guard, he has no superior. There is no large dog better fitted for a house watch dog, for his coat is short and fine, and is easily kept clean, while his habits and temperament are unexceptional. His growing popularity amply attests his valuable qualities, and he only needs to be known to be appreciated.

The following are the points and their value of the German mastiff or great Dane, adopted Sept. 4 by the German Mastiff or Great Dane Club of America.

General Appearance.—The German mastiff or great Dane is remarkable in size, of powerful and elegant build, strong and muscular, of high courage, supple in action, graceful and dignified in carriage and in movement. The coat is short and fine, the head and neck are carried high with a distinguished air, the ears are rather small, and when uncropped somewhat resemble those of the greyhound, but when cropped are carried upright, something like those of the bull-terrier. The neck is strong and well arched, and should be without dewlap. The tail is fine and tapering, and is carried on a line with the back, with a slight tendency to curve at the extremity. A too highly curved tail, or carried too high, gives the animal a very common appearance, and is a serious fault. In general appearance the German mastiff or great Dane is not so massive or clumsy as the English mastiff, nor so light and leggy as the greyhound, but somewhat resembling both, or what might be considered a satisfactory medium between the two; and in formation indicates great strength and activity. In disposition he is gentle and affectionate, yet courageous, and bears the stamp of nobility of character. He is devoted to his master and friendly with those he knows, but is not inclined to be free or familiar with strangers. When aroused he displays his strength and courage, but because of his intelligence and temperament he is easily governed even when under excitement.

Height.—In height dogs should not be less than 30in. straight measurement at the shoulder, and bitches should not be less than 28in.

Weight.—Dogs of the above height should weigh not less than 120lbs., and bitches not less than 100lbs.

Body.—The body should be long, somewhat inclined to roundness and compact. Belly well drawn up, yet well proportioned—not gaunt nor tucked up like the greyhound, but showing muscle and strength.

Head.—The head, or skull, should neither be domed nor flat; rather lengthy and not too broad; the frontal bones slightly raised; little indentation between the eyes, with very little or no stop; cheek muscles well developed; face not too broad. The whole formation and expression of the head and face should rather more resemble the hound than the bulldog or mastiff, except the muzzle, which is not like that of any other breed, as the German mastiff or great Dane has a muzzle peculiarly his own, the entire head and face, but much heavier, more nearly resembling those of the approved bull-terrier than of any other breed. Too much resemblance to the hound is a fault.

Ears.—The ears should be small and carried high, something like those of the greyhound. The ears may or may not be cropped. When cropped they resemble those of the bull-terrier.

Eyes.—The eyes should be small, round and deeply set, with a sharp expression, and may be light, or the various shades of brown and hazel, or in harmony with the general color of the dog.

Nose.—The nose should be large with bridge well arched.

Muzzle.—The muzzle should be broad and strong, and rather square, or blunt, at the point.

Lips.—The lips in front should be blunt, not hanging too much over the sides, but with well defined folds at the angle of the mouth.

Jaw.—The lower jaw should neither be short nor long, but should bring the teeth to meet evenly.

Neck.—The neck should be rather long, very strong and muscular, well arched, without dewlap or loose skin about the throat. The junction of the neck and head should be strongly pronounced.

Forequarters.—The shoulders should be sloping and muscular, the elbows well under, and neither turned inward nor outward.

Legs.—The forearms should be very muscular, with large bone, knees strong, not bent; ankles or pasterns muscular, and the whole legs straight, strong and well proportioned.

Chest.—The chest should be of good width, but not too broad, deep in the brisket.

Back.—The back should be muscular, and not too long, nor hollow, nor quite straight, but showing a very slight tendency to arch.

Loin.—The loin should be broad, strong and well arched, and muscular above and below.

Tail.—The tail should reach to the hock, strong at the root, fine and tapering to the end, and be carried horizontally with the back, or very slightly upward, with a slight tendency to curve at the extremity; but must not curl, or be carried high, or over the back.

Hindquarters.—The buttocks or hips should be well developed and strong, rounding gradually to root of tail; thighs muscular, with good bone, and second thighs long and strong—hocks well let down, or low, and straight, turning neither in nor out—ankles strong in bone and muscle.

Feet.—The feet should be large and round, and well set on ankles, turning neither inward nor outward. Toes well arched and closed, nails strong and curved.

Hair or Coat.—The hair or coat should be short, hard and dense, with no fringe or long hair on legs or tail.

Color and Markings.—The recognized colors are the various shades of gray or blue, mouse color, black, white, red or fawn; also brindle, or tiger-striped on white ground, with patches of dark colors. The single colors are sometimes accompanied with markings of a darker tint about the eyes and muzzle, and with a line of the same tint, called a trace, along the course of the spine. The above ground colors appear in the brindles, and in the striped and mottled specimens. In the one-colored specimens the china or wall eye rarely appears, and the nose more or less approaches black, according to the prevailing tint of the dog, and the eyes vary in color also. The mottled specimens have irregular patches or clouds upon the above-named ground colors, in some instances the clouds or markings being of two or more tints. With the mottled specimens the wall or china eye is not uncommon, and the nose is often parti colored or wholly flesh colored.

Symmetry.—The symmetry of the whole body should be of a high order, with well defined and gracefully curved lines, and the whole appearance should indicate power, activity, courage and nobility of character.

Faults.—The faults most common are too heavy or too houndy a head; too highly arched frontal bone, and deep stop or indentation between the eyes; too broad a face; too short or too light a muzzle; too long ears and hanging flat to the face; too short a neck; full dewlap or loose skin on neck; too narrow or too broad a chest; sunken or quite straight back; bent forelegs; over-bent fetlocks; cow-hocked hindlegs; dew claws if loose—better none. *Not permissible.*—Twisted feet; spreading toes; too coarse or long coat; too heavy or too highly carried or curved tail, or with a brush underneath; weak or narrow loin or hindquarters; a general lack of muscle; want of symmetry, and a general absence of character in appearance.

MINIMUM SIZE AND WEIGHT.

HELENA DOG SHOW.

[*Special Report.*]

HELENA, Mont., Aug. 30.—*Editor Forest and Stream:* The first annual bench show of the Montana Kennel Club was held in this city Aug. 28, 29 and 30. This being the first dog show held in this Territory, is to us an event of no little interest. The exhibition is given under the rules of the American Kennel Club, the Montana Kennel Club having made application for membership in that association. The Montana Agricultural, Manufacturing and Mineral Association kindly donated $500 to be used as premiums, also the use of a suitable building located on the fair grounds near this city.

The writer being a lover of dogs and having been an exhibitor at some of the best shows held in the East, as well as having been associated as one of the managers of an Eastern show (Rensselaer Kennel Club show), and being an old subscriber for your valuable paper, hereby takes the liberty of giving a crude report of the show.

The entries are not large, but when we take into consideration the population of our city (less than 25,000) and its remote location, it is gratifying to the managers to have met with the success attained. Ninety entries were made, with but two absentees. The quality of the dogs, as a whole, was good. There were, as is always the case at the first show held in any community, a lot of poor ones. There are many genuine sportsmen in this Territory, it being a game country, who have spared no expense in securing well-bred sporting dogs; others have brought their dogs with them. Attention to proper registration and preserving pedigrees has been neglected. It is evident, however, that many of the dogs seen at this show are from the best strains in this country, and we predict that one of the sequels of this exhibition will be the stimulation of the owners of good animals to look after these essential points in the future. The attendance was remarkably good, and invariably all express themselves as well pleased. Following is a list of the judges: Jack Wilson, mastiffs, St. Bernards, Newfoundlands, Great Danes and collies; Dr. C. E. Nichols, setters, pointers, spaniels, dachshunde and beagles; B. B. Kelly, deerhounds, greyhounds and foxhounds; R. T. Bayliss, bulldogs, bull-terriers and fox-terriers; Dr. H. Holloway the remaining classes.

In mastiffs there were five entries, and as a class they were good. Ilford Coroner has good legs, head and body; is, however, undersize, but was decided to be the best of the lot, taking first and special for the best dog in the show. Second and third would pass in fair company. In bitches, Fannie, the only entry, was worthy of first. She is well bred, sire champion Minting, dam Beulah. Good in body and legs; head not as good as first in dog class.

The only entry in St. Bernards was absent.

In Newfoundlands Vick was given second, which was more than he deserved.

Great Danes were well represented, there being five entries, more than have been present at many large shows in the East. Nero Hansa III., bred by S. Cohen, Hamburg, sire Mentor, dam Minerva, is a good one and in my judgment is better than many winners in this country. Carmen, bred by the same gentleman, sire Nero, dam Alma, prize winner at Stuttgart, Germany, 1887, is not as good as Nero Hansa III., and yet she is a nice bitch, and with her litter of puppies made a desirable addition. The other three were the get of the two above-named dogs and were all good.

We have good deerhounds in this Territory, and Dan, first in dog class, and Mada, first in bitch class, are as good as we often see. There were three entries in the greyhound dog class, all have good business or working qualities and large, muscular development. Dogs of this class in this country are highly prized, as we have plenty of jack rabbits and great amusement is afforded in the pursuit of them, using these dogs, it is simply a question of speed.

The pointers had five entries, with two very good dogs. Bounce won over Frank, the latter being better in head but not so good in body, the competition between the two being close. Lady Jess, in the bitch class, was given second, not being worthy of a first.

Twelve English setters were shown, five in each dog and bitch class, and two in the puppy class. The competition for first place was very close between Patch and Outlaw Dick; both are well bred. There being little choice first and second was divided between them, and third was given to Dick, a large dog, bad in head. In the bitch class Gypsy won easily; she is a very good bitch, a recent importation, good in feet, coat, color and symmetry, nose a little short, and lips not as full as we like. Second was given to Flossie, a lemon and white, with a fine head, but she is leggy. Queenie, suffering from chorea, otherwise a good animal, was vhc. In the puppy class Rock, an eleven months' dog, is decidedly the best of the breed shown.

There was not even a good Irish setter in a lot of five. Pifco, first; Snap, second; Max, third. Chip, in bitch class, was given second.

Black and tan setters had six entries. Rex, first, is good in coat, color, legs and feet, head a little large, but taking him all round he would do in very good company. Bob, second, is bad in coat, otherwise a good dog. Grouse, third, is bad in coat and color, but looks a good worker. Puppies very ordinary.

The class for field spaniels had no entries.

In cocker spaniels, dogs and bitches, there were eight entries. Topsy Obo, first, black head and ears fair, legs good, coat too wavy. Livingston Sport, second, coat curly, tail carried badly, legs good, short in body. Bozrah, third, is good in coat, short in body and legs a little too long; her muzzle is much shorter than I like. Ponteno, in the puppy class, is good in head, muzzle and legs, his coat is not quite straight, but is the best in the lot.

Collies had but one entry, Sabe. He was considered worthy of first place, but is decidedly defective.

The class for poodles brought out only one entry, a poor specimen.

Dachshunde also had only one entry, very poorly bred and hardly worthy of a place; he was, however, given first.

Beagles and bulldogs were not represented.

Bull-terriers had three entries. Stuff, first, is a fair specimen, but shows approximation to the round or bullet-headed terrier. Fan, the only bitch shown, has the same defect as first in dog class.

In fox-terrier dogs there were two entries, and both are very good dogs. First went to Ben, bred by Associated Fanciers, of Philadelphia. He is good in head, legs, feet and color; wide in shoulders and is lacking in symmetry and quality. Rip, second, is better in body and shoulders, but not as good in head. In bitches there were three entries. Nell, winner of first, is good throughout. Three puppies were shown; all are fair, but rather young to predict their future.

Black and tan terriers had one entry—Spider, a fair specimen.

Five pugs were shown. The judge consumed some time in making his awards. All were fair and they seemed to be properly placed. Baldy, first, is an extra good one.

There were five entries in the miscellaneous class; all were poor. Grover C., placed first, is a cross between a St. Bernard and Newfoundland. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st and special, Master Don Larabie's Ilfred Caroner; 2d, H. Gans' Jack; 3d, F. S. Witherbee's Tom. *Bitches:* 1st, Master Don Larabie's Fannie.

ST. BERNARDS.—Absent.

NEWFOUNDLANDS.—1st, withheld; 2d, W. B. Webb's Vick.

GREAT DANES.—1st, 2d, 3d and very high com., F. Pope's Nero Hansa III., Carmen, Sultan and Bella II. High com., Dr. J. J. Leisser's Nez Perce.

DEERHOUNDS.—*Dogs:* 1st, C. Gamer's Dan. *Bitches:* 1st, W. M. Murphy's Maida.

GREYHOUNDS.—*Dogs:* 1st and 2d, E. C. Babcock's Marco and Dandy. *Bitches:* 1st, L. Higgs's Lady H.

POINTERS.—*Dogs:* 1st, J. Davis's Bounce; 2d and very high com., C. A. Stewart's Frank and Ned. Com., A. B. Kleinschmidt's Dan. *Bitches:* 1st, withheld; 2d, J. P. McCabe's Lady Jess. *Puppies:* 1st, V. E. Goldsmith's Chequeta II.; 2d and very high com., J. P. McCabe's Frank P. and General Terry; 3d, T. Carter's Nell.

ENGLISH SETTERS.—*Dogs:* 1st and 2d (divided), T. J. Cronin's Patch and W. S. Davidson's Outlaw Dick; 3d, H. P. Kennett's Dick. *Bitches:* 1st, W. B. Raleigh's Gypsy; 2d, S. A. Balliet's Flossie; 3d, C. S. Wardman's Nellie W. Very high com., W. S. Davidson's Queenie. *Puppies:* 1st, C. F. Woodman's Rock; 2d, T. Hill's Nick.

IRISH SETTERS.—*Dogs:* 1st, W. S. Davidson's Pifco; 2d, J. Worth's Snap; 3d, H. Barbour's Max. Very high com., A. K. Barbour's Wig. *Bitches:* 1st, withheld; 2d, A. B. Cook's Chip. *Puppies:* 1st, withheld; 2d, unknown. High com., W. S. Davidson's Bob.

BLACK AND TAN SETTERS.—*Dogs:* 1st, H. M. Parchen's Rex; 2d, H. P. Kennett's Bob; 3d, W. F. Franklin's Grouse. *Bitches:* 1st, D. Dick's Rose. *Puppies:* 1st and 2d, W. S. Davidson's Bob Lee.

COCKER SPANIELS.—1st, J. E. Davis's Topsy Obo; 2d, C. Garnier's Livingston Sport; 3d, J. D. Ripley's Bozrah. Very high com., J. E. Davis's Ponteno.

COLLIES.—*Dogs:* 1st, W. S. Davidson's Sabe.

POODLES.—1st, Levy & Elias's Juno.

DACHSHUNDE.—1st, Mrs. F. L. Sizer's Snooks.

BULL-TERRIERS.—*Dogs:* 1st, O. P. Weisgerber's Stubb. *Bitches:* 1st, W. S. Davidson's Fan.

FOX-TERRIERS.—*Dogs:* 1st, J. B. Reed's Ben; 2d, J. Hancock's Rip. *Bitches:* 1st and 2d, J. P. Reed's Nell and Chippy. *Puppies:* 1st, 2d and 3d, J. P. Reed's Monkey, M. K. C. and Jack.

BLACK AND TAN TERRIERS.—1st, Ada A. Conyngham's Spider.

SKYE TERRIERS.—Withheld.

TOY TERRIERS.—1st, withheld; 2d, Miss J. T. Smith's Little Jim.

PUGS.—1st, J. D. Wilson's Baldy; 2d, Gussie Hartman's Frank; 2d, F. L. Allen's Girlie.

MISCELLANEOUS.—1st, H. O. Collins's Grover C.; 2d, Mrs. W. J. Bickett's Bruno.

MONT.

WILMINGTON DOG SHOW.

[*Special Report.*]

WILMINGTON, Del., Sept. 7.—*Editor Forest and Stream:* The dog show held this week in connection with the second annual fair of the Wilmington Agricultural and Industrial Association in this city, was one of the features of the fair and large crowds were constantly around the stalls. Nearly 150 dogs were shown, and many of them are well-known prize winners. Mr. James Watson, of Philadelphia, judged them, and, so far as I could learn, gave general satisfaction. Only one prize was given in each class, except in cases of exceptional merit. Following is a list of the

AWARDS.

MASTIFFS.—1st, C. Porter; Jr.'s, Boss Lady Clare; 2d, O. Vernon's Jack. *Puppies:* 1st, E. Bayne's Czar.

ST. BERNARDS.—1st, Associated Fanciers' Celtic Rector.

FOXHOUNDS.—1st, Associated Fanciers' Trailer.

BEAGLES.—1st, Associated Fanciers' Prince; 2d, J. H. Manlove's Nancy.

DACHSHUNDE.—1st, Associated Fanciers' Hilda.

BASSET HOUNDS.—1st, C. Porter, Jr.'s Babette.

GREYHOUNDS.—1st, J. C. Kriner's Swift.

POINTERS.—1st, Associated Fanciers' Village Jim; 2d, F. B. Colton's Prince. *Puppies:* 1st, C. Kemble's Don Cameron.

ENGLISH SETTERS.—1st, Associated Fanciers' Magnolia; 2d, E. C. Simpson's Pansy Blossom.

GORDON SETTERS.—1st, Associated Fanciers' Frizzle; 2d, E. C. Simpson's St. Joe.

IRISH SETTERS.—1st, C. T. Thompson's Nellie.

FIELD SPANIELS.—1st, T. Wallace's Pasha.

COCKER SPANIELS.—1st, W. West's Doc. *Puppies:* 1st, T. Wallace's Pasha, Jr.

COLLIES.—*Dogs:* 1st, W. Lindsay's Robin Gray; 2d, F. R. Carswell's Major. *Bitches:* 1st and 2d, F. R. Carswell's Lady and Rutland Miss. *Puppies:* 1st and 2d, F. R. Carswell's Queen and Boskie.

PUGS.—1st, Dr. M. H. Cryer's Othello; 2d, J. D. Brown's ——. *Puppies:* 1st, W. Bromley's Doc; 2d, F. Giles's Ferris.

SKYE TERRIERS.—1st, Associated Fanciers' Donald.

IRISH TERRIERS.—1st, Associated Fanciers' Judy.

BEDLINGTON TERRIERS.—1st, C. Porter, Jr's Punch.

TOY TERRIERS.—1st, T. D. Brown's Dot.

DALMATIANS.—1st, V. Laubacher's Dick.

SCHIPPERKES.—1st, J. C. Kriner's Dandy.

WILMINGTON.

BROOKLYN DOG SHOW.

THE first annual dog show of the Brooklyn Kennel Club was held at Ridgewood Park, Brooklyn, N. Y., Sept. 8 to 11. The show was held in connection with the Schwaben Volksfest, a harvest festival of the Germans, and the large crowd that thronged the park each day liberally patronized the building set apart for the dogs. The club were unfortunate in not properly making known to the public the fact that a show was to be held, and consequently there were only about 100 dogs entered. Quite a number of them, however, were dogs of high degree, and so far as quality goes the show was above the average for first shows of its size. The benching and feeding was done by Spratts Patent, and the dogs were comfortably housed in a small building that was just about large enough for the number shown. No catalogues were published so far as we could ascertain, and it was only by dint of hard work and an endless amount of cross-questioning that we were able to complete the following list of

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* F. C. Phœbus's Homer.—OPEN—*Dogs:* 1st, J. Burkhart's Duc of York.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, F. Emken's Roland; 2d, Mrs. J. Nicholson's Mount Sion III.; 3d, Welz & Zerwick's Solo. Very high com., F. Schultz's Ryhn. *Bitches:* 1st, Mrs. J. Nicholson's Lady Gay; equal 2d, Germania Kennels' Greta and P. Smith's Lucy. *Puppies:* Withheld.—SMOOTH-COATED—*Dogs:* 1st, F. Schultz's Rasco. *Bitches:* 1st and 2d, C. Wagner's Linda and Thisbe Wagner. *Puppies:* 1st, Avon Kennels' Duchess; 2d, C. Wagner's Alpine Guide.

NEWFOUNDLANDS.—*Dogs:* 1st, C. Eimer's Caro. *Bitches:* 1st, Prof. L. P. Braive's Brunette; 2d, C. Eimer's Nora.

GREAT DANES.—1st, J. Welz's Bella; 2d, 3d and very high com., N. Martin's Nero, Laura and Sultan.

GREYHOUNDS.—1st, J. B. Heffler's Blue Belle. *Puppies:* 1st, withheld; 2d and 3d, J. B. Heffler's Queen of Harlem and Spry.

POINTERS.—LARGE—*Dogs:* 1st, S. W. Pentz's Brake; 2d and 3d, S. S. Banks' Underwriter and Duke of Tammany. *Bitches:* No entries. SMALL—*Dogs:* 1st, Dr. H. E. Mann's Ned B. *Bitches:* 1st, H. J. Bennett's Kate Claxton; 2d, F. Russel's Rose; 3d, J. P. Swain, Jr's Bess. *Puppies:* 1st, withheld; 2d, J. P. Swain, Jr's Bob.

ENGLISH SETTERS.—*Dogs:* 1st, Dr. P. Hughes's Dash. *Bitches:* No entries. *Puppies:* 1st and 2d withheld; 3d, B. Turner's Nigger.

IRISH SETTERS.—*Dogs:* 1st, R. J. Kelley's Royal Ruby; 2d, D. Fynn, Jr.'s O'Donovan Rossa. *Bitches:* 1st, S. S. Bank's Gip of Killarney; 2d, D. Fynn, Jr.'s Sedan II. *Puppies:* 1st, H. Culberson's unnamed; 2d, D. Fynn, Jr.'s Kitty Glendyne.

GORDON SETTERS.—*Dogs:* 1st, E. H. Morris's New York Ronald. *Bitches:* No entries.—PUPPIES—*Dogs:* 1st, 2d and 3d, L. Parsette, Jr.'s Duke, Jr., Dash and Roger. *Bitches:* 1st, 2d and 3d, L. Parsette, Jr.'s Clara, Daisy and Minnie.

FIELD SPANIELS.—1st, E. H. Morris' Beau.

COCKER SPANIELS.—*Dogs:* 1st, Dr. P. Hughes's Black Jet; 2d, withheld; 3d, E. Cunningham's Carlo. *Bitches:* 1st, Dr. P. Hughes's Nellie; 2d, withheld; 3d, T. Markham's Shephard.

FOXHOUNDS.—1st, F. Munch's Major; 2d, T. H. Wakum's Snip.

BULLDOGS.—1st, F. H. Groufel's Patrick; 2d, withheld.

POODLES.—1st, J. Behling's Pepper.

BULL-TERRIERS.—1st, F. C. Phœbus's The Earl; 2d, F. R. Kniffen's Trip.

FOX-TERRIERS.—*Dogs:* 1st and 2d, L. & W. Rutherfurd's Warren Bluffer and Warren Dingle. *Puppies:* 1st and 2d, L. & W. Rutherfurd's Warren Daisy and Warren Harrison; 3d, W. T. Levering's June.

IRISH TERRIERS.—1st, 2d and 3d, T. Pluerbaft's Little Vixen, Little Maid and Adventurer.

SKYE TERRIERS.—1st, W. L. Morgan's Lochiel; 2d, F. McCue's Lulu.

YORKSHIRE TERRIERS.—1st, J. Bell's Brooklyn Ben; 2d, F. Gritlinger's Nelly.

TOY TERRIERS.—1st, Miss Daisy Woods's Mousey; 2d, N. Lowrie's Little Boy Blue; 3d, Mrs. R. Brave's Marquis.

PUGS.—1st, Miss Marion Bannister's Saxon. *Bitches:* 1st, G. Fisher's Tra-la-la; 2d, M. Rathbun's Cricket; 3d, Mrs. S. Schumacher's Daisy. *Puppies:* 1st, Mrs. Schumacher's unnamed; 2d, Mr. Rathbun's Bonnie Boy.

ITALIAN GREYHOUNDS.—1st, J. Weber's Tip.

MISCELLANEOUS.—LARGE—Absent. SMALL—1st, R. A. Homeyer's Carl; 2d and 3d, H. J. Bennett's Fanny and Lady Morton.

DOG TALK.

WE have received a copy of the constitution and by-laws of the American Pet Dog Club. The pamphlet also contains a list of the officers and members. Following is a list of the dogs that the club recognizes as pets: Pugs up to 17lbs., pugs 17 to 25lbs., (bitches not to exceed 17lbs.), King Charles, Prince Charles, Blenheim, ruby, Japanese and cocker spaniels; Yorkshire (blue and tan and other than blue and tan), Skye, Maltese, fox (not over 15lbs.), bull (not over 15lbs.), white English, Irish, Scotch, Welsh, black and tan (up to and over 7lbs.), Dandie Dinmont and Bedlington terriers; Italian greyhounds (up to 15lbs.), basset hounds, poodles (black and other than black), Mexican hairless

beagles and dachshunde. The president informs us that the club fears that the annual show this fall will not be held owing to inability to procure a suitable hall for the purpose.

Lord Jim is just now the observed of all observers. His offer to bet fabulous sums in support of his theory that he was the breeder of the best strain of pointers for the field, etc., finally brought a response from Mr. Duryea, who, it appears, had become weary of the subject, but the "only" breeder "crawled" and flatly refused to put up a cent, but by talking he induced a friend to back one of his strain to the extent of $250, and if nothing happens to prevent the match will come off the coming season.

There was no quorum at the meeting of the Eastern Field Trials Club on Tuesday. A few members were present, and matters concerning the coming field trials were informally discussed. Col. Arthur Merriman, of Memphis, Tenn., was appointed as one of the judges for the Pointer Stake. The "all day heat" field trial was discussed, and it seems likely that such a trial will be held next February.

The announcement of the All-Aged stakes of the Indiana, Eastern and Central Field Trial Clubs appear in our advertising columns this week. We have no doubt that all of them will be well supported and we shall expect to see the coming field trial season eclipse in brilliancy all of its predecessors.

The Georgia Pet Stock Association will hold a six days' show at Augusta, Ga., beginning Jan. 13.

Mr. E. K. Sperry, of Hartford, Conn., will judge all classes at the dog show to be held at Bristol, Conn., Oct. 1 to 3.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Count Noble's Boy. By E. A. Hight, Lynn, Mass., for white, black and tan English setter bitch, whelped Aug. 31, 1889, by Count Noble (Count Wind'em—Nora) out of Katie Berwyn (Dashing Berwyn—Whirlwind).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lucky—Jubilee. W. F. Hayes's (Utica, N. Y.) bull-terrier bitch Lucky to H. A. Harris's champion Jubilee (Bendigo—Queen), Aug. 22.

Marguerite—Jubilee. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch Marguerite (champion Count—Young Venom) to his champion Jubilee (Bendigo—Queen), Aug. 23.

My Queen—Jubilee. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch My Queen (champion Grand Duke—champion Maggie May) to his champion Jubilee (Bendigo—Queen), June 28.

Stanley Cauliflower—Blemton Match. H. A. Harris's (North Wilmington, Mass.) fox-terrier bitch Stanley Cauliflower (Blemton Volunteer—Stanley Nell) to his Blemton Match (champion Lucifer—Marguerite), June 15.

Brunette—Bradford Harry. Chas. York's (Bangor, Me.) Yorkshire terrier bitch Brunette (Bob—Judy B.) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Aug. 24.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie McGregor. E. C. Powell's (Ghent, N. Y.) collie bitch Nellie McGregor (champion Rex—Juno), Sept. 5, nine (five dogs), by Jas. Watson's Prince Charlie (Sefton—Mavis).

Cassandra. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch champion Cassandra (Debret—Dead Secret), Aug. 28, six (five dogs), by his champion Balkis (Clyto—Primrose).

Winnie Rake. Dr. L. M. Thompson's (Mahanoy City, Pa.) English setter bitch Winnie Rake (Count Rake—Winnie Davis), July 22, eight (three dogs), by W. D. Reynolds's Warwick Belton (Belton High—Magnolia); all since dead.

Katie Berwyn. E. A. Hight's (Lynn, Mass.) English setter bitch Katie Berwyn (Dashing Berwyn—Katydid), Aug. 31, eleven (three dogs), by B. F. Wilson's Count Noble (Count Wind'em—Nora).

Nell. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch Nell (champion Count—Bertha), Aug. 3, seven (two dogs), by his champion Jubilee (Bendigo—Queen).

My Queen. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch My Queen (Grand Duke—Maggie May), Aug. 28, nine (six dogs), by his champion Jubilee (Bendigo—Queen).

Stanley Cauliflower. H. A. Harris's (North Wilmington, Mass.) fox-terrier bitch Stanley Cauliflower (Blemton Volunteer—Stanley Nell), Aug. 14, two bitches, by his Blemton Match (champion Lucifer—Marguerite).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Prince Bang—Queen Miranda whelps. St. Bernards, whelped May 5, 1889, by H. S. Pitkin, Hartford, Conn., a dog each to James Phillips, Jr., Fitchburg, Mass.; W. H. Lockwood, Hartford, Conn.; Mrs. H. Adams, New York; Fred Markham, Wallingford, Conn.; Mrs. J. S. Camp, Hartford, Conn.; and a bitch each to E. J. Blake, Hartford, Conn.; Geo. T. Lord, Turnerville, Conn., and M. F. Gilsey, Wheeling, W. Va.

Rifle and Trap Shooting

RANGE AND GALLERY.

INTER-STATE MATCH IN NEW JERSEY.

SEA GIRT, N. J., Sept. 4.—The ping of the rifle bullet has been heard here all day long. The occasion was the inter-State rifle match which riflemen everywhere have been looking forward to with interest. The contesting teams were from New Jersey, New York and Delaware.

Prominent people from all parts of New Jersey and from other States witnessed the match. Besides Gov. Green and his military staff there were present Gov. Benjamin T. Briggs, of Delaware; ex-Governor Leon Abbett, Mayor Hayes, of Newark; Col. Mulligan, of Elizabeth; Robert S. Green, Jr. and party from Elizabeth; Adjt.-Gen. Wm. S. Stryker, of Trenton; ex-Senator Frederick S. Fish, of Newark; ex-Assemblyman Fred Walter, lawyer John Rellstab, Editor Briest, Councilman Conrad, Commissioner Joseph Rice, Edwin Fitz George, of Trenton, and many others.

The following officers had charge of the range: Executive Officer, Brig.-Gen. Bird W. Spencer; Range Officers, Col. G. De Lancey Walker, Col. Thos. S. Chambers, Major Edward Hoyt, Capt. Chas. Y. Bamford, Capt. Henry Johnson, Capt. Henry Lohman, Capt. J. P. Wickershaw, First Lieut. Geo. P. Olcott, First Lieut. Andrew Derrom, Jr.; Statistical Officers, Col. E. A. Campbell, Lieut.-Col. H. E. Hamilton, Major P. B. Holmes, Capt. E. G. Edwards, Capt. James W. Moore, Lieut. Joseph F. Cline.

A strong wind blew across the range from the south, and this had a marked effect on the scores, both of the individual marksmen and of the teams. The Massachusetts team, the Connecticut and Maryland sharpshooters and the regular army marksmen did not put in an appearance.

The match opened sharply at 10 o'clock on the 200yds. range. In the afternoon the shooting was at the 500yds. range and excitement ran high. The score between New Jersey and New York was very close all along, and at the finish it was "neck and neck." The last man to shoot for New Jersey was Private Gladden, and as he raised his rifle to aim all eyes were centered on him, as a bullseye would tie the score. He had made two bullseyes in his two previous shots. The hopes of the spectators, however, were not to be realized, for instead of a bullseye only two were made. This gave the match to New York by three points. The cheering and applause was deafening. Although the sympathies of the spectators were with New Jersey, they were generous enough to give the winning team a hearty send-off. The full score follows:

New York Team.

The trophy which the New York team have won is a magnificent silver piece hammered by hand. It is in the form of a large punch bowl, and is handsomely engraved and finished. The lining of the bowl and ladle is of gold. It cost $500, and is the gift of the State to the winning team. On one side of the piece is the coat of arms of the State of New Jersey, and on the other side the following inscription:

"Interstate and United States Army Military Team Match. Presented by the State of New Jersey to the State of New York. Robert S. Green, Governor, September, 1889."

Over each handle is the figure of a rifleman in the attitute that is assumed when firing on the 500yd. range. The whole is incased in a large oaken, satin-lined box with an inscription plate on the top.

Besides the trophy a handsome gold medal, inscribed "Interstate Match Winner," goes to the individual members of the winning team.

In the evening the trophy and badges were presented to the New York team by Gov. Green. Neat and appropriate speeches were made on both sides, and then social pleasures occupied the rest of the evening.

THE CANADIAN WIMBLEDON.

OTTAWA, Sept. 2.—The city is a perfect medley of uniformed men. All colors and styles are to be seen, and there is even greater diversity in the headgear. Promptly at 8:30 this morning the boom of cannon proclaimed that the twentieth meeting of the Dominion Rifle Association had been inaugurated on the Rideau Ranges. There was no formal ceremony unless the discharge of this fieldpiece be called such. The echoes of its roar had scarcely died away when the popping of the smaller arms were heard, showing that the marksmen in the Bankers Nursery competition had begun their struggle for the prizes.

The extra series matches, which, like the brook, go on for ever, were also started, and had not been long in progress before it was announced that T. Mitchell, of the 10th Royal Grenadiers, had made a possible. The wind and light for the greater part of the day were puzzling, and the result in some cases was unsatisfactory scoring. The most interesting feature of the day's work to the spectators, although very hot work to the participators in them, was the military matches. The skirmishing and volley firing was eagerly watched by an unusually large crowd. The weather was hot in the morning, but as the afternoon wore on a cooling breeze sprang up which was grateful to all alike.

The formal matches opened with the Nursery, open to members of the association who have not at any previous prize meeting of the D. R. A. won a prize of $10 or upward, exclusive of team or extra prizes, 77 prizes, value $880, entrance fee 60 cents, including ammunition; range 500yds., rounds 5, Snider rifles, position any, with head to target.

Pvt Windatt, 45th.	25	Pvt Cuckow, 77th.	23
Corp Lordley, 62d.	24	Pvt Robertson, 77th.	22
Mr J T Thomas, Melbourne.	24	Capt Silver, 63d.	22
Sergt Horsey, 45th.	23	Staff-Sergt Ronan, 12th.	22
Sergt Gray, 66th.	23	Corp Brown, G G F G.	22
Bandsman McJanet, 43d.	23	Staff-Sergt Wilson, 3d Vics.	22
W H Middleton, O R C.	23	Pvt Kamberry, 5th R S.	22
Pvt Simpson, 10th R G.	23	Capt Garland, 96th.	22
Asst-Surg Gillis, P E I G A.	23	Pvt McCowan, 5th R S.	22

Thirteen 17s were counted out of the prize list.

The next match was for the Macdougall challenge cup, with 409 entries. It is open to all Canadian or imperial military men; the cup to be the property of the member winning it twice consecutively. Cup and 65 prizes, value $552; entrance fee, 70 cents, including ammunition; ranges, 400 and 500yds.; rounds, five at each range; Snider rifles; position, any with head to target:

Q M S C Armstrong, 1st BFA.	45	Sergt C W Henderson, 62d.	41
Capt H St C Silver, 63d.	44	Maj Perley, H'dq'rt'rs Staff.	41
Trooper W E Cook, PLDG.	43	Sergt T C Boville, 43d.	41

Lieut G Margetts, 13th.	42	Pvt Nutting, GGFG.	40
Capt Bishop, 63d.	42		

Twenty-one 37s were counted out from the prize list.

The Gzowski challenge cup, open to one section of five men, non-commissioned officers, and rank and file, either or both, from any one regiment or troop of cavalry, battery or brigade of artillery, battalion or independent company of the active militia of Canada, schools of cavalry, gunnery and infantry and cadets of the Royal Military College, Kingston. Six team prizes, $200, to the sections making the highest aggregate scores in the following stages: Skirmishing, 20 rounds, from about 450 to 100yds. (advancing and returning), any military position; volley firing, 5 rounds, at 300yds. (kneeling); independent firing, 5 rounds, at 150yds. (standing); at targets exposed to view, for 10 seconds in each position. Entrance fee, $7 per section, including ammunition; rifles, long or short Snider, of Government issue, or bearing Government viewer's mark:

"A" Battery.	32	127

Sept. 3.—The second day's meet at the Canadian Wimbledon has been as successful as that of yesterday. The day was very hot, the wind unsteady, and the light not very good, with the result that scoring generally was not very high, although the scores which took prizes were quite up to last year's record. The first prize in the Manufacturers' goes to one of the ambitious city's cracks, Sergt. Goodwin; while the first individual prize in the Minister of Militia's match went to Pvt Simpson, the new man of "A" company, Royal Grenadiers, who is doing some good shooting. Sir A. P. Caron was present the greater part of the afternoon while his cup was being competed for.

Marksmen complained somewhat of a hazy light, which prevented the scores being as high as they otherwise would be, but for all this the shooting was good. The attendance of visitors on the grounds was larger than has been customary in the past, and everybody is of the opinion that the meeting is not only the largest, but the best ever held by the society.

There is a good deal of talk about the 10th Royal Grenadiers and the 43d Battalion. It will be remembered that when it was hinted that the team of the 10th could give the Massachusetts sharp-shooters a brush for victory, the 43d men asked who are the 10th Grenadiers that they should pose as the crack shots of the Dominion. Now, as the 10th in two team competitions have beaten the 43d, there was considerable joking to-day.

The shooting to-day commenced at 8:30 o'clock this morning with the Extra Series, and at 9:30 firing was proceeded with in the Manufacturers' match. There were 412 entries, as against 344 last year. This match is open to all members of the Association, 7 rounds at 500yds., Snider rifle, 82 prizes, with a total value of $585. The following is the result:

Sgt Goodwin, 13th Batt.	34	Stf-Sgt Mitchell, 90th.	31
Pvt Burns, 3d Vics.	34	Lt Sutherland, 43d.	31
Capt Rogers, 53d	33	Pvt McCowan, 5th R S	30
Staff-Sgt Mitchell, 13th.	33	Pvt Brown, 59th.	30

Corp Pratt, 6th.	31	Pvt Scott, 43d	30
Mr Slater, O R C.	31	Lt Cartwright, 47th.	30

The next match was the Minister of Militia's cup, presented by Sir Adolph Caron, with $618 added by the D. R. A., teams to be selected from the competitors entered as individuals and composed of three previously-named representatives of any affiliated association whose names shall have been given in writing to the secretary of the D. R. A. by some duly accredited representative of the affiliated association and vouched for as having been members of such affiliated association on or before July 1, 1889, 6 teams and 62 individual prizes. This year there were 45 teams entered, compared with 39 for 1888. There were also 419 entries for the individual prizes as against 341 for the previous year. The following is the result:

Cup & $45—6th Fusiliers, Mont.		$24—13th Batt., Hamilton.	
Sergt Riddle.	54	Sergt Goodwin.	55
Sergt Lavers.	53	Corp Morris	52
Pvt Waters.	52	Lieut Margetts.	44
	159		151
$36—Sherbrooke Rifle Asso.		$18—43d Batt., Ottawa.	
Lieut Spearing	55	Major Wright	52
Major Thomas.	52	Col.-Sergt Fairbairn	49
Staff Sergt Clarke.	50	Lieut.-Col. Anderson	49
	157		150
$30—10th Royal Grenadiers.		12th Batt., Toronto.	
Pvt Simpson	60	Staff Sergt Bell.	54
Staff Sergt Mitchell.	49	Staff Sergt Ronan	51
Staff Sergt McVittie.	46	Pvt Thompson	44
	155		149

The teams next in order were these: Nova Scotia 145, Hamilton Snider Association 144, 63d Battalion 144, Victoria Rifle Association, Hamilton 143.

There were 45 teams entered: The following is the individual prize list:

Pvt Simpson, Grenadiers, $30.	60	Sergt Hall, 79th.	56
Sergt Clark, Royal Scots, $25.	58	Sergt Macklin, 90th.	56
Pvt Green, 21st, $20.	57	J T Thomas, Melbourne.	56
Lieut Desbarats, Vics, $14.	57	Sergt Goodwin, 13th.	55
Pvt Todd, 6th.	56	Col.-Sergt Mason, 57th.	55
Pvt Nutting, Guards.	56	Sergt.-Maj Gibson, 66th.	55

The annual meeting of the competitors took place in the evening in the drill hall, with a large attendance. Lieut.-Col. White, chairman of the executive committee, occupied the chair. Capt. Hood, of the Royal Scots, and Adjutant of the Wimbledon team, spoke of the team of 1889 as being the best ever sent from Canada. When competing with the Cambridge team prior to the Wimbledon meeting the Canadians made the largest score ever made by any ten men, not excepting the great scoring of the Scotch twenty. He regretted that the result of the shooting of the team at Wimbledon was not duly telegraphed to Canada. In future he trusted that the officer commanding the team should have power to telegraph the result to any paper named. He said that while it was impossible for the Canadians to get a match with the Americans while in England, he would just say that when the Canadian team was shooting with the Cambridge team the Americans were shooting on the same day with the Berkshire team under similar circumstances, and the Canadian team made better shooting than the Americans by 43 points. As to the reason why the Americans succeeded in beating all the English teams, he explains that the home team were compelled to shoot at the 200yds. butts from the shoulder and the Americans used their own improved sights.

Major McSpadden, of the 12th, drew attention to the ammu-

nition supplied, which was not anything like that of 1888. He had several cartridges in his possession which were defective. Several competitors said that they also had received defective cartridges which they could lay before the meeting. One competitor did not see how he was going to bring one cartridge before the meeting which dropped 200 yds. from where he fired it.

After a general expression against the quality of the ammunition, Capt. Hart, of the St. John Rifles, moved, and Major Garrison, of the Halifax Artillery, seconded, a resolution that the competitors could not express confidence in the ammunition supplies now as was the case in 1888, was unanimously carried.

Sept. 4.—Never in the history of the D. R. A. was there finer weather, better shooting or more success generally attending any meeting than has fallen to the lot of this season's gathering of marksmen. Monday was hot, Tuesday was hotter, but to-day was the hottest of all. It registered in the city 90° in the shade at high 12. The camp on the banks of the Rideau River is most enjoyable, and there have been many more under canvas this year than heretofore. The Queen's Own and the 6th Fusiliers have perhaps the best locations on the grounds. Last evening the officers of the Fusiliers entertained the army and navy, when a pleasant time was spent. To-night the Queen's Own paid a similar compliment to the representatives of the Imperial forces. All the sportsmen agreed that to-day the light was excellent for shooting, but the wind was rather tricky. To-day was a lucky one for the Maritime Provinces, two New Brunswick teams leading in the Dominion match, and Staff-Sergt. Corbin, of the 63d, taking the first individual prize. Representatives from these Provinces figure throughout the whole score.

Firing in the Dominion match occupied all the time to-day. It is of value, for teams $200, individuals $715, total $915; open to all efficient members of the active militia, members of the staff and officers of the active force who have retired retaining rank, and to all officers and non-commissioned officers and men of Her Majesty's regular army and navy stationed in Canada who are also members of the association. The team prizes to be awarded to the five hightest aggregate scores made by any five previously-named members from the cadets of the Royal Military College, from the schools of cavalry, artillery and infantry; from any regiment, squadron or troop of cavalry, field battery or brigade of field or garrison artillery; from any corps of engineers, battalion or independent company of the active militia, or of the same denomination of the force of Her Majesty's regular army or navy stationed in Canada, provided that all are members of the Dominion Rifle Association. Following is the result, 200, 500 and 600yds., 7 shots each:

62d Fusiliers, St. John	394	5th Royal Scots	373
71st Batt., N B	393	45th	372
Q O R	391	52d	372
13th Batt	383	82d	370
Royal Grenadiers	379	G G F G	368
43d Batt	378	63d	363
6th Fusiliers	377	47th	362
56th	375	90th	327
Charlottown Engineers	375	59th	307
3d Vics	374		

The leading individual prizes were:

Staff-Sergt Corbin, 63d	89	Capt Macdonald, Q O Q	86
Lieut Courtice, 33d	88	Sapper Hooper, C E	85
Pvt Hutchison, 43d	88	Lieut O'Grady, 43d	85
Pvt Currie, Royal Scots	88	Pvt Robertson, 77th	84
Staff-Sergt Mitchell, 10th R G	87	Sergt Miner, 71st	84
Corp Marris, 13th	87	Pvt Blair, 78th	84
Capt Busteed, 3d Vics	86	Lieut Manning, 62d	84
Sergt Loggie, W F B	86	Sergt Hall, 79th	84
Col-Sergt Henderson, 62d	86		

Sept. 5.—The great prize of the Dominion Rifle Association meeting, namely, a place among the first sixty, which gives the marksmen a chance at the Governor-General's prize and a chance of being on the Wimbledon team is known to the competitors to-night.

To-day was a very busy day in the statistical tent, three matches, the Lansdowne, Aggregate and Grand Aggregate, having to be figured out.

In the evening the prizes were distributed at the Rideau Rink, where a great crowd of people assembled and lustily cheered the marksmen as they marched up to receive their trophies.

The first match to-day was one in which the range was 200yds., Snider rifle, standing position, 7 rounds, 54 prizes:

Col-Sergt Boile, 43d	33	Pvt Nutting, GGFG	30
Sergt Hall, 75th	33	Col-Sergt Graham, 20th	30
Capt Ross, 13th	32	Col-Sergt Robertson, 13th	30
Bandsman Defreyes	31	Sergt Baillie, 47th	30
Lieut Mitchell, 32d	31	Lieut Crean, QOR	30
Staff Sergt Curran, 10th RG	31	Sergt Cribb, 78th	30
Capt Hood, 5th RS	31	Col-Sergt Donnelly, QOR	30
Corp Bennbree, 3d Vics	31	Pvt Runnions, 59th	30
Pvt Corrigan, 59th	31		

Nineteen 28s counted out.

Snider Aggregate—The prizes in this competition are marked to be awarded to competitors who have made the highest aggregate scores in the following matches, viz.: Macdougall, Manufacturers', Minister of Militia's, Dominion and standing matches:

Sergt Hall, 79th	239	Lieut Spearing, 53d	227
Sergt Goodwin, 13th	232	Staff Sergt Mitchell, 10th RG	225
Pvt Hutcheson, 63d	231	Lieut Desbarats, 3d Vics	225
Corp Marris, 13th	230	Lieut Courtice, 33d	223
Sergt Loggie, N F B	229	Pvt Brown, 59th	223
Capt Milligan, D F B	229	Staff Sergt Mitchell, 90th	223
Pvt Davis, 10th RG	228	Lieut Cartwright, 47th	223
Capt Ross, 13th	227	Capt Silver, 63d	223

Rideau match, 600yds., 7 rounds, Martini rifles:

Capt. Bishop, 63d	33	Col-Sergt Dalrymple, 5th R S	31
Lieut Hora, 14th	32	Staff-Sergt Mitchell, 13th	31
Lieut Hoopes, 82d	32	Pvt Curtis, 45th	30
S Anderson, Charlotte Eng	32	Sergt Loggie, N F B	30
Lieut.-Col. Ray, 90th	31	Lieut Cole, 42d	30
Staff-Sergt Harris, H G A	31	Major Hughes, 45th	30
Lieut Col Gibson, 13th	31	Captain Zealand, 13th	30
Staff-Sergt Pink, 43d	31	Pvt Burns, Vics	30
Staff-Sergt Huntingdon, 56th	31		

The Ouimet, 600yds., Martini rifles, 7 rounds:

Sergt Crooks, Q O R	33	Capt Roberts, 33d	31
Hooper, 82d	33	Corp Longuenil, 63d	31
Staff-Sergt Mitchell, 90th	33	Capt Ross, 13th	31
Corp Marris, 13th	32	Pvt Costigan, 90th	31
Pvt Simpson, 10th R G	32	Sergt Riddle, 60th	31
Pvt Colton, N W Rifles	32	B S Major Casey, G A	31
Sergt Mowat, 10th R G	32	Sergt Hall, 79th	31
Lieut Dundas, Royal Navy	31	Lieut Dover, 78th	31

Grand Aggregate.—The Bankers' prize, to be awarded to competitors who have made the highest aggregate scores in the following matches, viz.: "Macdougall," "Manufacturers'" "Minister of Marine," "Dominion," "Rideau" and "Ouimet":

Sergt Hall, 79th	287	Capt Roberts, 33d	269
D R A medal, Capt Ross, 13th	286	Capt Bishop, 63d	269
Sergt D M Loggie, N B F B	285	Corp Andrew, Q O R	269
Sergt Mitchell, 90th	285	Lieut Hora, 14th	269
Pvt Hutcheson, 43d	284	Lieut Stewart, P E I GarArt	269
Sergt Goodwin, 13th	283	Sergt Horsey, 45th	269
Capt Milligan, D F B	282	Capt Macdonald, Q O R	268
Corp Marris, 13th	281	Lieut Conboy, 30th	268
Lieut Hooper, 82d	280	Pvt Currie, 5th R S	268
Pvt Burns, Vics	278	Lieut Manning, 62d	268
Staff-Sergt Mitchell, 13th	278	Lieut Dover, 78th	267
Lieut O'Grady, 43d	277	Pvt Windall, 45th	267
Staff-Sergt Mitchell, 10th RG	276	Staff-Sergt Clark, 53d	267
Lieut Courtice, 33d	275	Pvt Gills, 90th	267
Capt Busteed, Vics	275	Capt Longworth, P E I G Art	267
Pvt Davis, 10th R G	275	Capt Adams, H G A	267
Capt Silver, 63d	274	Color-Sergt Mason, 57th	267
Gunner Pugh, "B" Battery	274	Pvt Brown, 59th	267
Color-Sergt Henderson, 62d	274	Lieut Smith, St Johns Rifles	267
Lieut Desbarats, Vics	274	Lieut Cartwright, 47th	267
Capt Zealand, 13th	272	Staff-Sergt Bell, 12th	266
Pvt Waters, 6th	272	Staff-Sergt Pink, 43d	266
Lieut Spearing, 53d	272	Capt Rogers, 43d	266
Staff-Sergt McVittie, 10th RG	271	Sergt Mowatt, 10th R G	265
Staff-Sergt Ogg, Guelph F B	271	Maj Garrison, H A G	265
Pvt Simpson, 10th R G	270	Pvt Curtis, 45th	265
Sergt Riddle, 6th	270	Capt Robson, 20th	265
Capt Gray, G G F G	270	Sergt Clark, 5th R S	265
Pvt Blair, 78th	270	Lieut Williamson, 45th	265

For third and fourth places Sergt. Loggie and Staff-Sergt. Mitchell, of the 90th, are a tie, and will have to shoot off. For the last two places the following five competitors will have to shoot off, each having made 264: Pvt. Chamberlin, N. W. Rifles; Major Hughes, 45th; Staff-Sergt. Huntington, 56th; Corp. McNaughton, 51st; and Pvt. Robertson, 77th.

The Lansdowne Aggregate.—Challenge cup presented by his Excellency, Lord Lansdowne, late Governor-General, with $150 added by D. R. A., open to teams to be selected from competitors and composed of five previously named members of any affiliated rifle association;

13th Battalion	785	Bowmansville R A	741
Victoria Rifle Club, Hamilton	765	45th Battalion	739
3d Victoria Rifles	764	5th Royal Scots	738
43d Battalion	763	53d Battalion	737
Sherbrooke Rifle Association	757	63d Rifles	726
10th Royal Grenadiers	752	New Brunswick Prov Asso.	722
Halifax Garrison Artillery	752	Metropolitan, Ottawa	720
6th Fusiliers	751	Ottawa Rifle Club	720
No. 1, 43d Battalion	751	P E I Rifle Association	718
Nova Scotia P R A	750	Queen's Own Rifles	714
Queens County, P E I	747		

MINNESOTA STATE SHOOT.

LAKE CITY, Sept. 4.—A strong, irregular wind militated somewhat against the success of those engaged in the rifle matches at Camp Lakeview to-day, and yet some elegant scores were made. The scores below of the matches to-day are given in the order of merit, and it can readily be seen who the prize winners are.

Commissioned officers' match, 10 shots each, at 200 and 500yds., eighteen entries; first prize, gold badge; second prize, silver badge; third, bronze badge:

	200yds.	500yds.	Total.
Maj C M Skinner	44	43	87
Lieut Wm Bird	44	42	86
Lieut J F Cowie	45	40	85
Lieut Davenport	40	36	76

Enlisted men's match, 5 shots each at 100, 200, 300 and 500yds.; three prizes, gold, silver and bronze badges, 48 entries:

	100yds.	200yds.	300yds.	500yds.	Total.
Sergt C Maudlin	24	23	21	20	87
Pvt Moreland	21	20	23	20	84
Pvt Whitcomb	22	21	19	20	82
Corp B Neal	24	20	16	20	80
Pvt F J Britton	24	18	17	20	79
Pvt Bailey	21	21	18	19	79
Sergt Carpenter	24	22	20	12	78
Pvt Trowbridge	23	19	19	18	78
Sergt E G Falk	22	17	17	21	77
Pvt Goddard	21	19	20	17	77
Pvt R W Hubbell	20	20	16	19	77
Pvt Sweeny	21	19	19	18	77
Pvt D S Wade	19	18	11	11	77
Corp W W Crawford	21	16	19	21	77
Pvt Simpson	19	18	17	22	76
Pvt O Olson	22	15	19	20	76
Sergt W J Bain	20	19	17	20	76
Sergt A A Bates	20	18	19	20	75

Company Team Match.—The entries were 7 teams of 7 men each, 7 shots each man at 200 and 500yds., three prizes:

Co. C, 1st Regt.

	200yds.	500yds.	Total.
Capt Chantler	30	30	60
Private Whitcomb	24	34	58
Corporal W E Neal	27	27	54
Sergeant Iverson	28	25	53
Private Morland	31	21	52
Private Bailly	27	25	52
Sergeant Winne	20	26	46
	187	188	375

Co. G, 1st Regt.

Private O Olson	26	29	55
Lieut J Loye	23	28	51
Private E Magnuson	25	26	51
Private R W Hubbell	28	23	51

Lieut A B Aplin	36	40	33	109
Lieut Shandrew	40	31	30	101
				1,167

Sept. 5.—The regimental and company team matches being completed most of those engaged in them went home last night, leaving not more than forty to finish the programme of the tournament. The matches to-day, however, were important, and considerable enthusiasm was manifested by the contestants. The first was the Reeve match, open to the commissioned officers of any State or Territory, but no one from outside this State participated. Five shots each at 200, 300 and 500yds., with a possible total of 75. The first prize was an elegant gold badge, besides which there were five other prizes, winner's choice. There were eleven entries:

	200yds.	300yds.	500yds.	Total
Lieut E W Bird	23	21	20	64
Capt A E Chantler	20	20	20	60
Lieut O E Lee	18	21	18	57
Lieut T C Clark	20	20	17	57
Lieut E B Shanks	19	22	16	57
Lieut J C Shandrew	20	18	18	56

The Minneapolis match, 7 shots each, 200, 300 and 500yds.; first prize a military champion gold badge, won by Maj. C. M. Skinner from the Western Rifle Association and the championship of the State. Badge to become the personal property of the one who wins it three times; 20 other prizes, winner's choice. There were 32 entries:

	200yds.	200yds.	500yds.	Total
Sergt Maudlin	33	32	31	96
Lieut T C Clark	29	30	30	89
Lieut E W Bird	31	29	29	89
Lieut J F Cowie	30	31	29	89
Maj C M Skinner	28	29	29	86
Sergt E G Golk	27	28	30	85
Pvt D S Wade	31	25	29	85
Sergt C W Carpenter	28	29	25	83
Capt A E Chantler	30	27	26	83
Pvt F W Britton	27	31	25	83
Lieut E B Shanks	28	27	27	82
Pvt F J Britton	28	26	28	82
Lieut O E Lee	28	29	24	81
Lieut F A Tarr	29	23	28	80

Stillwater match, 10 shots each, at 200, 300 and 500yds. First prize a fine gold badge, presented by Company K, First Regiment, to be won three times by the same person before becoming his property. Fifteen other prizes, donated by Company K and their friends, winner's choice. Thirty one entries:

	200yds.	300yds.	500yds.	Total.
Sergt Maudlin	44	43	46	133
Maj C M Skinner	44	47	39	130
Lieut C A Clark	42	43	43	128
Lieut E W Bird	43	42	42	127
Lieut J F Lowie	41	41	44	126
Pvt F J Britton	43	42	41	126
Sergt C W Carpenter	44	38	41	123
Capt A E Chantler	39	42	41	122
Pvt Burns	41	42	39	122
Pvt F W Britton	47	40	35	122
Pvt D S Wade	35	44	41	120
Lieut Davenport	42	39	39	120

Fergus Falls match, 10 shots, at 200 and 500yds. First prize gold badge; five other prizes, presented by Company F, First Regiment. Twenty-three entries:

	200yds.	500yds.	Total.
Lieut E W Bird	45	46	91
Lieut J F Cowie	45	45	90
Sergt C W Carpenter	45	42	87
Pvt F W Britton	43	43	86
Capt A E Chantler	44	42	86
Lieut Aplin	54	41	86
Sergt E G Falk	41	44	85
Pvt F J Britton	42	43	85
Maj G M Skinner	43	42	85
Pvt O Olson	44	41	85
Lieut W E Cooke	39	44	83
Pvt D S Wade	41	42	83
Lieut Davenport	45	38	83
Pvt Burns	41	39	80

Sept. 6.—The fifth annual tournament of the Minnesota National Guard Rifle Association closed to-day. It has been altogether a successful affair, notable progress being shown in small arms practice. The Washburn match for inter-State teams, which was on the programme for to-day, was necessarily omitted, there being no teams from outside this State to enter. An individual match, named the "Fairmont," was substituted, consisting of 10 shots each at 200, 300 and 500yds, with a possible score of 150. A purse of $50 was raised for this match, and a graded division made among those making the fifteen highest scores, the first prize being $10. Lieut. E. W. Bird, who made the best score, waived his interest in the purse. There were twenty-nine entries:

	200yds.	300yds.	500yds.	Total.
Lieut E W Bird	41	40	44	125
Lieut W J Davenport	45	38	41	124
Lieut W E Cooke	42	42	40	124
Lieut E B Shanks	38	40	44	122
Sergt W J Bain	36	43	43	122
Pvt Agern	43	35	43	121
Sergt E G Falk	42	42	36	120

St. Paul match, 10 shots each at 200, 300 and 500yds. First prize, an elaborate gold medal presented by the *Pioneer Press. Globe* and *Dispatch* of St. Paul, and first choice of other prizes, badge to be won three times before becoming personal property. Other prizes winner's choice. There were twenty-eight entries in this match:

	200yds.	300yds.	500yds.	Total.
Lieut F A Farr	41	41	40	122
Maj C M Skinner	39	37	44	120
Pvt Burns	41	42	37	120
Lieut E W Bird	46	40	31	117
Pvt Agern	40	33	43	116

In a skirmish match between Lieut. E. W Bird and Maj. C. M. Skinner, the first named won by a score of 128 out of a possible 200, making 35 hits out of a possible 40.

Revolver match, 10 shots each at 50yds. standard American target, 3 money prizes. The winning scores were: Pvt. O. Olson 82, Maj. C. Skinner 69, Lieut. J. F. Cowie 56.

Continuous match at 200yds., 5 shots each, best 3 scores to count, 3 prizes. The scores of the winners out of a possible 75 were: Lieut. E. W. Bird 69, Sergt. C. W. Carpenter 66, Pvt. O. Olson 63.

PENNSYLVANIA STATE SHOOT.

THE annual brigade and regimental matches between teams of the National Guard began on Monday, Sept. 2, at the Mt. Gretna rifle range, with Col. Louis A. Watres, of Scranton, general inspector of rifle practice, in command. Maj. John G. Bobb, of Carlisle, ordnance officer of Third Brigade, is in charge of the rifle range. Twenty-one teams reported at the range to Col. Watres. The day was a fair shooting day, and the regimental teams went ahead of the scores of last year.

Tuesday's shooting at Mt. Gretna Park was an improvement on Monday both in general results and individual scores. The regimental Coleman prize rifle matches were finished with the following results:

	200yds.	500yds.	600yds.	Total.
Thirteenth Regiment	184	177	167	528
Sixteenth Regiment	175	182	166	523
First Regiment	182	171	165	518
Sixth Regiment	176	176	182	514
Ninth Regiment	165	175	169	509
Twelfth Regiment	170	154	164	488

The highest individual scores for the Coleman prizes were as follows:

	200yds.	500yds.	600yds.	Total.
T F Connelly, 15th	31	34	31	96
J J Mountjoy, 6th	31	34	28	93
G W Coulstan, 1st	34	31	28	93
G Atkinson, 6th	30	32	30	92
W W Smith, 6th	32	31	29	92
C W Gunster, 13th	33	30	29	92
H C Wagraff, 17th	29	32	30	91
J S McAskie, 13th	30	34	27	91
W Fuller, 6th	30	31	29	90

On Wednesday another regimental match was won by the 13th Regiment, with a score of 360:

	200yds.	500yds.	600yds.
Watkins	37	31	31
McAskie	31	29	25
Gunster	31	29	28
Pratt	32	34	32
	121	123	116

The other regimental scores were as follows:

	200yds.	500yds.	600yds.	Total.
Thirteenth Regiment	121	123	116	360
First Regiment	120	118	115	353

Eighteenth Regiment	105	120	114	339
Second Regiment	107	126	110	337

The individual scores were as follows:

	200yds.	500yds.	600yds.	Total.
C B Pratt, 13th	32	34	32	98
H J Mehard	32	30	30	92
L W Smith	28	29	34	91
G F Root	31	30	30	91

The fourth day's shooting was by the brigade teams in practice. In the morning with 15 men, 7 shots each at the range of 200, 500 and 600yds. the score was as follows: Third Brigade, 1261; First Brigade, 1253; Second Brigade, 1235. In the afternoon practice the leading score was made by the Second Brigade team of 1263.

Friday closed a most successful season upon Coleman Range. Every organization in the Guard was represented, and the scores made testify to the great interest manifested and to the remarkable progress in this important branch of the service. The brigade match was shot Friday, and won by the Third Brigade.

Third Brigade.

The prize trophy for the brigade marksmanship teams is in the form of a "loving" cup, of solid silver, fourteen inches high and eight and one-half inches broad at its widest point. The body of the cup has a repousse finish, and the keystone and crossed rifles and target are applica. Upon the reverse side will be inscribed the names of the winners. Two burnished handles of massive silver are placed upon opposite sides of the cup, while upon the keystone in enamel will be the color of the brigade winning the trophy. The trophy is to be competed for for three consecutive years, and upon the reverse side there is left a blank space for the victorious team's name.

BOSTON, Sept. 7.—The Massachusetts Rifle Association held its regular weekly shoot to-day with a good attendance. The shooting conditions were good, and some fine scores were made. The shooting of W. G. Hussey with the Springfield military was very fine, and perhaps a record for 50 shots. Mr. Merville won the gold champion medal, and Mr. Munroe won the gold medal in the 20-shot match. Mr. Keen won the first bronze medal in the military medal match on 10 scores of 36 or better. Following are the scores made to-day:

Champion Medal Match.

S O Merville ..... 7 8 4 10 7 9 9 7 7 9— 77

A W Redding, Co L, 5th	4	3	2	2	3—14
John Lewis, Co L, 5th	3	3	0	0	2— 8

THE CREEDMOOR TRANSFER.—The transfer of Creedmoor, the famous shooting grounds of the National Rifle Association, to the State of New York, was formally agreed to at a meeting of the Board of Directors Sept. 3 in the association's quarters in Temple Court. There were present Gen. Geo. W. Wingate, Chairman; Capt. John S. Shepherd, Secretary; Major Edward Duffy, Gen. Charles F. Robbins, Mr. J. H. Robbins and Mr. Jas. Duane. Gen. Wingate presented for the consideration of the board a formal consent to the conveyance of the property, bearing the signatures of more than 32 of the directors of the association, active and *ex officio*. The legal requirements having been complied with, Major Duffy offered the following resolution, which was unanimously adopted: "*Resolved*, That the president and secretary of the association be and are hereby authorized and directed to execute to the State of New York a conveyance of the range and property at Creedmoor, so as to comply with Chapter 540 of the Laws of 1889, and to affix the seal of the association thereto." By this action the State will become possessed of close upon 225 acres of ground, with the building, rifle ranges, and appurtenances at Creedmoor for the nominal sum of $25.000. The National Rifle Association, on its part, is relieved of all responsibility for suits growing out of its occupancy of the ground and maintaining a rifle range, and is assured the use of the range for ten days in each year for the holding of its annual fall prize meeting for a period of ten years, with a presumptive right to the renewal of that privilege. In order that the transfer might be legally executed it became essential that a president of the association should be elected, Gen. John B. Woodward, the vice-president of the association, who has been acting in that capacity, being in Europe, and on the motion of Major Duffy, Gen. Wingate was unanimously chosen. The thanks of the association was returned to Capt. Robert P. Bush, of the Twenty-sixth Separate Company of Elmira, for his exertion in securing the passage of the Creedmoor transfer bill by the Legislature.

IRA PAINE DEAD.—Paris, Sept. 7.—Chevalier Ira Paine expired at the Hotel du Bresi this evening, from strangulation of the bowels, after forty-two hours of intense suffering. He was filling an engagement at the Folies Bergères for the last three weeks, delighting large audiences with his marvellous performances with rifle and pistol. His wife and brother-in-law were with him when he died. By his request his body will be embalmed and brought to Providence, R. I., for burial.

JERSEY CITY, N. J., Sept. 2.—The Marion Rifle Club grounds on Jersey City Heights presented an animated scene to-day when the annual fall shoot of the club took place. There were over 200 crack marksmen present, including a large delegation from the Our Own Rifle Club, of Newark, which made the contests very exciting. The scores on an average were very good, but in the long-range events some poor shooting was done on account of the shifting winds and heavy mist which prevailed. Messrs. L. P. Hansen, George C. Varick and Anthony Hauck comprised the shooting committee for '89, and they showed their abilities well in this line of sport by arranging a very interesting programme. The contests were decided as follows: Target of honor, 200yds. off-hand: J. F. Autenreith first with a score of 60 out of a possible 75, L. P. Hansen was second with 58 to his credit, and H. Mahlenbrock won third prize with 51 points. The three leading men on the Creedmoor target, at 500yds., were L. P. Hansen 24, H. Hoersch 23 and Dr. Buyken 23. In the medal target competition Dr. Autenreith won first medal with a score of 66, 67, 70. Dr. Buyken was second. His score was 66, 57, 68, and H. Hoersch secured the third gold medal by making 65, 66, 70. The affair was a grand success financially, and the club contemplates holding another tournament in the near future.

NEWARK, N. J., Sept. 6.—The United Amateur Rifle Association held a well-attended meeting at Lakeside range this evening, and the prospects for the coming tournament are most encouraging. The Association is now composed of twelve clubs: Monroe, Oakland, Excelsior, Howard, Lakeside, Annie Oakley, Columbia, Puritan, Sheppard, North Ward, National and Electric. The constitution was drawn up, and as there are now no restrictions or rules to keep any person from competing, each club in the city will probably become a member at once. The entries will close on Oct. 1, and the tournament will commence on Oct. 14. The Association will now meet weekly in order to complete all arrangements, and any club wishing to enter can do so by coming to the next meeting or communicating with the secretary. The next meeting will take place on Friday evening, Sept. 13, at the Sheppard range, 301 Grant avenue, Kearny.

ST. LOUIS, Mo., Sept. 7.—The Pistol Club held a well-attended meeting last Monday night, and perfected arrangements for the holding of another tournament. It will be a fifteen weeks' shoot. A re-entry and a medal will be awarded to the member winding up with the highest straight general average. A handicap goes also in the affair, and the present handicaps are to be given a general overhauling by a committee appointed at the meeting. The initial shoot will take place next Wednesday night.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Sept. 13.—South Manchester, Conn., Tournament. C. R. Hathaway, Secretary.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 17, 18, 19.—Tournament in connection with State Fair at Meriden, Conn. C. H. Burbridge, Manager.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati; $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 1, 2, 3.—Linthicum's Keystone Tournament at Baltimore, Md.—Samuel J. Fort, Ellicott City, Md., Assistant Manager.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 8, 9, 10, 11.—Fred A. Fodde's Second Annual Amateur Tournament, at St. Louis, Mo. Inanimate targets.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

SEVILLE TOURNAMENT.

SEVILLE, Ohio, Aug. 21.—The Seville Gun Club held a tournament on the Fair Grounds Aug 27, which was quite well attended and a good time was enjoyed by all. Five traps were used under the Keystone system, which is a success for putting through a long programme in a short time. Standard targets, Association rules, ties divided unless otherwise noted.

Some minor matches were shot after this, but none of importance. CHIPPEWA.

OLD TIMERS.—The most interesting contest that will occur at the shooting tournament of the New Jersey State Sportsmen's Association, to be held at the Marion trap grounds, on Sept. 24, 25, 26 and 27, will be the event open to all residents of New Jersey over 55 years of age. There are many old-timers throughout the State who intend getting out and trying their hand with the gun, and although the scores will not reach very high, still the competition will be pretty evenly matched. Old Long Island rules will govern this shoot, and only one barrel will be allowed, while the gun must be placed below the elbow.

SPRINGFIELD, N. J., Sept. 2.—The Union Gun Club held a tournament here to-day. The attendance was fair and a number of events were shot, which resulted as below, ties divided:

No. 1, at 10 bluerocks, 25 cents entrance, 3 moneys:

Johnson	1111011111—9	Lyons	1101000010—4
Moffatt	1011011100—6	Sopher	1110110011—7
Sigler	0011111110—8	Miller	1111011110—8

No. 2, at 10 Keystones, same conditions:

Johnson	0111010111—7	Moffatt	1010011011—5
Sigler	1110111111—9	Miller	1111111101—9
Sopher	1010111101—7	Lyons	1110000000—3

Wade	010010010101001011001100111110—15

Johnson won badge with the only straight score of 30. Other prizes won without a tie except the 8th, which was shot off, Sopher winning after breaking 9 out of 10.

Extra No. 1, 10 keystones, entrance 25 cents, 2 moneys: Johnson 6, Miller 7, Perry 5, Lyon 6.

Extra No. 2, 10 bluerocks, same conditions: Johnson 7, Miller 10, Lyon 7, Perry 9, Moffat 5.

Extra No. 3, 10 Keystones, same conditions: Johnson 8, Lyon 7, Moffat 3, Perry 2, Miller 7.

Extra No. 4, 10 bluerocks, same conditions: Johnson 8, Moffat 4, Lyon 7, Perry 8, Miller 7.

Extra No. 5, 10 Keystones, same conditions: Johnson 4, Perry 8, Moffatt 6, Lyon 9, Miller 10.

Extra No. 6, 10 bluerocks, same conditions: Johnson 9, Perry 9, Lyon 8, Moffatt 9, Miller 10.

Extra No. 7, 10 Keystones, same conditions: Johnson 8, Lyon 3, Sopher 6, Miller 7, Perry 6, Sigler 7.

Extra No. 8, 10 Keystones, same conditions: Miller 10, Sigler 8, Johnson 9 Sopher 8, Lyon 6

WALNUT HILL, Sept. 4.—There was a fair attendance of sportsmen at the range to-day. Excepting the extreme heat, the conditions for shooting were good, and many fine scores were made. Mr. Knowles's score of 29 out of a possible 30, in the gold coin match, is worthy of special mention. Following is a summary of the day's events:

Gold coin match, 15 clay-pigeons and 15 Keystone targets, Keystone squad system.

	Clays.	Keystones.
Knowles	111111111111111—15	101111111111111—14—29
Swift	111111111011110—13	111111111110111—14—27
Lee	111110110111111—13	111101111011111—13—26
Stanton	011111111111111—14	111111111011001—12—26
Crown	110101111101111—12	101011111111111—13—25
Perry	111111111111111—15	110111000011111—10—25
Hosmer	111111111011111—14	001101011110111—10—24

Snow	011000110111110— 9	101111111101001—12—21
Nichols	101101011001111—10	101110011011011—10—20

PATERSON, N. J.—On Monday, the 2d inst., a team race for the Kershaw badge occurred at Echo Lake between teams of 5 men representing the Paterson City Rod and Gun Club, the Gentlemen's Gun Club, the Riverside Gun Club and the Gaster Gun Club. The weather was fine, but the sun was fiercely hot, and somewhat interfered with the contestants. The Paterson City and Riverside clubs tied twice for the badge, the Riversides finally winning. Scores, teams of 5, at 10 glass balls each:

Paterson City Rod & Gun Club.		Gentlemen's Gun Club.	
R Bustard	0010111011— 6	W Smith	1011011111— 8
G Gould	1110111101— 8	J Wilkes	1011111010— 8
G Hill	1111111111—10	J Fairhurst	0001001000— 2
J Eldridge	1011011011— 7	J Myrtle	0011101111— 7
J Welcher	1100111011— 7—38	J Allen	1100100011— 5—28
Riverside Gun Club.		**Gaster Gun Club.**	
C Pyle	1011101110— 7	C Vermorel	1011111000— 6
B Maskel	1011011011— 7	W Thorn	1011111101— 8
C Stalter	1110110010— 6	H Van Kirk	0100100101— 4
W D Braddock	1111111111—10	P Gough	1111111111—10
J Braddock	1111111010— 8—38	H Post	1111111110— 9—37

Tie:

Paterson City Rod & Gun Club.		Riverside Gun Club.	
R Bustard	11111—5	C Pyle	10111—4
G Gould	11101—4	B Maskel	11111—5
G Hill	11101—4	C Stalter	11110—4
J Eldridge	11111—5	W D Braddock	11111—5
J Welcher	10011—3—21	J Braddock	10110—3—21

The second tie was shot by agreement at one ball each, the Riversides winning the badge by a score of 3 to 2.—A. B.

FLORENCE, Mass., Sept. 3.—Norwood Gun Club shoot at 25 Keystones, 3 traps:

T T Cartwright	0110110110111101111011111—19
E E Davis	1101001010100100111110011—15
L Gaylor	1100110101101001011011011—16
C O Harris	1010101010011101001110011—17
L Foster	0111100100111100100111111—16

TORONTO, Sept. 7.—The following scores were made at the Stanley Gun Club shoot to-day for the handsome gun given by McDowall & Co. The weather was fine, and the shooting, considering the handicaps, was good. Mr. N. Dick captured the trophy with a score of 17 out of 25. Gun shoot at 25 birds, 5 traps:

N Dick, 22yds	17	Sawden, Sr., 24yds	15
Charles, 24yds	16	Bayles, 18yds	13
Draisey, 19yds	16		

Harrison and T. Brown, 19yds., retired.

First sweep at 10 birds: Emond 9, McDowall 8, Charles 8. Second sweep: Emond 7, McDowall 7, Charles 7. Third sweep: Charles 10, McDowall 8, Emond 8, Draisey 8, Dick 7. Fourth sweep: McDowall 8, Charles 8, Emond 7, Draisey 6. McDowall won.

MERIDEN, Conn.—A tournament at clay-pigeons is announced to take place here during the State Fair on Sept. 17, 18 and 19. The shooting will be at Keystone targets and traps, under Keystone rules. A complete system of classification will be enforced, so that the weak shots will have a chance as well as the best. The programme proposed is as follows: First day—Two-men team match, 25 birds per man, for medal and the sum of $10 added, to winner. Optional sweepstakes, $2 per man entrance. Class A, open to all, at 12 birds, entrance $2. Class B, open to all, at 10 birds, $1 entrance. Class C, at 8 birds, entrance 50 cents. Second day—Club team race, 6 men from any club in Connecticut, at 20 birds per man, $10 and medals to winners. Optional sweepstake as agreed upon by club. Other events will be arranged to fill the day on the class system. Third day—Grand individual State championship match, at 50 birds, $10 and medal to the winner. Optional sweepstakes, $2 entrance. Shooting will commence each day at 8 A. M. All shooters who compete for these prizes must purchase a season ticket at $1.50, which admits to all parts of the grounds. Programme and other information furnished on application to C. H. Burbridge or H. A. Merriman, at Meriden, Conn.

CLEVELAND, O., Sept. 5.—The Cleveland Target Company's monthly shoot was held to-day in conjunction with the East End Gun Club's regular badge contest. The scores made were not up to the average, owing in a great measure to the weather, which was very windy and rainy. But this did not seem to affect Paul North in the least, as he broke 25 straight, being the second straight score made in the Target Company's series of shoots, and which also entitled him to the club badge. Twenty-five single bluerocks were used at 18yds., and of these but three of the 700 thrown broke in the traps. A number of visitors participated. The scores follow:

Paul North	1111111111111111111111111—25
Pfaire	1110011111011111111111110101—20

CAPE MAY.—In the shooting match at the Athletic Park, to decide the tie for the Cape May A. C. cup, between Messrs. Thurman, Low and Cattell, Thurman of the Wingohocking Gun Club won:

Thurman	1111111011111111	10 10 11 11 00—20
Cattell	1111101111001101	00 10 10 10 10—15
Low	0101111011111100	10 00 10 00 00—11

In the shoot for the Physick cup, last year won by Leonard Finletter, that individual carried it off again with 20 singles out of 25 to his credit:

Finletter	1111111010110111110110111—20
Spicer Leaming	0001010111111111111111010—18
Benezet	1101110101101100111000111—16
Robbins	1101011001100111101111010—16
Wheaton	1011101001110000011011110—15
Taylor	1100010011011011001101011—13
Mecray	0101000001101111011010111—13
Mayhew	1001100111011001000101101—12
J R Evans	1001100110011010010111101—14

The Correspondents' cup, at 9 singles and 3 pairs of bluerocks, was won by Mr. John Armstrong, he scoring 13 out of the 15. The scores were very good, as the strong wind twisted the birds in every direction.

EATON, N. Y., Sept. 7.—The first time we ever used 5 traps unknown angle. Match at kingbirds, 15 singles and 6 pairs, 5 traps, 18yds. rise, Association rules:

Curtis	1010011010101	01 11 10 11 11 11—19
Hall	1111101111101111	11 11 10 10 11 11—23
Peet	1110110010111111	11 10 10 10 11 11—20
Richardson	0111111011110001	01 11 10 10 10 11—19
Briggs	0101110111111111	00 11 10 11 10 10—19
Cole	1111100111110111	11 11 11 11 11 11—24
Bell	0111101111011010	10 00 01 11 11 11—18
Mott	0100110010110110	11 00 01 00 11 01—13
Hamlin	1000111010011111	01 11 01 11 01 01—17
*Cruttenden	1010101111011001	01 11 10 10 11 10—17
*Weber	0001101111001010	11 00 00 10 10 11—13

*Visitors from Cazenovia.

Our boys would call it very tame business shooting Keystone rules. The idea of a man calling himself a wing shot and facing a trap knowing just the direction of his bird. Is that the way grouse get up for you in the brush? They don't for me.—WING.

NEWARK, N. J., Sept. 2.—On Labor Day the East Side and West Side Gun Clubs met in battle in Wiedenmayer's Park. They shot a 15 bird match at American standard targets with the following result:

East Side Gun Club.		West Side Gun Club.	
H Koegel	12	Drastle	13
Richards	11	Jacquin	7
Hilfers	11	Meyer	9
C Von Lengerke	13	J Weber	11
Humphreys	8	Meisel	9
Schraft	11	Buckhard	9
Ostrander	11	Astfalk	8
C Walker	13	Buob	9
Schilling	10	Spann	13
Perment	13	Deisler	5
Laubenstein	11	H Webber	8
E Theurich	7	L Schilling	7
Froelich	12	J Weber	10
Schork	14—157	Reibold	10—128

Then a live bird shoot ensued at 3 birds each and the prizes were divided. The scores were: Spann 1, J. Weber 2, Hilfers 1, Theurich 2, Bar 2, Schraft 3, Schork 1, Ostrander 1, Carl Von Lengerke 2, Perment 2, H. Weber 0, Astfalk 0, Matson 2, Koegel 2. A few birds were left and a second shoot ensued with the following result: Perment 3, Schraft 2, C. Von Lengerke 2, Schork 1, Kramer 0.

ALLENTOWN, Pa., Sept. 5.—Our club had its regular shoot today at standard targets, and as there was a pretty breeze blowing to-day and some new members shooting, the score made is not what it could be. We recently moved to our present grounds and I dare say that there is probably no better ground in the State if in the United States for having a clear view of the targets as they are thrown from the trap; we also changed our targets from clay pigeons to the standard targets, but throw them from bluerock traps:

L W Mazuric	0111011011111010—10	H Benning	0011100610101000— 6
Ed Fink	1011111111011111—13	J F Wolle	1010111100111110—10
B Huffort	0010100011101000— 5	E D Jeanes	1000100110000001— 5
J Benning	0110101010001001— 6	Ed Ulmer	1100001011000010— 7
A B J Frantz	1101011010101111—10	J P Boyer	1001110111101111—11
C George	1010010000101000— 5	J P Creveling	0010001010100001— 5
H T Erdman	0010000101010001— 5	P C Blank	0001001100110000— 5
F B Saeger	0111110110011000— 9	C F Kramlich	0100011001111011— 8

A. B. J. F.

DAYTON, O., Sept. 6.—This being the day for the regular Kennel Club shoot, a number of members and other shots assembled at Shorty's Inn for a series of live bird matches under the American Association rules, Ashton Webb, referee. First match, 10 live pigeons each:

Geo Volker	0002222212—7	Andy Mumme	0001211022—6
Gus Sander	2211102211—9	Geo Makley	0220031001—4
Wm Pratchett	1210002111—7	Ed Rike	0010101212—6
Chas Sander	2000221122—7		

Ties divided.

Second match, 10 live pigeons, 7 entries:

Geo Volker	0121200121—7	Andy Mumma	1210122111—9
Gus Sander	1122010202—7	Geo Makley	1012021211—8
Wm Pratchett	1102212020—7	Ed Rike	1101100021—6
Chas Sander	1020220022—6		

The next shoot will be held two weeks from to-day, with sparrows and bluerocks for targets.

POTSDAM, N. Y., Sept. 6.—Potsdam Gun Club match at 6 kingbirds, 3 traps, 18yds. rise, National rules. First event:

Long	011111—5	F A Weed	110111—5
Watkins	100110—3	W R Weed	111011—5

Ties on 5 shot off and won by W. R. Weed.

Second event:

Hart	111100—4	Watkins	111110—5
W R Weed	101001—3	F A Weed	111111—6

Third event, 3 kingbirds, 3 traps. Heath and F. A. Weed vs. W. R. Weed and Watkins:

Heath	110—2	W R Weed	110—2
F A Weed	101—2—4	Watkins	111—3—5

H. A. WATKINS, Sec'y.

CLEVELAND, O., Sept. 6.—At the regular weekly shoot of the Sherman Gun Club to-day Sprigg won class A badge on score of 21 and Flowers won class B badge by score of 19. Each man shot at 25 birds. Score: Sprigg 21, Flowers 19, Fink 19, Darst 19, Williams 16, Walters 15, Miller 14, Hunt 14, Fern 11. After the badge contest was finished sweepstakes were shot with the following results: First event—Sprigg and Walters divided first, Williams and Fink divided second, Miller won third. Second event—Darst won first on score of 5, Sprigg won second on score of 4.

MIDDLETOWN, Pa., Sept. 7.—A more unfavorable day for trap-shooting never greeted sportsmen than was experienced by the shooters who met at Middletown to-day; but the few who did attend were determined to burn powder, although the rain fell in torrents at times. Sweep No. 1, 70 cents entry, 10 bluerocks, 2 moneys, American Association rules:

Hepler	0111010111— 7	Bollock	1101100100— 5
Sheesley	1001000101— 4	Kouch	1111010010— 6

RAVELRIGG.

CORRY GUN CLUB.—The following are the scores made at our weekly shoot, Sept. 5. The day was very disagreeable, with alternating wind and rain storms. After the club shoot several very interesting team races were shot. Keystones, 5 Keystone traps:

H Arnold	0011111111001110001—19		
F Ward	1111111101111111111101—22		
Penrose	1111111011011111101111—22		
Lewis	1111111010101101111111—21		
Laurie	1011111111111111101111101—22		
Berliner	1111010001111111110101010—16		
Edwards	1000110010111100010011000—11		
Blair	0100100000111101011001101—12		
Wetmore	1010101101010101010010101—14		
M Arnold	1111011111110000111111111—20		

WELLINGTON, Mass., Sept. 7.—There was a fair attendance at the grounds of the Wellington Club to-day, and several good scores were made. In the silver pitcher match, at 8 clay pigeons and 7 bluerocks, Perry and Porter tied with 14 each, but Porter was barred for shooting at 16yds., and Perry was awarded the pitcher. The other scores made in this match were: Stone, Bond, and Field 13, Lee 12, Chase, Sanborn, Melcher, Edwards, Warren and Bradstreet 11, Dill 8. In the merchandise badge match, at 15 clay pigeons, Stone, Dill and Field tied with 13 each. The other scores were: Lee, Sanborn, Bond and Bradstreet 12, Porter and Warren 11, Melcher 9. Stone, Dill and Field did not shoot off for the pitcher. The usual sweepstakes followed.

THE MIDDLESEX GUN CLUB is out with its programme for the annual tournament at Dunellen, N. J., Oct. 8, 9, 10 and 11. Bluerocks and Keystone targets will be used the first two days and live birds the balance of the shoot. The programme is an excellent one, comprising many events for guaranteed purses, one of which is $400, at 25 birds. This live bird event is a feature of all Middlesex tournaments, and never fails to secure a large entry and to draw a crowd of spectators. Programmes on application to W. Fred Quimby, 291 Broadway, New York, or W. L. Force, Plainfield, N. J.

JERSEYVILLE, Ill.—The programme for the eleventh annual convention of the Central Illinois Sportsmen's Association, to be held at Jerseyville, Sept. 17 to 20, inclusive, is now ready. Champion clay birds and standard targets will be used and many valuable merchandise prizes are offered in addition to the money purses. For programme and other particulars address L. S. Hensell, Jerseyville, Ill.

NEWARK, N. J.—The Woodside Gun Club will hold an open shoot all day on Sept. 18.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

LARCHMONT Y. C. FALL REGATTA, SEPT. 7.

THE familiar sight of Oriva at anchor off Larchmont on Saturday morning, looking clean and bright as when she was last in commission five years ago, recalls forcibly the last races she sailed. In Oct., 1884, she had been stripped and laid up in the Seawanhaka Basin at Staten Island, Mr. Lee being about to go abroad, when the fall regatta of the Seawanhaka C. Y. C. was announced. At the last moment, when it was evident that there would be few entries, and that the race was likely to be a failure, Mr. Lee decided to put Oriva in the race; she was fitted out for racing within 24 hours, towed to the Screwdock and cleaned, sailed the race, and by the evening of the day following the second race was stripped again; to remain, as it proved, until sold this summer. Once in all that time it was proposed to put her in commission, in the winter of 1887, just before the last fatal cruise of the Cythera, when Mr. Lee had it in mind to put her in commission in order to be able to vote in the New York Y. C. against the acceptance of the new deed of gift. It is a pity that there are not more yachtsmen like Mr. Lee in the 40ft. and other classes.

What we said last year about the fall regatta at Larchmont might properly be said now; the club did everything to secure good racing, the owners nothing. Besides good money prizes, in all classes, the Connor, Gould and Thayer cups were offered, but without an entry, save Liris in Class 7, none of the 70ft. class were present; only Clara, Anaconda and Eleanor were present in Class 5, and the entries were correspondingly small in the other classes. The schooners Clio, 68ft., and Azalea, 69ft. l.w.l., made a class, the latter assuming a larger measurement.

There were plenty of forty-rooters in harbor, Nymph, Banshee, Lotowana and Vandal, but all claimed to be cruisers. Liris had been prepared specially for this race, much of her gear being heavier, as new topmast, new headsails, and some minor alterations, so that she was in better form than in any previous race. She has one leg for the Thayer cup and was looking for a second, but as no prizes are given for sailovers, she could not start alone. It is a safe principle to give prizes, first, second or third, only when a boat has beaten another; but in cases like this, which are only too frequent, it would only be fair to a man who comes prepared to race, at the expense of time and money, to allow him to sail alone if no ones comes to face him. At least it might be left to the discretion of the regatta committee to offer the prize for a sailover, as in the case of the American Y. C. this year when Nymph declined to start unless allowed to pick the course. The committee promised Liris a prize for a sailover, whereupon Nymph came to the line. In the present case, with a fine day and good breeze, rather than miss a race entirely Liris made a private sweepstakes with Clara, by which the larger boat allowed time on the actual measurements of the two, 55 and 42ft., the stakes being $25 each. A similar offer was made by Liris to Anaconda, but Mr. Prague declined it. The course was around Hempstead and Captain's Island marks, as usual, the wind being E.S.E. and pretty fresh at the start, though a little lighter at the outer mark. All crossed the line together on port tack, Clara first, followed by Liris. Anaconda was just astern of Liris at the line, but bore away to clear her and then tacked, crossing nearly 2m. later. The start was timed:

Clara	11 31 01	Culprit Fay	11 34 08
Liris	11 31 18	Eleanor	11 34 13
Zelda	11 31 21	Giggle	11 34 27
Volusia	11 32 09	Clio	11 35 36
Anaconda	11 32 59	Azalea	11 36 00
Fauna	11 33 00	Amazon	11 36 39
Dorothy	11 33 07	Niamuck	11 38 04
Alene	11 33 35	Edna	11 38 15

Clubtopsails were barred, but the yachts were heeled nearly rail to without them on the reach across to Hempstead. Clara ran away from her rivals and Liris was overtaken by Anaconda just at the turn, Clara stood by the mark, only tacking when well into the Long Island shore. Liris turned inside and ahead of Anaconda, both holding port tack, but the latter soon tacked compelling Liris to do the same. The three were nearly even, Clara ahead and far out to windward, then Anaconda, with Liris under her lee bow. The little cutter had no sooner trimmed sheets than it was apparent that she was leaving the sloop, in spite of 12ft. length, outfooting her and holding a good wind. After ten minutes Anaconda was a safe distance astern of Liris, and the little boat was plainly footing with Clara, though the latter was still well to windward. It was a close jam for the mark, with the chances that none would make it. Liris was holding a good wind, she and Clara coming nearer together, but when within a half mile of mark the wind eased a little, allowing Clara to fetch without much trouble, Liris came out just at the mark, being obliged to make a short leg, which cost her considerable time, the wind then being light. The times were:

Clara	12 51 00	Eleanor	1 03 30
Liris	12 55 48	Clio	1 10 55
Anaconda	12 56 50	Alene	1 12 40
Azalea	1 01 05		

Azalea had beaten Clio handsomely on even time, while Liris was within her time of Clara.

On the reach back with booms to starboard Clara, Anaconda and some of the others set spinakers, but the wind was too far forward. Liris had only her balloonjibtopsail and held very close to Anaconda. The last leg was also a reach, on the other tack. The full times were:

	Start.	Finish.	Elapsed.
CLASS D.			
Clio	11 35 36	3 26 00	2 50 24
Azalea	11 36 00	3 18 22	2 40 22
CLASS 5.			
Clara	11 31 01	2 06 20	2 35 19
Anaconda	11 32 59	2 12 45	2 39 46
Eleanor	11 34 13	2 29 10	2 52 57
Liris	11 31 18	2 16 15	2 44 59
CLASS 8.			
Alene	11 33 35	2 42 24	3 08 49
Volusia	11 32 09	2 42 08	3 09 59
Culprit Fay	11 34 08	3 03 20	3 29 12
CLASS 9.			
Fauna	11 33 00	2 59 22	3 26 32
Amazon	11 36 49	3 15 05	3 38 16
CLASS 11.			
Dorothy	11 33 07	2 21 51	2 48 54
Edna	11 38 15	2 04 07	2 25 52
CLASS 10.			
Zelda	11 31 21	1 31 15	1 59 54
Giggle	11 34 27	1 25 35	1 56 08
Niamuck	11 38 04	1 36 59	1 58 55

The corrected times over the course are: Liris 2.34.57, Clara 2.35.19, Anaconda 2.48.09.

Liris makes the best corrected time over the course, beating Clara and both the schooners. In such a breeze her performance, especially on a part of the windward work, is a remarkable one, though after the undeserved abuse that has been heaped on her owners, and especially on her amateur helsman, by the daily papers it is not surprising that it has hardly been noticed, most of them crediting the win to Clara. A special race for 40-footers is set for Sept. 28, but there is no certainty of it filling. During the race Kathleen came in from Marblehead, having made the run in 59h. sailing time and 73h. actual time, a good record for 30ft. On Sunday Gorilla also arrived from Newport.

EASTERN Y. C. FALL REGATTA, SEPT. 5.

THE fall regatta of the Eastern Y. C. on Sept. 5 was open to 40ft. yachts only, there being no chance of other classes filling. After the hard racing for the Weld Cup, five days in all, there were few forties ready for more racing, and only four started. Minerva is now being used by her owner's family, and will probably race no more this season. Helen, Tomahawk and Maraquita have given up for the season; Gorilla had gone to Newport, and none of the New York yachts cared to go so far for one race. The only starters then were Chiquita, sailed by Capt. Crocker; Verena, sailed by Mr. Burgess, with Helen's crew on board; Xara, sailed by Capt. Sloan; and Alice, sailed by Capt. Smith. Xara was out with a new clubtopsail, jib and balloon foresail. The wind was very light, E.S.E., but at 10 A. M. a tug was sent out to log off 10 knots to windward from Marblehead Rock. The preparatory was given at 11:25, and the start at 11:30, Xara going over first, to windward of Verena, Chiquita following the latter. Alice met with an accident before the start, the turnbuckle on her bobstay giving way. She repaired damage and crossed the line, but was soon compelled to withdraw. The times at the line were:

Xara	11 30 09	Chiquita	11 30 49
Verena	11 30 10	Alice	11 41 00

Starting on port tack all carried clubs and small jibtopsails Verena drawing ahead, but after a few minutes Xara went on starboard tack. Verena gained on Chiquita, and after a time went on starboard tack, after Xara. When Verena and Chiquita met again in tacking the former crossed the other's bow very easily. Xara had been left in her hunt for flukes, and was well astern of the pair, but at noon the wind favored her, and for a time made her the leading boat, with the other two well to leeward. This held for a short time and then the wind shifted once more, favoring Verena and Chiquita and leaving Xara becalmed. About 1:15 a fresh south wind came up, sending Verena and Chiquita out to the mark at a good pace, but leaving Xara to leeward, while she was the last to get the wind. Verena made the mark, but Xara failed to weather it, and had to make an extra hitch. The times were:

Verena	2 01 32	Xara	2 17 06
Chiquita	2 06 14		

Verena turned with her balloon jibtopsail set, carrying the sail all the way home. Both Chiquita and Xara set spinakers, staying them forward, but they did little good. The wind was variable, growing lighter by starts, so that Xara was very badly beaten. The times were:

	Length.	Start.	Finish.	Elapsed.	Corrected.
Verena	47.00	11 30 10	3 18 30	3 48 30	3 48 30
Chiquita	46.88	11 30 49	3 23 12	3 53 12	3 53 12
Xara	46.40	11 30 09	3 41 12	4 11 12	4 10 32
Alice	47.00	11 41 00	Disabled.		

Verena wins $200. The race cannot be taken as a test, the weather being too fluky. Both Minerva and Baboon were out during the race, but under plain sail and with boats in tow. The judges were Messrs. C. H. Joy and W. S. Eaton.

ROYAL CANADIAN Y. C., SEPT. 7.—The races for the Prince of Wales and Lansdowne cups was sailed on Sept. 7 in a strong S.E. breeze and heavy sea, the course being: From Exhibition Wharf to Bell Buoy, leaving it on starboard, thence to buoy moored 5 miles E. by N. from Bell Buoy, thence to buoy 5 miles S. by W. ½ W., thence N. W. ½ N. to Bell Buoy, yachts to keep outside of all harbor and island shore buoys, except those east of Bell Buoy, all course buoys to be left on starboard, finishing line the same as starting line; twice around for first class and once for second. The time allowances were as follows: Oriole allows Verve No. 2 16m. 58s., Aileen 3m. Aileen allows Verve No. 2 13m. 58s. Verve No. 1 allows Merle 2m. 12s., Cyprus 11m. 58s. Merle allows Cyprus 9m. 46s. Oriole is a schooner of 70ft. l.w.l., and Verve No. 2 a cutter of 42ft. l.w.l.—rather an unequal match. Verve was handicapped 9m. 17s. at the start, or she would have saved her time on the schooner. The times were:

	Start.	Finish.	Elapsed.	Corrected.
PRINCE OF WALES CUP.				
Oriole	11 05 00	4 35 35	5 30 35	5 30 35
Verve No. 2	11 05 00	4 53 50	5 48 50	5 31 52
Aileen	11 05 00	4 48 50	5 43 30	5 40 30
LANSDOWNE CUP.				
Merle	2 33 58	5 46 55	3 12 57	3 10 45
Verve No. 1	2 32 13	5 49 00	3 16 47	3 16 47

Cyprus was entered, but was disabled before the start. The presentation of the prizes was postponed. The following events will close the season: Sept. 14, 25ft. class; Sept. 21, cruising class, race to Whitby; Sept. 28, Cosgrove cup, 20 to 25ft. yachts; Oct. 6, McGaw cup, yachts 20ft. and under.

THE LOSS OF THE CYTHERA.—The memorial of the Corinthian Yacht Club read at the meeting of Nov. 23, 1888, in memory of Messrs. Stewart and Lee, has been printed, making a beautiful quarto volume. The address is printed on a very heavy linen paper, the opening pages containing the initials of Messrs. Stewart and Lee, with the club crest, printed in silver, and also the private signals of Cythera and Oriva, with the club burgee, also in silver. A very handsome photogravure picture of Cythera is also given. The volume makes a permanent and fitting memorial of the lost ship and her gallant crew. Copies of it have been sent to all members of the Corinthian Y. C. and also to the leading yacht clubs.

HULL Y. C. ANNUAL REGATTA, SEPT. 7.

WITH a dense fog and no wind there was little prospects of a race at Hull on Saturday morning, so that the start was postponed until 2 P. M., by which time there was a light E.N.E. wind and less fog, so the 43 starters were sent away. The courses were: For third class, across line between judges' yacht and flagboat, leaving judges' yacht on port, around Black Brush buoy No. 1 (half a mile south of starting line), leaving it on starboard, Wreck buoy off Peddock's Island on starboard, Jackknife Ledge buoy on starboard, Sheep Island on starboard, Black Brush buoy No. 1 on starboard, Red Brush buoy No 2 off Downer's on starboard, Black Brush buoy No. 1 on starboard, to and across line between judges' boat and flagboat, 10 miles; limit of time, 4 hours. For fourth, fifth and sixth classes: From starting line, leaving judges' boat on port, H. Y. C. barrel off northwest end Bunkin Island on starboard, H. Y. C. barrel off Prince's Head on starboard, red flag at starting line on starboard, H. Y. C. barrel off northwest end Bunkin Island on starboard, H. Y. C. barrel off Prince's Head on starboard, across line between judges' boat and red flag, 6 miles. The times were:

THIRD CLASS CENTERBOARDS, 21FT. AND LESS THAN 25FT.

	Length.	Elapsed.	Corrected.
Black Cloud, Aaron Brown	23.10	2 16 03	1 42 10
Secret, E. F. Linton	22.06	2 18 17	1 43 16

Guenn, E. M. Horton	17.06	1 47 10	1 21 42

Madge protests Posy and Secret for fouling Jackuife Ledge Buoy, and Meteor protests Vaga for fouling her. Subject to change by these protests, the prizes are won as follows:

Third Class, centerboards—Black Cloud first, $25; Secret and Posy divide second and third prizes of $20 and $10; Madge fourth, $5. Third Class, keels—Thelga first, $25; Echo second, $20; Beth and Judith divide third and fourth prizes of $10 and $5. Fourth Class—Eureka first, $25; Tom Cat second, $20; Ustane third, $10; Auk fourth, $5. Fifth Class, centerboards—Mabel first, $25; Atala second, $ 0; Peri third, $10; Myrtle fourth, $5. Fifth Class, keels—Astrea first, $25; Vaga second, $20. Sixth Class—Rocket first, $25; Flora Lee second, $20; Wildfire third, $10; I. X. L. fourth, $5.

The judges were John A. Stetson, W. A. Cary, J. B. Forsyth and John R. Chadwick.

On Sept. 5 the sail-off in second, fifth and sixth classes was held, and also a special race between Mabel and Atala, the last of a series of three. The latter race was started at 11:50, in a moderate S. E. wind, the course being from off the club house to Prince's Head, thence to northwest end of Bunker Island to judges' boat, and repeat; 6 miles. The wind was variable in strength and direction, finally coming fresh from S. W. The times were:

	Start	Finish.	Elapsed.	Corrected.
Mabel	12 49 08	1 33 58	1 44 50	1 21 49
Atala	12 49 00	1 34 41	1 44 41	1 23 29

The judges were A. B. Forsyth and A. W. Blanchard. Mabel wins the $50 cup for the series.

The sail-off of the other classes resulted as follows:

SECOND CLASS.

	Length.	Elapsed.	Corrected.
Malvena (keel) A. J. Lovett	29.02	2 12 09	1 41 24

FIFTH CLASS.

Myrtle (c. b.), R. C. Poor	19.02	1 25 15	1 01 27
Atala (c. b.), E. F. Linton	19.10	1 22 39	0 59 28

SIXTH CLASS.

Rocket (c. b.), H. M. Faxon	16.02	1 31 46	1 04 49
Wildfire (c. b.), H. A. Keith	17.03	1 31 34	1 05 05

Malvena, Atala and Rocket win in their respective classes. The judges were E. L. Burwell, Vice-Commodore J. J. Henry and James B. Forsyth.

BEVERLY Y. C.

THE 154th race, third cup race, was sailed at Marblehead, Sept. 7. There was a dead calm and dense fog all the morning, but about an hour before the start the fog lightened and a trifling breeze struck in varying from N.E. to N. by E. At the starting time it was moderate from N.E.; the sloops started first and hung together over the course, Kathleen steadily gaining all round, Wraith doing well to windward but dropping astern off the wind. Five minutes later third class cat started, Kiowa made the best start of the season, crossing line 1sec. after gun fire, 30sec. ahead of Edith, Pixy being last. Two short tacks were made in the harbor, Kiowa gaining on Edith; but on the next tack at the mouth of the harbor the wind died out almost to a dead calm, Kiowa had it so light that she lost steerage way; Edith got a little air under the fort and crossed Kiowa's bow. The latter, knowing Edith could beat her in such weather, broke tacks and stood in to the northward, hoping to get a little wind under the Beverly shore, the rest of the fleet standing to the eastward. For a little while Kiowa got the best air and gained, but it left her in the doldrums and the rest got it again long before she did, and when they next met Edith led by half a mile. For the rest of the beat and half the reach to Curtis Point, there was a decent breeze and Kiowa gained a little, Edith rounding windward mark 7½m. ahead, the rest of the race being very light and fluky. Dolphin had no chance with Nonpariel in a drift. Courses, leaving Bowditch Ledge and stakeboat off Curtis Point on port, B. Buoy 7, 5 and 3, and Selman's Berth Buoy on starboard and return, 7½ miles. Wind, N.E., variable and very light. Summary is as follows:

THIRD CLASS SLOOPS.

	Length.	Elapsed.	Corrected.
Kathleen, R. S. Peabody	25.05	1 56 35	1 48 00
Mosca, C. H. W. Foster	24.06	1 59 52	1 50 31
Wraith, H. P. Benson	22.03	2 03 52	1 52 29

THIRD CLASS CATS.

Edith, F. H. Wood	20.05	1 58 17	1 45 04
Kiowa, W. A. & W. L. Jeffries	22.01	2 03 15	1 51 43
Pixy, F. W. Chandler	21.04	2 10 08	1 57 54

FOURTH CLASS.

Nonpariel, W. O. Taylor	18.09	2 15 51	2 00 43
Dolphin, Royal Robbins	18.00	2 25 51	2 09 47

Kathleen and Nonpariel win and hold cups. Edith wins, tieing Nerina and Kiowa, the tie will be sailed off on Sept. 21. Judge, H. H. Buck.

A NEW FIELD FOR INVENTORS.—A recent decision of the Monatiquot Y. C., in the case of Erin's protest against Moondyne for sculling with the rudder, opens up a new field for inventors if the precedent thus established should be followed by other clubs. Sculling with the rudder has always been considered illegal, and in many clubs is specially prohibited, but in the case in question it is recognized as a legitimate means of propulsion, the protest being dis-allowed although the sculling was admitted by the owners of Moondyne. A yacht of moderate size may be propelled in a calm at a fair speed by the use of a large and slightly flexible rudder, and it now remains for some genius to improve this hitherto unlawful means of propulsion.

AN ACCIDENT TO THE ELECTRA.

ON Sept. 5 as the steam yacht Electra, flagship of the New York Y. C., was at anchor within the limits of the anchorage at the foot of Twenty-sixth street, East River, she was run into by the steamer Providence, of the Old Colony Line, bound in from the Sound. The following report of the collision is given by Capt. John Hammond, of the Providence:

"It wanted a few minutes of 8 o'clock. I was on deck at the time, as there was a dense fog and a strong ebb tide running. After passing Blackwell's Island we slowed down in order to pass between the spindle to the southward of the island and the buoy in midstream. They are about 200ft. apart, and on account of the strong tide we were obliged to head almost directly across stream. The fog was very heavy. The Electra was anchored in midstream, heading the tide, a very dangerous place for her on such a morning. As we turned slowly down stream the tide swept us right on to the Electra's jibboom, which struck the Providence just abaft the starboard wheel, tearing away the rail and ripping open three of the staterooms, Nos. 144, 145 and 146."

Com. Gerry's official report of the collision is as follows:

To the Inspector of Steam Vessels:

SIR—I have the honor to report that at three minutes past 8 o'clock this, Thursday, morning, Sept. 5, the steamboat Providence, belonging to the Old Colony Line, collided with my steam yacht, the Electra, then lying at anchor off Bellevue Hospital, in the East River, within the anchorage limits prescribed by the rules and regulations relating to the anchorage of vessels in the port of New York, issued by the Secretary of the Treasury July 5, 1889. The result of the collision, so far as the Electra is concerned, was to break her bowsprit short off at the foot, tearing up the steel shoe into which it fits, and carrying away her jib and bobstays, besides seriously disfiguring the carved work of her figurehead. The shock of the collision destroyed a quantity of china and glass, etc. Damage is estimated at over $1,000. There was fog at the time of the collision, and for several hours previous the ship's bell was sounded at intervals of not more than two minutes, as required by the rules of the Board of Supervisors of Steam Vessels. ELBRIDGE T. GERRY,

Commodore New York Y. C. and owner of steam yacht Electra.

Some damage was done to the steamer's after works, but the Electra suffered most severely. The steamer was impaled on her bowsprit, finally tearing it out and damaging the stem of the yacht, but not until she had been hove down with her rail nearly under water, breaking most of the crockery on board. Com. Gerry with his family were at breakfast at the time. The Electra will be repaired at once, but will go out of commission. The owners of the Providence have offered to pay for the repairs, as there seems no doubt that the blame rests entirely with the steamer.

A ROMANTIC VOYAGE.—"The Alerte, yawl, started from Southampton on Aug. 28, with Mr. E. F. Knight and his companions, on a romantic expedition in search of treasure supposed to be hidden by pirates seventy years ago on an island somewhere in the South Seas. The yacht has been fitted out by Pickett, of West Quay, the alterations including conversion from a cutter to a yawl, and sundry changes in the cabin accommodation in order to increase the berth room. Seven tons of ballast have also been taken out of her, this being compensated by the weight of a quantity of tools and apparatus for working on the island, and of course the party hope that coming back they will be ballasted with the old pirates' bullion. There are, in addition to Mr. Knight, thirteen others on board, including a doctor. Four are paid hands, and one of these, named Arthur Cotton, was with Mr. Knight in the cruise of the Falcon, about which so entertaining a book was written. The following are the names of Mr. Knight's friends: Messrs. A. Bridgewater and Aylmer, officers; Dr. Lloyde Smith, and Messrs. E. Ellis, A. Pollock, E. Powell, J. Holden and Pursell. It is expected the Alerte will be gone from nine to twelve months. She is a very staunch, stout ship, and once made the voyage to Australia and back, and has also crossed the Atlantic. In return for courtesies received at the West Quay Regatta Club, Mr. Knight, on Monday evening, gave a farewell dinner to the committee at Dartnell's restaurant, when hearty good wishes for the success of his novel expedition were tendered him. The yacht dropped down the river as far as Calshot on Tuesday night, and sailed right away on Wednesday. Her papers are for Sydney, N. S. W.; she will probably touch at one or the Canary Islands. Mr. Knight is his own sailing master."—*Land and Water.* Alerte is a cutter of 56 tons, built by Ratsey in 1884, and is about 85ft. b.w.l. and 18ft. 6in. beam. Mr. Knight has converted her into a yawl. Mr. Knight will carry the good wishes of all readers of the "Cruise of the Falcon," and whether or no he finds the treasure, we hope that he may return safely and give us another book as good as his first one.

DORCHESTER Y. C. 110TH REGATTA, SEPT. 3.—Regular club course, weather clear, wind S.W., light; tide flood:

FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Posy, F. S. Hunt	28.5½	1 43 50	1 23 50

FIFTH CLASS.

Peri, Frank Driscoll		1 56 15	Not meas.

SIXTH CLASS.

Psyche, Francis Gray	18.06	1 56 13	1 27 42
Rocket, H. M. Saxon	18.04	1 59 35	1 30 52
Paradox, C. J. Means	19 00	2 05 15	1 37 15

In the evening all the boats dressed ship with lanterns, the occasion being ladies' night at the club house. Dancing from 9 to 11, which was enjoyed by a large number of members and their friends. Regatta committee: L. M. Clark, W. B. McClellan, Francis Gray, A. J. Clark and W. H. Wilkinson. Judges: A. J. Clark, H. B. Callesides, E. R. Tilton and H. Davenport.

ST. LAWRENCE Y. C SKIFF RACE, AUG 31.—Club course. Weather fair, wind east, distance 5 miles:

	Length.	Start.	Finish.
Yukwa, W. J. Wallace	20.05	4 06 00	5 14 00
Tara, C. Scott	20.00	4 06 00	5 19 30

The St. Lawrence Yacht Club first class skiff race at Brockville, Can., postponed from June 22, was sailed on Aug. 31. According to club rules only the two original entries were allowed to start, as above. They both crossed the line together with a good breeze, the Yukwa taking the lead, closely pushed to the north buoy. From that point home being a beat to windward, the Yukwa soon increased her lead, and crossed the line an easy winner. This win gives the Yukwa, the rear-commodore cup, having won 3 out of the series of 5. The Yukwa is one of Sauyé's (Brockville) latest boats, he also building the winner of last year's championship cup. Judge, A. Irving.

FREDONIA AND HESPER.—The pilot boat Hesper is now fitting out for her race with Fredonia on Sept. 26. Mr. Forbes has written the following letter to the yachting editor of the Boston *Globe:* "In the Boston *Herald* of Aug. 30, Capt. Powers, of the Carrie E. Phillips, announces that he will challenge the winner of the Hesper and Fredonia race, the match to come off at Thanksgiving time. If the Fredonia is fortunate enough to win over the Hesper, I shall be glad to race the Phillips or the Dixon two days afterward, but I cannot put her into racing order again this year, and therefore I give the owners of the above schooners fair warning, that if they wish to test their boats against mine they can only do so at the above time. I think there is little doubt Capt. Lawler, of the Hesper, would be willing to meet either or both the above schooners in case he wins over Fredonia, so they may feel quite safe of a race. Very truly yours, J. MALCOLM FORBES (Naushon, Sept. 5).

IREX AND GENESTA.—A few weeks since Sir Richard Sutton's cutter Genesta was sold to Lieut. R. Betton Sayre, R. N., owner of Oak Apple, 40-ton yawl. It is reported this week that Irex has been sold by Mr. John Jameson to a Russian prince. Genesta is the present holder of the Cape May cup, which with the Brenton's Reef cup she won in America in 1885, the latter since having been won by Irex. No American gentleman has cared to cross and put up the $500 necessary to a challenge for either cup, but Mr. T. C. B. West, owner of Wendur, yawl, has just challenged Irex for the latter. Under the conditions, if the holder of the Cape May cup be sold out of the club to which she belongs, or if the holder of the Brenton's Reef cup be sold out of a Royal Y. C., the cup will revert to the New York Y. C. In the case of the Genesta this will probably make no difference, but if Irex is sold abroad while holding the cup it may come back to the New York Y. C. without a contest.

PICTORIAL HISTORY OF THE THAMES.—Mr. A. S. Krausse, editor of the *Lock to Lock Times*, has recently compiled a very interesting handbook of the River Thames from its source to London, under the title of, "Pictorial History of the River Thames." The book contains a great deal of valuable information for boating men, in addition to a large number of sketches, and will be found well worth reading by all who are interested in the famous river. It is in the form of a small octavo volume, bound in paper.

NEW YORK YACHT CLUB.—The year book of the New York Y. C. for 1889 contains a list of 209 yachts in the fleet, including 72 schooners, 69 sloops, cutters and yawls, 62 steam yachts and 6 launches. The total membership of the club is 746, including 661 active members, 50 life and 35 honorary.

NEW YACHTS.—A new Burgess forty, named Choctaw, was launched at Lawley's last week, a centerboard boat. The 53ft. class is promised with a boom next season, and four or five new boats are already talked of "to beat Clara." One, at least, of these will be designed by Mr. Gardner. Mr. Hanley of Monument Beach, the builder of the Cape cat Harbinger, is desirous of trying a 40ft. catboat of similar model, and there is some talk of a syndicate of the Great Head Y. C. to build one.

PAVONIA Y. C.—A second match was sailed on Sept. 8, between the H. H. Holmes and the Three Brothers, of the Pavonia Y. C., the course being from Liberty Island around buoy 15 and Fort Lafayette, 20 miles. The Holmes won in 2h. 48m., with the Brothers 50s. later. As the Holmes won the first race her owners take the stakes, $250. On Aug. 7 a match was sailed over the same course between the Triton and the Sisters, for $50, being won by the Sisters.

THE NEWPORT RACES.—It is likely that Titania and Katrina will meet at Newport on Monday next for the Morgan cup. On Tuesday Liris and Gorilla will be present, but no other forties have yet entered. No 30 footer is likely to meet Tom Boy on Wednesday.

Canoeing.

AMERICAN CANOE ASSOCIATION MEET.

WITH much to contend against in an unusual amount of rainy weather, the meet just closed was nevertheless a very pleasant one, being well attended, while there was no lack of amusement. Among the Canadian contingent, which was very large this year, were a number of ladies well used to camping, and who made their homes at Squaw Point for a couple of weeks, and added much to the social side of camp life. There was little trouble from outsiders, the camp being comparatively distant from hotels and settlements, and the result was visible in the lessened display in the way of costumes of the men. While open to some objections, the camp site was a great improvement on that of last year in every way. The grove in which the tents were pitched was comparatively open, so that a fine view of the main camp could be had as the steamer approached from Clayton or Gananoque. Owing in part to the abominable Customs regulations, the means of reaching camp were not as good as at Grindstone, the passenger from Boston or New York who came by the night express, arriving at Clayton before 7 A. M., was obliged to wander about that rather prosaic town until noon or later before finding a steamer for camp. There were steamers from Clayton that left at an earlier hour, but though they passed the camp they were not permitted to land passengers in Canadian territory under penalty of a heavy fine. In one case a canoeist staying with his family at Round Island chartered a steam launch to visit the camp at night for the camp-fire, but on reaching the island the captain of the launch refused to land the party, as he had lately been fined under similar circumstances. Where the blame for such a state of affairs rests we do not know, but it is a pity that tourists and travelers should be vexed by red tape and absurd restrictions that are entirely unnecessary.

In common with the camps at Bow Arrow and Long Island, '87 and '88, the present camp possessed several serious objections. The store and mess shed were at one extremity of the camp, the landing place was also distant from the center of the main camp, and the race courses were not visible from the latter. We may be over-enthusiastic on the subject of Grindstone Island, but after camping on every site but one that the A. C. A. has visited, we still look upon Eel Bay and the east and north slopes of Grindstone as the nearest to an ideal camp ground. In the first place, the wharf, store, mess shed and officers' quarters were exactly where they should be, in the center of the camp and all together, instead of being at one end or the other and widely separated. At Grindstone the camp was in two parts, the open plateau at the foot of the hill, free from stones and trees and fairly level, where most of the tents were pitched; and the long stretch of grove, dry and well shaded, along the north shore, where the most quiet men of the party pitched their tents. Between the two divisions was a little ridge, well above and overlooking the camp, known for three years as Capitol Hill, on which the officers' tents and the big flagpole were located. Arranged in this way the wharf, store, post-office and headquarters were within easy reach of each other and of any part of the camp. One great advantage at Grindstone was the open field, where, in spite of the heat at midday, the majority of the tents were pitched. This field and the hill behind it were directly opposite the race courses, so that a man could lie in his tent or entertain his friends beneath the awning and watch every movement of the racers. The camps of '87, '88 and '89 have been similar to each other, each being located on a narrow strait with a neighboring island facing the camp, the race course being on the extreme right, out of view of the camp. In order to witness the races it was necessary to go to some distance, and the long waits between each race were very tedious, besides which only one angle of the course was in close view. In order that all may see the races to the best advantage the course should be laid out as close to shore as possible, with the paddling course and the final leg of the sailing courses parallel with the shore rather than at a right angle to it, and the shore itself should be open or lightly wooded, so that the main camp faces the courses. Thus arranged, the spectators are always within view of the courses and the races may be seen without leaving the camp and neglecting all camp duties for the day.

It is an open question as to the merits of a camp in the open or in the shade, and there is a great deal to be said in favor of the former, provided there are trees near at hand where shelter can be found at the hottest part of the day. This year's camp, in a grove with little underbrush, was as good a one of the kind as is likely to be found, but still the ground was very uneven, there were stones enough, though not to compare with last year, and between trees, roots and stumps the navigation was difficult after dark. In wet weather the exposed camp is preferable to a thick grove, as the little sun that there is all goes to dry the tents, a very important matter. The ideal camp would be a stretch of meadow just above the water and 200 to 300yds. long, surrounded by a grove entirely free from underbrush, where those who wished could camp and where hammocks could be slung in the shade. The landing, store and headquarters should be together and very near the main camp, and if possible the ladies' camp should be on the other side, so as to be approached without passing through the main camp. The latter, or both, should face the race courses, the sailing line being of the wharf. The whole camp should cover a length of not over a quarter of a mile, and the center should be within one-eighth mile of the wharf; a straggling camp of over half a mile from the point where the only view of the races can be had, to the store, as has been seen at times, causes too great a loss of time and too much work. One more comparison in favor of old Grindstone, the camp itself was not picturesque, apart from the view of white tents and gay flags against the green hill as the steamer approached it; in beauty it could not compare with the late camp or that at Bow Arrow, but the view from the hill just above the camp at Grindstone, the wide expanse of blue river and green islands is unequalled in any other place that a meet has been held; while the hill itself seems designed by nature for a grand camp-fire. Both this season and last complaint has been made by those who lived in camp entirely of the lack of privacy; it is not entirely pleasant to cook your oatmeal and boil your coffee under the eyes of inquisitive strangers, who evidently consider it a part of the show to see the animals fed. The suggestion was made this year that a part of the camp be set aside for members only, and that no ladies or strangers should be allowed in it. A better plan is that followed in 1886, when no ladies or visitors were allowed in the main camp before 10 A. M. or after 6 P. M., the rule being rigidly enforced save that on race days the closing hour was extended until after the races were over. As the hill top and camp-fire could be reached from Squaw Point without passing through the main camp, there was no trouble at night. This meet naturally attracted a large number of visitors, who are welcome at all proper times, but some of them show a lack of courtesy in intruding into tents and about the cooking departments.

This year there was much more cooking done in camp than last, from the big mess of the Toronto C. C. down to a number of small messes, such as the Brooklyn and Red Dragon clubs. Those who followed our advice of last year in this matter were well repaid for it, as the mess shed was not a great success, though better than the plain and simple fare of the Hotel Horicon. The fact is that it is practically impossible to find caterers in such out of the way places who have the ability to run the mess shed to the joint advantage of themselves and their patrons. To be sure $1 per day for three meals is not a very great sum, but it should be possible to give a variety of plain camping food for that price at a reasonable profit when from 100 to 300 are fed at each meal, at least our experience in catering for small parties would indicate as much. To do it, however, some skill is necessary, lacking which there is neither pleasure for the boarder nor profit for the boardee. Some complaints were made, though we cannot say how well grounded they were, that those who cooked for themselves could not procure bread, milk, etc., at the store, so

that they found it necessary to resort to the mess shed for meals. The safest plan is to take a good supply of stores from the city and to cook for oneself, or with a few friends, as we described in detail last year.

It has been a matter of remark that the attendance at the meets does not vary much, in spite of the growth of the Association in numbers, being not much greater now than in the first years at Grindstone, about 250 to 300. The reason for this is that only a few years ago canoeing was confined mainly to some of the larger cities, and a man at a distance from New York, Cincinnati, Toronto or Philadelphia who wanted to see canoes and meet the leading canoeists was obliged to come to the meet of the A.C.A. in order to do so. The result of this was the formation of a club on his return, until now canoe clubs are found in all localities. Not only may a man obtain reasonable amount of canoeing and meet others with whom to talk canoe without a visit to the meet every year; but the FOREST AND STREAM carries to him the news of the meet and the races, with the lines of new boats and the plans of new sails, so that he can keep fully posted as to the progress of canoeing. Thus it happens that men who for a time were seen every year now turn up only on alternate years, or even less frequently, putting in their vacations partly in cruising, or at local camps and meets. It is curious to notice how, year by year, clubs attain prominence and then disappear for a time. In '84 the New York and Rochester clubs were among the largest present, both nearly uniformed and with a large encampment. In '85 and '86 the Mohican and Kingston College clubs were very prominent, and in '87 and '88 Springfield played a leading part. With the exception of Rochester none of these clubs had a representation worth mentioning this year, only one or two members being present, and yet every one of them is probably much larger in membership and also richer than in the years they visited camp.

One great function of the annual meet seems to be to create and stimulate an interest in canoeing in new localities, or in those where it has declined. This is shown this year in the case of Brockville, Montreal and eastern Massachusetts, all of which localities are promised with a boom in canoeing. The success of Mr. Ford Jones in winning the A. C. A. trophy with a home-built boat and rig, and the excellent work of Messrs. Torrance and Smillie in paddling, is certain to give a great impetus to canoeing about Brockville and the upper St. Lawrence. Montreal, with its scores of canoeists, has never been represented at a meet until last year, but as a result of the visit of Messrs. Poe and White to Long Island a canoe revival was commenced and is now well under way. Both of these gentlemen were present this year, Mr. White being elected vice-com. of the Northern Division and Mr. Whitlaw, of Montreal, purser, while the Northern Division meet will be held near Montreal. The result will be a strengthening of the Association in this quarter and a decided increase in canoeing there as well. In the Eastern Division the work of the A. C. A. has never extended far from the lower Connecticut River, from Springfield to Hartford, Lowell being a sort of frontier post. The sport has been growing, however, about Boston, and the indications are that this coming year the A. C. A. will make great progress there. The good work in the races done by Springfield, Worcester, and especially this year by Lowell, has begun to awaken the pride of New England canoeists, and a large accession of members is promised. The officers this year will come from Lowell, and it is most probable that for the first time the division meet will be held near Boston and on salt water, bringing in members of the established clubs. The A. C. A. meet of '90 being on Long Island Sound will be near at hand for the Eastern men, and they are likely to make a good showing. The holding of the meet in the Northern Division this year has done much to boom canoeing, and the coming meet in the Atlantic Division next year, the first on salt water, promises to do as much for the seaboard between New York and Boston. The dire anticipations of some old A. C. A. men when the division scheme was first broached have in no way been realized; on the contrary, the work of the past three years proves that the divisions and the rotation of the meet are most important factors in nationalizing the Association and in removing all sectionalism.

Last year we discussed critically all the details of the meet, the canoes and their fittings in particular, but this year there was not the material for similar review. In model, in building, in sails and fittings, there is comparatively little that is new to notice, but it does not follow that improvement has stopped. The case is rather that the late meets have brought out some very good boats, and many improvements in rig and fittings, and during the past year the owners of these boats have been content to work them up more fully, rather than to throw them aside for new ones, while the rank and file of canoeists have been busy in bringing their boats and rigs up to the standard set by such men as Gibson and Butler. The result has been that while there are few startling novelties a general improvement is manifest in the fleet, and the lessons of the meet, instead of dealing with details of model, rig and build, may be summed up in three or four brief propositions.

First—The danger that was feared after Pecowsic's success in 1886 that the displacement and power of sailing canoes would be cut down to a dangerous limit, has entirely disappeared; the boats of the year are of very good proportions, practically all 16×36, with a depth of 10 to 11in. amidships, and of fair displacement.

Second—The improvement in the canoes generally is shown by the number of capsizes in which the boats were filled, but continued the race, often coming in winners. With the canoes now in such a capsize, instead of putting a man out of the race, is a matter of comparatively small moment, the canoe is righted and goes on her way, so that less care is taken to avoid one than in the past.

Third—The deck seat and standing rig war, that has amused and vexed canoeists for three winters, has been settled in a most unexpected manner; the deck seat has come to stay, that question was finally settled very early in the meet by the renowned Mac fitting one to his "disgruntled racer" and climbing out on the windward piazza. The standing rig controversy was practically settled by the absence of standing sails at the meet, the sole exception being that of the new Canuck. Where they have gone we do not know, and it matters little, but there seems little likelihood now of their resurrection.

Looking first at the canoes, there were no better boats present than Notus, built in 1887, and Fly, built last year. Both of these are fully up to the limit, 16×30, and of large displacement, that is with nearly flat floor and strong round bilge. The old Notus did good work in the trophy race, but was disabled on the first round, the brass center of the deck tiller jamming so that the tiller was useless. She carried the original sails, as illustrated in the FOREST AND STREAM of Oct. 20, 1887.

The finest fleet of canoes ever seen at a meet, and consequently ever brought together anywhere, was that of the Vesper C. C., of Lowell, including Fly, Owl, Wasp, Ellida, Drift and Blanche. All were built of Spanish cedar, the workmanship being exceptionally good. The first three were ribbon carvel build, the Blanche being lapstrake. The work was done by Mr. Stevens, of Portland, Me., but under the supervision of Mr. Paul Butler. While giving Mr. Stevens the credit he deserves for fine and perfect workmanship, the boats are mainly the creation of Mr. Butler, who has devoted much time and study to the perfection of every detail of model, construction, rig and fitting, and who has turned out the most perfect piece of canoe building we have yet seen. It would be a hard matter to decide finally between these canoes and those built by Mr. Ruggles, but for general use the latter are stronger, having more ribs and thicker planking, while the Lowell boats have a higher finish and are more perfect in their appointments. Unfortunately Mr. Brokaw was not present this year with Eclipse, so there was no opportunity to try the two models again. Last year's test, it will be remembered, was far from satisfactory, as Fly was but poorly rigged at the meet. The rig of the Lowell canoes this year was the same as last, but better worked up, all hoisting sails. Among the new details were a sliding thwartship tiller and extension centerboard. The sails for all of these boats were kept on the float in a very convenient sail rack. Two thin boards were placed on edge, side by side and 2in. apart, then blocks of wood 2in. square were placed between the two, each spaced 2in. apart, and the boards were nailed to the blocks. This made a frame containing a number of holes 2in. square in which a mast could be stepped. The masts and some of the smaller spars were hollow, built up of veneer.

Of the new canoes the Canuck was the most important, being the winner of trophy race. She is similar to the old Ramona, Mr. Jones's former canoe, but not so deep. Her dimensions are 16ft.×29½in.×11in., with 6in. sheer at bow and 5in. aft. She has an easy form, considerable deadrise and moderately hard bilge. She was designed and built by Mr. Sauvé, of Brockville, on his smooth-lap method, the hull of $\frac{5}{16}$in. white Canadian cedar, with mahogany deck. The cockpit is 4ft. 6in. long. She has the circular saw centerboard, as in Ramona. The rig is a batswing mainsail of 70ft., mast 15ft., with a similar mizen of 40ft., both standing sails. Mr. MacKendrick's new canoe, the Mac No X, is also 16×30, a handsome canoe of moderate proportions, with a hoisting rig. As she was only delivered a short time before the meet, she was in no shape for racing, but promises to be a fast boat when properly worked up. Mr. Wood, the crack sailor of the W. C. A., brought to the meet a handsome lapstrake boat built by Douglas & Co., of easy form and very fine in the ends. The laps were tapered off, but the surface cannot compare with the smooth-skin canoes. There was nothing new in the way of building, the St. Lawrence Skiff, Canoe and Launch Co. had several handsome canoes, the build evidently being the same as the Ruggles boats. The same firm had at the meet the double centerboard canoe Allô, a handsomely-finished craft, but a cruiser rather than a racer in model. She was tried against the other canoes, but the double board did not come up to expectations by a long way. The Dimple of last year was succeeded by another Dimple of later build and different model, but in no way better; in fact, if these canoes are right, the generally accepted ideas of canoe design must be very far wrong. The new boat is a cross between the 1882 Pearl and a canal boat, the deck being fuller than the former and not quite so full as the latter. The hull is somewhat like the 1882 Pearl also, being very fine in the ends below water, full above and with considerable deadrise; though she is not so deep by 3 or 4in. at midships. The whole appearance of the boat is heavy, and there is nothing light or graceful in the model, nor does it show great speed. Most of the canoes had the board of large size and almost amidships, as last year, the ordinary steel or brass plate board being the most common. As stated above, the sails were all of the hoisting variety and hung abaft the mast, differing in minor details, but rigged much as described in the FOREST AND STREAM of April 19, 1888. Some used a single halliard, some a double and some an upper and a lower halliard (one setting the whole sail, the other the reefed). All of the sails had battens and most of them the rounded leech.

We cannot leave the canoes without mentioning two specially bad specimens, nominally sailing craft, brought out for the paddling race. One, owned by Mr. Johnson, of Toronto, was a shell of the flimsiest sort, built of stuff little thicker than veneering, with decks and side decks so light that they were badly broken in ordinary racing use. The mast holes were too small to admit of anything much larger than a lead pencil, while the centerboard and trunk were of the thinnest possible galvanized iron, no thicker than the side of a tin can. The other canoe, owned by Mr. Putnam, of Worcester, was perhaps a little better specimen than this, but still a useless affair, the bulkheads, of veneer, being cracked, the skin too light for any real use, and the centerboard trunk, of the thinnest possible metal, plugged tight with cotton. These two canoes came in first and second in the paddling race and were very properly ruled out by the regatta committee in favor of an open Canadian canoe of ordinary construction, a plain serviceable craft. This will probably put a stop to any such burlesque on a canoe in the future, even if the conditions of the race are not changed, and they are likely to be. The new paddling trophy, now being arranged for, will probably be given under such restrictions as will confine it to a good class of open paddling canoe, to which end a minimum limit of weight will probably be necessary to prevent any more "match box" constructions. The ordinary open canoes are coming into greater use each year in the States and more are seen at the meets. For pleasure paddling and exercise, and especially for "girling," they are unequaled, and the man who wants a canoe at the meet, but does not care to do much sailing, will find them not only far more convenient to transport, but also to use for knocking about the camp.

A. C. A. PADDLING TROPHY.

THE day before the race for the Paddling championship at the A. C. A. meet at Stave Island, two or three members, thinking that the time and place were favorable, resolved to start a subscription for a challenge cup to go with the flag. It will be remembered that at the time of the institution of the paddling championship race, it was intended to obtain a cup, but the matter did not then come to any conclusion, although several members gave it support.

This time it is intended that the thing shall be done. It was therefore announced that a cup or other suitable trophy would be purchased on the 1st of October next, the value to be whatever the subscriptions then amounted to. It was further announced that the cup would be ready for presentation to the champion of 1889 at the time of the executive committee meeting this year (October or November).

The trophy is to be a perpetual paddling challenge, to be raced for at the annual meet under such conditions as the regatta committees may from time to time impose.

In a very short time the sum of $175 was raised in amounts of $1 to $10. This total can easily be increased to $300 if the A. C. A. thinks it desirable. Subscriptions of $1 are solicited by the treasurers, R. W. Gibson, Potter Building, New York, and William Whitlock, 37 West Twenty-second street, New York. They should be sent immediately. The list will close in a few days now, and the names will then be announced. Subscribers will please forward amount by check or otherwise on or before Sept. 30.

ARLINGTON C. C. FALL REGATTA.

THE annual regatta of Arlington C. C. was held on the Passaic River in the vicinity of their club house on Labor Day, Sept. 2, there being a good attendance of canoeists, members of 10 clubs in the vicinity of New York being present.

Lack of wind made the sailing races tame and uninteresting, but the paddling races were well contested, and were spirited fights from start to finish. The Class 4 paddling was any one's race until about 500 yds. from the finish, when Peckman drew away and won easily, with Edinger and Collins fighting hard for second place. In the tandem race the Collins brothers had a good lead until near the finish, when A. H. Schuyler and Daily drew ahead rapidly and came near capturing the race. The hurry-scurry was as usual very amusing and interesting. In the standing paddling the contestants were compelled to stand on deck with centerboards housed.

The Class 1 paddling was made in very fast time. C. V. Schuyler took the lead shortly after the start and held it to the finish, with Douglass a close second.

Many of the visiting canoeists remained at the club house until well in the evening, which with coffee and sandwiches, song and story, passed only too quickly for those who were present. The races were as follows:

1. Sailing, Unlimited:

Kisco	W. B. Daily	Arlington.
She	George W. Cox	Newark.
Sweetheart	W. H. Hillier	Crescent.
Neenemouska	Geo. P. Douglass	Ianthe.
Mineola	Geo. W. Baxter	Ianthe.
Sybil	Dr. O. F. Coe	Crescent.
Anita	O. T. Connor	Ianthe.
Wind	W. J. Stewart	Ianthe.
Bachelor	H. S. Farmer	Ianthe.
Ada S.	Wm. Scott	Crescent.
Ianthe	L. B. Palmer	Ianthe.
No Name	F. McLees	Rutherford.

Won by Dr. Coe, L. B. Palmer second.

2. Combined Paddling and Sailing:

Bachelor	H. S. Farmer	Ianthe.
Sweetheart	W. H. Hillier	Crescent
Kisco	Wm. B. Daily	Arlington.

Won by Farmer, Hillier second.

3. Upset Sailing:

Neenemouska	Geo. P. Douglass	Ianthe.
Wind	W. J. Stewart	Ianthe.

Won by Douglass.

4. Class 4, Paddling:

Neenemouska	Geo. P. Douglass	Ianthe.
No Name	Frank McLees	Rutherford.
Sybil	Edward Edinger	Crescent.
Spray	F. B. Collins	Bayonne.
She	C. J. Peckman	Hudson.
Anita	O. T. Connor	Ianthe.

Won by Peckman, Edinger second.

5. Tandem Paddling:

Spray	Collins Bros.	Bayonne.
She	Coe and Peckman	Crescent.
Arlington	A. H. Schuyler and Daily	Arlington.
Daisy	C. V. Schuyler and Gibson	Arlington.

Won by Collins Bros., with A. H. Schuyler and Daily second. Coe claimed a foul against Schuyler, and was sustained by the regatta committee, thereby giving Coe and Peckman second place.

6. Hurry-Scurry and Upset:

Sybil	E. Edinger	Crescent.
Arganauta	N. H. Day	N. J. A. C.
Anita	H. S. Farmer	Ianthe.
Kisco	W. B. Daily	Arlington.
Turtle	F. Place, Jr	Arlington.
Redante	A. H. Schuyler	Arlington.
Daisy	C. V. Schuyler	Arlington.

Won by N. H. Day, with Edinger second.

7. Standing Paddling:

Bachelor	H. S. Farmer	Ianthe.
Brunonia	Geo. P. Douglass	Ianthe.
Kisco	W. B. Daily	Arlington.
Daisy	C. V. Schuyler	Arlington.
She	Geo. Cox	Newark.
Arganauta	N. H. Day	Arlington.

Won by Daily, Douglass second.

8. Class 1, Paddling:

Arganauta	N. H. Day	N. J. A. C.
Redante	C. V. Schuyler	Arlington.
Scoot	Geo. P. Douglass	Ianthe.
Clara R	W. J. Stewart	Ianthe.

Won by Schuyler, Douglass second.

BROOKLYN C. C.—The postponed regatta of the Brooklyn C. C. was sailed on Saturday, Sept. 7, off the A. Y. C. basin. In the first race for unclassified small boats three started with a very slight southerly breeze and strong flood tide. Dr. R. N. Denison's Galloux, a 17ft. cruiser, hung above the line for 5m. before she got wind enough to cross. Mr. G. G. Clapham's cat, Rita, and Mr. Thomas Clapham's yawl, Gnat, were unable to get across the line, and did not attempt to go over the course, a six-mile triangle formed by channel buoys 18 and 20 and the home stakeboat. The Galloux finished in 2h. and 4m. In the meantime the breeze had freshened, and the race for canoes was sailed around a mile and a half triangle. The starting signal was given at 3:05:30, and the canoes finished as follows:

Eclipse	R. S. Blake	Brooklyn C. C.	4 05 00
Brooklyn	H. C. Ward	Brooklyn C. C.	4 08 00
Sybil	Dr. O. F. Coe	Crescent C. C.	Not timed.
Vagabond	C. J. Stevens	New York C. C.	Not timed.
Ho	G. P. Douglass	Ianthe C. C.	Not timed.
Plum	W. S. Elliott	Marine and Field C.	Not timed.
Niente	F. L. Dunnell	Brooklyn C. C.	Not timed.
Bunch	W. H. Cammeyer, Jr.	Brooklyn C. C	Not timed.

The starters in the combined race were:

Ho, G. P Douglass, Ianthe C. C.; Eclipse, R. S. Blake; Brooklyn, H. C. Ward; Niente, F. L. Dunnell; Queen Bess, R. J. Wilkin; Bunch, W. H. Cammeyer, Jr., Brooklyn C. C. It was close and exciting, Eclipse finally winning with Brooklyn a good second and Ho third. The final race, a mile and a half to leeward and return for all classes, was won by Eclipse (canoe), R. S. Blake, the others finished in the order named: Brooklyn (canoe), H. C. Ward, Brooklyn C. C.; Ianthe (canoe), L. B. Palmer, Ianthe C. C.; Sea Urchin (canoe), B. S. Nadal, New York C. C.; Vim (cruiser), Jno. Johnson, Brooklyn C. C.; Galloux (cruiser), R. N. Denison, Brooklyn C. C.; Sybil (canoe), O. F. Cox, Crescent C. C. Galloux had fourth place, but Dr. Denison supposing he had finished drifted back with the tide without crossing the line, thus allowing Sea Urchin and Vim to get in ahead.

TORONTO C. C.—The second of three sailing races to be sailed this fall, came off on Sept. 7, over the regular triangular course, 1½ miles, 4 rounds, on Toronto Bay. The entries were in two classes, the rowers and sailers being divided. In the former were Hyla, Mac, Una and Guenn, and in the latter Bervie, Petrel, Levite, Aloha and Sardine. Guenn was first over the line, with Hyla, Mac and Una in order, but Una soon took the lead, holding it for two rounds, Hyla then came to the front, and held to the finish. The end of her mizen sheet parted, leaving very little to work with, so the mizen could not be squared when off the wind, but she managed to keep ahead. Una lost second place to Mac through the loss of the mainsheet, compelling her to luff in order to regain it. The times were:

	Start.	Finish.	Elapsed.
Hyla, D. B. Jacques	4 05	5 20 05	1 15 06
Mac, W G. McKendrick	4 05	5 20 35	1 15 35
Una, Colin Fraser	4 05	5 20 35½	1 15 35½
Guenn, J. W. Morse	4 05	5 23 20	1 18 20

The times in the second class were:

Bervie, A. Shaw	4 00	5 22 37	1 22 37
Petrel, George Sparrow	4 00	5 26 37	1 22 37
Levite, W. C. Lee	4 00	5 27 05	1 27 05
Aloha, H. C. McLean			
Sardine, S. Y. Baldwin			

The record in first class score stands Una 6, Mac 6 and Hyla 4 points. In second class it is Bervie 7, Petrel 7, Levite 4 points. The annual regatta will be held on Sept. 14.

RED DRAGON C. C.—The second race for the R. D. C. C. trophy cup was sailed on Aug. 31. The wind was very light from N.E. and marred what should have been a very interesting race, the boats being in the best possible trim, and particularly as this was the first meeting between the Io and Cigarette, the former a smooth-skin and the latter a lapstrake, both of the Fly model. Io is a new boat just from the shop, and her owner has not had time to get her in trim. She capsized by running out of the wind under the lee of a schooner at anchor on the course. She is undoubtedly very fast and will give someone a hard chase next time. The course around Petty's Island was abandoned as unsatisfactory, and a triangle laid out off the club house, distance 3 miles, twice around; start 3:05 P. M. The times were:

Nacoochee	H. E. McCormick	1 15 00
Cigarette	F. W. Noyes	1 15 01
Lassie	H. E. Fortiner	1 17 30
Mermaid	D. A. McCormick	1 20 00
Valesca	H. M. Kreamer	Not timed.
Io	C. B. Haag	Capsized.
Fern	F. Gergin	Withdrew.

A. C. A. MEET OF 1890.—On Saturday night after the Larchmont Y. C. regatta, the cutters Vandal, Lotowana and Kathleen were at anchor at Larchmont, the latter just in from Marblehead after a very quick passage. On board of Vandal was Commodore Stanton, Ex-Com. Oliver, and Vice-Com. Stephens; on Lotowana was Mr. Foster, and on Kathleen Mr. Whitlock and Ex-Com. Gibson. The fleet sailed over to Oyster Bay and spent the following day in a thorough search for a camp site for the Association meet of 1890, to be held in the Atlantic Division. All parts of Oyster Bay and Cold Spring Harbor were visited in rowboats. While no site was suitable in all respects several were found which might be used. At one spot where a landing was made a relic of departed friends was found in the shape of a Newburgh paper addressed to Mr. Nate Smith, denoting a camp of last summer's cruise of the Newburgh men. No special locality has yet been selected for the meet, and persons who may know of any suitable place convenient to New York are requested to notify Messrs. Stanton or Stephens.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

P., Fredericksburg, Va.—1. In what months do crappies bite best? 2. Do they guard their nests and young like the black bass? 3. At what depth of water and what kind of brush is best to place in the pond for them to deposit their eggs on? During the last five years I have placed over 500 crappies in a two-acre pond and have been able to catch but very few, generally none. 4. Does the red-eye perch guard its nest and young? 5. Will the large-mouth black bass thrive in the still waters of a pond? 6. We have a fish here known as the "white chub," Carolina chub or southern chub. It is sometimes caught weighing 10lbs., and it has every appearance of the black bass except that it is more bulky. Is this not the large-mouth black bass, slightly altered in appearance by pond culture? Ans. 1. June probably best, and throughout the summer. 2. We do not know whether this fish guards its young as vigilantly as the sunfishes and other basses, but it probably does. See FOREST AND STREAM of Aug. 8, 1889, p. 43, for an account of the nest-building habits of the sunfish. 3. It is not recorded whether the crappie makes nests in the sand or gravel, like the sunfish, or whether it spawns among brush, etc. Information covering this point is much desired. Logs and tree tops make good hiding places for the crappie. 4. Yes. 5. Yes. 6. It is the large-mouth black bass (*Micropterus salmoides*).

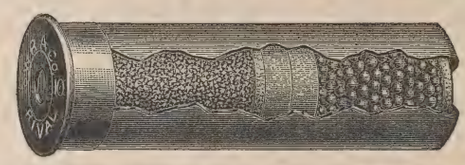
BUDWEISSER, St. Paul, Minn.—The yarn about the little girl, who was carried off into the air by a bunch of toy balloons and saved from drowning in the lake by a rifleman who punctured the balloons one after another, causing her to descend gradually into his boat, was a pure hot weather invention of the silly season.

S. R. F.—You neglected to give your post office. The deer hounding season will close in the North Woods Oct. 20.

INFORMATION WANTED.

J. E. S., Brooklyn, N. Y., wants to find some wild pigeon shooting not far from New York.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.



NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Full directions with each Box.
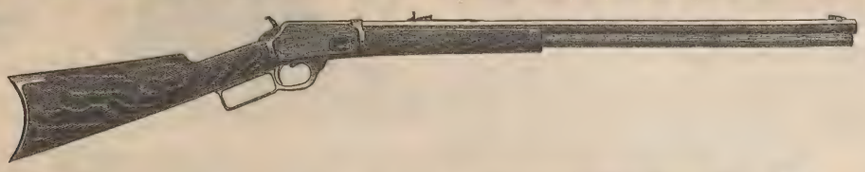
Prepared only by THOS. BEECHAM, St. Helens, Lancashire, England.
Sold by Druggists generally. B. F. ALLEN & CO., 365 and 367 Canal St., New York, Sole Agents for the United States, *who,* (if *your* druggist does not keep them,)
WILL MAIL BEECHAM'S PILLS ON RECEIPT OF PRICE 25 CENTS A BOX.



Canoe and Camp Cookery.
By "SENECA."
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

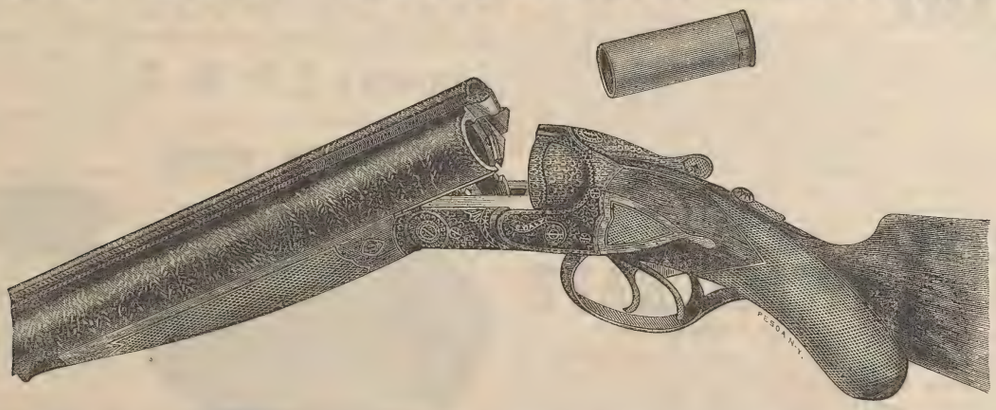
BIRD PORTRAITS.
Some Native Birds for Little Folks.
BY W. VAN FLEET, M.D.
A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:
Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.
Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

MARLIN MODEL 1888

PRICES REDUCED.



You will notice the breech block is on the old reliable Sharp principle, and has a solid backing against the frame. **You will notice** if you TRY THE ARM that it works WONDERFULLY SMOOTH AND SLICK, that it is finished superior to any other magazine arm, and **you will notice** if you SHOOT IT that the accuracy exceeds all other repeating rifles. Weight 6¾lbs. Same retail list, same dealer's discount as the Winchester. Sizes made: 24, 26, 28in. barrel. Calibers made: .32 .38 and .44, using Winchester cartridges. Ask your dealer to show it.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, [illegible] of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

SPORTSMEN SMOKERS

SHOULD ALL SMOKE OUR CELEBRATED

Hand-Made Havana Cigars.

MADE IN TWO STYLES AND SIZES.

LONDRES PERFECTO, 5in. long @ $7.00 per 100
CONCHAS ESPECIALS, 4¼in. @ 6.00 "

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

No Chemicals.

W. BAKER & CO.'S Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

LOG CABINS

AND

HOW TO BUILD THEM.

By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 19, 1889.

VOL. XXXIII.—No. 9. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE CREEDMOOR MEETING.

IT is most unfortunate that the only dispute of the recent Creedmoor prize meeting, other than the universal one against the weather, was the sharp ruling on a trivial point, which robbed a State team of the victory that it had actually won. The Massachusetts world-beaters must feel that they were really defeated by the Keystone marksmen, and the Pennsylvania men are entitled to all the glory and honor of having proven a match for a team which could not be downed by the best military shots of England. Still the technically defeated team must temper their indignation with the conviction that it was entirely their own fault that they were caught in such a trap. The time limit rule is a good one. It was needed and badly needed before it was put upon the list of regulations, and it is applicable to all matches at all times. The fact that it had been neglected was no reason for the Pennsylvanians to assume that they were not subject to it, and it is pretty certain that if the executive officer had not applied it in his rough-shod, military manner, the Massachusetts men when defeated would have sprung a protest on the same point. Any one who has witnessed a review of the Pennsylvania National Guard has seen a serviceable looking set of men. That they can shoot as well, the recent Creedmoor meeting shows. The only revenge properly left is not that of sulking in their tents, but the preparation of a good team and the wiping out of the misunderstanding by a good defeat of the Massachusetts men next year. That New York was defeated is universally attributed to the arbitrary fashion in which the team was selected, the team being made up at the will of its captain, instead of by any system of the survival of the fittest.

If the Massachusetts shooters wish to complete the series of victories with which they have marked the season, it will be in order for them to pay some attention to the desire of the Twenty-third Brooklyn Regiment for a match on some neutral range. The Seventh, with all its ability and with all its care devoted to rifle drill, has had to give way again and again to this Brooklyn crack body, and if Massachusetts has a really good regiment capable of putting out a team, now is its chance to down the best shooting regiment in the best State Guard in the Union. A neutral range, even that at Springfield in Massachusetts, would be satisfactory, and there is an abundance of good shooting weather yet before the wind-up of outdoor practice for the year 1889.

STOCKING THE YELLOWSTONE PARK WATERS.

IN our issue of Aug. 29 a special correspondent wrote at length of the condition of the National Park waters and of the project of stocking them with choice food fish by the Government. It is gratifying to learn that Commissioner McDonald is at once putting this work under way. Dr. D. S. Jordan, of the Indiana University, is going to the Park the latter part of this month, in order to ascertain the precise condition of the streams there with reference to the fishes; and he will make collections of them preliminary to the stocking of those waters by the U. S. Fish Commission. The object of the doctor's visit to the Park at this time is to learn something definite concerning the species already there, and the fitness of the various streams for those with which it is proposed to stock these waters. Mr. Geo. H. H. Moore, in charge of distribution, is in Northville, where he is superintending the loading of one of the transportation cars of the Commission, which is to take 5,000 brook trout, 1,000 California trout and 1,000 Loch Leven trout to the Yellowstone. Mr. E. R. Lucas will leave the car at the Park, supplied with seines and other equipments necessary to collect and transfer fishes from point to point in the Park. Trout will be transferred to the Gardiner River, and whitefish to the Twin Lakes.

SNAP SHOTS.

THE Upper Geyser Basin of the National Park has been subjected to a succession of earthquake shocks, which have stirred the Giant and other passive geysers into activity. The volume of travel to the Park has been very great this year, even to the point of evoking a remonstrance from some of the old timers, whose sentiments are probably well expressed by one of our correspondents when he writes: "I have no further use for the National Park. It has become what Congress set it aside for, a pleasuring ground for the People—with a big P. It is full of men, women and children. Last night I counted seven boats on the lake; camping parties of women were singing; I heard a baby cry. The country is fairly populous. Doubtless this is a good thing, but I don't want to travel where people are so thick. The Park is too crowded, and I do not mean to visit it again, unless I come in the capacity of a 'tourist.'"

We trust that the series of papers which the New York *Times* is publishing, descriptive of the forest stripping carried on by timber thieves in the Adirondacks, will have an attentive reading. The *Times* writer avers that the forest protection laws are systematically violated, that the lumbermen are cutting State forest without hindrance, that fires are utterly destroying vast tracts of woodland, that hotel men and sportsmen's preserve projectors are unlawfully taking up other tracts, and that the Forest Commission, charged with the care and protection of the woods, is an incompetent and worthless institution. All this, to be sure, was already known, but its reiteration by a powerful metropolitan journal we may hope will call public attention to the necessity of providing some prompt measures of reform.

Mr. Wakefield's interesting paper on the successful introduction of foreign species of fish into New Zealand will be followed next week by another account from the same author relating how the island was stocked with deer carried from Great Britain. The enterprise of the British colonists at the antipodes furnishes a suggestive and useful object lesson in fish and game conservation; and it is one which is quite the reverse of the common story of thoughtless depletion.

We have received from Mr. W. H. Rogers, late Inspector of Fisheries for Nova Scotia, "The Suppressed Sawdust Report," made to Hon. C. H. Tupper, Minister of Marine and Fisheries. The report has to do with the effect of sawdust on the fish supply, and the evidence presented tends to disprove the generally accepted belief that sawdust in streams is hurtful to fish. We do not know why nor by whom this report was suppressed, but it is very certain that in an inquiry of this importance the only wise course is to hear both sides and to draw conclusions from a consideration of all attainable experience and testimony. Mr. Rogers' report will have further notice in our fishculture columns.

Lake Mistassini, whose size was the subject of discussion by Mr. Murray and others in this journal some months ago, has been explored this summer by Prof. J. W. Loudon, of the University of Toronto, and Mr. George S. Macdonald, of the University of Montreal. They report that it is composed of three narrow lakes, two of which lie close together and are connected by many passes, while the third is a little further removed, but still connected by a navigable channel. All of these lakes are almost parallel to each other, and each of them is about 100 miles long. In the light of this report the lake can be called "the mysterious Mistassini" no longer.

The anti-preserve Sportsmen's Protective Association of California now has a membership of 500. Its purpose is to check the system of leasing tracts of barren land for exclusive shooting privileges, and warning the public off.

BITS OF TALK.

VI.—THE EXPENSES OF GOING SHOOTING.

"JUPITER PLUVIUS!" he apostrophized as he came in out of the wet. "These are the days when one must carry an umbrella at full-cock and finger on the trigger."

"How many partridges did you bring home?"

"Sat five days in that little country hotel, wishing it would clear up, and berating myself for not having brought a life-preserver, or pontoon bridge, or diving-bell, or some other appurtenance for ruffed grouse shooting in a flood. Out $37.50, a week's time, and not a feather to show for it."

"Ready to follow 'Podgers,' and write something for the paper about the expensiveness of a modern outing."

"'Podgers' is sound on that question. He hit the nail square on the head; but he didn't hit it half hard enough. It has come to such a pass that the traveler with the fishing rod or gun-case is looked on as legitimate prey to be bled and squeezed by everybody, from the baggage man to the backwoods guide, and from the time he sets out until he dodges back into his home again. Look at the Adirondacks. I can recall when one of the pleasures of a trip into the North Woods was to listen to the quaint talk of our honest old guide. We used to think that while the modest sum he asked might pay him, and pay him well, for his time, we still owed him something for the pleasure and satisfaction of his companionship, his knowledge of woodcraft, which appeared to us so wonderful, and his backwoods philosophy. How is it now? The guide, philosopher and friend of those earlier years has disappeared, gone with the deer and forests and the charm of the wilderness itself. And in his place to-day you find a lot of lazy louts, loafing about the hotels and waterways, so-called guides, who lie in wait for new victims, and demand three dollars for every honest half-dollar's worth of bestirring their lazy stumps."

"You cannot blame them, they have come in with the shoals of summer boarders and with the big hotels, and grown up as a part of the new order of things. The ordinary Adirondack guide of to-day is merely a boatman, as 'Piseco' once wrote; he rows the ladies and children about the lake for an hour or two, once or twice a day, for which mild labor he receives a full day's pay, and of course when you ask him to put in a full day's work for the same amount, he sneers at you.

"You must not blame him. It is human nature to get as much pay as possible for as little exertion as possible. The 'guides' of the seashore and inland resorts are not to be blamed. If you want to lay the fault where it belongs, put it on the people who have created this condition of things."

"Yes, and give a good share of it to the greenhorn who goes into the woods, who cannot catch fish, nor kill game, but who must pretend to do both, and pays his guide lavishly to do them for him."

The Sportsman Tourist.

THE ANGLER IN NEW ZEALAND.

THE combined arts of pisciculture and acclimatization have completely upset all the old-fashioned ideas as to where to go for sport, and also as to size and habits of even the most familiar kind of fish. If any of the most noted American anglers were asked to say, at a word, where the biggest trout in the world are to be caught, they would probably be puzzled for an answer, and the chances are a hundred to one that they would give a wrong one. Those who have the "inside notion," however, would have not a moment's hesitation in replying, "New Zealand, for a thousand dollars!" And they would win the money, if any one were rash enough to put it up.

Taking all the elements of enjoyment for anglers into consideration, indeed, not only are the biggest trout in the world to be caught in the wonderland of the Pacific, as New Zealand has been justly called; but the pleasantest and by no means the most expensive fishing is to be had there. In a word, it is an angler's paradise; and any one who has spent a season there can honestly lay over the most stupendous "fish stories" that he is likely to hear anywhere else. It is a curious feature of the country that everything is on a gigantic scale. The moa (*Dinornis gigantea*), a wingless bird, with which the island once swarmed, stood 14 or 15ft. high, and had legs as thick as a horse's. Even now eggs of this monster are sometimes found, measuring 12in. from end to end; and though no specimen of the living bird has yet been captured, vast skeletons are constantly being discovered. The acclimatized animals seem to follow the same law, for in every instance where they have been successfully established at all—and there have been some very perplexing failures—they have not only rapidly multiplied in enormous numbers, but also developed a size which would be deemed fabulous in their natural habitat. This is markedly the case with fish.

It is necessary to say here that New Zealand consists of two large islands and one small one, having an area altogether about as large as Great Britain, but longer and narrower, very much of the same shape as Italy, with the climate of the south of France, and a population of 650,000 British and 50,000 Maoris, who are the natives of the country. It lies out in mid-ocean, 1,200 miles from the nearest mainland, and it has higher mountains than any other country of equal breadth. A waterfall 2,000 feet high has recently been discovered among the little-known mountains of the West Coast; and the variety and magnificence of the river and forest scenery are indescribable.

It can be imagined what waters there are in such a country for fish. Yet, strange to say, nature placed no fish in them, or, at all events, none worth calling fish. Eels swarmed, and grew to an awful size; but there were no other native fish except a few little tittlebats and smelts, which are now used for bait. The acclimatization of fish began under the auspices of societies, aided by the Government, about twenty-five years ago; and has been accompanied by astonishing results. The salmon, the true *Salmo salar*, has been a most mortifying failure. The Government and the acclimatization societies have spent many years, and, perhaps, a hundred thousand dollars, in trying to establish this king of fish; but all in vain. The ova arrive in excellent condition, they are triumphantly hatched out, and the fry thrive apace and attain a phenomenal size in the breeding ponds or weirs; but so surely as they go down to the sea, so surely every one of them falls a prey to some unknown enemy, and never a smolt returns to tell the tale.

But now comes the strangest thing. All other fish of the salmon species that have been introduced have done splendidly. The American brook trout (*Salmo fontinalis*) has made itself entirely at home, like a true bred Yankee, and seems likely to crowd others out of the location wherever it is placed. It is a great favorite with the colonists, from its beautiful appearance. The acclimatization societies do not yet consider it sufficiently established to allow it to be caught, and though it has been turned out in some open waters, I have never seen or heard of one being killed with rod and line.

Then the Loch Leven trout (*S. levenensis*) and the salmon trout (*S. trutta*) have been quite successfully established; and what is most remarkable, the salmon trout goes down fearlessly to the sea and holds its own against all foes, while the true salmon, a much stronger fish, invariably succumbs. The commonest fish of all, however, in New Zealand, and the one which has developed most marvellously, is the brown trout (*S. fario*), which you have also introduced into America. Many of the rivers and streams of both the North Island and the Middle Island—which are almost like two separate countries—are now plentifully stocked with these fish, and, notwithstanding the most ruthless poaching, they are finding their way into all sorts of unexpected places, where none have ever been turned out, by means of the deportations and migrations that occur during floods.

I was fishing a beautiful little stream in the North Island the other day—the Horokiwi is its musical Maori name—when a cheery looking, sunburnt settler came and stood by me, grinning, and watching me throwing the fly with great interest. Presently he said: "Ketchin' trouts?"

"Trying to," I replied.

"They's nice, haint they? Leastways my old 'ooman do say so. I prefers heels myself; but I goes down with an 'ay-fork and ketches a couple o' trouts or so for the old 'ooman most hevery evenin'."

"Oh, you 'ketches them with an 'ay-fork,' do you?" I said.

"Yes, you can get 'em any time that way. I haint got no patience to stand a weltin' the water with that there whip of a thing, and then p'raps lose 'em arter all."

And that is what goes on everywhere. The old hands among the bush settlers look on "trouts" simply as food. They prefer "heels," but they are getting to like trout, too, and they "ketch 'em" the quickest and surest way they can. Yet they breed and muster strong, and all the "'ay-forks" in the country don't seem to make any difference.

There is one thing to be said, the acclimatization societies keep up the supply most energetically. They have breeding ponds, and they employ rangers, and all the better class of country settlers help them all they can. Many men of property in the back blocks never think of returning from town without a can or two of healthy fry—many thousands, perhaps—which they quietly turn out in some secluded stream, with a certainty of hearing good accounts of them some day. This is going on steadily from a great number of different points, and the consequence is that the fishing becomes more various and more satisfactory every year. All acclimatized birds, animals and fish are deemed to be the property of the acclimatization society within whose district they are found, and a license for shooting or fishing can only be obtained from them on payment of £1 ($4) for the season. It is strictly against the law to sell trout. The fishing season commences on the 1st of October and lasts six months. Every sort of information and assistance can be obtained by writing to the secretary of the acclimatization society, who will always be found an enthusiastic sportsman and a courteous gentleman, only too delighted to welcome anglers from abroad.

But how about the biggest trout in the world?

Oh, well, I was just coming to them. There are several rivers in New Zealand—mostly in the Middle Island—where for some reason not clearly ascertained the trout grow much more rapidly and to a larger size than elsewhere. One of these is the Opihi, in South Canterbury, on which is situated the picturesque village of Temuka. I have myself seen an honest brown trout caught there, weighing 28lbs., and a firmer or better fish I never saw. I have known 40lbs. of trout killed in the Opihi with one rod in a single evening, and not a long evening either, for darkness falls very suddenly in those latitudes. In the same river fish weighing 30lbs. have been taken and eaten, and found delicious. I happen to know the country about there well, and I attribute the great size and good quality of the trout in the Opihi to the fact that the river, which rises in the snowy mountains, does not flow into the sea at all, but into a large, deep lagoon, many miles long, which only breaks out into the sea at flood times, though the sea water penetrates into it through the shingle bank, or flows over into it during stormy weather. This lagoon is, in fact, like an inclosed arm of the sea, and is alive with little fish, crabs and all sorts of marine and semi marine creatures. Here the trout can get any quantity of food, and from the depth and saltness of the water, they develop some of the characteristics of salmon, the red flesh and the large size, without being exposed to the attacks of the ravenous seafish. The Mataura, in South Otago, another snow river running into a lagoon, has trout as large as those in the Opihi. A friend of mine who is a true angler, Mr. Alexander Ferguson, manager of the National Bank at Christchurch, Canterbury, to whom I applied for some authentic particulars of sport during the season just over, wrote to me, to follow me to America, as follows: "Brown trout weighing 20lbs. and upward have been landed with rod and line from streams both in the north and south of Canterbury during the past season. On the Selwyn, a stream fifteen miles from Christchurch, three rods killed twenty-one fish weighing 144lbs. on the 17th December, with natural bait, bullhead and smelt (small fish indigenous to the river). On the same day two rods killed sixty-one trout weighing 41½lbs. with artificial fly, in a stream flowing into the Selwyn."

The very big fish are generally caught with natural bait, or with an artificial minnow, the Devon being considered specially effective. But I have known several huge fellows landed through the seductions of a cockchafer or a large grasshopper.

In the mountain lakes of the Middle Island, some of which, such as Wakatipu, are 2,000ft. above the sea, and are reputed to be unfathomable, the trout reach a greater size than they do even in rivers like the Opihi or the Mataura. But I believe there has never been an instance of a big trout being caught in a lake with rod and line. Plenty of them are caught and eaten, but they are either netted or else speared, or snared in some way. There seems to be something in the vast depth and extreme coldness of the water which changes their habits and renders them proof against all the temptations that the genuine angler can hold out.

For my own part, I am inclined to think the trout fishing in the North Island is better than that in the Middle Island for casual visitors who wish to see something of the country in addition to getting good sport; and as the stream of Americans to New Zealand is steadily increasing—they are said to have numbered 2,000 last summer—a few hints as to where to go and how to get there may be acceptable.

Wellington, the capital of the colony, is the starting point. It is a humdrum little commercial city of 30,000 inhabitants, superbly situated on the shore of one of the grandest harbors in that land of harbors, framed, as it were, in noble mountains, clothed to the summit with evergreen forests, except where snowy peaks of distant ranges stand out against the sky.

There is the best of hotel accommodation at Wellington, and the people are most civil and hospitable to strangers. Sportsmen will find an unfailing friend and unerring guide in Mr. Charles St. Barbe, on Lambton Quay.

The fishing itself lies at a place called the Wainuiomata Valley—wai-nui-o-mata, water of sharp stones, a lovely mountain stream, flowing from the wooded ranges to the sea—which is about sixteen miles from Wellington.

The best way is to go to the Hutt, a village on a river of the same name full of big trout, by a little jingling train of cars running fourteen miles an hour—there is no rapid transit in New Zealand—and then walk or drive from there to Wainuiomata. There is no hotel there, but there are a number of *wharés*, or huts of one, two or three rooms, which are rented at from 60 cents to $1.50 a week, the tenant taking out everything he wants, bedding, cooking utensils, stores, etc., in an express wagon, or the buggy that he drives out in himself. There is abundance of fuel and water on the spot, and milk, eggs, and butter of the very best can be got for a trifle from any of the neighboring farmhouses, which in themselves are well worth a visit. The folks in the neighborhood are on the best of terms with the angling fraternity, who cordially reciprocate their kindness. I made one of a party last year, who invited every family living in the Wainuiomata and Orougoro valleys to an amateur entertainment at the school-room, to celebrate the opening of the season. They all came, to the number of a hundred or more, including several generations of men, women, children and innumerable babies. Every house for ten miles round was locked up empty that night. We gave them Christy minstrels, and readings from Mark Twain and Bret Harte till we nearly killed them. It was a sight to see whole rows of blooming young mothers suckling their babies and crying and stamping with laughing at the same time. Then we fed them with cakes and pies and filled them up with brown ale till they couldn't hold any more, and then they danced till midnight, when, as it was Sabbath morn, they left off dancing and drank whisky instead for another hour or two, before singing "God Save the Queen," and driving home in the moonlight. That's the way we go on up there. But the fish are not much interfered with after a night like that.

The life in the *wharés* is the perfection of camping, and you cannot imagine anything jollier than to return from the upper waters of the stream with a thumping basket, to find your mate has a rousing fire going—for there is a touch of frost up in those mountains at night, even in summer—two or three pounds of porterhouse sissling on the gridiron over the clear embers, new laid eggs to follow, a jug of beer foaming on the table, everything as snug as possible, and the certainty of a merry company from the neighboring *wharés* afterward, with plenty of good songs, good stories and good fellowship.

There are no big fish in the Wainuiomata, nothing over 6lbs. ever having been caught there, that being my friend St. Barbe's prize fish last season, but there are any number of beauties of from ½lb. to 4lbs. or 5lbs., for those who know how to get them. There is no difficulty at all about the expedition, and the cost is a mere bagatelle, for $1 goes as far in New Zealand as $5 here. Yet, you get first-rate sport, grand air and exercise, lovely scenery, and as fine a peep at the back country, with its virgin forest of cypress and yew and gigantic fern trees and palms, and strange flowers and still stranger birds, as you could get by going ten times the distance and spending ten times as much.

I can safely recommend any angler who wants big fish and all sorts of other good things combined, at a moderate outlay, and who does not mind an ocean trip to try New Zealand. He will never regret it; I have been there and I know.

EDWARD WAKEFIELD.

THE BULL AND THE BEAR.

WHAT Bismarcker, that recalls the good old days of '75 at Fort Abe Lincoln, does not remember Charley Reynolds, Gen. Custer's favorite scout? A grave kindly man, with an unmistakable air of refinement that even the wild, hard life of the frontier had failed to rob him of. Charley's experience of life on the border had been of the rough-and-tumble description, whose alternates were wild excitement and pinching deprivations. He had been by turns cowboy, courier, hunter and scout, and life to him while passing through these varied phases had been replete with stirring incident and thrilling adventure. On the eve of the battle of the Little Big Horn, when Gen. Custer divided his command, Charley was sent with Major Reno. On the following day, when Reno's command struck the upper end of the Sioux camp, Charley was shot in the head at the first fire. In a dazed and dying condition he rode straight into the midst of the hostiles, where he was pulled from his horse and stabbed to death. It was in the company of Charley Reynolds one sunny afternoon, in the autumn of '75, while riding over from Bismarck to Gen. Custer's headquarters at Fort Lincoln, that I heard the story of the bull and the bear:

"It was shortly after the spring round up over in the Wind River country. The outfit had just finished a drive of over one hundred miles from the lower valley, where the drought had sunburned the grass to a crisp. There were twenty-five of us all told, and we camped close together on the south bank of Wind River. We had little to do, and were mighty glad of it, for the long, dusty drive had worn us completely out. The cattle were as yet too weak to range far and grazing was good close to camp. After a week of rest and quiet we made a reconnoissance in force of the adjacent country, with results that were entirely satisfactory. Not a sign of Indians anywhere, while signs of big game were everywhere. The mountain streams were fairly alive with trout, and nothing could well exceed their anxiety to be caught. Hunting parties went out from camp every day and fresh meat was plentiful.

Occasionally the boys ran across the trail of a grizzly, but the big brutes kept well out of sight. One morning, however, about a month after our arrival, a party of us almost rode over a half-grown cub in a blackberry thicket, about six miles from camp. The cub was so busily engaged in stuffing himself with the ripe fruit that he did not see us until we were right up on top of him. The berry patch grew along the base of a bluff, which the bear made a desperate attempt to climb, but finding it too steep he put his back against it, showed his teeth and growled out something that sounded like "Come on." We got a couple of ropes around the youngster's neck, and soon had all the fight dragged out of him. Half stupefied from the choking, and frightened out of his wits, the cub waddled along into camp, his conduct on the way being so exemplary that we had to drag him only about two miles. Upon reaching camp we roped him down good and fast, and at supper time held a council of war, which was to decide the prisoner's fate. We didn't need his meat, so we decided to adopt him.

After a great deal of kicking and squealing on his part, and considerable off-hand profanity on ours, we got a nice rope collar around the cub's neck, and with a long wagon chain made him fast to a cottonwood, that grew near the opening of an old dugout, which some trappers had scraped out years before. Then Steve Leonard, the range foreman, brought a bucketful of water from the river, and we christened the bear Rube, after the cook; after which touching ceremony we shook the ropes off from him, and got out of the way.

Rube got up, shook himself together, and started out for his native hills. When he reached the end of his chain he turned a flip-flop that a circus veteran might envy, and dealt the ground a stunning blow with his broad, fat back. Then he got up, and spent the next two hours in trying to pull the cottonwood up by the roots. Just as he had worn the last vestige of skin from his neck, in his frantic attempts to pull up or break something, he discovered the opening to the dugout. Doubtless thinking it was an underground passage to some other and happier land, he shot into the hole, and brought up against the back wall with a thud like the full-length

delivery of a battering-ram on a brick wall. We heard a squeal of mingled pain and terror, and then the silence of death reigned down in that hole. "Broke his —— neck," said Bob Brown, the horse-wrangler. "Thank God," said the cook, devoutly. But the boys who had jerked Rube around by the neck out in the berry patch knew better.

The next morning everything was quiet in the dugout, so we concluded to let the cub alone for a while, and trust to the refining influences of starvation to bring him out. Two days had passed, and Rube had devoted the whole time to fasting and meditation. We could hear him sniffing and snuffling whenever cooking was going on, and we knew that his appetite was coming back fast. On the third day, at dinner time, a big juicy venison steak was broiling over the coals, and the wind carried the savory odor right into the dugout. This was more than Rube could stand. I had just sat down to dinner, when my partner, Jack Cornwell, dug his elbow into my ribs, and jerked his thumb in the direction of the dugout. Framed in the opening were the head and shoulders of the cub. He was sniffing vigorously, and surveying the feast with an expression that was pathetic in its wistfulness. Snatching a half-broiled steak from the fire, I laid it on a flat stone, about 6ft. from the hole, and retired. Rube vanished upon my approach, but reappeared before I could resume my seat. He took another anxious survey of the camp, and at last caught sight of the steak. Craning his neck out to its full length, he regarded that piece of meat for a few minutes as if all his earthly hopes were centered in it. The saliva streamed from the corners of his mouth, and another violent fit of snuffles overtook him, during which he got his forepaws outside. Then his appetite overcame his fear, and shambling out to the steak he made one bite of it, and got up on his hindlegs, facing us. We were ready for him with the hindquarters of a blacktail, which lasted him about twenty minutes. We had no trouble with Rube after that. He never missed a meal, and soon became as tractable as a house dog.

Hugh Campbell, a rustler from the Bad Lands, taught Rube all sorts of accomplishments, among which was boxing; and many a long, hot afternoon we spent in the shade "putting on the gloves" with the bear. Rube was fast becoming one of the boys, and we began to discuss the advisability of giving him the freedom of the camp. In this we were overruled by the cook, who swore he would let the sun shine through the cub the first time he found him loose.

The summer passed quickly, and almost before we knew it Rube had become a full grown bear. He was a veritable monster in size.

One evening in September, while Campbell was having a bout with Rube, the beast suddenly let go with his left and knocked Campbell completely out, breaking a bunch of ribs for him. All fights were immediately declared off, and Campbell was taken over to South Pass City for surgical treatment. As evening came around Rube would shuffle out to the full length of his chain, and rising on his haunches, "put up" his paws by way of invitation. We decided, however, that Rube should continue to wear the belt. For more than two months before this Rube had not curled up for a night's snooze without first having had his sleek, shining head cuffed and punched by the whole camp, and he was now, no doubt, sorely puzzled at the change that had come over the spirit of things. Tom Briscoe, a bow-legged cow-puncher from Arizona, was willing to swear that Rube never went to sleep without first cuffing himself alongside the jaws until his teeth rattled.

One morning the whole outfit was aroused by loud, angry snarling from the bear, accompanied by the violent rattling of his chain. Rushing out of my tent I noticed the cook working around the fire with a white, scared look on his face, while Rube had disappeared down the hole, from which came a succession of deep-throated growls. Suspecting foul play on the part of the cook, who hated Rube worse than wet wood, we laid hold of the chain and dragged the bear out. His back scraped the top of the opening in coming out, and down half the length of his spine the hair came off, leaving a streak as bald as the summit of Cloud Peak. He had been scalded. We immediately rounded-up the cook and hung him by the heels to a cotton-wood limb. Then we poured pretty warm water down his pants legs and turned him loose. We would have hung him by the neck, but he was the only cook in the outfit and we couldn't spare him. After the scalding affair Rube soured on us completely and sulked in his hole for two weeks, snarling and champing his teeth whenever we threw his food to him. When at last he crawled out one evening, with his back nicely healed over, Tom Briscol approached him with a flag of truce in the shape of a freshly caught trout, and only escaped being killed because Rube's chain wasn't three inches longer. We didn't blame the poor brute at all, but we were not affectionately demonstrative in letting him know this.

When the time drew near for the beef round-up and the breaking up of camp, Rube's future became a subject of daily discussion. No one thought of killing him; that would have seemed downright murder. At last we decided to turn him loose when the day of breaking up camp came around. Then the question arose as to how we were to get the chain off him. Bob Brown suggested that we cut the chain in two, as near the dugout as possible, and make Rube a present of all that remained inside. Then Sam Garbett, the broncho-buster, got up and informed us that he had been working for a week on a little scheme, the object of which was to make Rube furnish a little sport for the camp before turning him loose. Sam went on to state that he had all the raw material staked out for a big circus, and that it would surely come off if we only would say so. He proposed that we should get up a fight between Rube and a big black bull in the herd, that only the day before had horned one of our best horses so badly that we had shot the brute to end its misery. Sam's little speech was greeted with a deafening yell, and within less than fifteen minutes six of our best ropers were mounted and galloping away up the valley in search of the bull, while the rest of us went to work building a ring, to which we put the finishing touches about midnight. It consisted of a circular trench, in which long cottonwood posts were set closely together, and inclosing the dugout. We left an opening wide enough to drive the bull through, and which could be closed by dropping a few posts into place.

That night I had troubled visions of charging hosts of bulls and bears. Jack Cornwell dreamed that Rube had grown horns 5ft. long, and had impaled the cook against a wagon wheel. Some of the boys sat up all night, smoking and spinning yarns. Bob Brown told one about a wonderful hot spring out in Idaho, which the miners called the "Laundry." It flowed from the base of an overhanging cliff into a basin, where it formed a whirlpool. When you wanted any washing done you just threw your soiled clothing into the basin, and the whirlpool swashed it around for a few minutes, sucked it down the vortex, and blew it out of a hole into the limbs of a dead tree near by, thus saving the trouble of hanging it out.

I was aroused from sound sleep by a whoop from the boys outside, a signal that the roping party had been sighted. An answering yell came back on the morning breeze, followed by the bellowing of a bull. The gray of dawn was showing faint along the peaks of the Big Horns as we tumbled out of our blankets and hurried outside. About 50yds. away, and half hidden in a cloud of dust that they were kicking up, were the ropers, and although we couldn't see the bull, we knew that he was there all right, and was making it mighty interesting for all concerned. Suddenly the brute in charging out to the front caught sight of the camp, and came to a dead halt.

It was an involuntary tableau, which cannot be described and never will be reproduced. From the palpitating sides of the bull, a reek of steam rose into the frosty air, while the wide quick play of his nostrils told of the mighty struggle through which he had passed. His eyes were baleful with impatient fury, and his hoarse deep bellowing sent the cold chills chasing each other up our spinal columns. The ropers were covered with dust from head to foot, and with faces streaked by streams of perspiration looked like a Crow war party. The horses were nearly ready to give up the fight and leaned heavily against the ropes that secured the bull. Horses and riders were spattered with foam, that the bull in charging had flung upon them.

But the toughest job was yet to come, that of getting the chain off the bear. Steve Leonard volunteered to cut the collar off Rube, if the rest of us would pull his head out of the doorway. Steve drew his bowie across a sandstone a few times, walked into the pen and climbing up on the dugout knelt down over the doorway. Rube uttered a growl that sounded like distant thunder. Fifteen of the boys, full of Dutch courage, went into the pen, and getting hold of the chain gave it a violent and concerted yank, and out came the—chain, while fifteen "cow-punchers" went to grass. The collar had broken and Rube was loose, and a 4ft. opening wasn't half large enough to let the boys out. It was like a front door scene at a burning theater. Steve Leonard shinned up a post and stayed there.

Rube gave a wicked snarl or two, and tore around inside a while but did not come out.

Jack Cornwell planted a sharp stake just inside the opening, and hung the rear section of a red woolen shirt on it, and the boys brought up the bull. He had been taking life easy while we were engaged with the bear, and seemed now as fresh as ever, for when they tightened the ropes on him he made a break for the river, and came very near getting away from the jaded horses. At last they got him headed for the opening, and when he caught sight of Cornwell's dismembered shirt, he made a charge upon it, that carried him clear through. Dropping the posts in place, we shook the ropes off the bull and climbed up to the top of the pen.

The bull had the circus running wide open before we could take our seats. In chagrin he had run one horn through a corner of the rag, and was now racing around the pen, head and tail erect, with the fragment of Cornwell's shirt streaming out gaily in the breeze.

Suddenly he stopped opposite the doorway of the dugout and leaped wildly toward it. He smelt bear. Then every muscle in his mighty frame grew rigid and motionless, while the white circles widened around his dilated eyes. For one moment he stood thus, and then with an unearthly yell, that the distant hills seemed to take up and re-echo, he charged upon the dugout and sent a snort of defiance down the hole. Then he retreated to the opposite side of the pen, and again every muscle stiffened, and the massive head was lowered, until his heavy breathing blew up the dust in little clouds. The noble brute! I already regretted my part in getting up the fight. Every instinct of the bull was now alive with terror as he nerved himself to meet the unseen foe, from which there was no means of escape. But Rube had not signified any intention of coming out, and had thus far proved a great disappointment to his numerous backers.

"Say, boys," drawled Thad Grover, a granger from the Goose Creek country, "you bet Rube hain't lost no bulls answering to the description of this here one."

Just then somebody shouted: "Here he comes! Whoop!"

Now Rube came out of that dugout as if he had been blown out by a premature explosion of gunpowder, and without paying any more attention to the bull than if there hadn't been a bull in Wyoming, he made a break for the nearest post, and went up it just as if there had been something hot under his tail. Reaching the top, he climbed right over Tom Briscal and Sam Garbett, and tumbled over on the outside, striking the ground like a ton of mud. Then he got up, and after falling over himself a couple of times, he struck out for the foothills, running straight through the horse herd, which stampeded, wrangler and all.

Rube's bad break had completely paralyzed us, and we couldn't seem to do anything but sit and watch him streaking it for dear life, until he passed out of sight in the mouth of a cañon over six miles away. Then some of the boys, who sat next to the entrance of the pen, lifted out the posts and turned the bull loose. He went out as he had come in, at a charge, and soon disappeared up the valley in a whirl of dust. Then we got down and relieved our feelings with an old-fashioned Comanche yell that made the tinware rattle.

Poor old Rube! We heard from him on the following spring. One evening a big, gaunt grizzly walked into a rustler's camp over in the Stinking Water country, and taking a seat by the fire, waited to be asked to supper. They killed the bear, and when they went to take its hide off, Tom Briscal, who was with the party, identified the old cub by the collar marks on his neck and the bald spot on his back. When they shot Rube he never showed any fight, but just lay down and bawled like a baby.

LARRY YATT.

Natural History.

NESTING OF THE BLACK BASS.

THE fact that the two species of black bass (*Micropterus dolomieu* and *M. salmoides*) prepare a nest, and that at least one of the parents guards it, is now well known. But it may interest anglers as well as naturalists to learn how long the fact has been recorded, and this phase of the question is not well known.

The first definite information as to the parental care of the black bass that I know of is to be found in the rare "Ichthyologia Ohiensis" of Rafinesque, written when he was a professor in the old Transylvania University. The complete work was published in 1820. On the last page (88), in a "Supplement" to the work, he has given the following note: "14th sp. *Lepomis flexuolaris*.—Mr. Wilkins has informed me that this fish watches over its spawn, and prevents any small fish from coming near it; while thus employed it will not bite at the hook, but endeavors to drive away the bait. It is common in all the tributary streams of the Ohio, also in the Arkansas, Osage, Missouri, etc." *Lepomis flexuolaris* is one of Rafinesque's names for the small-mouthed black bass (*Micropterus dolomieu*).

The next notice of the nesting of the black bass and the most complete that has appeared for many years was given "by John Eoff, Esq., of Wheeling," Virginia, and was published in the "Ninth Annual Report of the Board of Regents of the Smithsonian Institution," in 1855 (pp. 289, 290). Mr. Eoff's article is entitled "On the Habits of the Black Bass of the Ohio (*Grystes fasciatus*)." *Grystes fasciatus* was another name for the small-mouthed black bass in current use when Mr. Eoff's article was published. Mr. Eoff prefaced his account with the statement that he considered the fish to be "the most valuable on account of their quality as a panfish and their quantity in our Western streams." After a few more remarks, he proceeded to describe its nidification and parental care:

"In the winter season they retire to deep and still water, and apparently hide under rocks, logs, etc., and remain there until the 1st of April, when they come out and begin to ascend the streams, apparently to find a convenient place for spawning, which commences about the 15th of May, varying some little according to the warmth of the season, etc. When that event is about taking place, they appear to separate into pairs, male and female, and hunt out some retired place, or nook, where the water is about eighteen inches deep and still, but adjoining deeper water, to which they can escape if alarmed; they there commence making their nests, that is, washing all the mud, etc., off the bottom, so as to leave it perfectly clean, in a circular form, the diameter of the circle (or nest) being about twice the length of the fish; after which the female begins depositing her eggs, which appear to become glued to the bottom, or small stones, in rows, after the deposit has taken place. She remains night and day, either on the nest or swimming round about it, apparently guarding the eggs, and driving every other smaller fish away. This watching or guarding continues until the eggs are what is called hatched, which occurs in from eight to ten days, according to the temperature of the water. The young fish at first remain near the bottom, and appear like a gauze veil floating. In two or three days they gradually rise and spread, the old one leaves them, they separate, and each one shifts for itself, *i. e.*, hides under leaves, small sticks and stones."

Mr. Eoff then expressed his belief that the black bass attained maturity in three years and gave good reasons for the belief. He closed with some judicious remarks on transplanting the species and stocking foreign waters. When it is recalled that the species was comparatively little known or thought of by anglers generally in those days, Mr. Eoff's remarks are truly sagacious:

"In the spawning season you will find a large number of nests of small bass, the bass being 10 or 11in. long, which I have always concluded were three years old. Hence, from the above fact, you will perceive that the bass of our western country are valuable, and, at the same time, can be easier transferred, and in greater quantities, from one stream to another, than almost any other fish. All that is necessary to supply a pond with any quantity, would be to examine their nests at the time they are spawning, and to pick up the small gravel out of the nests, with the eggs attached thereto, and put them in a bucket of water, and place them in your pond, in such a position that smaller fish could not devour the eggs, and in a short time they would hatch, and the young ones would help themselves. Or, to secure a larger quantitity in a short time, wait until the young are hatched, and are in innumerable quantities, suspended over the nest; then, with a piece of gauze net, dip them up and empty them in a vessel containing as much pure water as will sustain them until you can convey them to your pond; and then, as I before observed, they can support themselves while young, on insects, etc. Or, early in April or May, if you are fond of angling, you can go to a stream in which there are plenty, and in catching fifteen or twenty, will almost always get nearly one-half the number smaller ones. Put these into your pond unhurt; and, as they have not spawned that season, they will soon stock the water. Then all that remains to be done is to supply your pond with other small fish, minnows, etc., for food for the large bass, and they will increase in quantity just in proportion to their supply of food. Hence I am satisfied that if a farmer would convert one acre of his land into a pond, well supplied with fresh water, that acre would raise and support more fish yearly (the value of which would be more) than any other two acres cultivated in any other manner—the expense of cultivating deducted from each."

Much has been written on the black bass since those early days, and every reader of FOREST AND STREAM doubtless knows of the "Book of the Black Bass," by Dr. Henshall. Therein, and in the supplement to it ("More About the Black Bass") are recorded many facts about the nesting of the species and the care of the young. Nevertheless, we have to deplore that as to them, as well as to the common sunfish, we are yet ignorant which parent, male or female, assumes the care as guardian of the eggs and young. It is probable that the male does (and not the female as has been generally assumed), but we do not know. When the nesting season next approaches we may hope that some of our anglers will in-

terest themselves in the question and enlighten us. The desiderata in our information respecting the sunfish (FOREST AND STREAM, Aug. 8, p. 43) may be repeated for the black bass:

1. Time of nest building.
2. Exact manner of preparing the nest, especially how far the tail and mouth are used in clearing the chosen site.
3. Exact size and character of the nest.
4. Mode of oviposition.
5. Subsequent care of the eggs, whether by female and male together or alternately, or by female alone or male alone.
6. Size and age of the young, and their movements when abandoned by their guardian.
7. Does the guardian fan or agitate the eggs, and in what manner?
8. Is a vacated nest really taken charge of by another fish, or is the new occupant simply an interloper that avails itself of a suitable resting place?

The small-mouthed black bass is now abundant in the Potomac River, and during the present year has furnished excellent sport to the anglers of Washington. But time was, and not very long ago, when it was unknown in the river. When and how it was introduced will doubtless be of interest to many, and Mr. Eoff's words may be quoted exactly:

"Mr. William Shriver, a gentleman of this place, and son of the late David Shriver, Esq., of Cumberland, Md., thinking the Potomac River admirably suited to the cultivation of bass, has commenced the laudable undertaking of stocking that river with them; he has already taken, this last season, some twenty or more in a live box, in the water tank on the locomotive, and placed them in the canal basin at Cumberland, where we are in hopes they will expand and do well, and be a nucleus from which the stock will soon spread."

THEODORE GILL.

WASHINGTON, D. C.

Editor Forest and Stream:

I have read with much interest articles in your paper about nest building by the sunfish. I noticed a note from "R. F. R," King William county, Va., who, lifting gravel from the bottom of their nests, saw no spawn; probably the fish had not spawned. I have had ample opportunity to study the habits of sunfish. Those that I have observed commence to build their nests in June in some sandy spot, whole colonies building in one place. The male commences to clear a place by flirting the sand with his tail, and making the nest nearly round. After the nest is completed the female makes her appearance and takes charge of the newly made nest, watching it with a jealous eye, until the last of July, when the spawn is deposited, the fine pebbles on the bottom acting as a support to keep them firmly together. I have seen small fish try to devour the eggs, but the female would attack and drive them off. GEO. F. CONKLIN.

PEEKSKILL, N. Y.

DOUBLE-HEADED ANIMALS.

THE two-headed snake noticed in FOREST AND STREAM of Sept. 12, recalls a young specimen of the North Carolina king snake with two heads seen by the writer in the Smithsonian at Washington a few months ago. Mr. Ed. Rheem, of the Dept. of Reptiles, called my attention to the animal, which was preserved in a bottle of alcohol. It, also, had two developed heads, the union taking place at about the same point as that of the Maryland reptile.

I am led to believe that these monstrosities are of frequent occurrence, especially among fishes. About one year ago Mr. R. D. Kauffmann of Washington had in his possession a double-headed hound or dog shark (*Mustelus sp.*), which was captured near Lima, Peru. Union of the heads in this specimen took place immediately behind the gill openings, which were five in number, the two sets being present. There were two spinal chords, two sets of back or dorsal fins, and two upper lobes to the caudal; there was but one pair of pectorals, one of ventrals, and a single anal fin, one lower caudal lobe, and one navel. The length of this example was exactly 6in. It was presented by Mr. Kauffman to the U. S. National Museum.

Last fall a number of monstrosities were found among the trout hatched out at the Central Station of the U. S. Fish Commission in Washington. Among others there was a lake trout (*S. namaycush*) having two heads and two separate trunks back to the middle of its length, from which point there was but a single trunk. There were in this lot also two brook trout *S. fontinalis*), one of which was similar to the lake trout above mentioned, the food sac connecting the trunks from the pectoral fins to the place of union. The other brook trout example consists of two complete fish held together by a single food sac, which they seemed to share conjointly.

There are quite a number of two-headed mammals on exhibition throughout the country; and quite a collection of monstrosities, of various shapes and forms, is in the Army Medical Museum at Washington.

It is a good thing for observers to have recorded such freaks of nature mentioned by S. L., as well as all other occurrences of an unusual character happening among animals. BAB.

THE HORN-TAIL SNAKE AGAIN.

Editor Forest and Stream:

I have some more snake evidence which I wish to relate for the consideration of Miss Hopley, as it conflicts with a statement contained in her last communication to FOREST AND STREAM. The following statement was made to me by Doctor B., a prominent citizen of Vicksburg, Mississippi, with whom I am on terms of intimacy. This gentleman is an elderly physician, a man of learning and scientific research, who gives no imaginative coloring to his relation of facts.

Some years ago, as Doctor B. relates it, he was having some new ground cleared on his plantation in Louisiana, and one day being present he saw the negroes roll over a log, under which lay a snake about 6ft. long, jet black on top and almost blood red underneath. Besides the old one there were several young snakes of the same species, about 1ft. long. The old snake was killed at once, and struck with its peculiar appearance the Doctor gave it a close examination. There was a distinct horn-like terminal to the tail, of a dark color and quite hard, but he does not relate that the snake showed a disposition to use this appendage. It was perhaps killed too suddenly to afford an opportunity. But the young snakes which he captured and preserved alive left no doubt as to their intentions. Each one was provided with a horny tail also, of a lighter color but hard.

Whenever a stick was pressed upon the head or neck of one of them he would instantly strike it sharply with the end of his tail, thrown upward over the back. This was repeated quite frequently. A corroborative circumstance was that having the old snake skinned in order to preserve the skin, the operation was found to be difficult from the close adherence of the muscles of the back to the skin all the way down, requiring the use of a knife to separate them, whereas in other snakes it is only necessary to make a circumcision about the neck, when the entire skin can be slipped off by inversion, like a tight glove. The Doctor made a careful examination of the tail for evidences of a sting or venom, but found none. There was no orifice in the horn, no sting, no poison sac, no receptacle.

This testimony conflicts with the position of Miss Hopley, that "such snakes do not inflict an intentional wound with their tails, and if any should be made at all it should be ascribed to accident." But Dr. B. says there was no room to doubt the intention to inflict a wound with the tail, though he thought it must be a comparatively harmless weapon in the absence of poison as an adjunct.

COAHOMA.

BIRDS OF NIAGARA COUNTY, N. Y.

WITH ANNOTATIONS BY J. L DAVISON, ASSOCIATE MEMBER A. O. U., LOCKPORT, N. Y.

NIAGARA COUNTY is located in the extreme northwestern corner of the State, bounded north by Lake Ontario, west by Niagara River, south by Tonawanda Creek. Considering the large area devoted to agriculture there is a liberal share of native forest still remaining (principally of deciduous trees), which with the extensive orchards, for which it is noted, with some remaining swamp land, a number of creeks, numerous small streams (which latter are, however, now fast drying up), a large extent of hillside, some cliffs and small valleys, afford a diversified topography. The geological formation of the county furnishes a varied soil, giving rise to a widely diversified flora. It can easily be seen that the natural conditions would favor an extensive resident bird fauna; and the Niagara River affording a break in the chain of lakes, would probably induce many of the small migratory species to adopt this course in preference to crossing the larger bodies of water on either hand.

In presenting the following list I do so knowing that it is not complete, as the 192 species given are only such as have come under my own observation within the past ten years. I think it is generally claimed that about 250 species occur in this vicinity. There are many sections of the county that I have not visited. In fact most of my collecting has been confined to the central part. Among a collection of between 300 and 400 mounted specimens, 154 species were secured in the county. A few of the many species given as migrants may possibly remain through the summer, but I have found them only during migration.

LIST OF BIRDS OF NIAGARA COUNTY.

1. *Colymbus holbœlli* (Reinh.), Holboell's Grebe (2).—Rare. A live male specimen brought to me on May 4, 1887, captured at Wilson, N. Y., Lake Ontario.
2. *Colymbus auritus* Linn., Horned Grebe (3).—Not uncommon during spring and fall migration.
3. *Podilymbus podiceps* (Linn.), Pied-billed Grebe (6).—Not common, breeds along the shore of Lake Ontario.
4. *Urinator imber* (Gunn.), Loon (7).—A common migrant; a few breed on Lake Ontario.
5. *Urinator lumme* (Gunn.), Red-throated Loon (11).—Rare. I have a young specimen taken in the Erie Canal in December, 1882. An adult male was taken at Olcott, Lake Ontario, in May, 1888.
6. *Larus marinus* Linn., Great Black-backed Gull (47).—Rare; Feb. 1, 1886, one was taken at Lewiston, Niagara River.
7. *Larus argentatus smithsonianus* Coues, American Herring Gull (50).—Common; a winter resident along the Niagara River, and is often seen along the Erie Canal in the city of Lockport during April.
8. *Larus philadelphia* (Ord.), Bonaparte's Gull (60).—A common migrant, arriving in February and remaining until April along the Niagara River.
9. *Sterna hirundo* Linn., Common Tern (70).—Common during spring migration along Niagara River and Lake Ontario.
10. *Sterna dougalli* Montag., Roseate Tern (72).—Rare. On May 31, 1886, one was killed at Youngstown, on Niagara River.
11. *Hydrochelidon nigra surinamensis* (Gmel.), Black Tern (77).—Rare. I have a specimen taken Sept. 5, 1881.
12. *Oceanites oceanicus* (Kuhl), Wilson's Petrel (109).—Rare. I have a specimen taken October 1875, by Mr. J. A. Newton, while shooting plover just outside the city limits.
13. *Merganser americanus* (Cass.), American Merganser (129).—A common migrant, often taken at the mouth of Niagara River.
14. *Merganser serrator* (Linn.), Red-breasted Merganser (130).—A not uncommon migrant.
15. *Lophodytes cucullatus* (Linn.), Hooded Merganser (131).—Rare.
16. *Anas boschas* Linn., Mallard (132).—A common migrant.
17. *Anas obscura* Gmel., Black Duck (133).—A common migrant.
18. *Anas americana* Gmel., Baldpate (137).—Rare. I have a specimen taken at Olcott, on Lake Ontario.
19. *Anas carolinensis* Gmel., Green-winged Teal (139).—A common migrant.
20. *Anas discors* Linn., Blue-winged Teal (140).—A common migrant.
21. *Spatula clypeata* (Linn.), Shoveller (142).—A specimen was brought to me in October, 1885.
22. *Dafila acuta* (Linn.), Pintail (143).—A not uncommon migrant.
23. *Aix sponsa* (Linn.), Woodduck (144).—A common migrant. Breeds occasionally on Lake Ontario.
24. *Aythya americana* (Eyt.), Redhead (146).—A common migrant.
25. *Aythya vallisneria* (Wils.), Canvasback (147).—Rare. Occasionally taken on Niagara River.
26. *Aythya marila nearctica* Stejn., American Scaup Duck (148).—Rare.
27. *Aythya affinis* (Eyt.), Lesser Scaup Duck (149).—Rare. A few taken with the preceding on Niagara River.
28. *Glaucionetta clangula americana* (Bonap.), American Goldeneye (151).—Rare. Occur occasionally on Niagara River.
29. *Charitonetta albeola* (Linn.), Bufflehead (153).—A common migrant.
30. *Clangula hyemalis* (Linn.), Old Squaw (154).—A common migrant. The most common duck taken on Niagara River.
31. *Oidemia americana* Sw. & Rich., American Scoter (163).—A common migrant.
32. *Oidemia deglandi* Bonap., White-winged Scoter (165).—A rare migrant.
33. *Oidemia perspicillata* (Linn.), Surf Scoter (166).—A not uncommon migrant.
34. *Erismatura rubida* (Wils.), Ruddy Duck (167).—A common migrant on Niagara River.
35. *Branta canadensis* (Linn.), Canada Goose (172).—A common migrant. Mr. Norman Pomeroy, living about four miles from Lockport, captured 18 a few years ago, which had alighted among his flock of tame geese during a severe storm, and all taking shelter in the barn, when the door was closed on them. They mated with his tame geese, and he keeps a flock of 40 to 50 of the hybrid geese.
36. *Olor columbianus* (Ord.), Whistling Swan (180).—A not uncommon migrant. Nearly every season a number of this specie are taken in a wounded condition in Niagara River, below the falls. They are probably wounded by flying into the falls during storms while migrating during the night. I have also been told that dead specimens have been found on the shore of Lake Ontario, near the Niagara River, after the ice had broken up in the spring; they undoubtedly had remained in the ice all winter.
37. *Botaurus lentiginosus* (Montag.), American Bittern (190).—Common. Breeds.
38. *Botaurus exilis* (Gmel.), Least Bittern (191).—A not uncommon migrant, and I think a few breed along Lake Ontario.
39. *Ardea herodias* Linn., Great Blue Heron (194).—Common. Breeds in Tonawanda Swamp, in the adjoining county of Orleans.
40. *Ardea egretta* Gmel., American Egret (196).—Rare. Aug. 18, 1886, two specimens were taken at Olcott, Lake Ontario, by different parties, both of which were brought to me for identification. I took the measurement of one of them: Length 36.50 inches, extent 48, wing 15.50, tarsus 6.
41. *Ardea virescens* Linn., Green Heron (201).—A not uncommon summer resident.
42. *Nycticorax nycticorax nævius* (Bodd.), Black-crowned Night Heron (202).—A rare migrant.
43. *Rallus virginianus* Linn., Virginia Rail (212).—A not uncommon migrant.
44. *Porzana carolina* (Linn.), Sora (214).—A rare summer resident. Breeds. On June 2, 1883, I took 4 eggs, nest and 9. See FOREST AND STREAM, June 14, 1883, p. 384, "Do Rail Carry Their Eggs?"
45. *Gallinula galeata* (Licht.), Florida Gallinule (219). A rare summer resident. On July 9, 1888, a young of this species was brought to me for identification. It was taken on the (Tonawanda Creek) Erie Canal west of Lockport. The party kept it in a cage for two weeks. I have an adult specimen taken at Wilson, N. Y., May 10, 1883.
46. *Fulica americana* Gmel., American Coot (221).—A common summer resident.
47. *Philohela minor* (Gmel.), American Woodcock (228).—A common summer resident.
8. *Gallinago delicata* (Ord.), Wilson's Snipe (230).—A common migrant during the spring; none during the fall.
49. *Tringa maculata* Vieill., Pectoral Sandpiper (239).—A rare migrant.
50. *Tringa minutilla* Vieill., Least Sandpiper (242).—A rare migrant.
51. *Totanus melanoleucus* (Gmel.), Greater Yellow-legs (254).—A common migrant.
52. *Totanus flavipes* (Gmel.), Yellow-legs (255).—A common migrant.
53. *Totanus solitarius* (Wils.), Solitary Sandpiper (256).—A rare migrant.
54. *Bartramia longicauda* (Bechst.), Bartramian Sandpiper (261).—A not uncommon summer resident.
55. *Tryngites subruficollis* (Vieill.), Buff-breasted Sandpiper (262).—A rare migrant. Aug. 31, 1889, I saw in the window of a restaurant some golden plover, and among them was a specimen of this species, which I secured and sent to Dr. A. K. Fisher, of Washington, D. C.
56. *Actitis macularia* (Linn.), Spotted Sandpiper (263).—A common summer resident.
57. *Numenius hudsonicus* Lath., Hudsonian Curlew (265).—A rare migrant. I have a specimen, secured while shooting plover.
58 *Numenius borealis* (Forst.), Esquimau Curlew (266).—A rare migrant. Mr. L. H. Hill, of this city, has a specimen of this species, killed while shooting plover.
59. *Charadrius squatarola* (Linn.), Black-bellied Plover (270).—A rare migrant, formerly not uncommon.
60. *Charadrius dominicus* Müll., American Golden Plover (272).—A common migrant during the fall; none in the spring.
61. *Ægialitis vocifera* (Linn.), Killdeer (273).—A common summer resident.
62. *Colinus virginianus* (Linn.). Bob White (289).—A common resident, formerly abundant; protected since May, 1883, for three years.
63. *Bonasa umbellus* (Linn.), Ruffed Grouse (300).—A common resident, protected as the preceding.
64. *Ectopistes migratorius* (Linn.), Passenger Pigeon (311).—A rare migrant, formerly very abundant.
65. *Zenaidura macroura* (Linn.), Mourning Dove (316).—A common summer resident.
66. *Circus hudsonius* (Linn.), Marsh Hawk (331).—A rare summer resident. On April 19, 1888, I secured a specimen of decidedly bluish plumage, and taken from the highest ground in Niagara county. I had never seen one before, except on low, marshy ground.
67. *Accipiter velox* (Wils.), Sharp-shinned Hawk (332)—A common summer resident.
68. *Accipiter cooperi* (Bonap.), Cooper's Hawk (333).—Rare. Do not know that it breeds.
68a. *Accipiter atricapillus* (Wils.), American Goshawk (334).—On Feb. 5, 1889, I secured a fine female specimen of this species, being the first I had ever seen in this vicinity.
69. *Buteo borealis* (Gmel.), Red-tailed Hawk (337).—A common summer resident.
70. *Buteo latissimus* (Wils.), Broad-winged Hawk (343).—Rare. I do not know that it breeds
71. *Haliæetus leucocephalus* (Linn.), Bald Eagle (352).—Rare. Occasionally seen along Niagara River. Do not know of any breeding in the county of late.
72. *Falco columbarius* Linn., Pigeon Hawk (357).—A rare migrant.
73. *Falco sparverius* Linn., American Sparrow Hawk (360).—A common summer resident.
74. *Pandion haliaëtus carolinensis* (Gmel.), American Osprey (334).—A not uncommon migrant, and a few breed along Lake Ontario.
75. *Asio wilsonianus* (Less.), American Long-eared Owl (366).—A rare winter visitant.
76. *Asio accipitrinus* (Pall.), Short-eared Owl (367).—A common winter visitant.
77. *Syrnium nebulosum* (Forst.), Barred Owl (368).—A rare winter visitant.
78. *Nyctala acadica* (Gmel.), Saw-whet Owl (372).—Not common. I have seen only two specimens in ten years collecting. Have one in our museum.
79. *Megascops asio* (Linn.), Screech Owl (373).—A common resident.
80. *Bubo virginianus* (Gmel.), Great Horned Owl (375).—A common resident. Feb. 24, 1884, a live specimen was brought to my son to be mounted. It was killed by chloroform but not skinned for a week afterward. The body was a mass of fat, and my son wondering what it got to live on to keep in such good condition, thought he would make an inspection internally, and on cutting it open the knife passed through an egg just ready to be laid. Had she been kept alive she would have laid the egg during the day.
81. *Nyctea nyctea* (Linn.), Snowy Owl (376).—A not uncommon winter visitant.
82. *Surnia ulula caparoch* (Müll.), American Hawk Owl (377a).—A rare winter visitant.
83. *Coccyzus americanus* (Linn.), Yellow-billed Cuckoo (387).—A common summer resident.
84. *Coccyzus erythrophthalmus* (Wils.), Black-billed Cuckoo (388).—A common summer resident. I have often found the eggs of this species in the nest of *C. americanus*, but only once have I found it in the nest of any other bird. June 17, 1882, I found a black-billed cuckoo and a mourning dove sitting on a robin's nest together. The cuckoo was the first to leave the nest. On securing the nest I found it contained two eggs of the cuckoo, two of the mourning dove and one robin egg. The robin had not quite finished the nest when the cuckoo took possession of it and filled it nearly full of rootlets, but the robin got in and laid one egg. Incubation had commenced in the robin and cuckoo eggs, but not in the mourning dove eggs. I have the nest and eggs in my collection. See FOREST AND STREAM, Aug. 24, 1882, page 65, "A Strange Story." I am also quite certain that I have seen the black-billed and yellow-billed cuckoo feeding young in the same nest, an account of which was published in FOREST AND STREAM, since when I have found a number of nests containing the eggs of both species, and have come to the conclusion that I was not mistaken in that observation. On Sept. 10, 1883, I found a nest of the black-billed cuckoo containing two young birds not more than one day out of the shell; the two previous nights we had severe frosts that destroyed vegetables.
85. *Ceryle alcyon* (Linn.), Belted Kingfisher (390).—A common summer resident. Breeds. I have seen it as late as the 16th of December at the foot of the locks of the Erie Canal in this city.
86. *Dryobates villosus* (Linn.), Hairy Woodpecker (393).—A common migrant.
87. *Dryobates pubescens* (Linn.), Downy Woodpecker (394).—A common resident.
88. *Sphyrapicus varius* (Linn.), Yellow-bellied Sapsucker (402).—A common summer resident.
88a. *Melanerpes erythrocephalus* (Linn.), Red-headed Woodpecker (406).—A common summer resident.
89. *Melanerpes carolinus* (Linn.), Red-headed Woodpecker (409).—A rare migrant.
90. *Colaptes auratus* (Linn.), Flicker (412).—A common summer resident.
91. *Antrostomus vociferus* (Wils.), Whippoorwill (417).—Rare. Have been heard, not seen.

[TO BE CONCLUDED.]

Game Bag and Gun.

PATTERN AND PENETRATION TESTS.

GREENER 10-GAUGE.

IN OUR report upon the Greener gun of Mr. Such, given in the last issue of FOREST AND STREAM, mention was made of the trial of the gun with No. 1 shot. The figures on this will be interesting to a large number of gunners who have chance at large game across water ranges. The firing of the cartridge loaded with this shot was done along with the other 7 and 8-shot charges. In fact, the order was at 40yds., first, the No. 8 shot for 10 rounds, 5 from each barrel, then the No. 7 in like fashion, and finally the No. 1 shot. When the 60yds. range was reached the No. 1 shot rounds were fired first, then the No. 8, winding up with the No. 7, with the few shots with the left-over Scott gun cartridges sandwiched in between the two last-mentioned. The remarks of last week upon the weather hold good for the test, only it must be stated, to correct the error of last week, that the gun weight was 9⅝lbs. instead of 10⅝. The shooting, it will be seen, ran very even under the admirable weather conditions prevailing. The gun, too, was holding very

GREENER 10-GAUGE, 40YDS., RIGHT BARREL, 72 PELLETS, NO. 1 SHOT

close on the mark, and it will be noticed from the following tables for the struck and aimed circles of each shot that at 40yds. the average improvement by shifting the

GREENER 10-GAUGE, 40YDS., LEFT BARREL, 82 PELLETS, NO. 1 SHOT.

center was but 10 per cent., and at 60yds. but 14 per cent. The table stands as follows:

No. 1 SHOT—40YDS.

Right Barrel. Aimed Circle, Pellets.	Struck Circle, Pellets.	Dist. bet. center, In.	Left Barrel. Aimed Circle, Pellets.	Struck Circle, Pellets.	Dist. bet. center, In.
72	72	3	73	79	5
52	57	3	64	69	2
56	63	4½	69	82	4½
63	64	3	69	77	4½
71	73	4½	61	71	7
Av. 63	66	3½	67	76	4½

No. 1 SHOT—60YDS.

34	35	3½	24	26	4
26	30	5½	28	33	5½
31	35	4½	23	34	10
32	36	5	29	32	6½
28	32	5½	28	29	6½
Av. 30	33	5	26	31	6½

Looked at in the way of percentage of shot accounted for on the circle, the gun makes a very good average. When fired with this charge at 40yds. the aimed circle gives an average of .60 per ct, while the selected circle for best pattern rises to .71 per ct.; at 60yds. their respective percentages stand at .26 and .30.

In the matter of penetration the great 20grs. pellets were twisted and flattened out of all shape in getting through the closely laid paper pads, but they managed to tear through with great force and rolled up to over 40 sheets average at 40yds., and over 20 at 60yds., and this with patterns so well distributed that it would be a very small duck, indeed, that would get away if once within this charmed circle of shot. The weights of powder and shot respectively stand at 149 and 666, showing a tremendous propelling power with shot heavy enough to carry force when they did hit.

The formal record of the test stands:

CLAREMONT, N. J., Aug. 8, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Greener ejector hammerless. Cost, $350. No. of gun, 35,937. Weight, 9⅝lbs. Length of barrels, 32in. Gauge, 10. Right barrel, full choke. Left barrel, full choke.
Weather—Cloudy. Direction of wind, 9 o'clock. Force of wind, 3 miles per hour. Thermometer, dry, 73°. Do., wet, 69°. Humidity, 82°. Barometer, 30.15in.
Charge, as given by holder of gun:

BOTH BARRELS.

Shell—Winchester.
Powder, Brand—Du Pont's Eagle Ducking No. 2.
Powder, Quantity—5 drs.
Shot—*Make*—Tatham's Soft. *Quantity*—1¼ oz. *Size*—No. 1.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

BOTH BARRELS.

Loading.		Powder.	Shot.

3..... 36 pellets.	3..... 32 pellets.
Average 34 pellets.	Average 33 pellets.

Editor Forest and Stream:

About penetration: It does not profit the shooter much to know that his gun drives three shot through fifteen thicknesses of cardboard, if the rest of the load is weak. We will suppose ten pellets hit the first sheet of cardboard and seven of them travel through only ten sheets. Now, the extra penetration of the strongest three shot does not help the seven weak ones a bit. The shooter does not know which pellets strike the artificial or live target shot at. They may be pellets on the left or the right side of the 5in. square penetration pad. Would not it be better to follow in, say three-quarters of the pellets that hit the first pad. Suppose the gun puts twelve pellets on the first pad. We look through the sheets of cardboard and find that three-quarters of the hit, nine pellets, have gone through but ten cards. That looks to me like the practical penetration of the gun, or more properly, of the shot, for if the shot were all perfect and equally hard they would, probably, all penetrate alike. A chain is worthless if some of its links are weak, so is a gun unreliable if one-half or three-quarters of its messengers are deficient in strength. HEW.

NEWARK, N. J.

SQUIRREL SHOOTING.

THE season for this sport comes in the fall of the year, when the woods are glorious in their autumn tints and the calm of the Indian summer is upon the land.

Squirrel hunting is not a favorite pastime with every sportsman, and I think there are few who thoroughly appreciate it. To become an expert requires as much skill as to be a successful shot with the prairie chicken or quail. I can appreciate a week with the birds, and can follow my dog—staunch and true—from sunrise to sun set, and never grow weary; and with a fair count of success as well if the birds are not too wild. But the pleasures of this sport cannot allure me away altogether from the pursuit of the squirrel.

Perhaps it is the memory of the boyhood days on the old farm, that are so dear to the recollection of us all, that keeps one from getting weary of this sport. The days when we were the proud owner of a gun for the first time. Who can express the joy on this occasion in fitting words? It was not much of a gun; but since then I have owned some that were considered fine, even in this age of improvement, and I think none of them have ever afforded me the the pleasure that this single-barreled smoothbore shotgun did, when I was a boy.

Last fall, in September, I obtained leave of absence for a few weeks to regain a little of the strength expended in ten months' close confinement to business. After supplying myself with ammunition and sundry other things that are agreeable, if not necessary, for the use and convenience of one expecting to remain four or five weeks in the country, I purchased a ticket to a certain town away up among the hills of West Virginia, and after a seventeen hours' ride found myself within fifteen miles of my destination, at the railway station, the remainder of my way to be made by stage. During the drive I received plenty of information from the driver concerning the country, people, etc., and arrived at my destination in time for supper.

The next day was spent in loading shells and getting my gun in order, and that night I retired to bed early, intending to make an early start the following morning. At 4:30 sharp my host, Uncle Isaac, had me up, and after a hearty breakfast and storing a lunch in my game bag, I shouldered my gun and started for the woods. After walking about a mile, I entered my intended hunting ground long before the sun had made his appearance above the adjoining hill. It was too early to begin the hunt, and I contented myself with admiring the scene before me. Below me lay a valley, in the center of which a creek found its way through broad meadows toward the distant river; and the hillsides were covered with dense and heavy timber. Over the lowlands the mists had thrown a dense white pall, lying far below me like a silver cloud, motionless and still The wood, that is usually filled with so many inhabitants full of life, is quiet; and you can scarcely distinguish the sturdy trunks of the trees as you look through the uncertain shadows. There is an occasional note from a bird, as now and then he takes wing from the sheltering tree and flies out through the clear, pure air to seek his morning meal. Across the valley comes the startling cry of the sparrow hawk, as he moves swiftly through the uncertain light in quest of prey.

Suddenly there is a change. In the east, near the brow of the grand old hill, the mist grows lighter, and a faint reddish tinge lights up the timber at its crest. A minute later, and with this slight warning a great ball of fire appears over the hill, throwing graceful rays of sunshine down upon the banks of mist in the valley, and awakening to life the inhabitants of the wood and field. Suddenly I hear a harsh cry from the opposite hillside, and sailing high up in the air, coming straight toward me in all the strength and beauty of his freedom, flies a hawk of the larger species, cleaving the air with his broad, strong wings, and seeming to disdain all that is beneath him. I view him as he nears me more closely, half disposed to allow him to go unmolested. Higher and higher he mounts as he nears the top of the hill, far above the highest tree in the forest, with the bright sunshine falling upon his plumage; and I raise my gun. It is my first shot of the season, and my hand trembles. Suddenly, as the light flashes along the barrels, he sees me, and strives to avoid me; but too late. There is a loud report, and he wavers, falls, slowly at first, but faster and faster till he lies bruised at my feet. It was a grand shot, that thrilled me through and through, but when I beheld him lying there I half regretted that I had robbed him of his life. When I examined him more closely I found the white feathers in the tips of his wings bearing a crimson stain, which I at once surmised came from the fruit of the pokeberry bush, through which I afterward observed more of his smaller brothers pursuing some of the small birds.

I left him where he had fallen and turned to the wood. The sun was just here and there throwing his rays down through the branches of the giant trees. Taking the face of the ridge I walk along silently, skirting a bunch of hickories that stand in the little hollow below me. I hear no sound of the desired game. I sit down on a log and wait. Half an hour passes and all is silent. Suddenly a jay bird hops out on the limb of an oak just in front of me, uttering his loud cry, and regarding me very earnestly, turning his tufted head from side to side. Suddenly off to one side I hear a branch shake, accompanied by a shower of water, the dew that has gathered upon the leaves during the night. I am all attention. I cock my gun and wait. Watching the hickory intently, I hear a nut fall and all is silence. Soon I hear a loud cutting, accompanied by the sound of the fragments of the hulls falling down through the leaves as his squirrelship cuts the nut for his morning breakfast. I approach cautiously and slow, and once or twice, when my foot breaks a small twig, the cutting and pattering suddenly cease, as the squirrel listens, suspiciously, but the sound soon begins again, and I go closer and take up my post. Suddenly, on the ground almost before me I hear a rustling sound, and cautiously peering out from behind my tree I see a gray squirrel on the ground almost in front of me, and only a few paces off. I do not attempt to watch him. In a few moments he has whirled himself up the tree and is busily engaged in cutting down the nuts. The tree is a very high one, and after several very stealthy observations I discover four or five squirrels. Selecting the fairest shot, I stand out in the open and fire, and straight down, a distance of fully a hundred feet, came the squirrel. At the report of the gun there is a general movement in the tree, and slipping in another cartridge, I wait patiently. Soon there is a slight trembling of a little branch high up on the hickory leading out to an oak near by. I can just distinguish the gray brush; and I fire and the squirrel falls. Then there is a general rush to vacate the hickory, and I get in two shots, but both are clean misses. I put my game in my bag and walk on.

To give a full history of the day, of all the pictures of quiet woodland life I saw on that day, would fill a small volume to properly describe. I met with moderate success during the day, and when I returned to my starting place of the morning, seven squirrels and a brace of woodcock graced my bag by their presence.

My noontide meal was taken beneath the shade of the forest trees, and water from a crystal stream at my feet quenched my thirst, and I returned at night just as the sun was sinking to rest in the west, feeling improved in both body and mind; and after a hearty supper sought the solace of a read, and then to bed, to prepare for the morning, in a sweet, unbroken slumber.

Then there were other days, later on in October, when we pursued the birds across the stubble fields with our faithful dog until the sun had set, and we would return in "the gloaming" happy and contented.

I met many brother sportsmen during this fall's hunting, all entire strangers to me previously, and I find them to be what I have always found them to be heretofore—meet them where you will, at home, among their families, in social life, or with gun in hand—brave, true and generous gentlemen, ever ready to right a wrong and lend a kindly ear to a tale of sorrow or distress, and satisfied with themselves, the world, and things in general. Long may they live and prosper. DAN.

CINCINNATI.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

BOSTON AND MAINE.

THE open season on partridge began in Maine, New Hampshire and Vermont, on Sept 1, but thus far the shooting has been very poor. Monday, Labor Day, was a legal holiday in Massachusetts, and many merchants and gunners took the trains on Saturday evening previous for a day's shooting. Indeed it is seldom that more shooters from Boston go into the country in one day, but the score of birds was as small as the number of gunners was large. E. M. Gillam, of the *Boston Advertiser*, with a friend from the Chamber of Commerce, went to Franklin, New Hampshire for a day's grouse shooting. Mr. Gillam's dogs had been put into excellent trim for this occasion. They had been exercised in the field and in the brush almost daily, as early recommended in the FOREST AND STREAM. The dogs did excellent work, but the birds were very scarce, and the entire score was about one partridge. O. M. Smith, of the firm of Smith & Blanchard, lumber, hired an expert and took his new dog into the brush, with a result of no birds at all. The expert, who guns the most of the time during the open season, says that there are partridges enough, but that they are still in the swamps and the thickets, where it is impossible to find them. In Maine the open season was duly installed by the most of the boys "going a gunning," but with very poor results. Boston shooters, who went to that State for the day, also came back with very few birds—in many cases none at all. In one case in Oxford county, in a section about 14 miles from Lewiston, four boys, experts after partridges, were out all day, without getting a bird and seeing but one or two. One of these boys, who has been on the same farm for several years, and much interested in the subject, says that he has never known the partridges so scarce. Where he has usually had several flocks mapped out, ready for the opening day of the season, he does not know of a flock this year. From Lewiston and Portland the gunners have been out, but the scores are very poor, so far as I have been able to learn. The cause of the scarcity is laid to the heavy rains at the time when the chicks were small, followed by the superabundance of rainy weather, which lasted nearly all summer. It is suggested by those who ought to be well posted on the subject that the scarcity of grouse is probably confined to a district included within a line running with the seacoast and not more than 50 or 75 miles from the ocean; that the great volume of rain was within this area, or next to the seashore, and that beyond this area the weather has been more dry, and that the grouse are more plenty. Perhaps this is true. Thus far I have no direct proofs to the contrary, and perhaps in the deep forests of Maine there are at least the usual number of grouse. Berries of all kinds have been plenty in the woods of Maine, and this is a condition favorable to the growth and condition of the ruffed grouse.

But to turn from the scarcity of ruffed grouse in Maine, we will find a more pleasing theme in the remarkable abundance of deer in that State. I saw a gentleman from Hebron, Me., the other day, and he tells a curious deer story. In the first place, Hebron is an old town, the seat of an institution of learning, thirteen miles from the city of Lewiston, and where the inhabitants know about as much about the hunting of deer and their habits as they do about whales in the Pacific; indeed, a wild deer was never seen there till this summer, or at least since the days of the Red Men. Still, there is a good deal of rock and mountain and woods in the town, and of late years some of the worn out farms have grown up to woods. Well, a couple of deer came into a field of oats on a farm there and were seen several times. The farmers were aware that it was unlawful to shoot them till after Oct. 1, but one of them happened to hit upon the idea of throwing a lasso over the head of one or both of them. In good earnest he stirred about among his neighbors to get them to help drive the deer into a corner somewhere, and he would lasso the creatures. "I can do it," he said. He had had some experience on the plains at ranching and "rounding up" cattle, and though the ground was too rough where the deer were last seen and the thickets too dense to ride a horse, he somehow conceived the notion that he could stalk up to the deer and catch them with the rope. Some of the boys in the neighborhood rather believed in the idea, or at least they were willing to have the fun of seeing him try. So they were willing, at a given signal from the huntsman that the deer were again in the oats, to rush to certain positions and assist in the fun. They were to come together at a certain point in the woods, and the lassoist fully expected that the deer would be surrounded like a flock of frightened sheep. The signal came one morning, and there was a grand rush of the boys and a man with a coil of long rope, with a running noose at the end. Each rushed toward the point where the surrounding was to begin. The woods are very thick, indeed—low spruces and ground hemlocks—so thick that the cattle have paths beneath the limbs where it is almost impossible to find them. The hunters drew together. There was rustling heard by one of the boys, and he gave the signal—three whistles—to his companions and the man with the lariat. The deer were in the thicket for sure. They surrounded the point and gradually drew up to the thicket. The man with the long halter was ready. There was a rustling, then a pretty little red head, with mild, soft eyes, peered through the brush. The rope sung in the air. The aim of the lariat was sure. The noose fell dextrously over the nose of one of Deacon D.'s heifers. Those boys are not hunting for deer now, and that man with the lariat does not want the story to get out. The deer—I see some hunters smile. Ask Dr. Caton where they were.

But to go back to the number of deer in Maine, the increase has been more remarkable than ever this year, and the promises for sport this fall are excellent. In the town of Rumford, on the Androscoggin, where a deer was never seen till this year, one farmer complains that a field of grain has been nearly destroyed by them. He lay in wait one night, and a doe with two pretty fawns came into the oat patch and helped themselves to the fresh heads of grain. From all sections of the State come reports of the abundance of deer. The prevention of hounding and the maintenance of a close season has resulted in a wonderful increase, and yet the cry is a bitter one, from some hunters, that they are not allowed to hunt deer with dogs in Maine.

R. D. Richardson, of Richardson & Co., has returned from his fishing trip to the north shores of Lake Superior. The FOREST AND STREAM recently had an account of his departure, together with his brother and friends, on the steam yacht of the firm. The sail along the north shores of the lake was worth the whole trip, while the lake happened to be calm most of the time. They visited a new spot, instead of going directly to Jackfish Bay, as at first intended. The fact of the matter is, they desire to explore this north region, as much as to fish, and they feel repaid for their trouble. They visited the mouth of another stream or small river, and found the fishing all that could be asked for. The trout were large, running from 2 to 3 and up to 4lbs. They could catch them almost any time and all they wanted. Mr. Richardson is of the opinion that almost any of the streams emptying into the lake on the north shore are well stocked with trout. This is the story of the Indians and half-breeds. There were no mosquitoes and flies this year. The theory of the party is that these pests are done by the first of August, or at least by the middle of the month, the same as in the North Woods of Maine. Mr. Richardson is still very enthusiastic concerning a trip through from the north shore of Lake Superior to Hudson's Bay. He says that the Indians and half-breeds frequently make the trip. His idea is to take tents and guides and be about fifteen days on the way, following up the rivers from the lake to the head of the watershed; then down some stream to Hudson's Bay. He thinks that the trout region of the world is up in that almost unexplored wilderness. The party hope to make the trip next year.

Mr. H. S. Kempton, of the Boston *Herald* editorial staff, has shot his deer this fall. He was at the Adirondacks on the first night of the open season. His guide paddled him up to a deer, no part of which Mr. Kempton could see, except the eyes, at which he aimed, with the result of killing a fine doe, weighing 150lbs. Since this adventure he has been quite a lion with the newspaper men, among whom he was always popular.

Mr. Nat. Manson, of Bellows & Manson, has just returned from his two weeks' vacation at Camp Stewart, Richardson Lake, Me. Mr. Manson was accompanied by his friend Binner, of Cambridge. They had a splendid time, with fishing good, but partridges very scarce indeed. They got only one bird on the whole trip, the only one they saw, in fact. As near as Mr. Manson can learn, it is a poor year for grouse in Maine. They went one day up the Mooselucmaguntic, and up the Cupsuptic, to Soule's camps, and the celebrated Houghton & Dutton camps. He describes the camps as all heart could wish in the way of camps, but the little steam launch that plies up and down the lakes carries a small electric dynamo, and at night she is beached and her power utilized to produce incandescent electric lights in the camps. Alas! The days of true hunting and fishing are done. Electric lights at Cupsuptic! Give us the old lean-to and the fire of pine knots. Mr. Manson reports the deer plenty, but the Commissioners are trying to protect them till the open season, and thus far they have succeeded. Or at least open violations of the law are not as common as last year, for the reason that a warden is thought to have been on the watch. In one case a splendid jack light, made in Boston, was taken up to one of the lakes in August, but the story that a warden was watching every new comer prevented the light from being used.

Late reports say that fly-fishing is still good at Moosehead, and a party from Cambridge left for that region on Monday. G. H. Smith, of Smith & Blanchard, with Mrs. Smith, starts on Wednesday for a three weeks' outing at Camp Stewart, Richardson Lake. He will be followed on the 25th by Mr. and Mrs. C. H. Johnson and Mr. and Mrs. W. K. Moody. Mr. Bayard Thayer, of Boston, with party are already at the Birch Lodge, on the same lake, which property the Thayers have recently purchased.

SPECIAL.

CHICAGO AND THE WEST.

CHICAGO, Sept. 9.—Mr. Alex. T. Loyd and Mr. Reuben Donnelly have their plans all made, and will probably start in a day or so for a few weeks' chicken shooting in Iowa. They go to Hartley, in O'Brien county, where they last year had excellent sport. They know a neighborhood where they "stand solid" with the men. They will get plenty of birds beyond doubt. As I have before remarked, northwestern Iowa is a good place for a fall trip after prairie chickens.

There is a blackbird roost at Washington, Ill., of such gigantic proportions that the mayor of the town has issued orders for the destruction of the birds. Thousands of the birds are killed each evening, it is said, but as yet the numbers are not very perceptibly lessened. It is probably a preliminary banding for the southern migration.

I offer the following from the Milwaukee *Sentinel* as news regarding one of the most important of our Western shooting marshes, known generally as the "Horicon Marsh," of Wisconsin: "In September, 1830, the Hon. Satterlee Clark visited an Indian village on the bank of Rock River, where Horicon is now situated. The Indians obtained a living by hunting and fishing on and near the stream which was then, as it is now, a small river formed by two branches, one rising in the northeast and the other in the northwest of Dodge county, and uniting about four miles above the village, after having broken through the hills which bounded the east and west sides of the marshy lands through which the tributaries of the Rock River flowed, alternately widening into small lakes or ponds, from which there would be several outlets, as there is now, finally joining into one again. Throughout the marsh wild rice abounded, and wildfowl made it a breeding ground.

"Martin Rich, in 1846, built a dam across the river where the short bridge is at present and obtained a splendid water power, which was used to run sawmills, gristmills and other manufacturing industries. It took the water two years to overflow the marsh, as it spread out over an area of sixty-four square miles, being sixteen miles long and four miles wide, making the largest artificial lake in the world, with an average depth of six feet. When the bog or marshy land was overflowed, it raised from off its clay bottom and floated wherever the wind chanced to blow it, ofttimes drifting to the dam and clogging up the flume and water-wheels so as to stop all motion of the machinery until cleared.

"Fish abounded also at this time, and hundreds of wagon-loads of bullheads were drawn by the farmers to their lands to be used as a fertilizer.

"Mr. Hodge continually fought the parties interested in the dam through the courts until they were tired of defending themselves. They then formed a company called the Horicon Mechanics, and by a bill passed in the Legislature purchased this land from the State for about 5 cents per acre. After the dam was removed, thus destroying one of the best water powers in the Northern States, what remained of the bog resumed its former position. The grand old lake was a thing of the past, and in its place was left one of the finest hunting grounds east of the Mississippi River.

"The marsh comprises about 30,000 acres of land, 24,000 of which were entered by the above named company. In March, 1883, the "Mechanics" leased 10,000 acres of the marsh to the Diana and Horicon Shooting clubs for a period of twenty-five years. These clubs are composed of sportsmen anxious for sport, and who shoot for no other purpose.

"The remaining land was rented to Scanlyn, Shepard & Co., who for the last three years have cut hay from it. In 1887 they shipped 300 carloads of hay from Burnett station. This year plans are on foot to drain the marsh by ditching it, and surveyors have been here taking levels. Hustisford dam will have to be removed before it can be successfully accomplished. A scheme is also afloat to induce the Chicago, Milwaukee & St. Paul Railroad Company to lay a track for three or four miles on the marsh from Burnett station, so the cars may be loaded on the marsh, thus saving a good deal of expense. Men have been sent to look into the matter by the railroad company, who have no doubt made a report by this time. Every spring the marsh is again overflowed by the freshets, and for a few weeks there is a lake, but it soon subsides, and by fall the hunters drive nearly all over the marsh."

Sept. 13.—There have been several parties from this city who have been out in Iowa after prairie chickens. They report dry weather and poor luck. A Mr. Babcuf and two friends claim to have hunted pretty much all over Iowa, and their best day was forty-two birds to the party. Mr. W. L. Shepard is also back from northwestern Iowa, with a very poor account of the shooting. He says the water was so scarce they could hardly work the dogs. The dry weather doubtless makes it difficult to hunt, but it is probably true that some shooting in Iowa can be found if looked for in the right place. Of one thing a visitor may be sure; he will need get into some settlement at least thirty miles away from the railroad, and if such settlement should be one of foreigners, who do not shoot very much, his chances will be all the better.

Mr. George Marshall, of Grand Calumet Heights Club, tells me he last week killed about one hundred jacksnipe within a mile or so of his home at Englewood, five or six miles out on the Rock Island road. There is a long marsh that begins near State street there and runs around to Auburn Park, forming the park lake in that pretty little suburb. There were large numbers of snipe in here, and Mr. George D. Hunter, of the latter place, tells me the duck shooting was fine there a little while ago. He killed thirteen ducks in an hour or so one morning. This is a rather singular state of affairs, I should say, in view of the fact that all this is within the city limits and only a few miles from the heart of the city. The marsh winds around through a section which is all built up with substantial and tasteful homes. The building of Chicago in the middle of this big duck country spoiled a lot of mighty good duck shooting points.

Mr. Al. Bandle, of Cincinnati—I presume it isn't necessary to explain who he is—has just passed through here on his way home from his fishing trip in Wisconsin and Michigan. His exploit with the deer shall be kept secret, according to his wish, but he should bear in mind that no news of that kind is getting away. Mr. Bandle is looking well, and the boys who go down to his tournament on the 24th will do well to remember Mr. Weller's advice about "vidders," and "bevare."

I presume it may be generally known by this time that the Gogebic stage robber and late murderer has been captured. He came out of the woods to the town of Republic, Mich., and slept over night in a hotel. His boldness cost him his freedom. In the morning he was surprised and captured. Had he stuck to the woods he could never have been caught. The pursuing parties had given up the chase, and the "bloodhounds" were taken home.

Small bags of ducks are being made, in a leisurely way, by numbers of our shooters. They are mostly wood-ducks and teal. The snipe are not now quite so abundant near the city, as the water of the late rains has dried off a little. A few days ago I got about a dozen snipe over on the Sag, but there were very few birds in. There are thousands of snipe on Mak-saw-ba grounds, but the water is rather high there, and it is hard to walk for them.

E. HOUGH.

PENNSYLVANIA GAME GALORE.

CLEARFIELD, Pa., Sept. 15.—The season for black and gray squirrels in Pennsylvania opened Sept. 1. Reports had come in that the squirrels in this county were more numerous than usual, but the half had not been told. For two weeks everybody that pretends to shoot has been killing them by the dozen, both blacks and grays, and still they are here. I have been out three different evenings and scarcely outside of town I have killed 15 of the finest kind. The red squirrel or "piney" is here by the hundreds and is only shot when other squirrels can't be found. Saucy and impudent and destructive, he has almost taken possession of the farmers' cornfields, and is doing his best to drive out his bigger and better cousins the blacks and grays. Some time ago a white squirrel was captured near town and has become quite a pet. Grouse seem to be on hand ready for Oct. 1, and from the numbers seen last week fair bags are promised. Bears and bear signs are reported more numerous than for a number of years, and from the deer and deer signs reported by huckleberriers, the coming fall promises some rare sport out about our old cabin. I have sold both my guns and have ordered a new one and want to break it in in time for the fray. I will keep the two old buck heads that hang in my hall to remind me of the faithfulness of my old Plainsman, and while I part with it with regret I must keep up with the times and get a better one. I still enjoy the FOREST AND STREAM.

FRANK T. HARRIS.

SNIPE SHOOTING on the Long Island meadows has been capital the past week. The tremendous storm which flooded the meadows brought along the biggest flight known in years, and great scores have been made.

NOTES FROM THE FIELD.

Editor Forest and Stream:

I am particularly interested in bird shooting, ruffed grouse and woodcock being our game birds. I have a cross-bred setter dog, black and white, English and Irish. He is entirely natural, all that he is is what nature has done for him. There is one redeeming quality in him, he is staunch as a rock, and is a very lucky dog to find game. He has quite a mind of his own. Sometimes he and I have an argument on the proper places to hunt, always ending in his being right. He is a little wild at times, and if I let him get out of sight will have to call myself hoarse to get him back, but a more willing dog I never saw. The days are not long enough.

We never make very big bags of game, two or three partridge or woodcock in a day's hunt is all sufficient. The market-hunter gets the best part of the game. Bird hunting has been a hobby with me for four years, with the following score: First year, 12; second, 36; third, 52; fourth, 47. This year I have been out three times, killing, all told, one partridge and one woodcock. All of hunting is not the killing of the game. A grouse never looks as handsome to me as when it is getting away over the tops of alders, and the picture stays longest in my memory.

Last fall a friend and myself went across the Mohawk River on to the mountains for a few days' hunt. We came to a piece of woods belted with alders. He took the inside or woods belt, and I the outside. We have to have bells on our dogs to keep them located, and when we cease hearing them we know the dog is setting the bird. In this case all at once the bell stopped. All alert, I saw a great grouse break the cover coming directly toward me. I waited until he got by me, when my Parker spoke and I had the satisfaction of seeing and hearing the bird strike the ground. I went to where I had seen the bird strike, and all I could find was a lot of feathers. Looking beyond 10 or 15ft., there he lay dead. He was going with such force that he struck the ground and bounded. The dog commenced roading, soon showing game; again the bell stopped right on the edge of the alders. All at once out goes a woodcock. Crack, bang, a clean miss both barrels. We keep hunting along the alders and reach the opposite side, when my friend and I come together in a lot of poplar. Both dogs were trailing, when whir—bang—bang—bang—whir—bang—whir whir—whir; only one partridge brought to bag. We followed them but failed to get any more. The next day, after considerable shooting, managed to bag three partridges apiece; and the following day we hunted until noon and got a single woodcock, making in all just nine birds for two men in a three days' hunt. We came home perfectly satisfied.

I for one would like to hear more bird news, and I suppose it is the fault of bird hunters of your subscribers that you don't have more. I mean for one in future to contribute occasionally, and if every subscriber would do the same we would have a more interesting paper.

GLOVERSVILLE, N. Y. J. H. D.

MICHIGAN DUCKS.—The East Saginaw (Mich.) *Evening News* of Aug. 31 said: "Duck hunters are putting their guns in good shooting condition, and loading their shells ready for the opening of the season to-morrow, Sept. 1. Parties of two and more members each will be 'pulling' for the big marshes early on that morning, and as usual will make it lively thereabouts for a few hours. 'For eight years Michigan sportsmen were working hard to secure the game warden system to protect fish and game,' remarked a sportsman yesterday. 'The first season it was enforced it worked well, and it would have borne much fruit in a few years, but the whole game system is now looked upon as a farce, so much so that fish and game are now more poorly protected than they ever have been, and nearly everybody knows of a law-breaker or could easily learn of one.' A trip up the river last Sunday showed the marshes to be literally covered with wild rice—an enormous crop, so the fishermen said—and this is the main food for the wild ducks, but nowhere were there any sign of them; no, not even a single one was seen. An inquiry as to whether they were plentiful only brought forth a grin, with a remark, 'Go ask some of the city fellows how they taste.' On further questioning it was learned that for more than six weeks past parties would go up the river and kill everything that looked like a duck, and these unwanton slaughterers have had their forces increased, so that over fifty boats on Sunday could be counted on their trips to the rice ponds around Shiawassee Lake and above to kill the ducks while they were protected by law. Boasts were made by some of how many they had bagged, and one man, whose duty it was to protect game and cause violators to be prosecuted, was found 'looking after a duck for his sick wife.' This is wrong."

MASSACHUSETTS DEER.—The Elizabeth islands, better known by the ancient Indian name Naushon, are separated from Plymouth Woods by a narrow inlet, which at low water is less than a mile in width. Deer are still numerous there, having been preserved for a century or two by its various owners, Lord Temple, Governor Bowdoin, Governor Swain and Governor Forbes. No doubt a good many swim across to the mainland or pass over on the ice every year. It is not uncommon to see a deer in the great forest that extends from Plymouth to Marshpee. I met one there last summer, and it was a very pleasant meeting. Our party had just gathered a quantity of wild grapes for jelly, and I had but just remarked that now all we needed was the venison, when a beautiful doe ran up the road and played about us for half an hour. We shall not soon forget her friendly greeting. I remember very well when a boy starting three fine deer at Billington Sea, and I can see them now, bounding gracefully over the young oaks. Branch Peirce told me that when he first cleared his little farm at Halfway Pond young fawns could be seen in his field almost any summer morning, nibbling the young rye. To show how abundant deer were in these woods fifty years ago, I may add that this mighty hunter shot with his own rifle 269 deer in the course of a not long life. I possess the skin of number 269, which he gave me soon after his last shot. Mr. Webster often came over from Marshfield to hunt with him, the last of our great hunters. But if the day proved stormy the great orator stayed in the house, and pacing the little parlor, read Watts's hymns to Mrs. Peirce.—*Marston Watson, in the New England Magazine.*

PLYMOUTH WOODS.—In the *New England Magazine* Marston Watson writes of Plymouth Woods, on Cape Cod: These woods constantly remind me of the Indians, the ancient inhabitants who once roamed over this pleasant land. I believe the Indians were just as fond of it as we are. The Pilgrims found it a land "very fit for situation." The Indians too must have been well content. With the woods full of game and the water teeming with fish, no end of perch and trout, and mackerel and cod, and bass and clams, and lobsters and oysters, an abundance of ducks and geese and deer, "pigeons fattened on strawberries" (I follow an ancient chronicler), with prairie chickens (they are still found at Martha's Vineyard), and partridges and quail and the wild turkey (not yet quite extinct in Massachusetts), it must have been to them indeed a land of plenty. Josselyn relates that in his time twelve score of peeps were brought down at two shots; a record which beats, to be sure, the ninety-nine peeps of Samuel Burgess, but lacks the exquisite moral that attaches to that immortal shot. Samuel Burgess lived at Saquish, and was a noted gunner. He was a strictly honest man, and would not tell a lie for the whole world. One day he went peep shooting on the beach, and he saw a great flock of these dainty birds; and when they had alighted in a bunch he blazed away. He counted and found he had shot ninety and nine. Then he took them up to market, and on the wharf he met his friend Mr. George Churchill (who told me the story), and he offered to sell him his great bunch of little peeps. "How many are there?" said Mr. C. "Ninety-nine," replied Mr. B. "Why don't you call them a h ndred and be done with it?" said Mr. C. "What! said Mr. Burgess, "do you suppose I would tell a lie for one little darned peep?"

ADIRONDACK DEER.—Syracuse, N. Y., Sept. 14.—*Editor Forest and Stream:* Here is a characteristic piece of logic, in an extract from the New York *Times* of recent date, which reads: "Deer have increased rapidly during the past three years, owing to the strict enforcement of the law which prevents killing them for market, and also forbids the killing of more than three deer in a single season by one person. Another feature of the present game laws contributes largely to the preservation of deer, and that is, allowing the use of dogs in hunting from Sept. 1 until the end of the season. All experienced hunters agree that with dogs in the woods the destruction of deer is greatly diminished. The animals are made wild, and are therefore hard to capture by still-hunting, while no more than one out of four run by dogs falls before the hunter's gun. The best place to go for deer shooting at this season is to the small lakes in the Oswegatchie region. Cranberry Lake and several other smaller lakes and ponds in St. Lawrence county are in the midst of the best hunting grounds. On the middle branch of the Oswegatchie, a few miles from this place, deer were never more plenty." Now, remember that St. Lawrence county is the one county where the law forbids hounding. The *Times* writer says that hounding helps protect the deer, and that the deer are most abundant in St. Lawrence county, where the hounds are not allowed. What do you make of it but the same old self-contradictory bluster of the hounders?—OCCASIONAL SHOT.

THE MURDER OF WALN AND STRONG.—Denver, Col., Sept. 13.—The murderer of S. Morris Waln, of Haverford, Pa., and C. H. Strong, of New York, two young hunters, who were killed in Carbon county, Wyoming, on June 25, 1888, has at last been discovered in Thomas O'Brien, now serving a term of fifteen years in Canon City (Iowa) Penitentiary, for stealing horses near Cold Springs. Since then Jacob F. Waln, a brother of one of the murdered men, has made every endeavor to secure the arrest of the guilty party. In their trip through Wyoming the two men, with their guides, stopped at the house of a ranchman not far from Rawlins. They left there early the next morning, and three days afterward the dead bodies of Waln and Strong were found on the prairie, while teams and driver were gone and have not been heard of since. Some months ago the Sheriff of Colorado Springs advertised for the arrest of O'Brien for horse stealing. One of the circulars with O'Brien's photograph fell into the hands of the ranchman, who immediately identified it as the man who stopped at his house with Waln and Strong. O'Brien was finally arrested and sentenced to fifteen years. These facts came to the knowledge of Mr. Waln, who went West, took the ranchman to the prison where he picked out the alleged murderer. He left here last night for Wyoming to try to have O'Brien taken there and tried for murder.

MASSACHUSETTS WILD TURKEYS.—Springfield, Mass., Sept. 9.—*Editor Forest and Stream:* I noticed in your paper of Sept. 5 Mr. Hallock's remarks on the limits of the range of the wild turkey. There are men now living in the town of Hatfield, Hampshire county, Mass., who when they were young men (not boys), have seen wild turkeys in the woods of this town. This seems almost incredible, but they are solid, reliable men in every way, and not yet in their dotage, and I can give their address at any time if wanted. Unless it has been destroyed by fire, there is in one of the Amherst College museums a mounted specimen of a wild turkey killed on Mount Tom, said to have been the last one killed in that locality.—A. C. SIKES.

NEW JERSEY.—Perth Amboy, Sept. 16.—On Sept. 9 and 10 there was pretty good rail shooting on the South River, N. J., marshes, from 10 to 50 birds to a boat being killed. On Saturday last not one could be found, but the reed birds were abundant and very fat. A good many yellow legs and robin snipe were shot the same day on the Red Root Creek meadows. The writer observed a duck, a loon, a cormorant, a heron, and an eagle, the latter being in the act of robbing a fish hawk of his intended breakfast, a "moss bunker," which he caught in the air when relinquished by the hawk.—J. L. K.

ENGLISH SPARROW REED BIRDS.—Baltimore, Md., Sept. 12.—Three of us fired into a tree where there was a lot of English sparrows roosting, and picked up eighty-four. Repeated the performance two evenings afterward, bagging forty-three. The guests boarding at the farm where this occurred feasted on reed birds next day.—EDWIN SCHENCK.

Sea and River Fishing.

REFORM IN PENNSYLVANIA.

CLEARFIELD, Pa.—*Editor Forest and Stream:* Taking the west branch of the Susquehanna, and Clearfield Creek where they break through the Alleghanies, within the limits of Clearfield county, we have fifty miles of the very best natural bass streams, and no better natural trout streams lie outdoors than those that find their way through those grand old mountains and empty into our river. While nature and the fish commissioners of Pennsylvania have done everything for us, the sportsmen of our county have sadly neglected their duty. We are sorry to say it, but it is true that true sportsmen in these parts are few and far between. There are but few of them who would not to-day destroy the last deer in the woods or kill the last trout or bass in our streams without a thought for the future. It is not because of the protection afforded our game and fish by our so-called sportsmen that they are not to-day extinct. The pot-hunter and the fish-hog are at work day and night. Deer are slaughtered out of season and sold openly on our streets, while the dynamiter has rendered barren some of our best trout streams and bass territory. Our laws are all right, and the laws of 1889, not yet generally in circulation, are especially severe upon such characters. We have had the finest hunting and fishing territory in the world here in these mountains, and if taken care of it will still be fine, but the game and fish must have a chance.

I propose, for one, that they shall have a square deal, and if I keep my health another year it will get too hot around here for the vandals to ply their trade successfully, at least in Clearfield county. What we want is a class of sportsmen who are big enough to look out for the future—whose hearts are bigger than their stomachs, and who have honor enough to stand up for what is right. I have during the last year arrested several parties and convicted them for selling trout under five inches in length, but the Act of May 23, 1889, gives our wardens a better opportunity to hunt down the miscreants. In a notice published in our county papers, and posted over the county, I have stated that under the act of 1889 the catching of fish in Pennsylvania in any other way than with rod, hook and line is made a misdemeanor, and the penalty is $100 fine or imprisonment. Killing fish with dynamite or any other explosive is also a misdemeanor. I will pay $10 for any information that will lead to a conviction under the Act of 1889, or I will pay $20 for such information as will lead to the arrest and conviction of any person killing fish with dynamite within the limits of Clearfield county.

FRANK G. HARRIS, Fish Warden.

THE NEW TROUT OF TWIN LAKES.

WE are indebted to Dr. D. S. Jordan, President of the Indiana University, Bloomington, Ind., for the following interesting note concerning the finding of a new species of trout in the Twin Lakes: "While we were at work on the exploration of Colorado, Mr. George R. Fisher, of Leadville, an enthusiastic and very well-posted angler, called my attention to the existence of two native species of trout in the Twin Lakes, a body of water tributary to the Arkansas River near Leadville. Through Mr. Fisher's help we were enabled to secure numerous specimens of these species. One of them, the "yellow-fin trout," seems to be a new species, and it is certainly very different from the common mountain trout. The black spots on the body and fins are very small, mere specks. The lower fins are all bright yellow, and there is a distinct yellow lateral band. The fish is abundant on sandy bottoms in the Twin Lakes, and readily takes the fly. Its flesh is paler and more watery than that of the ordinary trout, and on the whole inferior. We have not yet decided upon what its Latin name shall be."

LARGE-MOUTH BLACK BASS IN TEXAS.—Wm. E. Hidden writes from Burnet, Texas, under date of Sept. 3: "The fish I send to-day by express is quite common in the headwaters of the Colorado River in this State (Texas), where it is called trout. Like the *Salmonidæ*, it frequents only the clearer and colder waters. It is a gamy fish, as much so as our northern black bass, and rises to the fly like a trout. In the water it exhibits a peculiar mottled appearance, much like the markings of some snakes; these markings disappear soon after the death of the fish. In weight they vary from ¼ to 1½ pounds, although 6, 8, 9 and 11-pounders have been caught." The fish was received at Washington in fine condition, preserved in alcohol, and proved to be a large-mouth black bass (*Micropterus salmoides*). In the Southern States this fish is generally known as "trout," in Kentucky "jumper," in Indiana "moss bass," and in North Carolina it is known under the name of "chub." The markets of Baltimore, Washington and Norfolk are supplied with black bass from North Carolina during the winter months, and it has often grieved the writer to hear this noble fish referred to as "chub" while passing through the Washington market. It is a case where the dealer makes a mistake, as many people will be attracted by the name "black bass, madam," but hardly ever by the "chub, madam."

DANIEL WEBSTER AS A FISHERMAN.—At home politics was never allowed to be a subject for conversation. If the subject was brought up the brow of the illustrious man darkened. Fishing, hunting, farming, horses, pigs, and hens were his staple subjects for home conversation. He knew his cattle by name as well as he did his brother senators. Of his garden he was very proud, and in the season would spend a portion of each day in it, pulling weeds and hoeing vegetables. A pastime that Webster loved above all others was fishing. As a rule, however, he had true fisherman's luck, and rarely ever caught a fish unless it got entangled in his line and couldn't possibly escape. When a little way ahead or behind his fishing companion he was always muttering to himself, and many of his speeches were composed while Webster was trolling along the streams of Marshfield. On his return from a fishing trip he would throw himself under the old elm tree in the dooryard and enjoy a short nap while resting from his fatigue.—*Correspondence Philadelphia Times.*

CAMPS OF THE KINGFISHERS.—X.

ECHO LAKE, ONTARIO, CANADA.

WE had fished Echo Lake from one end to the other, down and up, in rain and shine, in every bay and nook and corner around its entire shore; we had fished in deep water and shoal; we had fished early and late, and had taken less than a score of bass, four maskinonje, aggregating 45½lbs., and some bar'ls of ill-favored pickerel, and the outlook was still "pickerelish" till late in August or September, and we could look into the days yet left to us and see the end of our vacation long before that time.

We had cleaned out the only trout stream accessible, leaving as we believed only the old fellow under the big boulder, who had foiled the efforts of the entire camp to coax him from his rocky retreat (I have no doubt Louis and the Jedge wasted hours in trying to "scoop" him when the others were out of camp), and we looked only for an excuse to break up, which came one night about midnight, soon after two Indians—one of them a herculean fellow who could look straight over Charley's head, and Charley was "risin' o' six foot"—came up in a boat from Church's Landing after Louis, with the information that one of his children, his favorite little one, was dangerously ill with diphtheria, an epidemic of which was then spreading through the little settlement. Louis was soon ready, and as it was not likely that he would come back he was paid off, and with some words of sympathy for the little one, they pulled away in the darkness, leaving us to run the culinary department as best we could. Before they left we had decided to break camp in a few days and go back into Michigan; and the big Indian was requested to send Tom and his brother with the Mackinaw to camp the following Sunday afternoon, and we would be ready to leave the lake the next morning.

When we got out in the morning everything seemed to be out of joint; and it was soon apparent that a good cook in a camp was a treasure not to be lightly valued. Cooking was not a favorite pastime with any of us, and when Knots had fidgeted around awhile with a glance now and then at the fireless stoves, "cogitatin' in his mindi" as Sam said, he ventured to suggest, "James Mackerel, as you appear to know less about cooking than any of the rest of us, it looks like you'll have to get breakfast;" and it kept on looking that way with variations, for the next four days, but we managed to get enough to eat, and to catch a few more pickerel between times, which was a great comfort.

Sunday afternoon was spent in packing up personal effects, tackle, etc., that we would need for night or morning use, and entertaining our neighbors from the farm who had come up to pay the camp a first and last visit.

With evening came the Mackinaw and the two animated cigar store signs, Tom and his brother, who, after mooring their boat to the dock, came to an anchor on a couple of camp stools near the flagstaff, without a sign of recognition or a word of greeting, where they sat gazing vacantly down the lake, apparently utterly unconscious of our existence.

"Powerful noisy critters, them Injuns," said old Sam with a solemn wink at the Jedge. "Reckon we won't sleep a wink all night 'less we plug up our years; an' jest look at them mugs, will ye? About as much expression to 'em as a couple o' turnips."

As the Indian boys seemed to be waiting for us to notice them, they were called to come out to the camp; but even then, after a kindly word all around and a sort of perfunctory handshake, after the manner of ye candidate before election, we get nothing out of them but a guttural grunt from Tom, and from the younger one not a solitary grunt, as he appeared content to let his elder brother do all the grunting necessary to a clear understanding between us; albeit, when supper was ready there was no need of an interpreter to make them understand the invitation to sit down with us.

By 10 o'clock next morning everything was packed and aboard, and the Mackinaw and two of the small boats half-way down the lake, leaving the skipper lingering behind for a final look around the deserted camp to see if anything had been forgotten in the hurry of packing up; it was like parting with an old friend, and not till the boys were out of sight was the boat headed for the outlet to overhaul the slow-moving Mackinaw before they reached the bay looking out on Lake George.

At the foot of the lake the boat was pulled in under the leaning maple for a parting drink out of the little spring; and then with a last look at the wooded slopes and rocky shores, the towering crags, the little island and the rippling waters shimmering in the sun, I bade good-by to Echo Lake with a resolve to visit it again in the future if the fates so decreed—but later in the season.

As the boat came abreast the farmhouse, there stood my friend Jack at the top of the bank, with pricked up ears and wistful eyes, wagging an invitation to come ashore for a romp; but his mistress appearing at the door he stretched himself in the sand with nose on paws, waiting to see if she was in a humor to countenance a few capers, and the signs not striking him favorably he got up and trotted back to the house for a better understanding; but a "go way, Jack!" knocked the friskiness all out of him, and the expected frolic didn't come off.

Mother Ruttle hailed and asked where the others of the party were, and was surprised to learn that they had gone by without her noticing them; and she was greatly disappointed too, for the good heart had prepared a little surprise for us in the shape of a fried chicken lunch, with "trimmin's;" and now she was to be denied the pleasure of seeing us enjoy it. Verily, the clever people and the good of heart dwell not all in the cities, and I trust this page may sometime fall under the eye of the good woman, that she may know in what high estimation the "Kingfishers" hold her as a kindly, unselfish neighbor and a model housewife.

Declining with thanks the invitation to come out and attack the lunch single-handed, and with regrets that the boys were not all there to do justice to the well-meant compliment, I let the oars fall with vigorous stroke and a good by, and soon a bend in the stream hid from view this abode of content and good will to man, leaving Jack standing with drooping tail and motionless, with his forefeet in the water at the landing, gazing longingly after the boat, "cogitatin' in his mind" it may be—as wiser humans have done before him—whether it were better to follow his new friend out into a strange world or go back to the old and content himself with the lazy, humdrum life he had been used to at the quiet farmhouse since the days of his puppyhood.

When I pulled out of the mouth of the river the Mackinaw was anchored a half mile out in the bay waiting; and when at last the boat was made fast to the other two riding at her stern, we stood away past the larger island with just enough breeze on the beam to belly the sails and move her through the water at a snail's space; but finally we struck the current of the river at the foot of Squirrel Island, and swung over to Church's Landing, where the wind was cut off, and the Indians had to get out the setting poles and work up the bank to the saw-mill dock, where we were to wait for the steamer Messenger on her way up to the Sault in the evening.

We wanted to land our calamities at Church's, but by divers signs and grunts Tom made us understand that the saw-mill dock was the better place, and a few hours later we would have given a dollar apiece for an opportunity to give him a "hellrackin' good lickin'." When the Mackinaw was unloaded, and they had held a brief powwow in their native tongue with Louis, who had come up from the house to tell us the good news that his little one was out of danger, they poled off up the river around the bend and we saw them no more.

Guy and Harry took one of the boats and started up to Garden River to see about their mail, intending to be back by the time the Messenger came along, leaving the rest of us to kill the intervening four or five hours' time as best we could.

The Jedge had become "discouraged" early in the morning and was peacefully snoring in the shade of a neighboring lumber pile, where he had selected a soft bed in the sand and sawdust almost before the Mackinaw was fairly moored to the dock. Charley jointed a rod, and, with a few grasshoppers, he and the skipper amused themselves by turns for a while flipping out young perch and returning them to the water, while the others looked on or strolled uneasily around waiting for the boat. The monotony was further relieved by the graceful Canadian passenger steamer Atlantic, cleaving the blue waters on her way to the Sault, and by tows of loaded schooners booming by at intervals; and at last, when about all our time-killing resources were exhausted, the Messenger hove in sight down Lake George, and we got ready to signal her to take us aboard. When she had passed Church's Landing we swung our hats and made motions to the man in the pilot house to "hold her in;" but she kept the current over against Squirrel Island, and it began to look as if she would go by without seeing us. Then we shouted at the top of our voices and swung our hats frantically in the air again; but to no purpose, although the "miserable cuss" at the wheel could not help seeing and hearing us if he had eyes or ears. Then, as a last resort, Sam hoisted his old linen duster on the end of his "tree box"—a light box, 12ft. long, in which he and Charley always carried a few single-piece cane rods for an "emergency," as they said—and waved it vigorously as a sign of distress; but that cursed boat kept placidly on her course over in the channel against the Canada shore and went out of sight around the bend, leaving us "shipwrecked agin, b'gosh," on the identical spot where drunken Captain Tate had dumped us in "the early stages of our misery," some days before. Just then was when we yearned for a brief interview with Tom.

Old Sam dropped the tree box and wilted down on a camp chest with a feeble, "Another episode, an' the worst of all," and the others of us seated ourselves on the calamities and sat looking at each other for a while, too completely knocked out for utterance.

Then as this particular calamity dawned on us with its full size the vials of our wrath were opened on Capt. Barker and his "old scow," as the Jedge put it; but as they were serenely stemming the current on their way to the Sault, a couple of miles out of our reach, the "vote of thanks" hurled after them doubtless failed to reach the mark, and as it would take too much room to jot down here a detailed statement of the remarks, sulphurous and otherwise, made there on the dilapidated old dock during the next half-hour, they are left to the imagination of the reader. To quote old Captain Truck again, we were in a "h—l of a category."

We could put up a couple of tents and stay there over night; but we had no assurance that the boat would stop for us on her way down in the morning, and we could keep on staying there for the rest of the season "by the same token."

Louis, who had come up again when he saw the steamer go by without stopping, suggested that we go up to Cunningham's and stay all night, and we would be sure to catch the boat in the morning, as she always stopped at that landing on signal; but our two boats—Gray and Harry had not returned—would not carry half our outfit, and the outlook was still discouraging. When on the point of loading the two boats and getting to Cunningham's on the instalment plan—a little at a time—fortune smiled on us at last in the passage of a man coming up the river in a big, high-floating yawl, who when hailed and brought in to the dock proved to be an old Indian, with a diminutive brown youngster at the tiller, on their way to Garden River. A bargain was soon struck, the calamities all hustled into the yawl, and in another half hour we were on Cunningham's dock waiting for another "episode" to hit us.

A couple of us walked back to the general country store and dwelling all in one, a few rods from the dock, to interview Mr. C. about supper and a place to sleep, but he was not at home, and his wife, a sweet-faced, cheery little woman, could give us no definite answer till he came back from Garden River, where he had gone in a skiff for a barrel of flour. Another episode. We went back to the dock and waited nearly an hour before he returned, and then it required another trip to the house to lay our case of shipwreck before the little woman again. They didn't keep a house for public entertainment, but a brief consultation ended in an agreement to take us in and give us the best of their limited accommodations, and in a short time the good wife called us to the cleanest and neatest kind of a supper. More Samaritans.

A full belly lightened the burdens of life, but our trials were not over yet, the boats had to be returned to Everett at the Sault that night, and we were worrying lest some mishap had befallen the two youngsters, Guy and Harry, as they had not yet returned from Garden River.

KINGFISHER.

[TO BE CONTINUED.]

CHICAGO AND THE WEST.

CHICAGO, Sept. 10.—There is material out here enough to keep one busy investigating and writing about four hundred years. The more I knock around in these United States the more I become impressed with the fact that this is a big country. There is a big slice of this big country lying around Chicago, and I fear I shall have to delegate to my heirs and assigns the duty and the pleasure of learning it all thoroughly and well. A word or so might be added here about the fishing facilities hereabouts, however, which give some one a notion which way to head for a trip yet this fall, or in the following season.

I have already spoken of the singular system of lakes lying along the Wisconsin Central road, where our bass fishermen make their big catches. All summer long the bass fishing has been going ahead steadily, and the success of the competent anglers has been uniform. Loon Lake, Camp Lake, Lake Maria, Deep Lake, Channel Lake, Grass Lake, Fox Lake, Silver Lake, Brown's Lake, Powers' Lake, Twin Lakes—these and dozens more which lie on an average of fifty miles from Chicago, have all been yielding regular tribute. The fishing here is for the genuine black bass. Pickerel are sneered at, and the smaller *Percidæ*, like croppies, rock bass, sunfish, etc., are held in such light esteem as not to be desired at all on a fishing trip. It is within limit to say that a few of our better bass anglers have each taken hundreds of bass during the season. The sport is not waning. One regular inmate of the Wisconsin Central Sunday Asylum caught seventeen bass at Loon Lake and Deep Lake on his last trip, one evening and morning's fishing, and he averages about a dozen to the trip. Hates a pot-fisher.

It is needless to speak of such localities as Lake Gogebic, Eagle Waters, Lake Vieux Desert, and all the bass and mascallonge waters up the Milwaukee, Lake Shore and Western, for they are constantly before the public with scores which are hardly to be equalled elsewhere. I shall try to get up to Vieux Desert after a mascallonge this fall myself, but it is very problematical if I get off. It's a wonderful fishing country up there. I don't believe anybody realizes how wonderful. The Tomahawk Lake country lies up in that direction also. Milwaukee and St. Paul road also strikes that region. Trout Lake is up in that system. It contains about seven square miles of water. There are said to be 100 lakes which afford good fishing, all accessible from the above points by means of trails.

After you get up the Ashland way, or anywhere over the north divide, you strike the trout country in all its wildness. There is plenty of fishing for trout left yet in there. Skirt along the south shore of Superior, and you will find big brook trout in every stream of consequence coming down into the lake. You can ascend many of these streams by boat a great distance. I can imagine no grander trip for camping and fishing than a canoe trip up some such stream as that mentioned as one of the Two-heart rivers, or indeed any one of the many good ones that come in on the south shore.

When you get around by the Sault, then you've got fishing any way you look, whether for bass or trout. Vanderbilt, on the southern penninsula, is not far from Pigeon River, once famous as a grayling stream, and still good for trout. I telegraphed the station agent at Vanderbilt in regard to the grayling fishing there, and he replied: "Good trout fishing in Pigeon; never heard of any grayling being there." It is, however, very probable that there are a few grayling left in that stream. I have also heard of grayling fishing in one or two other streams in Michigan, but not having had time to investigate personally, should be reluctant to say much about it, as the reports may be ill-founded.

The south shore of the North Peninsula is also a great fishing country, and very accessible either by boat or rail. For instance, a Goodrich line steamer will take one to Manistique, or one can reach that point by the Milwaukee & Northern and "Soo Line" connections. At Manistique one is within easy driving distance of a number of exceptionally good trout streams, and he may have the assurance that by a drive of twenty to thirty miles he can get big trout, three and four pounders; and that is a comfort. There are any number of streams in this north country whose small trout are to be had in numbers, but I don't call snaking a little trout from under a log anything. That's just fishin'. Near Manistique, or accessible by a handy drive and a pole up a rapid stream, is a vast spring, which is really a lake of itself, and which feeds a river of its own. This singular and beautiful whim of nature is unequalled in its way, and it is worth a long trip to visit it. The water is very clear, and the bottom of the spring, 40 or 50ft., is distinctly visible. For some time it was thought no trout could be in the spring, or they could be easily seen, yet one day a party was dropping bits of bright tin into the spring, when a great trout flashed out from somewhere or other, and caught at the shining metal. Several large trout have since been seen there. The water is strongly sulphurous.

Coming down along the west shore of Lake Michigan one runs into Queen Bay, a much-beloved summer place for Chicago people. There is any quantity of good bass, pike and wall-eye fishing in that neighborhood, and sailing and expeditioning in general is possible in a hundred ways.

A little further down, on the old Père Marquette water trail, is Lake Winnebago, and there is always good fishing there. Neenah is a good point to make for on that lake. The angler for bass, pike and small *Percidæ* will not miss it there.

Elkhart Lake is only 147 miles north of Chicago. It is a bright green-colored water, pebble-walled. Good bass and pike fishing there, and they also claim the cisco. A good summer resort and much frequented by people from the South. I have been surprised in my little northern trips, at the numbers of Southerners who yearly come up to places like Waukesha, or to some of the delightful fishing lakes which decorate lower Wisconsin. Certainly they could not do better. They bring their friends, and this class of travel to the North is annually increasing. The beauties of this northern country of ours are but half known. No paper has ever systematically tried to set them forth, and the blundering methods of advertising pursued by the railroads have chiefly served to obscure them.

Maple Valley, also on the M. & N. R. R., 231 miles north of Chicago, in Oconto county, is a center for a dozen lakes and streams. Kelly Lake, a very beautiful

sheet of water, is much taken up by clubs of Aurora and Galesburg, Ill. Board is very reasonable and the place is pleasant.

When you get as far north as Beaver, on the same line, you approach the Peshtigo, and in fact border on the country which I have tried to describe in a late series of articles on the trout country of that region. There is good bass and pike fishing in adjacent lakes. That whole country is full of lakes, and the lakes are full of fish. I have covered fifty miles or so of the country in there, but I did not get so far north as Floodwood, Mich., 325 miles north of Chicago. The station agent there writes that the trout fishing eight miles from the railway is excellent. At Witbeck, six miles further north, one is near Witch Lake, and that there are 3 and 4lb. trout in that lake I know to be a dead moral certainty. When you are so far up as this, you are in the middle of a boundless trout country, and if you are patient and determined you will find your stream and come away happy.

There is some good fishing on the south side of this city, but I don't know very much about it, except in a general way. Other Indiana rivers have plenty of bass naturally, but are speared out a good deal. Cedar Lake, on the Monon, is a pleasant place for boating and fishing for small *Percidæ*. The Catlin and Cedar Lake boat clubs of Chicago have headquarters on this water, and it is quite a pleasure resort.

There is another Cedar Lake, on the Chicago and Atlantic road, and there is bass fishing there, but I have never been there. The fishing is said to be good.

A pleasant trip often made by Chicagoans is the one by boat across the lake to St. Jo. There is some fishing on the river there for pickerel and bass. I wouldn't recommend it as a sure thing for bass. The whole of the southern peninsula of Michigan, accessible as it is from this city, is full of bass and trout waters. There is good trout fishing in Michigan within 100 miles of Chicago. I don't see how I can ask space to write more than passingly of this and the other angling wealth of this strangely fortunate region, and to leave specific mention to such fortunate trips northward as in the course of human events are bound to become necessary.

Sept. 12.—A singular instance of the fatuity of the average daily newspaper man on field sport matters was lately well exemplified here. A Chicago paper sent a man up into the Gogebic country. In return for the privileges of the paper, the Lake Shore and Western Railway gave this man a pass. He, thinking to earn his way, perhaps, or possibly burning with ambition to tell a bigger fish lie than anybody, wrote a glowing account of a fishing trip on Lake Gogebic, and sent a marked copy of the paper to the railway folks. In his article he gave minute account of the number and weight of the fish taken by himself and party, and had occasion to state and comment upon the large numbers of exceptionally large mascallonge taken; weight, length, etc , of each mascallonge given, also total number of pounds. The youth who wrote this thought it would tickle the Lake Shore folks about to death. He didn't know, poor fellow, that there are no mascallonge in Lake Gogebic!

Mr. Julius DeLong, of Brooklyn, N. Y., a cousin of the noted Arctic explorer, and himself a well-known yachtsman and clubman of the East, is back from a pleasant fishing trip through the Fox Lake system, in which he met abundant success.

Mr. John White, son of Judge White, of Pittsburgh, Pa., in company with seven friends from that city, has just passed north through here on the way to Lake Gogebic.

Mr. L. F. Loeb, of A. G. Spalding & Bros., has just returned from two weeks of good fishing up Lake Maria way. He brought down a box of big bass, total weight over 40lbs., and reports the sport as good, especially for the last few days before he left. An 8½lbs. pickerel had just been caught by a lady. Previous to that, Mrs. Dell Flint, wife of the Chicago base ball player, "Old Silver" Flint, had been high hook in that region, having taken, besides abundance of smaller lake fish, a pickerel of 8lbs. weight.

The bass are biting as well as ever. In the lakes of the further north the vegetation is said to be cut down somewhat in the water, and the mascallonge are reported to have begun their fall biting. Plenty of sport to the north of us now, and no one will miss it by going in on a fall trip.

Mr. C. Christy of Pittsburgh, Pa., has just passed through this city on his return from a trip on the king of all trout rivers, the Nepigon. It goes without saying that the sport was magnificent, as it always is on that magnificent stream.

I note that the types make me say (in the Gaylord Club article, Sept. 5) that I have been catching bass on a "No. 20 hook." I never saw a hook quite that small, and believe it would be a trifle fine for the most delicate bass fishing. What I wanted to say was that I used a 2 O hook, but I am not sure I have said it, even now.

E. HOUGH.

BURNING OUT A FERULE.—Reading Mr. Hough's experience with a broken rod in last week's FOREST AND STREAM, I am moved to give him and others of the brethern a "pointer" on burning out a ferule when the broken stump of a rod is to be removed. It may be assumed that the ferule in question was a brass one, or nickel plated brass, as German silver won't bend to "an angle of 45°" after heating. When brass is heated red hot and plunged in cold water the effect is exactly opposite to that produced on iron or steel. It takes the stiffness out and makes it so soft that it may be readily chipped or whittled with a knife. The next time the worthy brother has occasion to burn out a ferule, let it cool off in the air, and he will find it "jest as stiff or a leetle mite stiffer'n it was before."—KINGFISHER.

THE DOLPHINS.—A review of the species of dolphin, by T. W. True, Curator Department of Mammals, U. S. National Museum, has just been issued from the Government Printing Office, Washington. It forms Bulletin No. 36 of the U. S. National Museum, and is the forty-seventh of a series of papers intended to illustrate the collections belonging to the United States, and constituting the National Museum. The pamphlet contains 191 pages of text, 47 plates, 102 figures. Mr. True had figured all of the material accessible, and the figures are for the most part good. This will be found a valuable work to those specially interested in this family of the cetaceans.

THE CUTLASS FISH.—Washington, Sept. 10.—This species (*Trichiurus lepturus*) made its appearance in the Center Market, Washington, last week. The dealers had never seen the fish before and were at a loss to know what to do with them. I took home a pair and cleaned them, an easy operation, as they have no scales. In the stomach of one I found the vertebral column, with short ribs attached, of some small fish. The flesh, like the skin, is a pretty silvery white in color and is very good. It is sweet, like the eel's, not strong but of a very delicate flavor. The body is of a long band-like form, tapering to the tail, which is thread-like. It grows to a length of 4 or 5ft., and is fished for with hook and line. The fishing is done before day, when it is taken very readily. They are said to be eaten in Florida and in the West Indies, where they are considered a good food fish. It is extremely voracious, and has powerful jaws armed with large strong teeth. An allied species, the frost fish of New Zealand, is, according to Hector, esteemed the most delicious fish of that island, and is sold in Dunedin at 2s. 6d. per pound. The cutlass fish is found in our waters from Florida to Massachusetts. The specimens here referred to were probably from Piney Point, Maryland, at the mouth of the Potomac River. The largest were about 20in. long.—BAB.

FISHING IN ROUND BAY, SEVERN RIVER.—Messrs. Done, Becker, Miller and Floeckher, of Washington, and Holliday of Annapolis, have just closed a successful camp at Round Bay, Severn River, about eight miles from Annapolis, Md. Fishing for yellow perch was very good, the fish being of a large size and plentiful. White perch were scarce, but those taken were of a large size. Two years ago the yellow perch were very scarce and the white perch plentiful, just the reverse of this season. Striped bass, or rock fish, were taken in small numbers. Croakers and spots of a small size were rather plentiful, and the boys thought of an extra fine flavor. Rod and line was used, with soft or shedder crabs for bait. Crab was the only bait used. These gentlemen were much pleased with this locality, and thoroughly enjoyed the two weeks they were there, and speak of their treatment as of the best.—B.

Fisheulture.

FISHES FOR THE FISH COMMISSION AQUARIA.

MR. W. P. SEAL, superintendent of Aquaria, U. S. Fish Commission, accompanied by D. W. Kenly and L. Harron, has gone to St. Jeromes, Md., where he will commence the work of collecting fishes, mollusks, crabs, etc , and all manner of marine life, including plants, for the aquaria at Washington. This party is supplied with live-boxes, tanks and cars, besides large wooden transportation boxes in which to ship the collections. Mr. Seal will have the steam yacht Bluewing to carry his party and collections from point to point. He will start the work at St. Jeromes and go southeast as far as Cherrystone, Va. Large collections will be made if possible as the aquaria is in need of marine animals. We will look forward with interest to Mr. Seal's return, which will be in about two weeks, as the results of this trip will probably add much to the attractiveness of these aquaria, which now form one of the chief points of interest in the Capital City and are well patronized.

LAKE ERIE.—In a conversation with Frank L. Montgomery, of Erie, Pa., your correspondent was told that the fishing for lake herring this season has been a very successful one, and that there occurred such a glut of these fish a few weeks since that the fishing had to be stopped, as the packers were unable to handle such great quantities of fish at one time. Whitefish fishing has been poor, and the season, usually commencing about the middle of July, had not yet been fairly started (Sept. 10). Mr. Montgomery says the storms of the past two months have undoubtedly caused the backwardness of the present season, but that they still hope for a good catch of whitefish. To the question: What is your opinion and the opinion of the Lake Erie people generally concerning the work of propagation being carried on there by the Fish Commission? Mr. Montgomery replied that the results for good fishing were already apparent, and that it is his belief that much can be done to add to and keep up the supply of food fishes in Lake Erie.

FISH EXHIBIT AT DETROIT.—The exposition at Detroit was opened on Tuesday. One of the principal features of this show is the live fish exhibit. Large aquaria and tanks have been erected, and fifty varieties of fish are shown, such as sturgeon, whitefish, lake trout, buffalo fish, etc. The U. S. Fish Commission contributes to this exhibit. During the exposition there will be a grand fish fry.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. C. H., Cleveland.—We cannot give you the address.

R. C. B., Jersey City, N. J.—A dog that has had his leg broken would not be penalized on the bench if the leg has been properly treated and no bad effect remains.

L. B. K., Huntingdon, Pa.—For full description and points of Dandie Dinmont terrier see "Standards and Points of Judging for all Breeds of Dogs," published at this office.

CONSTANT READER, Brooklyn, N. Y.—A dog with one white and one brown eye is not consequently a mongrel. 2. It is impossible to state the number of St. Bernards in this country.

C. R.—Of the four concerns you name the Winchesters are the only ones we know to be responsible. A license fee of $10 is exacted from non-residents to hunt in Richmond county.

W. H. P.—Please tell me how to make a cement to hold paper in a brass shell, so that I can crimp them; also where I can get a 20-bore Damascus steel shotgun barrel, one that will weigh three and a half pounds. Ans. 1. Gum tragacanth will stick paper to glass, and ought to act the same on brass. We do not understand what you mean by crimping brass shells. 2. The barrel can be supplied by any of the large manufacturers or dealers.

F. B A., Rochester, N. Y.—I have on my farm a tract of some fifty acres of fine forest near a village, and wish to know what means I should take to preserve the game in these woods, what signs I should put up and if there is any special size that the notice must be made, and if any one is detected trespassing what is the penalty, and if the offense is merely trespassing? Ans. The requirements are contained in the sections of the law which we send you by mail.

X. Y. Z.—A gentleman visited his trout pond several days ago and found floating among some large rocks, a large dead trout, somewhat decomposed. There was a large round hole in his belly just under the stomach, no other sign of a hurt or bruise was to be seen on him. What killed him? He weighed 2oz. less than 6lbs. Ans. Of course it is impossible to tell what caused this fish's death. If there were no signs of disease it most probably died a natural death, and the hole in his abdomen caused by decomposition only, or it could have been made by some other fish. Such cases, when observed, should be examined carefully and reported upon.

FIXTURES.

DOG SHOWS.

Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Sec'y. Entries close Sept. 4.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y. Entries close Sept. 7.

Oct. 1 to 3.—Third Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. F. C. Barnes, Secretary.

Oct. 8 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary. Entries close Sept. 28.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

THE GORDON SETTER CLUB.

To the Members of the American Gordon Setter Club:

A meeting of the American Gordon Setter Club has been called to take place Oct. 9, 1889, at Baltimore, Md., the principal business of such meeting being the election of officers. A blank proxy has been sent to the members, requesting them to sign the same, giving Mr. Norris, the secretary of the club, the power to vote for the list of names attached to the proxy as the officers of the club for the ensuing year. This I, as a member of the club, make serious objection to for various reasons, among which are the following:

First—In the opinion of several members of the club a radical change of officers is necesearv, as nothing has been accomplished by them during the past year worth speaking of; on the contrary, considerable injury to the interests of the Gordon setter and his admirers has been done by the president, Mr. Malcolm, in advising every owner of Gordon setters not to run their dogs in the field trials. If our dogs are not to be run in field trials, how are their field qualities to be made known to the public? Certainly not by newspaper writing alone.

Second—The constitution of the club, as I interpret it, is very defective and conflicting, and it should be amended in several respects. Sections 3 and 9 seem to conflict. Sec. 3 provides that two members merely are to be elected, while Sec. 9 provides that five members are to be elected annually. The constitution says nothing whatever about allowing voting by proxy, which it certainly should do if proxy voting is to be the rule or law of the club. Many good objections, however, can be made against proxy voting, and it seems to me the opinion or will of all the members of the club should be consulted first, and if a majority so desire, then it should be engrafted on the constitution.

Third—The constitution provides that the annual meeting shall take place in New York about the time the annual bench show is to be held there. If this was done it would insure a larger personal attendance of the active members. Another phrase, however, in the constitution permits the president to call the meeting elsewhere, which he has done. This looks bad for a young club only a year in existence and struggling for a prominent position. This action of the president in calling the meeting at Baltimore and asking for proxies to re-elect the old officers looks very much as though there was a clique already running the club and desiring to perpetuate themselves in position. No other ticket has been put in nomination, the members in general have not been requested to manifest their desires in the premises, therefore no alternative is left them but either to vote the ticket fixed up for them by the officials at Baltimore or not vote at all.

Having the above objection to this meeting in mind I addressed a letter to Mr. Norris on Sept. 8, requesting him to send to me the names and addresses of the members of the club, but up to the present time I have not received them, and am therefore compelled to reach the members through the press, and ask any and all of them who have similar opinions to those expressed above to send me their written authority to present to the committee requesting them to have this meeting of Oct. 9, 1889, postponed for at least sixty days, so that each and every member of the club can be communicated with, and have his unbiassed choice recorded for whom he wishes to vote, as well as any suggestion he may wish to make as to the policy to be pursued by the committee in forwarding the best interests of the Gordon setter.

Our club should be progressive in its policy, and when any opportunity is given the club to forward the interest of the Gordon setter, advantage should be taken of such opportunity, and not neglected, as it was in the past year in my opinion. I therefore hope that all those interested will communicate with me at their earliest opportunity.

JOHN H. MEYER, 159 West Thirty-fourth street.

NEW YORK CITY, Sept. 17.

"TRAINING BEAGLE PUPPIES"—Wrightsville, Pa. In my article in your issue of Sept. 5 occurs an error in the third line of the third paragraph, where the word "dog" appears, whereas it should be "brace." The sentence should read thus: "After your puppy has an idea of the work before him, and the age and strength to follow a brace or pack, he may then be hunted in such company."—A. C. KRUEGER.

GERMAN MASTIFF OR GREAT DANE STANDARD.—The standard for the German mastiff or great Dane, as published last week, contained an error in the value of points. It should read ears 3 instead of 5, and nose, muzzle and lips should read 4 instead of 2.

LONDON DOG SHOW.

[*Special Report.*]

THE London Kennel Club's second bench show opened on Tuesday morning, the 10th, in the same building that was used last year, on the grounds of the Provincial Fair of Ontario. The directors of the bench show did everything in their power to make it a success, and the untiring energy of Manager Stone, seconded by that of some of the directors, made things run smoothly. In addition to the main building two large tents, 40ft.x80ft. were erected, in which the judging was done in two rings, and where Professor Hopper gave his exhibition of trained dogs at intervals during the day to an admiring crowd. The judging began at 2 P. M. on Tuesday, and was all finished on Wednesday at 2 P. M. Mr. Mortimer began with mastiffs, and Mr. Bell with spaniels. The first day the attendance was very slim, the second day it was a little better, but we fear the London Kennel Club will have to go down in their pockets again before all the expenses are covered. All the arrangements and care of the dogs seemed to be perfect, and the judges' rings were well served, with very little confusion and no delays, which reflects credit on the management. Mr. Mortimer judged mastiffs, St. Bernards, Newfoundlands, great Danes, pointers, setters, foxhounds, collies, fox-terriers, bulldogs, bull-terriers and pugs; Mr. George Bell the remaining classes.

MASTIFFS.

The challenge class had no entries. In the open class for dogs first went to Mode, a very good dog with a typical head, good ears and eyes and a well-shaped body. He is rather straight from the hocks down. He has plenty of size. Cleveland, rather a weak specimen, was second. In the bitch class Bessie B. got the blue ribbon. She is very short in face and wanting in expression, and her color and markings are not good.

ROUGH-COATED ST. BERNARDS.

In these classes there were thirteen entries with one absent. The challenge class did not fill. The open dog class had six entries. Bernal, the winner, was described in the puppy class last year. He has developed into a very good dog, but he was not in condition. He has a good head, rather weak at muzzle, chest well let down, good quarters and hocks, straight tail well carried, plenty of bone, rather weak in loin, coat not in good order, expression might be better. His color is orange and white. Nero, a white dog with tawny markings, was a good second. He has good head, neck, shoulders and quarters, but is not quite right at hocks; ears badly carried and a little hollow in back, condition good, carriage and expression very typical. Colonel, third prize, lacked condition and is weak in head. Brian, vhc., is a very fine dog, but not in show form. In the open bitch class Maida was placed first over Luna, who was in no condition, or this would have been different. Third went to Duchess, a poor specimen, in fact none of the bitches came up to the dogs. In the puppy class nothing extra was shown, and the awards appeared to be right. No smooth-coated dogs were exhibited.

NEWFOUNDLANDS.

Leo, first, is a good-sized dog, but his coat is rather rough. Victoria, second prize, is rather washy in appearance for a Newfoundland.

GREAT DANES.

Two entries. Leo, a very good specimen, was first, with Gretchen, also a good puppy, second. When developed should make a very good one.

GREYHOUNDS.

Milo was alone in the dog class and got first. He is a very taking looking dog, but would not stand pulling to pieces. The other entry was absent. In the bitch class there were three entries. Spider, a nice-headed bitch, won over Josey. If the latter had been in condition this decision might have been reversed.

POINTERS.

How is it that pointers are so little owned or exhibited in Canada? I recollect twenty years ago when the pointer was far more used in Canada than the setter, yet of late years the setter seems to be altogether used by the sportsmen here, consequently the pointer classes were not well filled. The Westminster K. C. being absent, only 5 dogs faced the judges in the three classes. In the open class for dogs the first prize was rightly withheld, and second prize went to Don, a very ordinary dog. Third was given to Hope Paitzel, a snipy-muzzled weedy-looking dog. In the bitch class Devonshire Flint, a nice, well shown bitch, rescued the pointer from low mediocrity, and second prize was withheld, as the only other entry was very poor indeed.

ENGLISH SETTERS.

Twenty-nine entries in English setter classes with one absentee was a good showing, taking everything into consideration, with Toledo and Ottawa both holding shows at the same time, and the quality has never been equalled in Canada. Leddersdale was alone in the challenge class. In the open dog class Sir Tatton at the head of affairs looked well, although all the dogs exhibited by the Item Kennels were shown in off condition, yet their quality pulled them through. It is not necessary to say anything about the winners, as they have all been described before; yet I would suggest that owners of really good dogs do both their dogs and themselves great injury in showing them out of condition. Davey & Richards's exhibit in the setter classes were all in the pink of condition and deserved their places. Locksley, second, has already been described and commented on at other shows. Matana, who took first in the puppy class last year has developed into a good dog rather lacking in size. Dick Bondhu, reserve, showed the effects of his long journey from the northwest, as did his kennel mate Manitoba Gladstone, yet they look like workmen and are built on racing lines. Jester, vhc., if it were not for his rather coarse head and defective stern, would have taken a much higher place, in fact, would have been at the first flight; he looks all over a good level-headed every-day and all-day dog, which we believe he is. Dashing Kent, vhc., was shown in no condition. In the open bitch class Cambriana outclassed all the others; she was described last year, and is fully up to anything that was then said of her. She might be shown in better condition. Canadian Lillie is quite a taking bitch, and was shown well. Forest Fern is a good all-round bitch, and was properly placed. Bonnie Lass, reserve, like all the Item Kennels' dogs, showed much want of condition, which is accounted for to a certain extent by their late long sea voyage. The puppy classes were well filled with good specimens, and for luck Night almost stands unrivalled with first in his class and five or six specials; but it is hard to tell how a dog may turn out judging them at five months old, yet he has no glaring defects. In the bitch class Carlton Fiorie was away ahead of any of the others for shape and style, which is nearly right in every place.

IRISH SETTERS.

Redstone stood at the head of affairs and is really a very fine dog but might be a little darker in color, and his eye is a bad color for an Irish setter. Jack Malone is very little behind him and is a little better in coat and color. In bitches Belle, Ida was to my mind and eyes the best in the Irish classes. In the puppy class Rosemere was alone but deserved his first.

GORDON SETTERS.

Mr. Campbell's exhibit in this class placed it away up, all his dogs were in good condition and the awards were correct. Simcoe, placed first, has a good square head, nice ears, well let down chest, and with a strong back and well carried stern is a wonderfully good Gordon setter. Gordo, third, might have changed places with Pelham, as his head is more typical, but he has not such good well set ears as the second prize one which I dare say detracted from his other good qualities. Becky Sharp has been too often commented on to say more than she got the first place rightly.

ENGLISH FOXHOUNDS.

The London Hunt Club carried off all the honors in this class with their entries which were shown in very fair condition for working hounds. They are rather undersized but have good bone, nice feet and legs. They also got the kennel prize for foxhounds.

AMERICAN FOXHOUNDS.

The class contained a varied lot of types, but Ranger, rightly placed first, is really a fine hound and was in splendid condition. Countess, a rather light built dog, was placed second. Driver, a black and tan with good head, was placed third.

COLLIES.

As the Chestnut Hills Kennels had eight and McEwen and Gibson ten entries, these classes were well filled, and were about the best exhibit in the show. Fall is a poor time to show collies, as they are all shedding their coats, which detracts a good deal from their appearance. Dublin Scot and Scotilla, in the champion class, were placed first and second. No need to say anything about these grand dogs, who have been so often described. Charleroi II. was placed first in the open class. He would be hard to beat in any class but for his ears, which drop like a fox-terrier's. Maxwell, a young sable dog, got second. He is not fully developed. He has good head and ears and a splendid set of feet and legs under him, but is just a little light in the middle yet When he gets age I think he will improve very much there. Red Gauntlet, reserve, has about the best coat we have ever seen, and he is proving himself a good sire. In the bitch class that sweet little bitch Roslyn Clara was far ahead of the rest. Her head might be a little larger, but the beautiful carriage of her ears and her kindly collie expression makes her a remarkable bitch, and we augur for her a brilliant show career. She got first in her class, and was awarded the special for best collie that had never won a prize. This was protested, as it appears that she won the Collie Club's sweepstakes this year. The protest was sustained by the C. K. C., and the prize went to Mr. Edward Gibson's Maxwell. The reserve in this class, Madge, ought to have been higher, but her coat was against her. The puppy classes were good, and the awards appeared to be correct.

SPANIELS.

These classes were not so well filled as last year, nor was the quality so good throughout. There was only one entry in the challenge class, Juno; three in the open field spaniel class for black. The prize was awarded to Faust, a good-bodied dog with horribly malformed front legs and feet. It does not seem necessary to have any legs under spaniels now, so we won't comment on them. When will this be altered? All that is required is length of body, smooth coat, plenty of ear and crooked legs to win. The judge, I suppose, is right, as he follows in the footsteps of all the present spaniel judges. Sweep, second, is a fairly good dog. Glencho, a black and tan, is rather a good dog barring his coat, which is rough, got second in any other color than black, the first prize being withheld. In Irish water spaniels there was only one entry, which was considered good enough for third prize. No Clumbers were entered. The cocker classes were fairly well filled. Black Duke, not looking in very good condition, was first in dog class; he has a fair body and good coat; he also won the special for best cocker of any class. Kespie, second, is a very taking dog, but as he is only 9 months old it is hard to say how he may develop. In bitches Marguerita was the best, but too young to say much about. Perhaps, second, is younger still, with a good head and ears. In the any other class Silver King was the only one noticed. He has good length of body, but is rather light in bone; his feathering is very scanty. In the puppy class Faust won, with Pekoe second. We think this should have been reversed. Marguerita might even have gone ahead of the first

BEAGLES.

The beagle class was very good. Rattler, a very typical dog, was placed first, with Cleopatra a very good second and Fairmaid, a little dog with a good deal of quality, third.

FOX-TERRIERS.

Village Belle, who carries her years and honors well, was alone in the challenge class. Blemton Trump, a nice-bodied dog with good feet and legs, but a little off in head, was first. Oxford Duke, a cobby made dog, with good head and jaws, and ears well carried, with plenty of bone and fair coat, was placed second. Belvoir Bacchanal, placed third, has the best coat of any of the exhibits, but is scarcely up to show form, although he has no glaring defects: he should be a good one to breed from, as he has plenty of bone and looks a workman. Virgil, in the bitches, shows a good deal of character, but her coat is rather soft. The puppies were better than usual, with Oxford Duke placed first in dogs. Oxford Veda first in bitches, Belvoir Risk second. Wire-haired terriers had three entries, all above the average. Billet, first, has been shown before. Patch is only a puppy yet. His head might be a little flatter in scull and he is out of condition, as he is just imported. He took first in Liverpool in the puppy class. Capsicum was alone in the bitch class

BULL-TERRIERS.

Bull-terriers were represented by three white dogs in good condition. The awards were correct.

BLACK AND TAN TERRIERS.

This was the best class ever exhibited in Canada. There was very little difference between the prize winners, and the judge had to go down to very fine points to decide between them, but he did so and the awards were well received.

Dandie Dinmonts were not represented.

In Bedlington terriers Zulu II. is a good all-round bitch and deserved the first place. Gimlet, second, is a bit too light in body and bad in coat, otherwise he is a very good dog with lots of character.

Irish terriers had an entry in dog and bitch class. Peggy is a very good stamp of bitch, but a trifle soft in coat, her head is very good. She might have more bone for her size.

Dachshunde were a nice level lot of good-coated dogs and the awards were well placed.

Yorkshire terriers had four entries with two absent. Dolly is a rare good one with a beautiful coat.

In the pug class there was not a great deal of merit although much better than usual in a Canadian show, which is an indication that more interest is being taken in them. Toy terriers had only one entry. A nice little Scotch terrier shown got second.

Toy spaniels were a poor lot and the prizes were rightly withheld.

In the miscellaneous class a smooth-coated collie was first, a harrier second and the rest were nondescripts. Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—No entry.—OPEN—*Dogs:* 1st, H. Falconer's Mode; 2d, W. C. White's Cleveland. *Bitches:* 1st, J. V. Battram's Bessie B. *Puppies:* Prizes withheld.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—No entries.—OPEN—*Dogs:* 1st and very high com., H. Gorman's Bernae and Brian; 2d and high com., A. F. Jones's Nero and Hector; 3d, Pottersburg Kennels' Colonel. *Bitches:* 1st and 2d, Pottersburg Kennels' Maiden and Luna; 3d and very high com., A. F. Jones's Duchess and Tip. *Puppies:* 1st and 3d, A. F. Jones's Duchess and Priam II.; 2d, very high com., and high com., Tecumseh Chief and Monieta.—SMOOTH-COATED—No entries.

M. B.

CANADIAN KENNEL CLUB.—The annual meeting of the Canadian Kennel Club was held at London, Ont., Sept. 12. Following is a list of the officers elected for the ensuing year: President, R. Gibson; Vice-Presidents, J. K. Campbell, J. W. Gregory, Samuel Coulson, Thomas Johnson and Dr. J. Mills; Treasurer, S. F. Glass; Secretary, C. A. Stone. Executive Committee; C. M. Nelles, H. Bedlington, H. Martin, W. B. Wells, F. H. F. Mercer, Dr. J. S. Niven and T. G. Davey.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

OTTAWA DOG SHOW.

[*Special Report.*]

OTTAWA, Sept. 11.—*Editor Forest and Stream:* The Ottawa show is a success. There are about 170 dogs in the building, and the management are put to great shifts in providing room. The building and benching are very well arranged, but the structure is not large enough. We understand that upward of fifty entries were refused, and that the committee could have secured over 300. More than 7,000 people have passed the turnstiles in the first two days, and now (the evening of the second day) the expenses are more than covered, and to-morrow will be clear profit.

There are scarcely any attendants, the committee finding it impossible to secure competent men in sufficint numbers, but they are endeavoring themselves to do the necessary work.

Mr. J. Otis Fellows, who judged, gave the best satisfaction, and made friends of every one he came in contact with, save the owners of the unnoticed, and even of some of them. He went entirely wrong in fox-terriers, but otherwise we agree with all of his decisions that we have had time to look into carefully.

MASTIFFS.

Wyoming Count, a very nice young dog, though lacking in size, walked over.

ST. BERNARDS.

The splendid-looking Bernard won over Lord Dalhousie, an English winner, hands down. He is a 32in. dog of good color, but lacking in head markings. He is also cow-hocked. Blake, vhc., is a nice, though small dog, bad in color. In bitches Uncle Dick, in the kindness of his heart, not before carefully inquiring whether they belonged to ladies or not, and being answered in the affirmative, withheld first, and awarded second to Bruna, who is wrong pretty well all over.

NEWFOUNDLANDS.

Four black dogs faced the judge. Jumbo (Ami's) has far the best head, but everywhere else loses to his namesake Gratton's Jumbo.

ENGLISH SETTERS.

These classes were very bad. In puppies Glen, a lovely-headed but decidedly shelly bitch, rightly won over Don, a very pretty three-months-old blue belton, and his litter brother Ben II. Dexter, hc., was protested by Mr. F. H. F. Mercer, in the name of the Canadian Kennel Club, as over age, and the case is still to be decided.

IRISH SETTERS.

Bang beat Zero in head, but would not show himself; they were placed equal first.

GORDONS.

All were off in head and other points, but the best won.

POINTERS.

Roy had a walkover in dogs, as had Ada in bitches.

GREYHOUNDS.

This was a wonderfully hot class, and it took a lot of time to decide which were the best. We think "Uncle Dick" picked the right ones. Galatea, a sapling, is a lovely little creature, and does credit to Balkis and Mother Demdike. She should make a good one.

FOXHOUNDS.

The judge could only judge by working capabilities. They were a motley lot.

BEAGLES.

Fitzhugh Lee beat Tessie, who excels him greatly in ear.

IRISH WATER SPANIELS.

Prize should have been withheld.

CLUMBER SPANIELS.

These were the largest classes of Clumbers ever got together in America. Twelve were entered. Champion Johnny has been retired and therefore did not compete, while Drake was so run down after a week's hunting that his owners entered him for exhibition only. Champion Boss III., the celebrated English champion, rightly won over Fop. Boss' head is as wrong as wrong can be, but Fop's is shapeless, though better in parts. Boss also beats him in texture of coat, feather, length and formation of body, while Fop beats him in eye and stern. Shell, a very nice dog, should have been let out earlier, he did not show to advantage by any means. It may be of interest to compare the two champions, Johnny and Boss III. The former beats the latter in muzzle, eye, expression, ear and skull, in short as the judge said to the writer, "Johnny beats Boss fifteen points in head." Boss' color is all wrong, whereas Johnny's is correct, and in length, texture and lay on of coat, also in markings, Boss is not in it with him. In shoulders, neck and muscular development Johnny scores ahead, but in body, feather and lowness on the leg Boss beats him handily. In length Johnny scores, but very little, and his feet are, if anything, the better. In short, Boss is a "crocodile," Johnny a workman. In bitches it was a close, a very close thing between the English crack Bromine and Lucy II. Both were out of condition, but Bromine was in worse shape. We think the best bitch got the award, though there is much room for dispute. Lucy's blind eye handicapped her badly. Madge was outclassed. In puppies Quester and Bustler, two three-months-old toddlers, won without any trouble over their far older opponents. They showed great quality, and the former especially is a pup of great promise. He is full of Clumber character. Meta, vhc., is a very pretty bitch, as is also Mina, hc.

FIELD SPANIELS.

Bruce won rightly over his kennel mate. In bitches Blackie practically walked over, for her only opponent, Moera, is an overweight cocker. The latter has a perfect cocker head with the exception of being rather too much cut away below the eye. In puppies Punch walked over.

COCKERS.

Uncle Dick gave the prizes to the common sense animals whenever he consistently could. If spaniel men would bring out decent "workers" they might not have to complain, but all their trouble and time is wasted on the crocodiles, and wretched workers, so-called, are shown and beaten. In black dogs the beautifully coated Bronte won over the badly covered Obo, Jr., and also rightly won special for best. Jr. beats him in length and lowness on leg, but that was not what the judge was after, and he gave the prize to the best cocker. In black bitches the lovely little cocker Judy won over Woodstock Nellie, also special over Luna for best bitch. She is long, but not too long in body, is cobby and a good medium height on the leg; if anything, too high. Her coat and feather could well be improved upon, also her ear. Tiney Obo won in black puppies, and rightly. Budd, second, is a worker, but is likely to grow out of the class. Oh Dear No is a pretty little thing, but dish-faced, ears badly set on and forelegs very crooked. In other than black, Rufus rightly won over Tory, who is black save about the vent. In bitches the pretty, though badly-coated, Luna rightly won. Rideau Mite won in puppies, but, after only a hasty glance it is true, we preferred Rover for the place.

COLLIES.

All prizes were withheld in dogs, and we would not have thought the judge hard if he had also withheld in bitches and puppies. About all the collie there was about most of them was that they had four legs.

BULLDOGS.

A walkover for a very moderate-headed, bad-bodied bitch.

BULL-TERRIERS

Though six dogs were entered in this class there was only one bull-terrier, Count Dick. He was looking very well and won. He is badly off in stern and has markings.

FOX-TERRIERS.

Zig Zag was the only fox-terrier dog worthy of the name and won. In bitches Clytie won, and this was almost the only bad blunder Mr. Fellows made. She showed herself so well in the ring, jumping up to her master's shoulder, a fox-terrier all over, whereas Elora Tatters would only slouch around. Still, he had to take them as he saw them. We examined them carefully on the bench, and Elora, in our opinion, beats Clytie hands down. Mr. Fellows made a still greater blunder in putting Clytie over Zig Zag for the special. How he could possibly do this we simply cannot understand. Zig Zag beats Clytie at every point in our opinion, and we spent half an hour over the two. In puppies it was a close thing between Brit and Royal Dart, and the best one won.

OTHER TERRIERS.

In Skyes Move walked over. Weaver, a really high class specimen, wos alone in Airedales. In the absence of Vortex, Squaw won in black and tans. In toys Le Moir, a black and tan, won over a Yorkshire that was out of coat and shape generally.

PUGS.

Judy rightly won over Trixie in this class.

TOY SPANIELS.

E. Bradford owned all but one in this class, and made a clean sweep with his pretty quartette.

MISCELLANEOUS.

Snowflake, a white English terrier, was the only dog worthy of notice. Following is a list of the

AWARDS.

MASTIFFS.—1st and 2 cups, F. W. Connolly's Wyoming Count.

ST. BERNARDS.—ROUGH—*Dogs:* 1st and special, Hon. E. Dewdney's Bernard; 2d, M. Arahill's Lord Dalhousie. Very high com., J. Terrance's Blake. *Bitches:* 1st withheld; 2d, Mrs. H. S. Lauder's Bruna. High com., H. R. Elliott's Topsy.

NEWFOUNDLANDS.—1st and special, G. Gratton's Jumbo; 2d, S. J. Ami's Jumbo.

ENGLISH SETTERS.—*Dogs:* 1st, Dr. A. Lawyer's Zeno; 2d, Mrs. Sydney Smith's Polo. Very high com., E. F. Dey's Boatswain. *Bitches:* No entry. *Puppies:* 1st and special, E. H. Corbett's Glen; 2d, Mrs. B. H. Humphrey's Don. Very high com., Clumber Kennel's Ben II. High com., A. Lacelle's Dexter.

IRISH SETTERS.—*Dogs:* Equal 1st and special, J. Manghan's Bang and Hon. E. Dewdney's Zero. *Bitches:* No entry.

GORDON SETTERS.—1st and special, C. Kelly's Domo; 2d, Mount Royal Kennels' Hilda. Very high com., W. H. Pearce's Popsey.

POINTERS.—*Dogs:* 1st, G. B. Smart's Roy. *Bitches:* 1st and special, R. H. Mavecty's Ada.

GREYHOUNDS.—1st and special and 2d, H. P. Thompson's Volunteer and Fly. Very high com., T. C. Bates' Edgewood and Mount Royal Kennel's Elcho. High com., H. C. Andrews' Russ and S. S. Davidson's Barney. Com. and puppy special, L. N. Bates' Galatea.

FOXHOUNDS.—1st and special, A. Stewart's Mingo; 2d and very high com., W. Pownell's Mingo and Rose. Very high com., R. Quain's Jack. High com., J. Spence's Moose and S. Robitaille's Lady Middleton.

BEAGLES.—1st and special and 2d, Clark and Rutter's Fitzhugh Lee and Tessie.

IRISH WATER SPANIELS.—1st and special, J. Torrance's Diver; 2d, withheld. High com., E. F. Burrett's Boatswain.

CLUMBER SPANIELS.—*Dogs:* 1st and special, T. C. Bate's Boss III.; 2d, Mrs. F. H. D. Vieth's Top. Very high com. and special, H. B. D. Bruce's Shell. *Bitches:* 1st and special, T. C. Bate's Bromine; 2d, H. B. D. Bruce's Lucy II. Very high com., Mrs. F. H. D. Vieth's Madge. *Puppies:* 1st and 2 specials and 2d, Clumber Kennels' Quester and Bustler. Very high com. and high com., T. C. Bate's Meta and Mina.

FIELD SPANIELS.—*Dogs:* 1st and special and 2d, Woodstock Spaniel Kennels' Bruce and Kaffir. *Bitches:* 1st, Woodstock Spaniel Kennels' Blackie. *Puppies:* 1st and special, E. Flood's Punch.

COCKER SPANIELS.—BLACK—*Dogs:* 1st and special, Wood stock Spaniel Kennels' Bronte; 2d, P. G. Keyes's Obo, Jr. Very high com., J. A. Robertson's Duke. High com., G. Bell's Man in Black. *Bitches:* 1st and special, A. U. Almon's Judy; 2d, Woodstock Spaniel Kennels' Woodstock Nellie. Very high com. and special, C. E. Living's Cleo. High com., W. G. McCullough's Vic. *Puppies:* 1st and special, P. G. Keyes's Tiney Obo; 2d, A. W. Rideau's Budd. Very high com., G. Bell's Oh Dear No. High com., S. S. Davidson's Nerve.—OTHER THAN BLACK—*Dogs:* 1st, F. J. Leigh's Rufus; 2d, Woodstock Spaniel Kennels' Tory. Very high com., T. M. Robertson's Rover. *Bitches:* 1st, G. Bell's Luna; 2d, Woodstock Spaniel Kennels' Senora. *Puppies:* 1st, P. G. Keyes's Rideau Mite, 2d, T. M. Robertson's Rover.

COLLIES.—*Dogs:* Withheld. *Bitches:* 1st and special, J. Duncan's Flora; 2d, H. F. Brading's Kintorina. Very high com. and special, T. Chandler's Lilly. Very high com., E. G. Worley's Tricksie. *Puppies:* 1st, J. Duncan's Floss; 2d, T. Chandler's Garry and E. Richardson's Squire. High com., H. F. Brading's Yum Yum, E. Turton's Badger and A. D. Ramage's Dixie.

BULLDOGS.—1st and special, T. Hartnett's Nettle.

BULL-TERRIERS.—1st and special, A. E. Heming's Count Dick; 2d, withheld.

FOX-TERRIERS.—*Dogs:* 1st, H. P. Thompson's Zig Zag; 2d, withheld. *Bitches:* 1st and special, P. G. Keyes's Clytie; 2d and high com., H. P. Thompson's Elora Tatters and Bacchante. Very high com. and special, E. Gleeson's Jess. High com., F. McGuire's Jess, J. Wilkins's Gypsy.—OTHER THAN BLACK—*Dogs:* 1st, F. J. Leigh's Rufus; 2d, Mount Royal Kennels' Chummie. *Puppies:* 1st and special, Mount Royal Kennels' Royal Dart; 2d, B. F. W. Hurdman's Brit. Very high com., G. S. Oldreive's Kitty and B. F. W. Hurdman's Vic, Jr.

SKYE TERRIERS.—1st and special, Mary Little's Mave.

AIREDALE TERRIERS.—1st and special, Clumber Kennels' Weaver.

BLACK AND TAN TERRIERS.—1st, special and 2d, J. F. Campbell's Squaw and Desdemona. High com., M. Drolet's Pomper.

TOY TERRIERS.—*Dogs:* 1st and special, M. Drolet's Le Noir; 2d and special, Mount Royal Kennels' Fritz. *Bitches:* 1st, W. H. Reid's Floss.

PUGS.—1st and special, J. F. Campboll's Judy; 2d Miss Maud Hurdman's Trixie. High com., Mrs. C. D. Graham's Victor.

SPITZ.—1st and special, Mrs. W. Rodger's Fred.

TOY SPANIELS.—1st and special, 2d, and very high com., E. Bradford's Fannie's Blen, Prince and Romeo.

MISCELLANEOUS.—1st, J. F. Scholes' white English terrier Snow Flake.

OTTAWA.

A. K. C. EXPENSES.

Editor Forest and Stream:

I notice that on May 22 last Mr. Vredenburgh, the treasurer of the A. K. C., made the following report, as appears in the May number of the *Kennel Gazette:*

Receipts from all sources from Jan. 11 to date.....$4,538.43
Expenses for same period..... 3,578.38

Balance on hand..... $960.05

I am not a mathematician, and, while I shall not dispute the expense account, I am anxious to know where the receipts came from, and I would like to know how much of the sum came from the generosity fund? Up to and including the month of May the receipts from dogs registered in the *Kennel Gazette* amounted to $464.75; for registration in Stud Book $652; 296 associate members (if all have paid), $1,480, making in all $2,596.75, leaving a balance of $1,941.68 to be accounted for as received. Will Mr. Vredenburgh in his coming report explain from what resources this fund was derived, and is it not a fact that the major portion of this sum was not received from actual income earned by the club?

In my letter of last week, in the expense account, having charged the manufacture of the *Kennel Gazette* for eight months $1,600, I should not have charged again the item of $654 for the 327 copies supplied to the associate members.

JERSEY CITY, N. J., Sept. 16. PESHALL.

TOLEDO DOG SHOW.

[*Special Report.*]

TOLEDO, Sept. 12.—*Editor Forest and Stream:* The first annual dog show of the Toledo Kennel Company is a decided success. The entries number 310, and as the prize list will show many of them were first-class animals. Mr. John Davidson, of Monroe, Michigan, and Mr. H. W. Lacy, of New York, officiated as judges and gave satisfaction. The show was superintended by Mr. George H. Hill, of Madeira, O., and his management was excellent. Judging began rather late on Tuesday, and was not finished until to-day, the specials occupying considerable time. The attendance has been quite good, and the association will come out ahead. Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—1st, C. E. Cook's Moses.—OPEN—*Dogs:* 1st, E. B. Sears' Sears' Monarch; 2d, J. F. Stone's Philammon. Very high com., J. Grant's Leo III. High com., E. Probert's Jumbo. *Bitches:* 1st, E. B. Sears' Countess of Dunsmore; 2d, C. E. Cook's Menglada. *Puppies:* 1st, W. H. Warner's Duke of Connaught; 2d and high com., C. E. Cook's Guy and Gracie.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—1st, Alta Kennels' Noma.—OPEN—*Dogs:* 1st, E. B. Sears' Plinlimmon, Jr.; 2d, Peninsular Kennels' Caspar. Very high com., J. J. Geddes's Argus and Meadowthorpe Kennels' Star. High com., B. R. Geddes' Caleb. Com., W. H. Elston's Lion. *Bitches:* 1st, E. B. Sears' Lady Wellington; 2d, Alta Kennels' Bessie Bayard. High com., J. B. Lewis' Pansy and Keystone Kennels' Warwick Abbess. *Puppies:* 1st, Meadowthorpe Kennels' Star; 2d, Peninsular Kennels' Earl.—SMOOTH-COATED—CHALLENGE—1st, Alta Kennels' Victor Joseph.—OPEN—*Dogs:* 1st, W. F. Harn's Rex Maximus; 2d, J. M. Gallagher's Cato, Jr. Very high com., Keystone Kennels' Sola. *Bitches:* 1st, Alta Kennels' Apajune; 2d, Meadowthorpe Kennels Norah. Very high com., W. F. Harn's Theo. High com. and com., Peninsular Kennels' Appolona and Daphne.

GREAT DANES.—*Dogs:* 1st, withheld; 2d, and com., Wolverine Kennels' Cæsar II. and Hector. *Bitches:* 1st, withheld; 2d, Wolverine Kennels' Auguste.

NEWFOUNDLANDS.—1st, Meadowthorpe Kennels' Meadowthorpe Flora.

DEERHOUNDS.—*Dogs:* 1st and 2d, S. W. Skinner, Jr.'s Robin Adair and Fergus. *Bitches:* 1st and 2d, S. W. Skinner, Jr.'s Phyllis and Lady Dare.

GREYHOUNDS.—*Dogs:* 1st, Meadowthorpe Kennels' Douglas Fleming. *Bitches:* 1st, Meadowthorpe Kennels' Alla-Gratta; 2d, Bulled-Bruette Kennels' Carmine.

POINTERS.—CHALLENGE—No entries.—OPEN—LARGE—*Dogs:* 1st, J. R. Daniels's Lord Graphic; 2d, Meadowthorpe Kennels' Meadowthorpe Duke. Very high com., B. F. Lewis's Ike. High com., B. F. Seitner's Luck of Idsfone. Com., A. W. Hitch's Nicadeane. *Bitches:* 1st, Hollywood Kennels' Moll Faust; 2d, J. E. Gill's Don's Dot. Very high com., Dayton Kennels' Van Bang.—SMALL—*Dogs:* 1st, Bulled-Bruette Kennels' Molton Baron; 2d, John Bolus's Trinket's Champion. Very high com. and com., Dayton Kennels' Bodine's Bow and Noble Bang. High com., J. R. Daniels's Graphic's Topic. *Bitches:* 1st, Meadowthorpe Kennels' Primrose; 2d and com., Dayton Kennels' Bodine's Dell and Mealy IV. Very high com., J. Lewis's Siberian Girl. High com. and com., J. R. Daniels's Trinket S., Graphic Clip, and Nellie Croxteth. Com., B. F. Seitner's Phantom. *Puppies:* 1st, E. H. Osthaus's Bijou; 2d, J. R. Daniels' Loraine.

ENGLISH SETTERS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st, J. E. Dager's Cincinnatus; 2d, Mt. Washington Kennels' Lindo. *Bitches:* 1st, Columbus Kennels' Pearl Bondhu; 2d, Mt. Washington Kennels' Zona. Very high com., C. E. Eddy's Kate Mandan. High com., A. W. Hitch's Liberty II. Com., G. G. Kuhm's Jessie D. and R. M. Green's Frolic Bondhu. *Puppies:* 1st, J. R. Daniel's Nellie Dale.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, E. W. Clark, Jr.'s Blarney. *Bitches:* 1st, Kildare Kennels' Laura B.; 2d, C. B. Thompson's Molly Bawn.—OPEN—*Dogs:* 1st, W. N. Kuhn's Mack N.; 2d, W. C. Hudson's Kenmore. Very high com., E. Maher's Larry S. High com., Meadowthorpe Kennels' Rover. Com., F. S. McGraw's Don L. *Bitches:* 1st and high com., Kildare Kennels' Ruby Glenmore and Kildare Ruby; 2d, Meadowthorpe Kennels' Kate II. Very high com., L. M. Hilsendegen's Biddie. Com., H. G. Byrant's Chipeta. *Puppies:* 1st, Meadowthorpe Kennels' Kate II.; 2d, W. C. Hudson's Lady.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, S. W. Dixon's Little Boy. *Bitches:* 1st, Meadowthorpe Kennel's Belmont.—OPEN—*Dogs:* 1st, 2d and very high com., Meadowthorpe Kennels' Heather Harold, Heather Roy and Laddie. High com., E. H. Mason's Dandy. Com., Bulled-Bruette Kennels' Devon Grouse and W. T. Higbie's Monte. *Bitches:* 1st and very high com., Meadowthorpe Kennels' Blossom and Heather Model; 2d, W. A. Mitchell's Vic II.

IRISH WATER SPANIELS.—1st, J. R. Daniels's Patsy O'Conner.

FIELD SPANIELS.—*Dogs:* 1st, P. Demmel's Mick Whiffles. *Bitches:* 1st, Campbell & Blake's Pansy.

COCKER SPANIELS.—*Dogs:* 1st, S. R. Hemingway's Rabbi. *Bitches:* 1st, Lake Shore Kennels' Bene Silk.

COLLIES.—CHALLENGE—1st, W. D. Hughes's Bonnie Brae.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Roslyn Sensation; 2d, H. W. Harding's Bonnie Scot. Very high com., W. D. Hughes's Nullamore. *Bitches:* No entry. *Puppies:* Withheld.

BEAGLES.—CHALLENGE—1st, W. D. Hughes's Lou.—OPEN—*Dogs:* 1st, Detroit Kennel Club's Bross; 2d, J. Lewis's Ross W. *Bitches:* 1st, J. Lewis's Cricket.

DACHSHUNDE.—1st, J. Reade's Sport; 2d, B. F. Seitner's Prince.

BULLDOGS.—CHALLENGE—1st, G. Raper's Rabagas; 2d, R. B. Sawyer's Portswood Tiger. OPEN—*Dogs:* 1st, R. B. Sawyer's Lion; 2d, H. L. Goodman's Joker. *Bitches:* 1st and 2d, R. B. Sawyer's Soudan and Thespian. Very high com., Campbell and Blake's Mape.

BULL-TERRIERS.—*Dogs:* 1st, 2d and very high com., F. F. Dole's Trentham Baron, Don Pedro and Hinks. *Bitches:* 1st and 2d, F. F. Dole's Starlight and White Daisy. *Puppies:* 1st, F. F. Dole's Don Pedro.

FOX-TERRIERS.—*Dogs:* 1st, A. E. Pitts's Raby Signal. *Bitches:* 1st, Campbell & Blake's Belle; 2d, Meadowthorpe Kennels' Folly. Com., G. M. Hendrie's Tiny and Salt.—WIRE-HAIRED—1st, G. M. Hendrie's Eskdale Broom; 2d, Mrs. F. F. Dole's Cotswold Jocko. Com., Dartmoor Kennels' Snorter.

SCOTCH TERRIERS.—1st, Meadowthorpe Kennels' Donald.

SKYE TERRIERS.—1st, Mrs. A. Bright's Ben More.

IRISH TERRIERS.—1st, Lewis & Jarrett's General Burnside.

BLACK AND TAN TERRIERS.—1st, Rochelle Kennels' Rochelle Maiden; 2d, F. F. Dole's Kaiser. High com. and com., Campbell & Blake's Nanon and Prince. Com., G. M. Hendrie's Nip.

DANDIE DINMONT TERRIERS.—1st, 2d and very high com., Meadowthorpe Kennels' Reiver, Wonder and Baillie.

YORKSHIRE TERRIERS.—1st, Mrs. A. Bright's Fairy.

PUGS.—CHALLENGE—1st, A. E. Pitts's Kash.—OPEN—*Dogs:* 1st and 2d, Eberhart Pug Kennels' Bradford Ruby II. and Douglas II. High com., Acme Kennels' Lord Nelson. *Bitches:* 1st, H. L. Goodman's Bo Peep; 2d, Dr. M. H. Cryer's Una. Very high com., A. E. Pitts's Daisy. High com., Eberhart Pug Kennels' Lady Thora. Com., J. Lewis's Mona and E. Probert's Winnie. *Puppies:* 1st, Eberhart Pug Kennels' Cashier.

TOY SPANIELS.—1st and 2d, E. Probert's Charlie and Little Cricket.

WHIPPETS.—1st, 2d and very high com., Campbell & Blake's Nellie Grey, Maggie and Ben Bow.

MISCELLANEOUS.—*Dogs:* 1st, Meadowthorpe Kennels' Black Diamond. *Bitches:* Equal 1st, Meadowthorpe Kennels' Pearl and H. Eichler's Flossy.

SPECIAL PRIZES.

Exhibitor scoring the largest number of points, Campbell and Blake. Kennel mastiffs, C. E. Cook; St. Bernards, Alta Kennels; deerhounds, S. W. Skinner, Jr.; pointers, J. R. Daniels; Irish setters, Kildare Kennels; Gordon setters, Meadowthorpe Kennels; fox-terriers, G. M. Hendrie; bull-terriers, F. F. Dole; pugs, Eberhart Kennels. Best mastiff, Scars' Monarch; greyhound bitch, Alla-Gratta; Irish setters in open classes (divided), Mack N. and Ruby Glenmore; beagle, Lou; bull-terrier, Trentham Baron; rough-haired terrier, Donald; collie, Roslyn Sensation; bulldog, Rabagas.

TOLEDO.

COURSING AT LOUISVILLE.

[Special Report.]

THE coursing season of the fall of 1889 was opened at the Jockey Club track, Louisville, Ky., by the National Coursing Association of Hutchinson, Kan. The dates fixed for the meeting, Sept 4 to 7, unfortunately fell in the rainy season, and the first two days' races were necessarily postponed. This made a serious hitch in the programme; many from a distance were sadly disappointed, and several of the entries were not present; but, notwithstanding the unfavorable conditions, the morning of the 6th being bright and clear, the management were at the track early, and before 2 o'clock P. M. everything was in order, and the famous racecourse, where the great Proctor Knott was trained, was to witness the most novel racing event ever seen east of the Missouri River. The postponement from day to day, and the shortness of time for notifying the public, naturally brought but a small attendance; but if small in numbers, there was no lack of enthusiasm, which at times was unbounded, the crowd cheering so lustily that in two instances the greyhounds were so thoroughly frightened as to turn from pursuing the jack rabbit, and flee for safety to their masters.

There is no further question as to the practical success of coursing away from the home of the jack rabbit, the western prairies, as the success of the meeting just closed has demonstrated.

Coursing with jack rabbits after shipping them hundreds of miles, was in a measure experimental, and to see such speed as they showed to their long tailed pursuers was fairly a source of astonishment, even to the managers of the association. The jacks came through safely from Hutchinson, Kas., and after the second day regained their form, and were in good racing condition, as shown by the result of the contests, only five rabbits being caught in the fourteen courses, the winner of the stake, Snow, being carried clear through the course in two instances, with but two turns to her credit. The original programme called for two stakes of twenty dogs each, but one stake was necessarily dropped, as other dates could not be secured in which to complete the full programme.

The Louisville Derby Stake closed with eighteen entries, composed of dogs principally from Louisville and New Albany, the entries being limited to dogs owned in Kentucky, Ohio, and Indiana. In the entries were the names of Prince B., winner of first at the July running meeting in Louisville, and Brandt, the runner-up. The name of Socks, the runner-up in the Great Bend Derby, at the meeting of the American Coursing Club at Great Bend, Kan., October, 1888, was quite prominent, but unfortunately he was attacked by a large bull-mastiff, and so seriously lacerated that he was unable to compete in the stakes, and it remained for his kennel companion Snow to carry off the honors. The local interest was great, and throughout the several races were watched as intently as any racing event ever held on the Jockey Club track. Old running horsemen were in the stands, with stop-watches in hand, and their disappointment was very noticeable when the rabbit and dogs would swerve from their course and break the straight quarter. In only one instance was the time accurately secured, and that was in a course with a brace of slow dogs. The time was caught at 27 seconds. Repeated efforts were made by an enthusiastic owner of a fast greyhound to match a race for a quarter or half with a thoroughbred, but although the greatest confidence was expressed by the owners of the flyers, no definite arrangements could be made; but in the near future the fact will be demonstrated as to which is the fleeter of the two animals.

The course was prepared by fencing the track on both sides down the stretch with a mesh wire, to prevent the rabbit from escaping. About two hundred yards below the judges' stand a permanent corral is made with heavy duck canvas eighty feet square and eight feet high. This is the home of the jack rabbits; just above the quarter-pole a temporary corral is also made of the same material, but much smaller. Shortly before the race begins the jack rabbits are driven up the track to their corral, and are allowed to escape one at a time, two dogs in slips being in waiting for them to appear; and as the hare glides from the chute the eager greyhounds spring to the slips, and at the word the slipper pulls the spring and they are away. Down the course they come, the long ears of the jack rabbit laid close on his back; and only a light gray streak is seen taking a straight line for the escape, with his swift and silent pursuers rapidly closing in on him; but the peculiar formation of his head and eyes enables him to see straight over his back, and as the greyhounds approach he lets out a kink and flashes under the wire and through the brush to the corral, and is safe. The judge closely following in the wake, waving the winning flag, either red or white.

In a few instances the rabbit was caught, but the invisible wire muzzle worn by the dogs prevented serious injury, and the slip steward's assistant was promptly on hand, to assist in protecting the hare. The dogs, although a good looking lot, were inexperienced, and in a few instances refrained from running the rabbit, for which they were promptly disqualified, the rules of the American Coursing Club governing all contests, and being rigidly adhered to. Mr. D. C. Luse, secretary of the National Coursing Association, acted as judge, and Mr. M. E. Allison performed the duties of slip steward.

In the first series W. H. Gray's black dog Prince beat W. W. Daniel's dark dog Swift. Joe. H. Kraft's white bitch Snow beat Mr. S. D. Duff's Beauty. J. Elmer Bush's fawn dog Prince B. beat A. M. Young's white dog Alphonso. J. D. Hill's fawn dog Rocket beat Wm. Nord's blue bitch Queen. Mrs. John R. Botto's fawn dog Brandt beat Gus Kraft's blue and fawn dog Kraft's Beauty. Arnold Held's fawn dog Bob Ingersoll beat W. N. Daniel's fawn bitch Kelpie. Tom J. Sandrum's blue and white dog Count beat W. N. Daniel's black and white bitch Beauty D.

The reports of the races in the daily papers, and the vigorous advertising of the races on the following day, when the winners were run off, brought a very large and enthusiastic gathering, and there was a ripple of excitement when course by course was run off, and only two of the fleetest were led up the stretch for the final contest. The contest was between a New Albany dog and a Louisville dog, the runner up at the July races. They were loosed to a good rabbit, but as the dogs struggled to get free the big fellow, Brandt, broke from the slips while the rabbit was but a scant fifty yards away, and the slipper at once loosened Snow, and in the run-up Snow scored a decided go-by, and was first to the hare, turned it to the big dog, who accepted the opening, and scored a trip, and as they straightened to the course Snow again made a go-by, tripped and caught. The wildest excitement prevailed as the announcement was made that Snow, the New Albany dog, had won.

Snow, the winner, is a pure white bitch, weighing about 58lbs., strongly built, with exceptionally large chest, ribs well sprung, well arched back, close-coupled, strong quarters. Her most noticeable faults are a rather short though fairly well-formed head, and very short tail heavily covered with hair. Her owner, Mr. Joe H. Kraft, of New Albany, has recently purchased Socks of Roger D. Williams, of Lexington, Ky., and will send both of them to Kansas the coming week, to be fitted up for the meetings at Hutchinson and Great Bend. He will also send a youngster to compete in the Derby.

The runner-up Brandt is a very large, finely-formed dog, weighing about 75lbs. He is a rich golden brown, stands well on his legs, close coupled, and with a well arched back. One can truly say that he is a grand, good, well-balanced large dog. He is said to have been imported by Von der Ahe of the St. Louis Browns. The summary of the races is as follows:

First Series.

Prince beat Swift.
Snow beat Duff's Beauty.
Prince B. beat Alphonso.
Rocket beat Queen.
Bob Ingersoll beat Kelpie.
Count beat Beauty D.

Second Series.

Snow beat Prince.
Prince beat Rocket.
Braudt beat Bob Ingersoll.
Count a bye.

Third Series.

Snow beat Prince B.
Brandt beat Count.

Final Heat.

Snow beat Brandt and won.

The prizes awarded were: Snow $50, Brandt $25, Count $15, Prince B. $10.

The next meeting of the series will be held at St. Louis, Mo., Sept. 21 and 23, the Association being unable to secure other satisfactory dates. After the St. Louis meeting, arrangements will be made for the meeting at the Association grounds in Hutchinson, Kan., after which time dates will be made for other points abroad.

DOG TALK.

MR. EDWARD E. INGALLS, of Ithaca, N. Y., owns a St. Bernard bitch named Selma. He writes letters on the letter paper of G. W. Ingalls & Co. On June 24 he tore off the letter head so as to disguise the origin of the letter, and wrote to us as follows: "Will you tell me through the columns of your next issue (1) the registration number, if registered, (2) the pedigree, also (3) name and address of owner of Selma, a rough-coat St. Bernard bitch?—C. W. B., Ithaca, N. Y." The name C. W. Bower was added in parentheses, and there was nothing to show that the letter signed C. W. B. was written by Ingalls, the owner of Selma. In our issue of June 27 we replied that the bitch was not registered. Thereupon Mr. Edward E. Ingalls, *alias* C. W. Bower, wrote us: "A fellow townsman of mine asked of you some information about the rough-coat St. Bernard Selma. He asked these questions: 1. What is her registration number, if registered? 2. What is her pedigree? 3. Who owns her? Now, we sportsmen in Ithaca do not want to think anything but kindly toward FOREST AND STREAM, so out of justice to me and my dog will you kindly answer C. W. B.'s questions in your next issue. You will find her registered in A. K. C. S. B. with full pedigree. Trusting you will correct this I remain a constant reader of FOREST AND STREAM.—EDWARD E. INGALLS." Subsequent to our reply in issue of June 21 we received the June number of the *Gazette*, and in it was contained the registration number, 13,522, and the pedigree, Merchant Prince—Rensel, and the owner's name, Edward E. Ingalls, Ithaca, N. Y. To Mr. Bower *alias* Ingalls we tender a tardy apology for this late reply, and to Mr. Ingalls *alias* Bower an apology for having quite unwittingly deprived him of the free advertisement he was after. And we shall go right on answering questions and giving such aid as we can to inquirers, with perfect confidence that ninety-nine of them are honest and only the hundredth a fraud of the Ingalls-Bower, Bower-Ingalls stripe.

In compiling a list of the awards at the Brooklyn dog show last week, we had no end of trouble, and if the mistake mentioned below is the only one made, we shall be thankful. Mr. John Keevan writes: "The Erminie Kennels of Mt. Vernon, N. Y., referred to in your issue of last week as the "Germania Kennels," was represented at the late bench show held under the auspices of the Brooklyn Kennel Club, by two exhibits. Barry II. in the challenge class for rough-coated St. Bernard dogs, and Greta, in the open class for rough-coated bitches; the former winning first and the latter equal second prize."

Mr. John M. Weigle, of Augusta, Ga., is engaged in writing a book on practical dog training for field work. He has had considerable experience in handling pointers and setters for his own amusement, and he will doubtless give us something well worth reading.

"The Pocket Kennel Record," published by the Forest and Stream Publishing Company, has been issued with new style of blanks, prepared by the editor of these columns; and it will be found even more convenient and complete than the old form.

The dog show held at Toronto this week is reported to be the most successful of the fall shows so far. The entries foot up 329, and among them are a large number of valuable dogs. A full report will appear next week.

In the advertisement of the Central Field Trial Club last week the first prize in the All-Aged Setter Stake was inadvertently printed $200. It should have been $250, the same as in the Pointer Stake.

PENNSYLVANIA'S NEW DOG LAW.—*Editor Forest and Stream:* The following clipping from one of our papers may prove of interest to some of your readers. The paragraph making dogs personal property and subject to larceny is certainly a step in the right direction. But will you, Mr. Editor, kindly interpret to me this new law at the point where it says: "The law does not repeal or affect the provisions of any existing special law on the same subject in any county or district." We have here a borough ordinance providing for the taxation of dogs in our borough at the rate of $1 for dogs and $2 for bitches. Will we be obliged to pay both taxes—this borough tax and the one provided for in this new law?—A. C. KRUEGER. The law provides that there shall be collected annually from the owners of dogs a tax of 50 cents for every male dog and $1 for every female dog. This money shall constitute a fund, from which persons sustaining a loss or damage to sheep by dogs may be paid for such loss, along with the costs necessarily incurred in establishing their loss. Persons who have sustained loss or damage to sheep may make complaint before any Justice of the Peace, and the latter shall notify the owner of the dog or dogs causing the loss, and if the owner does not appear "as soon as practicable" and pay the loss caused by his dog the Justice shall notify the township auditors to appraise the loss sustained by the claimant; they have the power to summon witnesses and investigate the case thoroughly, and shall determine and report to the Justice the amount of the damage, if any. If it shall be found at the close of the current year that the dog tax is not sufficient to pay for all the losses incurred under the law, then the School board shall pay a pro rata share to the several claimants; if the funds are sufficient, then the claims shall be paid in full. All dogs in the State are made personal property and subject to larceny. Justices shall be allowed a fee of fifty cents in every case that comes before them. Owners of dogs causing loss may voluntarily pay the damage without waiting action. In case there is a surplus in the sheep fund in the hands of the treasurer at the close of the current year amounting to $100, the same shall be transferred to the school fund of the district for school purposes. The law does not repeal or affect the provisions of any existing special law on the same subject in any country or district. [The new tax is evidently in addition to local taxes.]

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Count Noble's Boy. By E. A. Hight, Lynn, Mass., for white, black and tan English setter dog, whelped Aug. 31, 1889, by Count Noble (Count Wind'em—Nora) out of Katie Berwyn (Dashing Berwyn—Katydid) (wrongly given last week).

Duke's Baby and Victoria. By High Rock Cocker Kennels, Lynn, Mass., for black cocker spaniel bitches, date of birth not given, by Black Duck out of Zo Zo.

Count W. and Countess W. By N. Wallace, Farmington, Conn., for black and white English setter dog and bitch, whelped July 7, 1889, by Count Noble (Count Wind'em—Nora) out of Jennie III. (champion Foreman—Jennie).

Kicker, Othello's Boy, Dr. Cryer, Pug Ugly, Faraway Moses, Othello and Scamp. By Geo. W. Fisher, Catawissa, Pa., for fawn pugs, seven dogs and one bitch, whelped Aug. 31, 1889, by Othello (Othello II.—Scamp II.) out of Jule (Tom Thumb—Byon).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Dixie—Little Duke, Jr. W. E. Deane's (Somerset, Mass.) beagle bitch Dixie (Flute—Thorne) to W. E. Deane's Little Duke, Jr. (A.K.R. 2389), July 10.

Colina—Scott's Jack. Theo. J. Hook's (Rome, N. Y.) collie bitch Colina (Kilmarnock Bruce—Lady of the Lake) to H. S. Quin's Scott's Jack (champion Dublin Scot—Effie Dean), Sept. 12.

Romp—Rum. Edward Brooks's (Boston, Mass.) Chesapeake Bay bitch Romp (Rake—Rose) to F. B. Greenough's Rum (Rag—Ripple), July 3.

Lulu IV.—O'Donovan Rossa. M. Flynn, Jr.'s (Bristol, R. I.) Irish setter bitch Lulu IV. (Dick—Lulu) to his O'Donovan Rossa (Sarsfield—Nino), Sept. 1.

Lady—Towser. Geo. W. Fisher's (Catawissa, Pa.) fox-terrier bitch Lady (Trap—Nettle) to Mrs. J. R. Bennett's Towser (Trap—Nettle), Aug. 20.

Lassie—Oxford Duke. Geo. Douglas's (Woodstock, Ont.) fox-terrier bitch Lassie (Richmond John—Nellie), to F. Wheeler's Oxford Duke (Dane Baffler—Rosa Canina), Aug. 7.

Beverwyck Flip—Bacchanal. Beverwyck Kennels' (Albany, N. Y.) fox-terrier bitch Beverwyck Flip (Beverwyck Tippler—Beverwyck Nelly) to A. Belmont, Jr.'s Bacchanal (The Belgravian—Bedlamite), Sept. 5.

Beverwyck Booze—Beverwyck Poacher. Beverwyck Kennels' (Albany, N. Y.) fox-terrier bitch Beverwyck Booze (Beverwyck Tippler—Beverwyck Nelly) to their Beverwyck Poacher (Dusky Trap—Blemton Arrow), Aug. 6.

Flossie—Bradford Harry. Thos. McAloon's (Bangor, Me.) Yorkshire terrier bitch Flossie to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Sept. 8.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Posy. Pottinger Dorsey's (New Market, Md.) beagle bitch Posy (Fleetwood—Twinkle), Aug. 11, six (three dogs), by his Lee (Warrior—Rosy).

Venus II. Pottinger Dorsey's (New Market, Md.) beagle bitch Venus II. (Lee—Venus), Sept. 3, seven (five dogs), by his Boston (Lee—Twinkle).

Countess. Pottinger Dorsey's (New Market, Md.) beagle bitch Countess (Ringwood—Juliet), Sept. 3, five (two dogs), by his Boston (Lee—Twinkle).

Dixie. W. E. Deane's (Somerset, Mass.) beagle bitch Dixie (Flute—Thorne), Sept. 10, six (four dogs), by his Little Duke, Jr. (A.K.R. 2389).

Romp. Edward Brooks's (Boston, Mass.) Chesapeake Bay bitch Romp (Rake—Rose), Sept. 6, five (four dogs), by F. B. Greenough's Rum (Rags—Ripple).

Patsey Bang. J. Hansen's (Minneapolis, Minn.) pointer bitch Patsey Bang (Bang Bang—Peggy), Aug. 24, nine (four dogs), by his Duke (champion Sensation—Rose).

Jule. Geo. W. Fisher's (Catawissa, Pa.) pug bitch Jule (Tom Thumb—Bijou), Aug. 31, seven (six dogs), by Dr. Cryer's Othello (Othello II.—Scamp II.).

Lady Nell. Woodland Kennels' (Woodstock, Ont.) cocker spaniel bitch Lady Nell (Burmah—Woodstock Molly), Aug. 7, seven (four dogs), by his Black Duke (champion Obo II.—Woodland Queen).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Rose. Apricot fawn pug bitch, whelped Jan. 27, 1887, by Bradford Ruby out of Gyp, by Geo. W. Fisher, Catawissa, Pa., to Geo. L. Robertson, Mt. Carmel, Pa.

Rustic Prince. Fawn pug dog, whelped July 6, 1889, by Rustic King out of Rose, by Geo. W. Fisher, Catawissa, Pa., to Geo. L. Robertson, Mt. Carmel, Pa.

Rustic Joe. Fawn pug dog, whelped July 6, 1889, by Rustic King out of Rose, by Geo. W. Fisher, Catawissa, Pa., to E. W. Jester, St. Georges, Del.

Minnie. Black and tan Gordon setter bitch, whelped April 25, 1889, by champion Royal Duke out of Jennie II., by Louis Parisette, Jr., Brooklyn, N. Y., to John Steuernagle, New York.

Prince of Elcho. Red Irish setter dog, whelped May 11, 1889, by Elcho, Jr., out of Romaine, by Wm. Jarvis, Claremont, N. H., to J. M. Weigle, Augusta, Ga.

Spot. White bull-terrier bitch, whelped January, 1889, by Wm. J. Henry, Jersey City Heights, to H. L. Langhaar, Nutley, N. J.

Blemton Lilly. White, black and tan fox-terrier bitch, whelped May, 1885, by Twig out of Norah, by Beverwyck Kennels, Albany, N. Y., to W. A. Ellis, Bryn Mawr, Pa.

Beverwyck Hecate. White, black and tan fox-terrier bitch, whelped Sept. 3, 1888, by Lucifer out of Daze, by Beverwyck Kennels, Albany, N. Y., to W. S. Applegate, New Albany, Ind.

Beverwyck Dusky—Blemton Lilly whelps. White, black and tan fox-terrier dog and bitch, whelped March 19, 1889, by Beverwyck Kennels, Albany, N. Y., one each to C. W. Carter, Boscawen, N. H., and James E. Unks, Muncie, Ind.

Warren Discord—Daze whelps. White, black and tan fox-terrier bitches, whelped March 15, 1889, by Beverwyck Kennels, Albany, N. Y., one each to J. A. Hoffar, Washington, D. C., and James E. Unks, Muncie, Ind.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. T., Ikanwood.—Ans. Dog has worms. Give tablespoonful of castor oil and three hours after 30 grains of powdered areca nut made into a large pill with lard. Give another dose of oil three hours after the pill. Feed milk only during treatment.

A SUBSCRIBER, Harrison, N. J.—I have a young retriever bitch about seven months old that is troubled with large white worms about 1½ or 2in. long. Would you please inform if there is any cure? Ans. Give two teaspoons of castor oil and follow this in three hours with a pill made of 20 grains of powdered areca nut. This, if made with lard, can be forced down the throat. Give another dose of oil in an hour after the pill. Feed milk only while treating.

G. C. B., Buffalo.—When breathing my collie dog gives a very funny twitch sideways from his head to behind his shoulders. When lying down and trying to sleep his breath becomes very irregular, until he suddenly jumps up with a start. He was shot in the foreleg shortly ago, but the wound has healed and it is now entirely well. He is in very good spirit and will romp and play as much as ever. Ans. It may be a central spinal trouble. If so, little good can be done for it. If it is a functional trouble, strychnine, iron, quinine and exercise, with good food, will benefit. Let some physician look at your dog.

H. A. S., Chelsea, Mass.—A collie dog two years old had a touch of mange, and we applied an ointment which soon cured the mange and the hair grew out all right. This was about a year ago, and ever since a humor has been coming out in raised blotches as large as a nickel, which seem to itch terribly. The dog will scratch and rub so as to produce a sore. Have used an ointment which will cure the sore, but next day it will break out again. Ans. Use an ointment made of equal parts of diachylon and zinc oxide ointments. Give 5 drops of Fowler's solution night and morning in the food. Keep the bowels free by use of syrup of buckthorn.

H. B., White House, N. J.—My setter dog, four years old, appears all right, but is sometimes suddenly taken with very severe pains in hind parts, losing the use of them, and struggling violently; appetite fair; tires easily. I think it is worms. What can I do for him? Ans. If you are certain that the dog has worms, give a generous purge of castor oil, one or two tablespoonfuls, and follow this in three hours with a large pill containing 30grs. of powdered areca nut. Feed only milk for two or three days. After this treatment give a 2-grain pill of the citrate of iron and strychnine three times daily hidden in a morsel of meat.

Rifle and Trap Shooting

IRA PAINE.

THE death of Chevalier Ira Paine briefly mentioned in our last issue has called forth many reminiscences of the world famed marksman. He was no doubt at the head of his chosen profession and deserving much praise for his years of effort in setting high records for future expert shots.

The Captain was a native of Providence, R. I., a man of large physique and about 48 years of age. At one period he was a prominent minstrel, and a member of a quartet which gained some reputation. His wife is a native of London, England, and one of the most attractive women on the stage. They were married abroad some 6 years ago, and, although she assisted him on the stage, she never gave any public exhibition of skill. In 1860 Capt. Paine decided to adopt the profession of a marksman, and received his first inspiration, as it were, while on a gunning expediton down the Delaware River with several gentlemen yachtsmen, of Philadelphia, in which city he was then engaged in the minstrel profession.

He and Bogardus shot many matches and Paine was generally defeated. He trained in New York with Harry Felter and Selah Smith. He attributed the superiority of Bogardus to his great steadiness and his regular mode of life.

They first met for the champion badge at pigeon shooting and $1,000. Paine won by 86 to 83. Bogardus then challenged him again and beat him by 87 to 85. Paine then came out with a challenge and was beaten by a score of 89 to 91. Then Paine challenged again, this time putting up $1,000, and beat Bogardus by one bird, the score b ing 80 to 79. Next he shot Bogardus for the Lorillard Badge at Stamford. Bogardus killed 39 birds to Paine's 37. Then they met at Prospect Park and Bogardus won by 84 to 81. On Dec. 21, 1875, Paine met Miles Johnson, and on March 7, 7, 1876 Dr. B Talbot at Deerfoot Park.

Paine made his first trip to Europe on May 2, 1876, with the trotting mares presented to Baron Rothschild by Mr. Belmont. He went to London to test his skill with the Englishmen at the trap. He met Capts. Patton and Shelley at Nottingham Hill. He shot Patton 30 birds each at 27yds. rise for $500 a side on June 3, 1876. They made a tie of it and the match was postponed for a few days. When it came off Paine won by three birds. He found the English birds quicker and more alert than the American.

Then he shot Capt. Shelley for $50 a side, 20 birds each, 27yds. rise, and beat him by one bird.

On Feb. 5, 1882, he beat Henry Cartier at pistol shooting in Paris. In June, 1888, he shot with F. E. Bennett of Boston, the match lasting several days, but the men had a row, and Paine declined to finish, Bennett shooting the match off alone.

Mr. Paine went to Europe in 1880, and spent six years abroad, visiting every part of Europe and taking a run to Australia. One of his most pleasant achievements was when he received the endorsement of the noted military authority, Gen. Von Kameke, German minister of war, on March 12, 1882, in the presence of the royal family and some four thousand troops, who pronounced him the most wonderful shot in the world. On Dec. 8, 1882, he was knighted and decorated by the King of Portugal at Lisbon, in the presence of the American minister, Hon. John M. Francis, and Commander Newell and his officers of the American ship-of-war Nipsic, and on Jan. 25, 1883, he received his papers and insignia. This was the reward for a private exhibition given to his Majesty by special command. After the exhibition he was the guest of the King, who joined Mr. Paine in pistol shooting. At that time what had distinguished Mr. Paine was his astonishing rapidity and accuracy with the different national arms, such as hitting an 8in. target 35 times in one minute, loading a Winchester rifle. This feat was accomplished at the palace in Lisbon. Another similar feature was performed aboard the United States ship-of-war Lancaster, at Cronstadt, in May, 1883, when loading and firing an American Hotchkiss rifle, he hit a target 32 times in one minute. With the Mauser gun, in the presence of Gen. Von Kameke and the German troops, he hit 27 times.

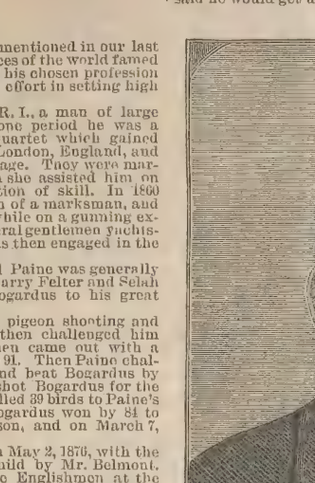
At the great London revolver trial in 1884, in the presence of representatives of the London press, he succeeded in hitting a 6in. target fifty times in succession with a Colt's army weapon. While in Paris, and at the celebrated Galleries Renette, Mr. Paine shot with such success that Gastine Renette, the expert, declared that the gallery had not seen his equal, although it had been in existence for over eighty years. On September 28, 1885, he won a great match with Herr Joseph Schulhoff, of Vienna, the most noted pistol shot in Europe. This match created profound interest in military circles on account of the reputation of the contestants. The distances were 40, 120 and 225yds. Mr. Paine won all three of the matches and nearly doubled the points of his opponent. The last target was 17.66in.—Paine hit it with a pistol 77 times in 100. The five judges in the great pistol match, including Baron Restel, Military Commander, of Vienna, presented him with a magnificent medal, inscribed: "The Master-shot of the World; from Vienna Friends." Upon his return to this country in 1886, he was fairly loaded with souvenirs when he had completed his tour, and all of them are of much value. Another incident kept in mind by Mr. Paine was the occasion of his visit to the late King of Spain, where he gave private entertainments and was received and entertained for several days.

When Carver visited Europe in 1881, Paine was introduced as "Mr. De Jongh, a Transvaal marksman," and the pair shot matches in Glasgow, Edinburgh and other cities, as gate money exhibitions. Mr. Paine possessed a beautiful outfit of arms, and his suggestions to the armory managers on the small but important points of fine marksmanship were always listened to and followed. A report of a shooting exhibition given by Capt. Paine at Detroit in 1880, just before his departure for Europe, will show what a good all-around shot he was. The report says:

"The shooting was done on the river bank back of the Park House, Hamtramck, where the sun's rays were strong and where the wind had its interest in whatever was going on. There was no seeking of shelter, no trick loaded shells or prepared powder, cracked glass balls or other illegitimate methods sometimes adopted by exhibition marksmen.

"Mr. Paine began his work by shooting with an ordinary double barrel shotgun or breechloading fowling piece, at glass balls thrown in any and every direction, and as rapidly and as far as possible. After breaking every ball thus thrown Mr Paine shot at balls thrown high in the air, and broke them first at the point where the upward flight stopped, then after they had fallen half way to the ground, and finally when within 8ft. of the ground.

"With a regulation single-barrel dueling pistol all shots were made at ten paces, the first object being a block of wood 2in. square, which he centered with the bullet and sent spinning through the air. Then he shot at a crab-apple about an inch in diameter, which was suspended on a wire hung in front of the face of the target board. Next his assistant held an ordinary lead pencil before the target board and Mr. Paine sent a bullet which broke the lead pencil in halves. A peanut not more than an inch in length was strapped in an upright position to the top of young Jaques's head, and at the first shot the nut was cut in two. An ordinary grape hanging by a thread and swinging before the target board, was next hit with a pistol ball, after which a dozen balls were put through as many postage stamps on envelopes taken from the spectators and held between the thumb and finger.



"His assistant placed an ordinary business card against the target board with the edge of the card—not more than one-sixteenth of an inch thick, toward the shooter. Then Mr. Paine, with the duelling pistol, took a long, unerring aim, and, at the first shot, hit the card on the edge, cutting it in exact halves. The feats with the duelling pistol closed with the shooting of a cork from a stone bottle without injuring the bottle or spilling its contents.

"With an army revolver Mr. Paine exhibited several very dexterous shots. His assistant, standing 30ft. away, tossed glass balls in him, and he shot them before they could hit him. Then Mr. Paine threw the balls himself, and broke them with the revolver before they could reach the ground. With a small rifle such as is used in shooting galleries Mr. Paine broke balls thrown at him and away from him.

With a Winchester rifle Mr. Paine shot double balls thrown into the air, breaking both of them, and put twelve shots into a 6in. target in eight seconds. He then performed the ricochet shot. A glass ball is placed upon the ground, and the rifleman, by shooting into the ground, under the ball, throws the globe into the air four or five feet, and before the ball falls to the ground it is broken by a second shot. Mr. Paine successfully made two ricochet shots, ending the fancy shot programme.

"About a third of a mile from the shooting ground was a red spar buoy, looking to the spectators to be about the size of a lead pencil. Wishing to see what Mr. Paine could do at long range, requests were made that he would shoot at the buoy. The marksman unhesitatingly complied, explaining first, however, that he would be obliged to guess at the elevation, as his rifle was not fixed for long range shooting. The first shot went several hundred feet beyond the buoy, the second went about 200ft. beyond the spar, and the third one alighted within 50ft. of the object. All were line shots. The fourth shot dropped alongside of and bespattered the buoy with water raised by the shot.

"Then reloading the rifle with sixteen cartridges Mr. Paine said he would get up a little squall around the buoy, and firing in

IRA PAINE.

rapid succession the sixteen shots were sent around and within from 6in. to 2ft. of the buoy, causing the water to fairly boil. Thus ended a most entertaining and surprising exhibition of what may be accomplished with firearms."

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

THE story of the 17th annual prize meeting of the National Rifle Association, held during the past week, should be written in water rather than ink Every score card bears the blur of the rain drops that fell upon it during the record-making, and both officer and marksman swam through five days of very determined work. The story of the week's doings told in daily sections is a notorious one of wading and waiting. Of course the Association is out of pocket on the week, but this is a matter to which it is now pretty well accustomed, and only praise should be said of the officers who have done so much under so long a period of very discouraging surroundings.

Sept. 10.—The meeting had a dismal, damp opening. There was no shooting in the morning, but the regular events were carried out in the afternoon, save the Judd match, which was postponed until the morrow.

There were about fifty riflemen on the ground when the hour sounded at 1:05 P. M., and the shooting started in simultaneously on half a dozen different ranges. The officers of the occasion, which will last five days, are Brig. Gen. Robbins, General Inspector of Rifle Practice of the State of New York, executive officer. Range officers—Capt. G. B. Rhodes, Seventh Regiment; Capt. W. G. Owen, Twelfth Regiment; Lieut. Christoffel, Forty-seventh Regiment; Lieut. C. H. Smith, Seventy-first Regiment. The last-named had something to do before a rifle was fired. Gen. Robbins' horse didn't like his hostler, and he viciously threw the boy in front of the club house, and stepped on his knee while he was down.

Never before in the history of the range has such a storm of wind and rain been experienced during the autumn meeting. The average velocity of the wind during the day was demonstrated to be forty-five, and at times it reached between fifty and fifty-five miles an hour. Tents went down before the onset of the blast as if they were paper houses, and shooting was rendered well nigh an impossibility.

Some really brilliant shooting was accomplished by Major Chas. H. Gaus, Inspector of Rifle Practice, Third Brigade, Albany, at 1,000yds., who won the Wimbledon Cup on a score of 107 points. The remarkable feature of Major Gaus's shooting consisted in the fact that he held "the iron" for the entire thirty shots constituting the match, not a single miss being recorded against him. This was the only finished match of the day, all the other shooting being done in continuous or re-entry matches.

Massachusetts and Pennsylvania sent good delegations, and there were quite a number from New York and New Jersey. The Massachusetts delegation is nearly the same as it has been for five years past, and it contains many of those who went to England in the spring. Col. Rockwell of the Second Brigade will be in charge. Lieut. Connelly of the Sixteenth Regiment was on hand with his men from Pennsylvania.

Sept. 11.—The riflemen seemed to feel perfectly at home in the rain to day. The events started in early in the morning, and they kept it up all day, tramping about in rubber coats with dripping guns. The continuous events went on, and the important matches were the Judd and long range military match. There was a slight influx of militia in addition to Tuesday's attendance, and the competitors in the Judd match numbered nearly fifty.

New York riflemen beat the strong shooting men of Massachusetts and Pennsylvania in this match, which was won by Sergt. Frederick A. Wells, 23d Regiment, Brooklyn, and Pvt. Peter Finnegan, 69th Regiment, won the long range military match.

It was a beastly day for shooting, the wind in its velocity and the accompanying downpour of rain fairly discounting the disagreeable and trying conditions of the day before The fact that, even under these circumstances, it required scores of "centers" or better—that is, an average of 4 points per shot, or 1 point under bullseyes—to secure a place among the twenty-six prize winners in the Judd match affords not alone a fair index of the ability of the contestants, but the advancement which has taken place in military rifle shooting.

Sept. 12.—There were no long-range matches on the programme to-day, and if there had been they wouldn't have come off, for the shower of rain was so thick all day that it was scarcely possible to distinguish a target at 900 or 1,000yds., and the bullseye couldn't have been seen with a glass. The wind wasn't as strong as the day before, but it rained three times as hard, and the range just purchased by the State of New York was half under water. Captains and privates alike were compelled to ring their sleeves. Each man got no less than a pint or water out of each sleeve of his army coat. There wasn't much temptation to shoot in the continuous matches, because if the weather is clear later in the week it will be an easy matter for some one to step in and with a score or two leave far behind the hard-earned shots of stormy weather.

The only event that was completed was the President's match for the military championship of the United States. In this match 37 competitors participated, and victory remained with a New Yorker, Capt. Macaulay, former Inspector of Rifle Practice of the 12th Regiment, winning the match at the second stage.

Sept. 13.—To-day was team day for the local teams and the State with the two division matches were disposed of. The two crack commands, the Seventh and Twenty-third, had things their own way, each winning its division match and then the Seventh taking the State prize with five teams in the field. The range took on nearly its accustomed form. The rain held off, except for intermittent showers, while the wind ceased to blow in great gusts and was only tricky and deceptive.

Sept. 14.—To-day the meeting ended with fair weather and two important matches. It ended, too, in a whirlwind of ill-feeling, and it is more than likely that executive officer Gen. Robbins, by a harsh though technically correct ruling, has driven the Pennsylvanians into a state of mind which will prevent them from coming again to Creedmoor for a long time. New York simply held tail positions in both the Inter-State and the Hilton Trophy matches, yet it was not very far in the rear, and the match was won on rather low scores considering the favorable day on which they were shot. The wrangle was on the rigid application of the time limit rule in the last few shots fired at the 600yds. distance. It has been in years gone by a rule at Creedmoor to limit the time in which matches shall be shot. This rule lately has been more honored in the breach than in the observance, but little attention being paid to it. In the Hilton match the Pennsylvania team got through first, followed closely by Massachusetts, with New York a bad third. In going from the 500 to the 600yds. ranges much time was wasted. Massachusetts was shooting at a target where the marking was particularly slow, and Pennsylvania men were taking all the time they wanted. It was noticed that New York was shooting rapidly, and Col. Rockwell, in charge of the Bay State men, remembering the old rule, inquired how much time he had left. "Just 12 minutes," said Gen. Robbins. But 12 minutes to fire 18 shots over a long distance, requiring the nicest calculation, and a sharp order was issued to the men to hurry. This did not improve the score, and the low record made by the two Bulls at 600yds. must be charged to this account. As it was, the horn blew to cease firing before F. R. Bull could finish his score, and left the Pennsylvanians short on two men. There was tremendous kicking by Pennsylvania, but as it was the Massachusetts team succeeded in winning the trophy by just two points.

Gen. Robbins explained that the limitations of the matches had been posted in the morning, allowing 1¾ hours for the 200yds. shoot in both the Inter-State and Hilton matches, the latter immediately following the former; then three hours for the 500 and 600yds. portions of the matches. The three hours would bring the match up to 5 P. M., but as eight minutes was lost in shifting targets between the 200 and 500yds. events, this much extra time was allowed after 5 o'clock. The Pennsylvania men said they knew nothing about such an arrangement, and when they got done with the 200yds. events in the morning, long before the other teams and wanted to know if there wasn't some limitation, Gen. Robbins told them there was none. They say they wanted to keep right on with the 500yds. shoot, but they were not allowed to. As a result, when the final horn was blown, at 5:11, Massachusetts had one shot and Pennsylvania two which were ruled out.

At this juncture Pennsylvania was but two points behind the "world beaters," with an almost assured certainty of winning the match. F. R. Bull, the last man of the Massachusetts team to shoot, had made 21 points in his possible 35, while Gunther and Pratt, the ruled out men of the Pennsylvania twelve, had scored 22 and 24 points respectively.

Assuming this average to be maintained, of which there was every reasonable assurance, there could be no doubt that the match would go to the Keystone marksmen. But the executive officer stood upon the strict letter of the law and the regulations, and the match terminated with a hollow victory to the credit of Massachusetts and unrepressed dissatisfaction and rebellious feeling on the part of the Pennsylvania and New York contestants.

At the close of the shooting and upon the announcement of the result the Massachusetts shooters freely expressed themselves as preferring defeat to being compelled to accept a quasi victory by virtue of a technical decision, while the Pennsylvanians were outspoken in their indignation at being ruled out of a fairly-earned winning score.

Hereafter, they declared, Pennsylvania would conduct its own rifle matches, putting up prizes to be competed for at Mount Gretna far exceeding in value those offered by the National Rifle Association, and it would be a long day before a team from the Keystone State would again be seen at Creedmoor.

The formal record of the prize winners and leading scores in the various matches stand as follows:

No. 1. Directors' Match.—200yds., open only to directors of the N. R. A., rounds 5, any military rifle, including specials:

B Walker	45554—23	Geo Shurtleff	45544—22
James Duane	55345—22		

No. 2. Judd Match.—Open to all comers, the Remington .50cal., State model, or the United States Springfield, 200yds., standing, rounds 7, entries and re-entrance $1 each, the aggregate of two scores to count for the first five prizes. 26 prizes:

F A Wells	5545544—32	Frank Connelly	5544444—30
J J Mountjoy	5455444—31	E J Cram	4553544—30
John F Klein	4444455—30	W A Stokes	4145553—30
W G Hussey	5445445—31	S S Bumstead	4444544—29

MASSACHUSETTS VS. NEW YORK.

AS the outcome of the matches shot at Creedmoor during the annual fall prize meeting of the National Rifle Association, a novel competition has been proposed by the Twenty-third Regiment of Brooklyn. In the inter-State match at 200 and 500yds. the Massachusetts twelve, firing ten shots at each distance, beat the Pennsylvanians and the New Yorkers by 10 and 20 points respectively. In the Hilton trophy match, seven shots each at 200, 500 and 600yds., the "world beaters" won by the narrow majority of 2 points over Pennsylvania's and 5 points over New York's team.

The two teams first named shot with the Springfield rifle, .45cal., equipped with the celebrated Buffington sights, which gave their members the advantage of employing the most improved arm known to the military service. The New York team, on the other hand, made its score with the Remington rifle, a .50cal. weapon, having only "open" sights, and derisively termed the "gas-pipes." The closeness of the competition was a decided disappointment to the Massachusetts marksmen, inasmuch as it opened up the crucial question of men or rifles. Under the circumstances the "world beaters" should have won by a decisive majority, and left their less-fortunately-equipped competitors far in the rear. Having failed in the accomplishment of this result, the Massachusetts men began to cast about for the reason of the narrowness of their victory. They were satisfied that they had shot the best "military gun" in the world, since the experiments of the experts of the United States Army, foremost among whom stands Capt. Greer, the ordnance officer under whose supervision Fort Hill, at the State Camp of Instruction at Peekskill-on-Hudson, was constructed, had demonstrated such to be the fact, and there could be no doubt that the ammunition employed by them, and which was specially loaded by Government employes at the Springfield Armory, could not be surpassed.

The "world beaters" were accordingly anxious to ascertain the reason for the close call to which they had been subjected, and this expressed anxiety led to the following proposition from the 23d Regiment of Brooklyn. Through Major Heyward C. Broun, captain of the rifle team of "Ours," it was proposed that an exchange of rifles should be made, and a match shot between the experts of New York and Massachusetts, either at Walnut Hill, Boston, at Creedmoor, or on some neutral range, such as Mount Gretna Park, Pennsylvania, or Sea Girt, N. J., as might be determined. the teams to consist of six, eight, ten or twelve men, as warranted by circumstances.

On behalf of the 23d Regiment Major Broun stipulated to furnish the Massachusetts men with a sufficient number of Remington rifles for team practice. Major Hinman to supply the 23d Regiment team with a corresponding number of Springfields. Equal opportunities for practice should be afforded the contestants preliminary to the deciding shoot, the only condition insisted upon by the Brooklyn men being that the Massachusetts team should be selected wholly from some one regiment of the Volunteer Militia of that State, it being held that it would be unfair to compel a New York regimental team to shoot against the pick of the shooting men of the Commonwealth, as represented by the "world beaters."

The match is likely to be made, since both sides are eager for the contest, and it is quite possible that it may be arranged to be brought about before the close of the current shooting season.

THIRD BRIGADE R. A. MEET.

ALBANY, N. Y.—The Third Brigade Rifle Association will have its 12th annual fall meeting at Rensselaerwyck Range, between Albany and Troy, on Oct. 10 and 11. The prospects are for a very nice meet, with plenty of matches open to all comers. The programme reads:

Thursday, Oct. 10, Match No. 1—Short Range Continuous Military Match, open to all comers, 200yds., 5 shots; the aggregate of the best two scores to count; off-hand, Remington rifle, State model, .50cal.

Match No. 2. Standard American Target Re-entry Match, open to all comers, 200yds., 5 shots, off-hand, any rifle.

Match No. 3. Champion Marksman's Badge Match, open to all members of the National Guard of the State of New York who have qualified at 100 and 200yds. in the Marksman's Qualification Match, or with the organization to which they belong and to members of the Third Brigade Rifle Association; 200yds. at 3d class target, 500yds. at 2d class target; 5 shots at each distance; standing and off-hand at 200yds., prone at 500yds.; Remington rifle, New York model.

Rest Match, open to all comers on standard American targets, 200yds., 5 shots; aggregate of the best three scores to count for first two prizes; best two scores to count for all below; shoulder and muzzle rest, any rifle.

Match No. 5—J. Stevens's Target Pistol Match—Open to all-comers and to pistols only; 30yds. on the standard American target reduced. Five shots, unlimited re-entries allowed. Aggregate of the best three scores to count for first place. Best two scores to count for all below. Standing and off-hand, use of one arm only allowed. Pistol not to exceed 3lbs. in weight; length of barrel not to exceed 12in., open sights; ammunition, any. Cleaning allowed between scores only.

Match No. 6.—Colt's Target Revolver Match—Open to all comers, and to revolvers only, 30yds. on the American standard target reduced. Five shots, unlimited re-entries allowed. Aggregate of the best three scores to count for first place, best two scores to count for all below, each score to be completed before counted. Standing, off-hand use of one arm only allowed. Revolver not to exceed 3lbs in weight; maximum length of barrel (exclusive of chamber) 8in., open sights; ammunition, any. Cleaning allowed between scores only.

Friday, Oct. 11.—Match No. 7.—Third Brigade, N. G. S. N. Y., open to teams of six commissioned officers or regularly enlisted soldiers from any battalion or separate company of infantry in the Third Brigade, N. G. S. N. Y., 200 and 500yds., 5 shots at each distance, standing at 200yds; any, with head to the target at 500yds., Remington rifle, New York State model.

All communications may be addressed to Buel C. Andrews, Secretary, Third Brigade Rifle Association, 14 North Pearl street, Albany, N. Y.

CHICAGO, Sept. 7.—The annual team shoot of representatives from four regiments, comprising the First Brigade of the Illinois National Guard, for the handsome medal given by the brigade staff, came off at the village of Turner to-day. Sergeant Zobel's count of 129 out of a possible 155, with a skirmish score of 10 straight bullseyes, is one that has seldom been equalled. Three teams of 10 men each, representing the First, Second and Fourth Regiments, qualified for the match and competed. The Third Regiment failed to present a full team and were not allowed to compete. The conditions of the match were: Distance 200yds., 500yds. and 600yds.; 7 shots at each distance and 10 shots at skirmishing; no sighting shots allowed. The positions used by all the contestants was what is known as the Texas grip—the men lying at full length on their backs, supporting their heads on the left arm, and resting the gun across the left knee and then firing. Below are given the names of the teams and individual scores:

BOSTON, Sept. 14.—The Massachusetts Rifle Association held its regular weekly shoot to-day at Wallnut Hill range with a large number of riflemen present. All the matches were well filled, and some good scores were made. The shooting conditions were good, with a light wind from 4 o'clock. Mr. Francis (Rabbeth) won the gold medal in the 20-shot rest match, and Mr. Clarke won the gold champion medal. Mr. Merville takes two medals in the victory medal match. Next Wednesday the trap-shooters hold their regular prize and sharpshoot. Following are the scores:

20-Shot Rest Match

J Francis	12	10	10	11	10	12	9	12	11	10	
	11	10	11	9	11	11	9	9	10	12	—210

A E Bengel	9	5	6	5	7	6	6	8	10	6—68

SYRACUSE, Sept. 17.—The second annual tournament of the Onondaga Rifle Club, Sept. 25 and 26, promises to be a very interesting event in the history of the club and profitable to the participants. A good start has been made in the donation of prizes by merchants and manufacturers, and when the list is completed it is expected to tempt not only the city shots and the sharpshooters in neighboring villages, but also some noted marksmen from further off. The matches to be shot are as follows: No. 1, Honor Target (strictly off-hand); tickets for 5 shots $1; re-entries 50 cents, unlimited; best single ticket to have first choice, second best single ticket to have second choice, and so on till the prizes have all been drawn. The 25-ring target will be used in this match which has a 12in. black. No. 2, Point Target (strictly off-hand), same terms as No. 1. A total of $50 guaranteed in ten prizes. This match will be shot on the three-point target with 12in. black, shots outside the black not counting. A special prize of $1 will be given for the first and last 3in. center in the morning and afternoon of each day; also a special prize of $2 for the most points during the tournament on this target. No. 3, Rest Match, with peep and globe sights; tickets for 7 shots $1; re-entries $1, unlimited; standard weight of guns 12lbs.; all guns over 12lbs. shall give one-half point per pound, and all guns under 12lbs. shall receive one-half point per pound. First prize, an elegant rifle telescope, value $45, given by Mogg of Marcellus, and mounting and machine work by Reynolds, of Camillus, N. Y. Sixteen prizes. No telescopes allowed in this match. Any kind of muzzle rest allowed in this match that does not confine gun or add weight to it, and all guns must be held to the shoulder. This match will be shot on the standard American rest target. Match No. 4, King's Medal Match, open only to members of the club in good standing. Tickets for 3 shots no charge, and no re-entries. This match will be shot at the 25-ring target, strictly off-hand. Contestants may select any time during the tournament to shoot for this medal. The prize will be an elegant gold medal (value $10), partly donated to the club by Mr. Brilbock. Match No. 5, rest match, with telescopes. Tickets for 7 shots $1; re-entries $1, unlimited; standard weight of guns 15lbs.; all guns over 15lbs. shall give one-half point for each pound, and all guns under 15lbs. shall receive one-half point to the pound. Five prizes, 25 per cent., 20 per cent., 15 per cent., 10 per cent., 5 per cent. Any kind of rest allowed that does not confine the rifle or add weight to it. All guns must be held to the shoulder. A special prize of $2 will be given for the most points on this target during the tournament. This match will be shot on the standard American rest target.

NEWARK, N. J.—The following officers were elected at the last meeting of the Our Own Rifle Club: President, Gus Goerk; Vice-President, Fred C. Taute; Recording Secretary, Fred C. Knothe; Financial Secretary, John Coppersmith; Treasurer, William Dreuler; Sergeant-at-Arms, William Weider; Captain, L. A. Freiensehner; Assistant Captain, John Bander; Rifle Inspector, Marcus Furth; Official Scorer, C. Miller; Executive Committee, William Dreuler, F. A. Freiensehner, Fred Taute, Fred Fetting and J. Inkeifer.

REVOLVER CARTRIDGES.—Wrightsville, Pa.—*Editor Forest and Stream:* Will some experienced revolver shot kindly give me the result of his experiments as to the best cartridge for fine target work with the revolver. I use a .38cal. Smith & Wesson and find that all standard cartridges, even the short, give too much recoil for fine shooting. I hope to get through your columns the experience and advice of others.—A. C. KRUEGER.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 17, 18, 19.—Tournament in connection with State Fair at Meriden, Conn. C. H. Burbridge, Manager.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 1, 2, 3.—Linthicum's Keystone Tournament at Baltimore, Md.—Samuel J. Fort, Ellicott City, Md., Assistant Manager.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 8, 9, 10, 11.—Fred A. Fodde's Second Annual Amateur Tournament, at St. Louis, Mo. Inanimate targets.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets, Philadelphia. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 17, 18, 19.—West End Social Gun Club Tournament, Harrisburg, Pa.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

THE ROCKY MOUNTAIN TOURNAMENT.

DENVER, Colorado.—*Editor Forest and Stream:* The first annual tournament of the Rocky Mountain Sportsmen's Association has come and gone, and has proven a great success than the most sanguine of its promoters had anticipated.

Owing to the limited extent of ground at our disposal, but one set of five traps could be used, which were set in a straight line, six men shooting in a squad, which we found much faster than was thought, and taken all around was fairly satisfactorily, especially to the poorer shots.

Although the event was advertised as for members of the association only, quite a number of celebrated shots were present, and a number of extra sweepstakes were shot for their benefit. The genial Best, of Chicago tin pigeon fame, was present, but owing to lack of time for changing traps, the events arranged for him were shot at Peoria blackbirds, which of all the clay targets was pronounced the most satisfactory. To close this report without mention of the efforts of our manager, Mr. C. B. Lane, would be an omission noticeable to all contestants, as his untiring efforts to make all things run smoothly had to be seen to be appreciated.

In the diamond badge shoot considerable interest was manifested in the scores of Mr. Westfield and "Tuff," the latter gentleman coming to the score at the last moment, and shooting alone broke 50 singles straight, tying Westfield, and from that out the result was watched with great interest, but was finally decided by "Tuff" getting only 13 of his doubles, while Westfield broke 17, winning the badge on a score of 47 out of 50.

First Day.—First event, preparatory sweep, open to all, 10 single Peorias, 4 moneys, ties div.:

Hampson 7, Dougan 8, Aiken 7, Barter 6, Hawkins 7, Stewart 8, Hewitt 7, Swen 7, Young 6, Scott 6, Levis 4, McDill 7, Stevens 9. Stevens first, Stewart second.

AL. BANDLE'S TOURNEY.

THERE ought to be a general rush Cincinnatiward next week on the part of trap shooters, and no doubt there will be. Al. Bandle and W. E. Limberg have joined forces, each being the assistant boss to the other in putting through Al. Bandle's fifth annual tournament. It opens on the 24th and closes on the 27th. There will be all sorts of targets, including live birds, and the programme reads:

Tuesday, Sept. 24.—Match 1, 9 single blue rocks, entrance $2. Match 2, 9 single Peoria blackbirds, $2. Match 3, Ed. Taylor's favorite, 10 single champion clay birds, $5. First $40, second $20, third $20, fourth $10. Match 4, Blue Island's favorite, no medals, 7 single live birds, $5. Match 5, Lieut. Geo. Alber's favorite, 10 single Ligowsky clay birds, $5. First $40, second $30, third $20, fourth $10. Match 6, 9 single standard targets, $2. Match 7, 9 single Keystone targets.

Wednesday, Sept. 25.—Match 8, 10 single champion clay birds, entrance $2. Match 9, 9 single standard targets, $2. Match 10, Jim Stice's favorite, 12 single Peoria blackbirds, $5. First $40, second $30, third $20, fourth $10. Match 11, C. W. Budd's favorite, 7 live birds, $6. First $40, second $30, third $20, fourth $10. Match 12, C. E. Verges' favorite, 12 single blue rocks, $5. First $40, second $30, third $20, fourth $10. Match 13, 10 single Keystone targets, $2. Match 14, 10 single Ligowsky clay birds, $2.

Thursday, Sept. 26.—Match 15, 10 single champion clay birds, entrance $2. Match 16, 9 single standard targets, $2. Match 17, Penrose's favorite, 12 Keystone targets, $5; first $40, second $30, third $20, fourth $10. Match 18, Frank P-P-Parmelee's favorite, 7 single live birds, $6.50; first $40, second $30, third $20, fourth $10. Match 19, Tee Kay's Joner, 10 single champion clay birds, $5; first $40, second $30, third $20, fourth $10. Match 20, 12 Peoria blackbirds, $2. Match 21, 12 single bluerock, $2s.

Friday, Sept. 27.—Match 22, 12 single targets, entrance $2. Match 23, Rolla Heikes's favorite, 12 single standard targets, $5; first $40, second $30, third $20, fourth $10. Match 24, H. McMurchy's favorite, 7 single live birds, $6.50; first $40, second $30, third $20, fourth $10. Match 25, 10 single Keystone targets, $2. Match 26, Wick, the double-bird champion's favorite, 25 pair double clay birds, 6 moneys. All purses divided into 50, 30 and 20 per cent., unless otherwise stated. For best averages in all guaranteed matches the following prizes will be awarded: First 25 per cent., second 20 per cent., third 18 per cent., fourth 15 per cent., fifth 12 per cent., sixth 10 per cent., of surplus money in guaranteed matches, donated by the management. Shooters must compete in all guaranteed matches to establish an average.

READING GUN CLUB.

THE Reading, Pa., Gun Club will hold a tournament on their grounds Oct. 15, 16, 17, 18 and 19. Both live birds and inanimate targets will be used, the former under the supervision of Miles Johnson, and the Keystones under the care of H. A. Penrose. The grounds are inclosed, located on the city line within five minutes walk of Philadelphia and Reading R.R., or terminus of street car line. A handicapping committee, consisting of W. Fred. Quimby, C. W. Budd and R. E. Irwin will classify all shooters, and see that the amateurs have a fair chance. The tournament committee is large and every arrangement will be made for the comfort and pleasure of visitors. The programme is as follows and may be obtained on application to Benj. Fleishman, Sec'y Reading Gun Club, Reading, Pa.:

First Day, Tuesday, Oct. 15.—Opening shoot, 9 A. M. First shoot, 10 single, Keystone targets; second shoot, 7 single rises, live birds, handicap; third shoot, 15 single, Keystone targets; fourth shoot, 9 single and 3 pair, Keystone targets; fifth shoot, 5 single, live birds.

Second Day, Oct. 16.—Sixth shoot, 8 single, live birds; seventh shoot 10 single, Keystone targets; eighth shoot, 5 single, Keystone targets; ninth shoot, 6 single, 2 pair double, live birds; tenth shoot, 5 pair, Keystone targets.

Third Day, Oct. 17.—Eleventh shoot, 25 Keystone targets; twelfth shoot, 7 live birds; thirteenth shoot, 5 Keystone targets; fourteenth shoot, 15 live birds; fifteenth shoot, 7 Keystone targets.

Fourth Day, Oct. 18.—Sixteenth shoot, 10 single, live birds; seventeenth shoot, 10 Keystone targets; eighteenth shoot, 5 pair, Keystone targets; nineteenth shoot, 10 single, Keystone targets; twentieth event, East against West, John L. Bruer, R. E. Irwin, J. Frank Kleinz, vs. C. W. Budd, J. R. Stice, R. B. Organ, 50 single, live birds, per man, for a purse of $300.

Fifth Day, Oct. 19.—Last and greatest event of the tournament. Twenty-first shoot, open to the world, $50 entrance, 50 birds each, Hurlingham rules, divided into 50, 30 and 20 per cent., over 12 entrances 40, 30, 20 and 10 per cent. Upon this occasion the management have arranged with the full Germania Band to give one of their most excellent musical concerts during progress of shoot. In the evening banquet and hop in honor of visiting shooters.

ST. LOUIS, Mo., Sept. 14.—The Empire Gun Club held its wind-up shoot last Wednesday afternoon. There was a good crowd present, and the shooting may be said to have been of a high grade. A very appetizing lunch was set by the club, and all present spent a most delightful time. A very good lot of birds were furnished for the affair. The only event which was brought off was a sweepstakes, each man shooting at 15 birds, and darkness preventing, all ties were divided. The score is as follows:

J E Hagerty	121211121212—13	B Evarts	120100110020— 7
A Stoll	121011201220—10	P Burg	212111112111—13

	22?2212111—10—97		1211120112— 9—88

THE SOUTH SIDE GUN CLUB of Newark, N. J., have mapped out quite a programme for the fall club shoots. On their grounds at Newark regular shoots will be held during October, November and December. On the first and second Saturday of each month a sweepstakes of 25 bluerocks, 50c. entry, will be shot, each contestant being obliged to shoot in at least four contests to qualify, and his average in the four highest scores to determine the class in which he shall in future be placed. The third Saturday of each month will include a match at 10 single bats for merchandise prizes. The fourth Saturdays will be devoted to open sweepstake shooting, and on the fifth Saturday in November the Essex County Gun Association cup will be contested for.

FLORENCE, Mass., Sept. 10.—Norwood Gun Club. Match at 25 kingbirds:

T T Cartwright	1001110111110111111111111—21
F W Twiss	1000111101110110011111111—18
L F Gaylor	0101110001011010011111111—15
Bay State	0110110100001110000111100—12

J R Price.....2201110111111012211001121—20

Ten-bird sweep, same day, $5:

Ashley	1211111123—10	Mussey	1210111121— 9
Lowe	2221101101— 8	Foss	0121111111— 9
Wadsworth	0112221211— 9	Deiter	0211112212— 9
Price	1112212121—10	Hamline	0112121201— 8
Hutch	1101211211— 9	Watson	1211112102— 9

Price and Ashley divided first, Lowe and Hamline divided third, second money was settled in the next shoot, Watson and Foss divide, see score below. Five-bird sweep, $2:

Wadsworth	12121—5	Watson	11111—5
Hutch	11111—5	Ashley	21111—5
Mussey	12102—4	Hamline	10111—4
Foss	11111—5	Price	12211—5
Deiter	12211—5	Stevens	20100—2

Mussey and Hamline divide second money, Foss, Watson, Ashley and Price divide first money.—RAVELRIGG.

MIDDLETOWN, Pa., Sept. 14.—There was a sweepstakes pigeon-shooting match held in Frey's Park to-day, but owing to the threatening weather it was not attended as well as it might have been under other circumstances. The rain fell moderately, with a strong, steady wind blowing directly away from the traps, which resulted in a good many lost birds. The entrance fee was $5, divided into three prizes, 50, 30 and 20 per cent. Old Long Island rules:

H Baugh	1001010010—4	T Dalson	0111100110—6
A Molter	1111001111—8	A Wolf	0000011011—3
M Sheesley	0101100111—6	Corcoran	0001100111—5
C Keogh	0111111100—7	R Shearer	0101111111—7
G Witman	0101000111—5	Brelsford	1101101000—5
W Helper	1111111010—9	Cassel	1111011111—9
M Sullivan	1001111110—7		

EATON, N. Y., Sept. 14.—Kingbirds, 15 singles and 6 pairs, 5 traps, a-sociation rules. First team:

Richardson	1001110011110111	10 10 11 11 11 11—20
Put	1110101.0111110	10 10 11 10 11 11—20

HARRISBURG, Pa., Sept. 14.—The regular monthly shoot of the West End Social Gun Club came off on Thursday at the stock yard grounds, and owing to the very inclement weather the boys did not turn out very strong. Some of the enthusiasts, however, went out and certainly made the feathers fly, as the scores will show. The club is in a very prosperous condition, and will hold a three days' tournament at live birds and inanimate targets, Oct. 17, 18 and 19. There will be a full programme and guaranteed prizes Match at live pigeons, King's ground trap, 21yds. rise, 80yds. bounds, old Long Island rules, gold medal:

M., 12:10, 12:30, 1:40, 2:30, 3:20 P. M. If the weather proves stormy the shoot will take place the next fair day.

WELLINGTON, Mass., Sept. 14.—There was a good attendance at the grounds of the Wellington Club to-day, and several good scores were made. In the silver pitcher match, at 8 clay-pigeons and 7 bluerocks Field won with a clean score of 15. The other scores in the match were: Bond 14, Warren 13. Chase 12, Bradstreet and Perry 11, Cowee, Sanborn, Dill and Lee 10, Webster 8. In the merchandise badge match, at 15 clay-pigeons, Warren was the winner with a clean score. The other scores were: Sanborn 14, Lee 13, Cowee, Chase and Perry 12, Snow and Field 11, Bond and Porter 10, Stone 9. The winners in the sweepstakes follow: First event at 5 pairs bluerocks: Chase 7, Melcher 6. Second event at 6 bluerocks: Lee 5, Perry 4, Cowee 3. Third event at 5 clay-pigeons: Cowee, Warren, Field, Sanborn and Perry 5, Smith, Lee and Stone 4, Bond and Bradstreet 3, Dill and Melcher 2. Fourth event at 5 bluerocks: Bond, Sanborn and Chase 4, Stone, Field, Lee and Melcher 3, Bradstreet and Warren 2. Fifth event at 6 bluerocks: Bond and Lee 6, Smith and Field 5, Stone, Warren and Sanborn 4, Perry and Chase 3. Sixth event at 5 bluerocks, Cowee and Perry 5, Choate and Warren 4, Field and Sanborn 3, Bradstreet 2. Seventh event at 8 clay-pigeons: Field and Dill 8, Stone and Perry 7, Chase and Bond 6, Bradstreet, Sanborn, Melcher and Smith 5. Eighth event at 7 bluerocks: Field and Sanborn 7, Bond and Bradstreet 8, Warren, Chase, Dill and Smith 5, Perry and Melcher 4. Ninth event at 10 bluerocks: Stone, Bond, Perry and Lee 9, Sanborn and Chase 8, Porter, Field and Webster 7, Nichols 6.

BOSTON, Sept. 12.—The weekly shoot of the Jamaica Plain Gun Club was held at Clarendon Hills, Jamaica Plain, this afternoon. Following are the winners of the different events: 6 clays, Herbert and Ensign, Woodruff and Cowing, Woodruff; 6 bluerocks, Herbert; 6 blackbirds, Herbert and Woodruff, Woodruff; 10 clays, for the Rounds cup, Woodruff first, breaking nine out ten, Ensign second; 10 bluerocks, for the Rounds cup, Woodruff first, getting nine out of ten, Herbert second, Woodruff wins the cup; 6 clays, Woodruff and Barrett; 6 blackbirds, Barrett; 6 clays, Woodruff; 10 clays, for badge match, Shaw; 3 pair clays, Shaw.

BUDD VS. KLEINZ.—J. F. Kleinz is out with a card telling his neighbors in Philadelphia that they have a chance to see a good match. He says: "The people in this vicinity will be able to witness a contest, no doubt worth looking at, at the Gloucester base ball grounds, on Saturday, Oct. 5, between the holder of the American field championship, Capt. C. W. Budd, of Des Moines, Ia., and myself, at 100 live pigeons, 5 traps, Hurlingham rules, for a purse of $500. Budd defeated me at Chicago, Ill., 98 to 94, and I expect either to give him a good snaking up or a defeat. He is considered the champion of the Western people, and contemplates leaving for England with R. Borgan, his backer, of Chicago, Ill., to give the people on the other side a chance to meet him at the score this fall."

BUFFALO, Sept. 12.—Dr. Bartlett concluded successfully his attempt to beat Dr. Carver's record of breaking 60,000 glass balls in six days. Dr. Bartlett began on Saturday, at 6:30 A. M., and continued 22 hours a day. On the first day he broke 12,020, Sunday 10,017, Monday 10,105, Tuesday 10,591, Wednesday 9,605, Thursday 11,675. He finished at 5:30 P. M., to-day, with a total of 64,017. On the third day he was timed, and he broke 500 balls in 17 minutes, and a consecutive 500 in 28 minutes. Then he made a spurt to break the record, and he broke 500 in 14 minutes, breaking Oakley's record of 100 in 3 minutes 30 seconds. Dr. Bartlett also achieved the phenomenal record of breaking 20 balls in 8 seconds.

TORONTO, Sept. 14.—The Stanley Gun Club members shot for the thirteenth time to-day for the handsome gold watch presented to the club by its president. Quite a handful assembled, and the shooting all through was fair. Mr. Emond topped the list with 22 out of 25. This is his second win. Already twelve other members have their monogram engraved on its case. The shoot was on McDowall & Co.'s grounds at 5 traps. Several sweeps at singles and doubles followed.

BALTIMORE.—The shooters in and around Baltimore, Md., are preparing for a grand three days' tournament, to take place on Oct. 1, 2 and 3. Keystone traps and targets will be used, and events of all kinds are arranged. Address Samuel J. Frost, Assistant Manager, Ellicott City, Md.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE STORM ON THE COAST.

THE yacht clubs and owners here suffered severely from the storm of the past week, the greatest sufferers being the owners of small yachts. The larger craft have ridden out the storm in the principal harbors between Cape Ann and Cape May, but the small craft have been badly damaged. The tides on Staten Island have been higher by a foot than at any time in a dozen years or more. At Harlem, Port Morris, Cow Bay, Communipaw, and many other places yachts have been carried away and wrecked. At Whitestone the sloop Saracen, Mr. G. R. Burrows, Atlantic Y. C., went ashore, but was hauled off with some damage. On Thursday the sloop Defiance, N. J. Y. C., owned by Mr. Letts and Richard Bartley, went ashore at the Atlantic Highlands, being a total loss. Two sloops were thrown ashore in Lloyd's Harbor. On Monday as the cutter Kathleen was coming from Larchmont to Bay Ridge with Mr. Whitlock and a man and boy on board, she picked up a young man from a capsized catboat, where he had clung for three hours. The catboat, Gussie, was 25ft. l.w.l., with a 35ft. mast, and in sailing her alone in the storm she capsized off Execution. The heavy sea made it a difficult matter to rescue the man, Mr Whitlock finally rowing off in his yawl for him. At Atlantic Basin the schooners Marguerite and Montauk were in collision, also the sloops Ariadne and Annie. The regatta of the Columbia Y. C. set for Sept. 14, was indefinitely postponed.

A CRUISE IN A 15FT. BOAT.

Editor Forest and Stream:

The Anderson is a cat-rigged open boat, 7ft. beam, 3iin draft, ballasted with 600lbs. of iron low down amidships under the floor. W. J. Harland and W. W. Ashcourst wrote me from Cape May, and on their return left me the inclosed outline of their trip. The average age of these gentlemen scarcely reaches 21 years. They had never cruised in Delaware Bay before, but are fond of sailing and handle the stick admirably, with no lack of grit and pluck, as their log attests. You will probably surmise by their notes that they read the FOREST AND STREAM as to small cruisers, which, no doubt, suggested this trip. Taking into consideration the unsettled state of the weather, etc., the cruise was a remarkable one, inasmuch as not even a rope yarn was broken.

R. G. WILKINS

We started from Cooper's Point Wednesday, Aug. 7, at 12 M., and nothing of importance having occurred all day anchored off Deep Water Point at 7 P. M., where some people from Wilmington were camping on shore; weighed anchor at 10 P. M. and continued our course until we reached Bay Side at 11 A. M. Thursday, where we mailed letters. Leaving Bay Side immediately, we continued our voyage without accident or event of any kind until 11 P. M., when we struck a shoal near shore off Davis Creek; the tide was nearly out, so soon after the turn we were again afloat, but the wind, which had hitherto been always light and fair, was now becoming so high that we decided it was best to anchor a little further off shore and wait for daylight to continue our trip.

Early the next morning we started, and in a short time made Fishing Creek, where we ran in to wait for the tide; the crew of the sloop yacht Restless, formerly Sunbeam, first class sloop, Quaker City Y. C., three Philadelphians, very kindly offered to tow us down to the Cape in the morning from their anchorage off Fishing Creek, as they expected to rejoin the well-known steam yacht Restless, owned by Mr. Singerly, proprietor of the Philadelphia *Record*, awaiting their return off Pond Creek at the steamboat landing on Cape May Point. We left our anchorage at the time agreed upon, but for some reason or other the Restless could not get off, and we were obliged to sail down alone, making Pond Creek just in time to get in with the falling tide, where we were given a warm welcome and partook of the hospitality of Capt. James Murray of the keel sloop Razzle-Dazzle and Capt. Charles Sims of the sloop Dolphin. Saturday we spent most of the time in Cape May City, returning to the Anderson by the last train. Sunday was passed very pleasantly aboard of the two sloops in Pond Creek, and with the evening half flood tide we left our anchorage, and having rounded the Cape, turned and started up the bay, hoping to make Egg Island Light, for which we made directly, steering by compass. The weather had promised to be fine, but before we had gone half the distance, about twenty miles, the wind began to rise; the tides carried us further and further out into the bay, in what direction we had no means of ascertaining. The lights in sight were those of Cape May, Cross Ledge, Brandywine Shoal and Egg Island Point; these did not help us, as we could not determine which was which; we did not know whether one of the lights toward the north was at East Point (Maurice River) or at Egg Island Point; whether another toward the northwest was Cross Ledge or Egg Island Light; whether another toward the south was Henlopen or Brandywine Shoal. The wind was rising from N. N. W., making it impossible to reach land nearer than about twenty miles; the Anderson carried a double reef quite well and did not ship any water; we kept the lead going and when on the extreme edge of the oyster region found about 3½ fathoms and dropped anchor; to steady the boat we were compelled to keep the centerboard down and sit on the bottom. The wind was now blowing a stiff breeze and the waves were about 5ft. high. We expected every moment to be swamped, but the Anderson during the whole night never shipped over half a bucketful of water; we had the rudder unshipped and everything on board made fast and taut; we thus passed the night. A drag was improvised in case the boat did not hold on.

Next day the wind veered to S. and S. W. and we made for Egg Island Point. We sailed on until we reached Pennsgrove at 6 P. M. and made fast to the Arcadne of Portland; in half an hour the tide was in our favor and we made up the river to Cherry Island flats where we anchored at 2 A.M. Tuesday. At 6 A.M. against tide, we started up the river and continued until we reached Philadelphia at 3 P.M.

On the way up the wind, sometimes strong, sometimes light, was in our favor; we encountered a squall off Red Bank but continued our course, merely dropping our peak. There was very little rain during the whole trip and the weather on the whole was very good; we took on water at Deep Water Point and Cape May Point, in both going and coming, easily making the distance, 103 miles, in a day and a half. Every one assured us that ours was the smallest craft that had ever ventured so far down the bay; in every way the Anderson was worthy of praise, sailing well in all kinds of winds, riding beautifully over the waves in storms and behaving in every way as well as could be desired.

IS MINERVA A RACING MACHINE?

"'THE Minerva is simply a racing machine,' said Mr. Burgess to the writer a few days ago. There was no mistaking his language, and he evidently meant what he said. Such a criticism, coming from the source it did, must necessarily have great weight with yachtsmen, and the statement should be carefully and impartially weighed. In making such a criticism the well-known designer puts his own boats to the test, and they are to be judged alongside the Minerva. A racing machine,' as commonly understood among yachtsmen, is simply a shell with no inside fittings, no living accommodations—in fact, a boat in which every comfort is given up for racing. In the Minerva one finds every comfort for cruising. She has proved her seaworthiness in making a trip across the ocean in fast time, encountering several gales on the way. She has a good after stateroom and cabin, wash-basin, water tanks under the cabin floor, and one of the best forecastles in any of the forties. Her deck plan is all that could be desired. She is easier handled, has lighter rig, and would outlive the Verena, Chiquita or Nymph in a hard time. Take the Tomahawk, one of the costliest of Mr. Burgess's boats, and compare her with the Minerva. She has practically no inside fittings, no wash-basin or water closet, no ice chest and no inside ceiling; in other words, she is simply a shell with big spars and sails. Her spar and sail plan are too large for cruising purposes, and under reefed sails she would not be as handy as the Minerva. Under her working sails, and in a passage across the water, the Minerva would make the best weather.

"The Scotch cutter has taught us a valuable lesson, and one which comes at the right time. American designers have gone to boats of great power, hard forms to drive, with great sail plans. The races of the Minerva have shown that the brute boat does not move the fastest. Where flukes did not control, but where the races were sailed under even conditions of wind and handling, the Liris and Kathleen did not suffer when compared with the Tomahawk, Marquita, or Saracen. One thing must be admitted, and that is, the handling of our forties, with the exception of the Pappoose, has not been first-class. The regular skippers were not up, consequently all the speed was not gotten out of our boats. Mr. William Gardiner, in a recent conversation, said: 'If I were to design another forty, I would not design her with so much beam as the Liris. I could make a faster boat with less beam and sail.' This clearly indicates that Mr. Gardiner believes that the Minerva type of boat is the faster. Already there is talk of another forty coming over, built from the lines of William Fife, Jr. It is known that an American yachtsman, who has been visiting abroad, has called on Mr. Fife, and had quite a talk with him, and the designer of the Minerva gave assurances that he could design and build a boat to outsail the Minerva."—*Boston Herald.*

GREAT SOUTH BAY Y. C.—On Sept. 14 a race for baymen and oystermen was held off Islip under the auspices of the Great South Bay Y. C. The wind was fresh from the east, with fog. The times were:

CLASS 1—SLOOPS 25FT. AND OVER.

	Start.	Elapsed.	Corrected.
R. Esterbrook	12 08 01½	2 59 32	2 52 08
Pathfinder	12 07 47	3 07 35½	2 59 37½
Jesse Johnson	12 07 57¾	3 05 57½	3 05 57½
Two Sisters	12 06 00	3 19 21	3 15 45
Ahda Wood	12 06 29	3 29 56	3 23 52
Marion	12 09 51½	Did not finish.	

CLASS 2—CATBOATS 25FT. AND OVER.

Chas. F. Dayton	12 06 10¼	2 37 34½	2 37 34½
Samuel C. Wicks	12 06 28¾	2 41 43½	2 37 57½
John H. Vail	12 06 45	2 43 45½	2 38 17
Mystery	12 07 59	2 44 55½	2 39 48½
Gussie K	12 08 47	3 54 50	2 45 49
Maggie	12 06 40½	2 48 45¾	2 45 31¾
Bernicea O. Dell	12 06 23¾	2 53 45½	2 45 59¾
Halcyon	12 06 10½	2 58 49½	2 53 29½
Marion Herbert	12 08 35½	Did not finish.	
Carrie Potter	12 07 19	Did not finish.	

The judges were Arthur Deming, superintendent of the life-saving stations on Long Island; Chauncey F. Low, John H. Vail, Bradish Johnson, Jr., and H. I. Nichols.

PROVIDENCE CORINTHIAN Y. C.—The first regatta of the Providence Corinthian Y. C. was sailed on Sept. 9 in a strong breeze, the courses being: For classes 2 and 3—Start between judges' boat and signal, to and around striped spar buoy north of Providence Point, leaving same on port, and to and around stake-boat off Rumstick, leaving same on port, and return to starting point, two rounds, 12 miles. Class 4—Around Gaspee buoy, 10 miles. The times were:

SECOND CLASS.

	Length.	Elapsed.	Corrected.
Kelpie	30.10	2 55 35	2 55 35
Arthur Franklin	27.11	3 09 25	3 04 17
Xenia	23.11	3 22 14	3 08 33
Rhodia	29.03	2 51 49	2 49 07
Frolic		Disabled.	

THIRD CLASS.

Afghan	20.00	2 53 49	2 52 35
Maud	22.06	2 57 18	2 55 26
Victor	22.03	3 00 11	2 58 19
Ripple	20.00	3 29 16	3 18 50

Nemo		2 12 35	2 12 35
Mabel		Did not finish.	

Rhodia was disqualified for not turning buoys properly.

CLEVELAND Y. C. fall regatta, Sept. 10:

FIRST CLASS.

	Elapsed.	Corrected.
Alert, C. G. White	3 10 28	3 06 57
Sylvia, Edwin H. Clark	3 16 03	3 16 03
Restless, Frank Overbeke	3 16 40	3 16 33
Ida, C. W. Kelly	3 27 13	3 19 13
Rover, H. Richter	3 43 54	3 34 52

SECOND CLASS.

Unique, Ernest Radder	3 46 41	3 31 05
Arab, Benj. Lyman	3 52 41	3 37 08
Perrel, James Martin	4 03 38	3 51 05
Bessie, W. C. Sly	Not timed.	
Lady Ida, F. Smead	Not timed.	
Eole, Al. McEachrew	Disabled.	

Wind, northeast, fresh and steady. Judges, Geo. W. Gardner and H. D. Coffinberry.

CORINTHIAN Y. C., MARBLEHEAD, SEPT. 14.—The final race of the season, the third championship, was sailed on Sept. 14 in a strong breeze and rough sea, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Saracen, W. P. Fowle	38.03	2 21 15	2 20 01
Migaon, H. Babson		Withdrew.	

FOURTH CLASS.

Edith, Fred Wood	20.05	1 40 00	1 28 32
Wanda, Royal Robbins	21.07	1 46 40	1 36 15

FIFTH CLASS.

Lassie, W. S. Eaton, Jr.	25.02	1 40 45	1 33 18
Kathleen, R. S. Peabody	25.07	1 41 15	1 33 56
Mosca, C. H. W. Foster	25.03	1 42 40	1 35 06
Wraith, A. P. Benson	23.03	1 46 00	1 36 57

SIXTH CLASS.

Josephine, D. H. Follett	21.05	1 47 24	1 36 50
Nonpareil, W. O. Taylor	18.08	1 51 30	1 38 18
Dolphin, R. C. Robbins	18.00	1 00 10	1 46 15

Mignon was badly beaten, and did not finish. The championship in fourth class was won by Myrtle, and in the fifth by Mosca, in former races. In these classes Lassie and Edith each received cash prizes. In sixth class this race gives championship to Josephine, and Nonpareil takes second prize. The judges were Vice-Com. I. S. Palmer and W. I. Palmer.

MINERVA AT MARBLEHEAD.—The circumstances attending the first day's racing for the Weld cup were as follows: the cup was sailed for under the E. Y. C. rules, which require a finish before sunset in order to make a race. The finish was made very close to sunset, and before deciding whether a race had been made the judges wrote to Harvard Observatory to learn the exact time. The reply was that sunset at Marblehead occurred at 6:28:-56. As Minerva had finished at 6:30:37, or 1m. 41s. later, the committee could do nothing but declare the race a failure. The rule in itself is bad and illogical, and cannot be changed too soon. If a time limit is necessary it should be made in some other way than by sunset, as there is often safe sailing for hours after, and no account is taken of the time of start.

"WHO WON."—Since it was first issued in 1887, this useful book has grown from a compact record of races sailed into the most complete list and reference book that has yet been prepared for yachtsmen. The care and labor expended in order to secure accuracy in the first volume have been heartily appreciated by yacht-men, and a demand was made for a more extended work. This has been very successfully met in the edition of 1889, as the book contains all that could be asked for within the compass of one convenient volume. The book is now in three parts—the first historical, a record of yachting history at home and abroad; the second includes the racing record of 1888; while the third includes the most complete list of American owners, yachts and flags yet published. The list of owners and yachts include 3,400 names, while there are 200 private flags, in addition to club and national colors. The flags are arranged according to the latest method, the grouping being by colors, while a reference number tells where to find the yacht in the register. The latter is very compact, but gives the leading points, such as dimensions, designer, etc. A great deal of information on such subjects as pilotage, navigation, measurement rules and allowance tables, tides, etc., is scattered through the book. This year the Larchmont Y. C. received special attention, there being a concise history of the club races, with a fine portrait of Com. Lowrey. Two special features, devised by the author, Mr. James C. Summers, are a compact tide table for the Atlantic coast, and a silicate slate record for timing any race. Though containing over 400 pages, the book is small enough to be carried in the pocket. It is very well printed and handsomely bound in celluloid covers.

SCULLING WITH THE RUDDER.—The Monatiquot Y. C., at meeting lately held, passed the following resolutions, repudiating the recent decision of the regatta committee: "*Resolved*, That we, the members of the Monatiquot Y. C., declare that we do not countenance so-called 'sculling' with the rudder in any race under the auspices of this club. *Resolved*, That the decision in the Erin protest against sculling on Moondyne in a recent race is against our rules as printed in our club book and contrary to sportsmanlike racing, and is not approved by the club." By this action the club effectually clears itself in the matter, and leaves the blame where it belongs, on the committee.

ATLANTIC Y. C.—At the meeting on Sept. 9 the winners of the average record for runs on the annual cruise were announced as follows: Fearless, Fanny, Athlon, Anaconda, Concord, Chispa and Arab. The winner in Class 7 is not yet decided. Azalea has challenged for the pennant in her class, and Arab in hers.

WEST INDIA HURRICANE.—The great storm which has raged for over a week along the Atlantic coast calls attention to Mr. Hayden's interesting work on "West India Hurricanes and the March Blizzard," lately published by the Forest and Stream Publishing Company. The present storm is very similar to the famous blizzard in its origin and progress, and the laws which govern its movements are clearly laid down in Mr. Hayden's valuable book.

NEW YORK Y. C. NEWPORT RACES.—In consequence of the severe storm none of the yachts are ready for the races at Newport, and the first race was postponed from Tuesday until to-day.

NAHLI AND TATTLER.—A race was sailed on Sept. 7 off Sand's Point, Nahli winning by 1m. 24s., the elapsed time being 3h. 31m.

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS.....} Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON }
Vice-Com. *Rear-Com.* *Purser.*
Central Div.,W. K. Huntington.E. W. Masten.....T. H. Strykor, Rome, N. Y.
Atlantic Div,W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 156 Jerolemon st., Brooklyn.
N'thern Div..Robert Tyson.....S.S. Robinson.....Colin Fraser, Toronto.
Eastern Div..H. E. Rice, M. D....Maxton Holmes.....H. D Marsh, Springfield, Mass.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, Chicago, Ill

SNIPS FROM SNAPS AT THE '89 MEET.

"Stave Island is a splendid spot
To fry the ham or boil the pot,
To break your bones or bark your shins
A tumbling about it outs and ins."

SO went the Ubiques' chorus, and excepting in one particular they fall far short of the truth. I never, since I first began to boil a billy, had so much trouble in getting water into the proper state to make tea with as I had at Stave Island, and of all camps I ever camped at, the Stave Island camp was provided with the smallest supply of natural firewood. With all due deference to Grindstone, which I know nothing of, I think that the head of Stave Island was a most charming camp ground. It was so broken and diversified with rocky ridges, hollow knolls and thickets, the shores fell away into so many charming bays, and the Norway pines, oaks and maples gave such relief to the white tents and bright flags that the little canvas city was beautiful beyond compare. The little islands in front of the camp gave a well-sheltered canoe harbor. The courses were all that could be desired, both from the racers' and spectators' point of view, and headquarters was both the natural, social and official headquarters of the camp. The dock was certainly much too far away from the main camp, and the arrival of the boat was not half the event it should have been, but this seems to be a chronic complaint at an A. C. A. camp, and must be borne with. The mess was a fairly good one, it was far better than that at Lake George, and not quite what it should have been. The truth is that for the past two years the A. C. A. camp fires have usurped their functions. What we want when we go to camp is not an imitation of a third-rate railway hotel bill of fare, we want good wholesome camp food, plenty of it, and good attendance. So much for the camp site and the camp arrangements, with one exception, and that exception deserves more attention than all the others.

A two weeks' camp is somewhat of a permanent affair, and tent floors are in the cases of seventy-five per cent. of the campers and fifty per cent. of the camp sites, a necessity. Floats or docks, or skids, to beach the canoes upon, are also a prime necessity, and the trouble about both floors and docks is that they are all wanted at once. At Long Island last year the chairman of the camp site committee nearly killed himself trying to be at two places at once, and although the docks were all that could be desired, it was at the expense of an A. C. A. man's holiday. This year an experienced carpenter with a good staff of assistants had charge of the whole affair, lumber was plentiful and very cheap, and the result was that never before was the A. C. A. as well provided with floors and docks, and never before did these conveniences cost so little. Jackman was not only the carpenter, he was the flagpole raiser, fire builder and general utility man of the camp. He was an institution, and if he could be made an annual institution it would be a good thing.

I spent the first night after I left the meet in a lonely camp on the banks of the St. Lawrence, and as I lay at full length in the cockpit of the Inez—proving myself a crank of the worst order by preferring to make my bed in my boat, in fifteen minutes, rather than to spend hours in trying to find a level spot of soft ground on which to pitch a tent—with the roar of a great rapid in my ears and my favorite constellation, the Great Bear, glittering in a clear sky above me, I tried to generalize and analyze both an A. C. A. meet and the pleasure that it gave me. It was then, and only then, that I realized to the fullest extent, that behind the mere material things that make up an A. C. A. camp, the free life in the open air, the deep sleep, the camp-fires and their jolliness, the racing and its excitement, the never ending interest in the talk about rigs, kits and canoes—there lay a subtler, deeper, more potent influence, something almost intangible in its essence, and yet all-powerful, which for want of a better name may be called the A. C. A. spirit; and that it is this spirit that gives life and being to the dry bones, and very old jokes of the camp. It is this spirit, which is more than the mere spirit of comradeship, that makes every man in camp your friend, it is more than the spirit of fair play, more even than that divine essence that descends from nature upon those that love her, that lifts us up out of ourselves in camp, that hangs between us and the worry, the striving, the self-consciousness of our every day life, a great veil, and makes us all desire to give and to get pleasure, that gives individuality to the camp, and makes it unique. As long as this spirit exists and makes itself felt in the A. C. A., so long will it go on and prosper, in spite of the racing mania, the cup hunter, the hippodromist and the squaw man, for it is the spirit of canoeing, made manifest not in the lonely cruise, but in the crowded meet. It is because of this intangible influence that certain features of this year's meet, which under any other conditions but those which prevail at an A. C. A. camp would be entirely pleasant, have not added, but have rather detracted from its success as a reminiscence. What an A. C. A. meet would be without a Squaw Point—away with your Paradise Places, I'll have none of them—I do not know, nor do I care to think of such a contingency; but I am sure that there were far too many squaws over the ridge at Stave Island. With the exception of the regatta programme, nothing could be done in camp without more attention being paid to the necessities of the squaws than the wishes of the canoeists. The cruises had to be converted into picnics for their benefit, and although they were very pleasant affairs, I am afraid the meet lost by the change. Then, too, the attractions of Squaw Point broke up the homogeneousness of the camp. If a man was wanted for anything or everything, from the description of a canoe fitting to the singing of a song, he was, unless the ladies were all in the main camp, moderately certain to be "over at Squaw Point," that is, unless he was a "canoe's husband." The squaws did not, however, spoil the racing. Although if one or two eager racing men had sailed more and spent less time in squiring fair dames it would have been better for them, from a racing point of view. The Jabber says that the Western men have sworn an oath together "to keep it with an equal mind" to leave their squaws at home next year, and have a canoe meet. The A. C. A. does not need to proceed to this ungallant extreme; but there is a danger in the increased popularity of the camp's annex, and it is all the greater because there are not many who are as boorish as I am, and, therefore, the number who make bold to speak out is but small.

One of the most interesting and most important features of the meet was the strength of the cruising contingent, and the flavor which it gave to the camp, its doings and sayings. There were at least four big club messes, the Toronto, Unique, Brockville and Lindsay messes, and a number of men either wholly or partially grubbed themselves. Besides the Brooklyn cruising six, and the Toronto cruising four, half a dozen parties cruised to the camp, at least as many cruised from it, and there was plenty of cruising talk, and a good deal of interest manifested in the cruising events. The official cruises were picnics rather than cruises, and the unsettled weather interfered sadly with the efforts and intentions of the cruising committee, but the first week would have been a somewhat monotonous one had it not been for these picnics, and I think that the value of a cruising committee as a permanent part of the machinery of the association has been proved. The cruising race brought out quite a number of entries, and but four starters, but it was a good race, from start to finish, and it was won by a fine specimen of a cruising boat. Of the three canoes which finished in the cruising race, one was the winner of the record, another the winner of the combined, the third was second in the Orillia cup race, not a bad showing for the "disgruntled cruisers."

The kit competition, which, although advertised as such, was not down on the official programme, and was put through because of the demand for it on the part of the cruising contingent, brought out ten or a dozen entries, and if it was not a success, it was because the regatta committee muffed the whole affair, not because of a scarcity of material for a contest, or of a lack of interest therein. I do not wish to say anything that will in any way hurt the feelings of the individual members of a regatta committee which carried through the regatta programme in a manner which, taking account the rather difficult conditions under which they had to work, was admirable, but that I must say, if the kit competition is to be as successful a feature of the A. C. A. meet as it should be, and as it has been of the Northern Division meets, it must be conducted in a very different manner from that in which it was in '89. In the first place, the two members of the regatta committee who acted as judges did not examine the kits until the last moment, after some of the competitors had left camp, and their decision was not officially given until they were on their way to the boat that was to carry them away from the camp. There was, therefore, no opportunity given to the camp to examine the successful kit, and disgruntled competitors had no opportunity to protest against their judges' decision. As a natural consequence not a few competitors left the camp, feeling that they had been treated, and the camp itself received no benefit whatever from the event. Of course the committee can hardly be blamed for not doing four things at one time, but if they had not time, either as individuals or as a committee, to examine the kits, at least a day before the annual meeting, they certainly had the power to appoint a jury to do the work for them.

In itself the dilatory action of the committee was enough to ruin the competition, but in my opinion the grounds upon which they elected to try kit against kit, were of such a nature as to make the whole affair a farce. They decided to give the prize to the man having the most compact nest of cooking tools, and it cannot be denied that they gave the prize to the man with the most complete box of tricks, but in what measure does a "box of tricks" constitute kit? What they practically did was to give the prize to the tinsmith, not the canoeist, and I have yet to learn that it is possible for a man to cruise successfully with the assistance of never so clever a tinsmith. As far as my limited experience goes, a man has to do several other things, such as sleep and rest, as well as cook, on a cruise, and in particular he has to carry a sufficient quantity of suitable food to cook, and of clothing to sleep and work in. Some men—I know several of them—can do all their cooking with a tin plate and a granite ware cup, and others—I myself am one of this class—can, with the kind assistance of a trying-pan and a couple of tin pails, satisfy the hunger of from one to a dozen, but the man who can cook without carrying food, and sleep without tent and blankets, I have no knowledge of. The great difficulty of the cruising canoeist is not in carrying cooking utensils but of clothing and food, and the problem he has to work out is how to do this in such a way as to preserve his outfit from damage in case of an upset, and to combine handiness with due efficiency. As a matter of fact the prize winner of the kit competition of '89 had no facilities for storing food at all, and to give him the prize the committee passed over such complete and practical cruising outfits as those of ex-Commodore Wilkin, Scott, of Ottawa, and the Toronto cruisers' kits, which included every thing, cooking utensils, tent, bedding and its storage, food and its storage.

This is not the way to encourage cruisers to give the meet the benefit of their experience or to induce them to bring their kits to camp for the enlightenment thereof. I was myself a competitor in this event, and I have been sufficiently disgruntled to speak with feeling on this subject, not because I was not given the flag, of course not, but in the interest of the right. I did not want the prize—who ever heard of a disgruntled competitor that did?—but I did and do want to see the prize given to the man who has worked on his kit, not to the man who has the best tinsmith.

If the kit competition is to become an annual feature of the meet, and the number of entries this year proves that it could be made as interesting as it is desirable, it should, I think, be conducted not by the overworked regatta committe, but by the cruising committee, who at present have nothing to do during the second week of a meet; and it should be carried on under fixed rules as carefully framed and as rigidly adhered to as those which govern sailing races. The examination of the kits should take place at such a time as will permit of the exhibition of the winning kit at headquarters for at least a couple of days, and the prize should be a suitable one. It might not be a bad idea to put the cruising race into the hands of the cruising committee also, and to make it a part of one of the meet cruises. The experience of this year goes far toward proving that a steam launch is almost a necessity to a large A. C. A. cruise, and with the aid of such an auxiliary there would be no difficulty in making the race a success.

The Toronto cruising four, who put in ten days on the Trent Chain, the Bay of Quinte, and the river, winding up a good piece of work by running from Kingston to Stave Island in one day, had a very complete and interesting outfit. Their canoes were big double-decking open hulls, with large bow and stern compartments, brass drop rudders, brass leeboards, and a good spread of canvas. The power of their boats was fully tested by more than one gale in open water, and by some difficult pieces of rapid work, and by lashing them together, making a catamaran, they rode out seas that would have drowned a naphtha launch. They used the Toronto pyramid tent, a simple square affair, with one pole and eight iron pins, and the Toronto pail kit, a combination grub box and box of tricks, with utensils enough in it for a party of six and room for a week's groceries. The only fault to be found with this kit is that it is bulky, the tent being quite large and the pail fully twelve inches high, and it is doubtful whether the grub storage is water tight. Taken as a whole, however, the Toronto cruising four have the best open canoe cruising outfit that was ever seen at a meet, and the interesting thing about it is that they are following closely in the footsteps of the first Canadian canoe users. The Toronto cruising four are simply adapting the canoe of the fisherman and gunner to the necessities of the modern canoeist, and their success may encourage other Northern Division men to take the same course, instead of following foreign lights. There seems, however, to be something approaching a general awakening among canoeists, to the advantages of the open Canadian canoe, and proof is not wanting that the development of this interesting type of canoe has not ceased. There was an English of Peterboro open 16 30 on the Ubique dock with beautiful lines, a long bow, clean run and an easy bilge, built with a smooth lap between the ribs, a straight stern to take a rudder, and with a decided improvement on the old Indian sheer. She was quite the prettiest specimen of an open canoe I have ever seen, and was very fast either under sail or paddle.

The two most interesting features of this year's racing—apart from the "who won" element—were undoubtably the almost universal use of the hoisting rig and of the Lowell deck seat. While last year there were only two canoes in the trophy race with hoisting rigs, this year there were only two with standing, the Canuck and the Cyrus, and it is very doubtful whether the winner of the trophy had a second's advantage because her rig was a standing one. The standing-rig evil has apparently cured itself—perhaps the threat of legislation has had something to do with it—and canoeing has weathered out on that nasty shoal in magnificent form. Whether the sudden awakening of the racing men to the advantanges of the sliding hiker is going to prove a worse evil than standing rigs, the future will make clear. If I remember rightly, in a screed on racing abominations, which I sent to the FOREST AND STREAM last winter, I said that the standing rig was a present evil, the hiking seat an evil tendency, and the midship centerboard an unmitigated abomination, and I see no reason for altering this series of definitions. A hiking seat can be carried during a race on such canoes as the Fly, Owl, Mac, Evangeline and Ellida, without in any way injuring them as canoes, and there can be no question that a canoe can be kept up with a hiker with great ease, that is if the user thereof is a fit and proper person to secure an engagement with Mr. Seavey. If, however, the result of the use of the sliding seat is to be the use of a plank athwart a knife blade, canoeing is doomed to yet another rough traverse. Judging by the talk about deadrise that went on "under the flies" after the trophy race, there is some prospect that the hiking seat and not the canoe's bottom will furnish the stability of next year's fleet. The Lowell men know more about the hiker than all the rest of the Association, however, and their argument, that it gives no stability on the run, and that it is the run, not the reach, that determines a canoe's sail-carrying power, and also that speed cannot be attained without stability, is a strong one.

Leaving aside the hiker and its evil tendencies, and taking the racing fleet as it is, I think that there can be no question that there has been substantial progress made during the past year. Unless a cruiser is, as the ultra racing men say, a craft that cannot sail, there was no hard and fast line drawn between the racer and the cruiser at this meet, and the canoe, not the racing machine, is again in the ascendant. The 'midship centerboard, and all too light construction, were the only grave faults of the trophy fleet of '89, the latter evil cures itself, for there are not many men who can afford a boat too light to beach, and the former must some day be cured by legislation, but when? By the way, there is one feature of the "piazza" which the Vesper men discovered some time ago, that the racing gang now know something about, and that is the tendency of the blessed double back action, narrow gauge railway, to up and bust, just at the most opportune moment for making things interesting. The velocity with which a racing canoeist makes a hole in the water when his railway shunts him, is something that even an electric shock cannot rival. There will be a good deal of valuable hard wood wasted by energetic hikers this winter, and if some strange and wonderful contrivances of the nature of the before-mentioned railway do not decorate the field of '90, I am greatly mistaken.

It is very interesting as a proof of the A. C. A.'s strength to know that in a day or two several hundred dollars can be raised for a paddling trophy, and that without anything approaching a fuss being made about it, but is not this trophy business becoming too pronounced a feature of the regatta? The A. C. A. trophy is a fine prize, it makes a fine race, and it creates plenty of interest, but has it helped canoeing? One thing I am sure it has done that is not beneficial; it has hurt the Record, and that seriously. By the A. C. A.'s own laws, and by the natural laws, that canoeing creates for itself, the Record is the event of the Association's meet, and the man who wins it is supposed to be the honor man of the year. The old guard of A. C. A. men may still put the Record first, but the outside world hardly knows what it means, and the Association members pay no attention to it whatever. How this is to be cured and the Record made again the big scalp of the meet, is a matter which I think canoeists should consider. I suppose if a big silver pot could be got and data-hed to the regulation scalp, the pot-hunters would alter their opinion as to the relative importance of the Record and the sailing trophy, but that would be extending a present evil. The "scalp" idea has, I think, done something toward rehabilitating the Record, and if the Record flag instead of being of the same style as the two trophy flags had been a somewhat more elaborate and costly affair than they, it would have done more.

I was not at the general meeting at Long Island last year, and do not know how the "scalp" system was worked for the first time, but I am satisfied that the way it was managed at Stave Island has year discriminated against and was unjust to the Record winners of these days. In the days of old the Record winner used to get the best flag at the meet, and when the "scalp" system was introduced he got a scalp as usual. Each Record winner, up to '88 or '89, got a meet flag, as useless as pretty, and a scalp, as useful as plain. In '89, the Record winner got his scalp, simply that and nothing more, and however well the scalp may satisfy his sense of honor, I submit that the æsthetic side of his nature is as much entitled to satisfaction as was that of his predecessor's. It is a small matter this, I know, but the Record is such an important feature of the A. C. A. and exercises so powerful a controlling influence over the development of the canoe, that when it relates to it, nothing, I think, is too small to deserve attention. Dr. Gage's proposition, that in future men should be required to enter for the Record, and to start in all the races to enable them to get a place in it, is, I think, a wise and advisable reform. I should like to go much further and see the trophy contestants picked only from those who have taken a place in the Record. This would prevent a non-paddling sailing canoe from winning the sailing trophy, a non-sailable paddling canoe from winning the sailing trophy, and a specialist from winning either.

RETAW.

N. Y. ATHLETIC CLUB'S CANOE REGATTA.

WHAT promises to be the most noteworthy canoeing contest after the great international races which have occurred in these waters, will take place at the New York Athletic Club's summer quarters at Travers Island on the Sound near New Rochelle, on Sept. 28, at 2 P. M. This season the club in the endeavor to widen the interest in aquatic sports has endeavored to collect a fleet of small yachts, and now it has attempted to encourage the canoeing interest.

Prizes were offered and invitations sent to the leading canoe clubs in hopes that the best canoeists would enter and show the athletes what canoe sailing really is.

The invitation was cordially received by the canoeists and entries have been already received from Messrs. Butler, Goddard and Gage of the Vesper Canoe Club, of Lowell; Knappe, of Springfield; Forrest, of Hartford; Blake, Whitlock and Ward, of Brooklyn; Vaux and Stevens, of New York; Palmer, of the lanthes, of Newark, and several other prominent canoeists of the A. C. A. The interest to the canoeists will be centered mainly in the fact that Blake, who won most of the races on New York Bay last summer, and whose boat, the Eclipse, ably handled by Mr. Brokaw, won the A. C. A. trophy cup last year, will for the first time meet Butler, who was a close second to Brokaw.

Interest will be added by the fact that Dr. Gage, who won the unlimited sailing race at this year's meet, and who there defeated Butler, will also be in the contest. Old hands like Whitlock and Vaux, who were generally the winners a few years ago, will also join issue again with the later victors. It is pleasant to record that Mr. Whitlock's splendid success with his new yacht Kathleen this summer has not dampened his ardor for the graceful sport of the smaller craft.

It is unfortunate that ex-Com. Gibson's name does not appear among this list of canoe notables, but there is still a week's time and plenty of good boats at his disposal. Mr. Brokaw, too, would lend interest to so notable a contest.

It is hoped that Mr. Bailey will bring the Notus up from Pittsburgh, but no word has yet been received from him.

Members of canoe clubs recognized in the A. C. A. will be admitted to the club grounds upon presentation of proper credentials.

Travers Island is situated on the Sound a few miles below New Rochelle, and but a few hundred yards from Glen Island. It is best reached by New York and New Haven Railroad to Pelham Manor, where trains are met by the club's stages.

A. C. A. MEMBERSHIP.—Atlantic Division: Chas. P. Tuttle, Camden, N. J.

NEW YORK CANOEING.

THE present month is an active one in canoeing about New York, a number of important regattas being arranged, but the severe and continuous storm of last week has caused a general postponement. A great deal of damage has been done to floating property of all kinds, and in common with the yacht and rowing clubs, the canoe clubs have suffered by loss of floats, flooding of houses, etc. The Marine and Field Club, at Bath, whose first canoe regatta was to have taken place on Sept. 14, has suffered the worst, losing floats and bulkheads, so the regatta was postponed until Sept. 21, at 2:30 P. M. The New York C. C. house was exposed to the storm for several days, the old bulkhead which should have protected it being deep under water with a heavy sea running over it. Fourteen hawsers were needed to hold the house, several of them parting at times, but it rode the gale out in safety. Dr. Grant, of the club, and Janitor Staples were on the watch throughout the worst of the storm, and the safety of the house is largely due to their exertions. The fall regatta of the club, open to all members of canoe clubs, will be held on Oct. 5, at Stapleton, Staten Island. The regatta of the Ianthe C. C., at Newark, set for last Saturday, was postponed to Sept. 28, on account of the lack of wind and the high water in the Passaic.

As there was quite a good sized and expectant audience at the club house last Saturday, it was decided to have some paddling record races and scrub races, that the spectators might not go away altogether disappointed.

Class 1. paddling, was won by G. P. Douglass in the Scoot, W. J. Stewart second.

The senior record paddling was won also by Douglass in the Neenemooska, B. Fredricks second.

The junior paddling was won by E. Edinger, Crescent C. C., in Sybil, W. B. Daly, Arlington C. C., in Kisco, second. There were three crews in the tandem paddling, but one upset at the turn and the other two went to the rescue, so the race did not finish. The hurry-scurry race was well contested, being won by E. Edinger, with R. Hobart second. The canoe regatta of the New York Athletic Club will be sailed at Travers Island on Sept. 28.

CANOEING ON THE POTOMAC.—A correspondent who proposes to cruise up to the headwaters of the Monongahela River, and then to strike the North Branch of the Potomac, desires to know how far up the latter is canoeable, and at what point it will be best to strike it.

IANTHE C. C.—Of the active membership of this growing club, 25, all but 6 are A. C. A. members.

OTTAWA C. C.—On Sept. 7 the second sailing race for the Ottawa C. C. cup, from Nepean Point to Gatineau Point, was sailed, the following canoes starting: Mirabel, A. Maingy; Ira, T. H. Gisborne; Iolanthe, W. Maingy; White Wings, E. King; Musette, H. Roy; Natchez, C. De Lanaudiere; Nixie, P. B. Symes. The wind was very light, and it took two hours to reach Gatineau Point, but it freshened later, and Mirabel won. Musette and Mirabel each have one leg.

The Lansdowne cup was sailed for in the afternoon, the entries being Musette, Eira, Nixie, White Wings, Natchez, Unknown and Irene. The light breeze that came from the east kept steady till the finish. After a fair start the Nixie took the lead and passed the first buoy first, and was followed by Musette and Irene. The former and latter beating windward, passed the Nixie at the second buoy. Then the Irene overtook the Musette, went ahead, and kept her lead till the finish. At the second round the Unknown took the second place, and kept it till the stopping place. In turning the second buoy at the second round Musette was stuck in the sawdust, and lost five minutes in struggling with the sawdust refuse. The Ira soon gained a considerable speed, and passed the Nixie and Mirabel on the homeward tack, and was soon found close upon the Unknown's heels. The Irene, sailed by R. H. Baldwin, reached the winning post first in thirty-seven minutes. Unknown came in second, Ira third, Nixie fourth, Mirabel fifth, Musette sixth, White Wings seventh and Natchez last. Mr. Baldwin also won the cup last year.

VESPER B. C.—The Vesper Boat Club, of Lowell, Mass., has lately issued a very attractive year book, giving a history of the club since its formation in 1875. Though organized as a boat club, the Vespers owe most of their fame to their strong canoeing contingent, including Messrs. Paul Butler, Brazer, Gage, Goddard and Walsh. The club owns a very handsome and convenient house on the Merrimac, at Lowell, with an active membership of 150 and a club fleet of 19 shells and canoes, in addition to a private fleet of 20 rowing boats and 48 canoes. The book, compiled by Secretary Hemmenway, a canoeist, contains a good picture and plans of the house, and a history of the club and its races. We are glad to see that a page is given to a very good notice of the A. C. A.

New Publications.

THE GARDEN'S STORY; OR, PLEASURES AND TRIALS OF AN AMATEUR GARDENER. By George Ellwanger, New York. D. Appleton and Company. The writer tells us in his preface that there are not half enough contemporary works on the subject, that in fact there cannot be too many; and if all works on the garden were as pleasant and instructive reading as that under review, we should be disposed to second the author's verdict. The well ordered garden is almost always evidence of a genial home, the love of flowers is evidence of a refined and sensuous nature and incompatible with a sensual one, and he who describes flowers as our author does, in language which renders us familiar with, and compels to recognize their excellencies, and to love them for them, deserves well of his kind. And Ellwanger does all this and more, for while he tells of the flowers, he tells of the birds and insects that are suggested by talking of the flowers, and then of what the poets say, and of ancient fable, until the reader feels that he has got into the company of one who is not only enthusiastic about flowers, but a cultivated, enlightened and genial conversationalist. The chapter entitled "Warm Weather Wisdom" is decidedly cool and refreshing.

THE STORY THAT THE KEY TOLD ME; AND THE STORY OF THE MAN WHO DIDN'T KNOW MUCH. By W. H. H. Murray. Boston. Cupples & Hurd. Price $1.50. This is the first volume of the Adirondack Series, a series of tales of the wilderness, in all of which John Norton the trapper, a brave, simple, honest son of the forest, plays a leading part. That John Norton was modeled on, or at least suggested by Fennimore Cooper's "Leatherstocking," is beyond question, but it is not too much to say that in his delineation of the character, and in the interest of his situations Murray has shown himself in every respect up to the level of his great original. The other leading characters of the book are no less sharply and boldly delineated, and the man that didn't know much, the long, lank, ungainly, humble, pious lad, who could shoot with the best, cut down professionals with the oar, and play the violin like Ole Bull, is as original a creation and genuine a hero of romance as was ever conceived by the great father of romance, Sir Walter Scott. It is a story of inimitable heroes who win the reader's sympathy, rouse his enthusiasm, and provoke him alternately to innocent mirth and manly tears, such as the manliest may shed without blushing. Murray has gone back to nature for his characters. The lessons of his stories are the worship of the grand and beautiful in nature, of simplicity, earnestness and heroism of character, and above all of the matchless capacity of performance consistent only with a sound mind in a sound body, which he attributes to his heroes. Such a genuine romance is far more wholesome reading than the great body of psychological novels which issue from the press in such numbers, and we bespeak for the Adirondack Series an ever growing appreciation.

A. P. POPE, Olean, N. Y.

No Chemicals.

W. BAKER & Co.'S Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

LOG CABINS

AND

HOW TO BUILD THEM.

By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

LONDON: DAVIES & CO., 1 Finch Lane.

Best in the World.

One-third size.

For Guns, Bicycles, etc. Throws only small quantity of oil at a stroke. Handsomely nickel plated. For sale everywhere, or sent by mail on receipt of price 50c. each. CUSHMAN & DENISON, 172 9th ave., N. Y.

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms

EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest improvements——Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel,** carefully inspected for workmanship and stock, and GUARANTEED. Do not be deceived by IMITATIONS largely manufactured of **malleable cast iron,** and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

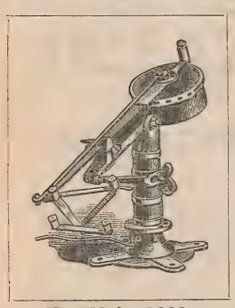
SMITH & WESSON,

SPRINGFIELD, MASS.

DO NOT DISPOSE OF YOUR

American Clay Bird Traps,

As we are now prepared to furnish the



CHAMPION CLAY BIRD,

Which is far superior to the old American bird, and can be thrown from the same trap.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO, 318 Broadway, New York.

PREMIÈRE QUALITÉ,

Our New Cigarette.

As the result of long labor and careful study we have this superb Cigarette to offer. It cannot be surpassed in purity or excellence; and is a novelty, unique, chaste and dainty. It is from the highest cost Virginia and North Carolina leaf.

The finest Smoking Mixtures are of our Manufacture.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 26, 1889.

VOL. XXXIII.—No. 10. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE "SAGINAW CROWD," whose doings in the Indian Territory were set forth in these columns a year ago, will go west next month in their hunting car, equipped with guns and cameras, and it is hinted, a diary. Mr. W. H. Mershon, former secretary of the Michigan Sportsmen's Association, and one of the "Crowd," had a successful grayling fishing trip this year on the Little Manistee, taking 146 in two days.

Mr. C. H. Ames, of Boston, who is a frequent and valued contributor to our columns, is planning for a run down into Maine with rod and gun. Mr. Ames has just withdrawn from the Prang Educational Company to become a member of the publishing house of D. C. Heath & Co. Mr. Heath, by the way, shoots a rifle and casts a fly, as in fact do a surprising number of Boston's successful business men.

Mr. Charles Hallock, who resides in Washington, has been summering in his native town in Massachusetts, where he reports grouse are plenty and double-barreled guns and bird dogs almost unknown. We have a paper from Mr. Hallock in type for next week.

Capt. L. A. Beardslee, "Piseco," was not long ago discussing ways and means of an expedition against the winniish of Lake St. John; and the next thing we heard he was studying the FOREST AND STREAM series of papers on "Fishing Around New York." This change of programme was caused by his appointment to the command of the United States Receiving Ship Vermont, at the Brooklyn Navy Yard. It gives us decided pleasure to count "Piseco" among our near neighbors.

Mr. E. A. Samuels, President of the Massachusetts Association, is now at the Upper Dam, Maine, and reports rainy weather and fishing slow. Mr. Samuels, it is an open secret, has completed the preparation of his magnificently illustrated book on salmon and trout fishing, on which he has been engaged several seasons in taking photographic views.

STUDY OF FRESH-WATER FOOD FISHES.

ONE of the most pressing needs of the day for the advancement of fishcultural work in this country is an establishment in which our important fresh-water fishes can be kept for the purpose of observing their habits, learning the best conditions under which they prosper, and the effect of climatic and other changes upon their growth and nature.

Our ignorance upon these subjects is inexcusable, and as Dr. Gill has said, in speaking of the doubt as to whether it is the male or female black bass that guards the nest, "Certainly, with all the piscicultural establishments in the country, and the large appropriations they enjoy, it is strange that the facts are still unknown, especially as the black basses have been the subjects of long attention and extensive cultivation." This applies equally well to the other important members of this family, the red-eye (*Ambloplites*), crappie (*Pomoxys*), as well as to the perches. We believe that these excellent species can be successfully transplanted to and made to thrive in waters in which they do not at present exist. We also believe that the U. S. Fish Commission, at Washington, should establish, in connection with its extensive aquaria, a series of small ponds in which such fishes as are desirable can be kept for this purpose, not only for a study of their life history, but also for experimentation as to the adaptability of species to new waters. These ponds could be established and provided with fishes at a nominal cost, and being easy of access would afford students and investigators an excellent opportunity to study and observe the fishes under the most favorable conditions, making such work invaluable. The ponds could be constructed and so sheltered that conditions suitable for species from North and South would be found in Washington, and it seems to us eminently proper that the U. S. Fish Commission should carry on this work.

Col. McDonald, the Commissioner of Fisheries, expressed to us years ago the necessity and pressing need of such work, and it is to be hoped now that he may find time to seriously think of, plan and establish the necessary plant looking to a more thorough understanding of the habits and needs of fishes. One of the principal experiments should be made with the sunfish. A ledge placed in the corner of a large aquarium, and arranged so as to repeat the conditions they would have in a state of nature, would enable observers to study and note more accurately the exact habits of this interesting fish while breeding.

THE "LEATHERSTOCKING" TALES.

NOTE of the centenary of the birth of James Fenimore Cooper, Sept. 15, has recalled, we dare say, to many a man now on the shady side of fifty, the rare delight with which many years ago—so many that one hardly dares reckon them—he first made the acquaintance of Natty Bumpo; and perhaps the dusty volumes of the "Leatherstocking Tales" have been taken down from their shelf to test if their pages have the charm of those younger days. In a home where there are healthy boys, to be sure, there is small danger that the "Tales" will have accumulated dust; more is the pity if they have; or if their place has been filled by the pestiferous and pernicious blood-and-thunder trash now in vogue. Certain it is that many a youngster has imbibed from Cooper's chapters his early taste for roughing it and for woodcraft; but no boy ever found in any of the "Tales" the spirit of insubordination to authority and the wild defiance of law and order which pervade so much of the literature for the young in these days. That is the distinguishing merit of Cooper over one modern school of writers of adventure.

Cooper is the American novelist *par excellence;* his field is the realm of pure romance, and although America has given birth to many and great writers, Cooper is still without a rival in his chosen field. He knew whereof he wrote, he invested the prairie and the ocean, and the life of adventure amid those scenes, where man has to grapple single-handed with the hostile forces of man and nature, with a charm which all men felt, because by elevating heroism he appealed to the sentiment of hero worship latent in every breast. His heroes, too, were heroes cast in a new mould. The points of resemblance between his "Leatherstocking" and the mailed heroes of Walter Scott are less noticeable than the points of distinction, and yet in "Leatherstocking" we miss none of the attributes of the true hero. And herein lies the secret of Cooper's success and the moral of his writings. He endowed his simple backwoodsman with the sterling qualities of truth, courage, self-reliance, and all the attributes of the true hero, stamped him with the impress of nobility, and taught the young nation that nobility is inborn, and not the creation of king or kaiser, who can at most show their recognition of it.

Apart from the charm of Cooper's works, they are essentially wholesome reading, and by their treatment of the free life of adventure in the forest and on the prairie, tend to waken the love of the chase and the craving for free communion with wild nature; and who shall say how much we are indebted to the healthy inspiration of Cooper's writings for rendering field sports popular, and inspiring the fast growing custom of withdrawing from the all-absorbing business of life for a few weeks in the year to recuperate on mountain and prairie, by forest and stream?

SNAP SHOTS.

THE State of Massachusetts has a law forbidding the drag, set or gill nets, purse or sweep-seines, in waters of Buzzard's Bay. This law has been rigorously enforced in its application to the home fishermen, and it is said that they approve of the law and hold an opinion that it is beneficial to their interests. The menhaden fishermen from Rhode Island have invaded the bay, and Massachusetts officials have been active in thwarting them. The fishing steamer Joseph Church was recently seized by the police while fishing in the bay, and in connection with this case has come up a consideration of the constitutionality of the Massachusetts law. Mr. F. J. Barbour, president of the National Fishery Association in a letter to the owners of the seized vessel, writes: "The real issue is that of jurisdiction, and it seems to me proper to waive all preliminaries possible and obtain the decision of the Supreme Court of the United States, as this case involves not only your vessels, but the entire menhaden business, and the seining operations of the whole American fishing fleet. The fisheries must stand together for equal rights and opportunities to take fish wherever they may find them. Massachusetts may legislate for her inland waters, but the fish of the ocean, outside of three miles from the shore, are the property of whoever may take them, and inside of the three-mile limit the waters, where navigable, are under the sole jurisdiction of the United States, and the fisheries in them can be regulated only by national legislation." If there is any doubt of the perfect right of a State to control the fishing privileges in its own bays and local waters like those of Buzzard's Bay, the sooner the doubt is set at rest the better.

The Kansas correspondent, who writes of an expedition to kill prairie chickens in the close season, asks that comments on the conduct of his party be withheld; but it would be interesting if not instructive to learn just how this "Dennis" incident is regarded by the average sportsman of Kansas. According to the author, his party set out to kill birds in the close season, knowing that if they waited for the opening day there would be no birds left; and the people who punished them for their violation of the statute were not actuated by any laudable motives, but by a base desire to gratify personal grudges. If this is a true presentation of the state of affairs in Kansas, nothing but a speedy interposition of providence can save the pinnated grouse.

The concluding instalment of the chronicles of the "Kingfishers" came to hand too late for publication in this issue; it will be given next week. "Kingfisher" does not claim to be a second Izaak Walton, but if the "Compleat Angler" were blotted out of existence, a very satisfactory substitute for it could be culled from the philosophy of "Old Knots" and the rest of the famous band as set forth in the several "Camps" series.

The coming of October is looked forward to with rare expectation this week by scores and hundreds and thousands of gunners who have been more or less patiently waiting for the law to be off. The unusually heavy foliage this season will be an element in favor of the game.

Mr. A. C. Collins, the energetic and efficient president of the long named Connecticut fish and game protective society, is winning many words of praise and encouragement from the press of the State.

The Sportsman Tourist.

A CATTLE DRIVE.

UP when the shadowed peaks stand clear,
As silhouettes against the dawn,
Woke by the bellow of a steer,
To still another crystal morn.

A meal for hungry man and steed,
A moment at the sinch strap strain,
Then mount and start the herd that feed
In clusters on the river plain.

The dust so thick, scarce else but gleams
From glist'ning horns anon appear;
Like some long line of battle seems
The grimy cloud their bay'nets spear.

Down the long valley's slender throat
Flows on the mellow hoof-beat rhyme,
To cowboys' shouts, or whistled note,
While clinking spurs and chains keep time.

Then soon come tests for rider's nerves
And sturdy broncho's wind and strength,
As cross a spur of foot-hills curves
The steep trail's sharply swerving length;

And truants from the brown ranks break
To scatter o'er the slipp'ry shale,
Climbing the knolls for mischief's sake,
Or scamp'ring down some tempting vale.

But these are men to saddle bred,
Who ride like Centaurs ev'rywhere,
And many a bull has cause to dread
Their lariats' sure and fateful snare.

Once felt drawn taut 'round horns or shank,
As long-trained horse braced for the shock,
With straining limbs and quiv'ring flank
Stood rigid as though carved in rock,

Until the line had run its length,
And pulsing from the steer's last bound,
All his wild, maddened, brutish strength
Lay panting, useless, on the ground.

But milder measures serve to-day
Than in the branding time, long past,
Ere long the herd resumes its way
As all are gathered in at last,

And onward push, till sunset flows
In streams of molten lava through
The mountain rifts, as day doth close
With golden clasps her page of blue.

K. H.

ANTLERS AT THE ANTIPODES.

ONE of the greatest triumphs of acclimatization ever achieved, perhaps, is the establishment of the red deer in the British colonies of the South Pacific. It is no slight achievement to carry fallow deer, or even the little roe deer, over 13,000 miles of stormy ocean, including a broad tract where the torrid calms of the equator alternate with raging tempests, and ending with a fortnight of cold squalls. But fallow deer and roe deer are almost tame creatures, and are easily domesticated. Their small size, too, makes it a simple matter to provide them with snug quarters on board ship, where they can be kept cool in the tropics and warm as they approach the Antartic, and clean all the time. The magnificent red deer (*Cervus elephas*), the monarch of the glen, and the wildest denizen of the highland forest, is a very different animal. Yet the red deer has been quite successfully transported to the antipodes and established there among the *ferœ naturæ* with astonishing results. The first attempts, which began about the year 1854, were a failure, owing mainly to want of experience as to how to feed the deer on the long voyage, which seldom took less than one hundred days. At length, however, a shipment of red deer was successfully carried to Nelson, a seaport at the head of Blind Bay, in the northern part of the Middle Island of New Zealand, and as the results of that operation, in which I had the privilege to be personally concerned, left absolutely nothing to be desired, I will do my best to describe it for the information or entertainment of readers of FOREST AND STREAM.

Our deer did not come directly from Scotland, for the simple reason that we found it easier to obtain them elsewhere. The late Earl Russell, then Secretary of State for Foreign Affairs, was residing at the White Lodge in Richmond Park, and my father, who was a devoted naturalist and indomitable acclimatizer, having interested him in the enterprise, the earl kindly obtained permission for us to take a stag and two hinds from the royal herd which adorns the fair chases of Henry the Eighth's favorite domain. Instructions having been given to the foresters, therefore, we had a novel deer hunt in Richmond Park. The object being to secure the animals with as little injury or alarm as possible, the foresters contrived to separate a few deer, including a noble stag, from their companions, and to trot them gently through the fern brake toward a hollow where there is a shallow pond. Here the whole party assisted them to surround the deer, and to drive them toward the water. The beautiful creatures several times turned and tried to break through the circle of foresters and amateur huntsmen who were slowly but steadily closing in upon them; but at every point they were met by waving arms and hats, or, most alarming of all, suddenly opened umbrellas, and cries of "shoo-oo, shoo-oo." At last they found themselves hemmed in on the shore of the lakelet, and the water seeming to offer the only chance of escape, the big stag threw up his antlers, gave a snort of defiance or disgust, and waded in breast high, followed by a younger stag and three or four hinds. The foresters immediately went in after them, some on horseback and some in a high-wheeled van drawn by a stout horse. The deer finding themselves surrounded in water almost out of their depth, surrendered at discretion, and the foresters having seized the big stag and sawn off his antlers, skilfully roped him and two fine hinds, and dragged them out of the water nto the van, where they lay as docile as possible. The others were allowed to find their own way ashore, and in a couple of seconds were out of sight in the nearest oak coppice. The captives were taken to the stables at the lodge, where they were placed in separate loose boxes and kept until their ship sailed, so as to accustom them to confinement and artificial diet, before setting out on their long sea voyage. This afforded an excellent opportunity to experiment with different kinds of food; and the result showed that red deer are almost omnivorous. Hay, oats, bran, carrots, turnips, apples, potatoes, beans, acorns, bread, biscuit, sugar, salt, and even small pieces of meat mixed with their other food were all thankfully received and speedily disposed of; while it was shown that their liquid requirements were very small indeed—an important matter on a voyage of a hundred days, before condensers for ship's use were invented. The fare that suited them best, however, was an alternation of hay and acorns, one full meal morning and evening, with a lump of rock salt to lick at between whiles. As soon as they were tame enough to be handled, they were habituated to a daily rub down with a wisp of straw, and subsequently with a stiff brush. In the meantime, stalls almost exactly like ordinary horse boxes had been fitted up for them on the main deck of the ship, and to these they were transferred, having been taken down to the dock in a van and slung on board, the day before their departure.

Sea sickness is proverbially capricious. Some people are terribly sick when first they go on the rolling deep, while others get their sea legs at once and suffer little or no inconvenience. This is even more markedly the case with animals. I have seen horses champ their chaff uninterruptedly from leaving the wharf, through all sorts of weather, while others beside them were prostrated with agony and terror. So it was with our deer. The big stag, sultan of the herd, was a wretchedly bad sailor. For the first few days, when we were tacking about the chops of the channel, or driving through a heavy sea in the Bay of Biscay, he used to stand shivering with his forefeet wide apart, his head hanging down helplessly, and a mass of spume drivelling from his mouth and nostrils. Once or twice he tried to collapse on the floor of his box, but we stopped that by means of a broad belly-band of canvas with a woolly sheepskin lining. It was not until we were off the Western Islands that he fairly recovered and took his tucker regularly without any unpleasant consequences. His lady loves, on the contrary, were quite hearty from the start. When the ship began to roll in the heavy swell off Deal, they opened their great pathetic eyes very wide and sniffed inquiringly, as if in feminine curiosity to know what in thunder was the matter with the ground. They also had a peculiar habit of bristling up their hair and wrinkling their skin over the neck and shoulders as a silent protest against such goings on; but they very soon settled down to their new life, and never missed a meal from the outset. We had taken an ample allowance of the best mixed hay, oats and clover, in neat little trusses, and enough acorns in barrels to give them each about half a peck a day for a hundred days. For variety, we gave them ship's biscuit every other day, and on Sunday they used to be allowed a few American dried apples or a little sugar for a treat.

The ship carried a large number of emigrants, including swarms of children, and our greatest difficulty was to prevent the youngsters from killing the poor deer with kindness by giving them all sorts of unwholesome things to eat, such as sour pastry, mouldy raisins, chalky sugar plums and other filth. More than once we feared we should lose one of the hinds from this cause, and the stag very nearly died off the Cape of Good Hope of a mysterious illness, which proved to have been caused by a facetious sailor giving him a piece of tobacco, which the unsophisticated creature masticated and swallowed with gusto, little suspecting what dire effects would follow. While in the tropics all three deer showed signs of suffering from cutaneous irritation, probably caused by some parasite; but we kept them in health by brushing them all over as often as the weather permitted. We easily got some of the most trustworthy among the young men on board to assist us in this; and there came to be quite a rivalry as to who could turn out the best groomed deer. We proved, in fact, that all that is necessary to secure the well being on board ship is to feed them strictly according to rule—rather underfeeding than overfeeding them—and to keep them scrupulously clean. They often got very wet, either with rain or with salt water coming over the side in bad weather, which was unavoidable; but it did not appear to hurt them at all.

As soon as we arrived in port we had the deer removed in their boxes, on a drag, to the residence of a gentleman who had large racing stables, and who took a warm interest in acclimatization, and they were at once placed in loose boxes and supplied with a moderate allowance of green food. This was on the outskirts of the lovely little city of Nelson, where the lower spurs of a range of lofty hills, rising in the background to snow-capped mountains, come down to the back gardens of the houses. A few weeks after our arrival, when the deer seemed to have become accustomed to their change of food and their new surroundings, we chose a nice warm evening—it was in the early summer—and turned them out of the stables into the scrub and grass on the hillside, where there was nothing to prevent them from wandering away at their pleasure. It was curious and touching, however, to see how unwilling they were to go. Like the prisoner of Chillon, they did not know what to do with their liberty when they recovered it. The stag especially was loth to leave us, and we had actually to drive him into the low scrubs where he began browsing, and so, straying on unconsciously, was lost to sight in the growing dusk.

The next evening, and for many evenings afterward, the affectionate creatures came back, and looked wistfully at us over the fence, as if begging us to take them back; and they did not finally leave the place and make for the mountains until a fierce kangaroo dog—a cross between a mastiff and a Scottish deerhound—set upon them and drove them for miles.

Years passed away without anything being heard of the deer, except that from time to time some settler in the back country reported that his cattle had been led away into wild recesses by some animal with big horns standing up from his head, and we greatly feared that a revengeful rifle ball had frustrated all our pains. In course of time, however, a fawn was found dead on a river shallow after a flood, and then reports came from various quarters of deer having been seen. Careful search was eventually made, with the gratifying result that the deer were found to be well established in the mountain fastnesses; and for several years past it has been permitted to stalk the stags for a two months' season. Like all acclimatized animals in New Zealand, they attain an extraordinary size, 400lbs. being a common weight and 450lbs. by no means uncommon. This is fully 100lbs. heavier than any stag I have heard of being shot in the Highlands, at all events for many years, and it is not easily accounted for.

The acclimatization of red deer has added a new attraction to a country which is in many respects one of the most attractive in the world, and is surely destined one day to be an important source of wealth.

Hares have also been most successfully established in New Zealand, another of my father's exploits, in which I had the pleasure of assisting him. Our pioneer hares were netted by country louts among the beanstacks or in "runs" through thorn hedges down in Suffolk, and were kept for a fortnight in the zoölogical gardens under the charge of a Suffolk boy who took care of them on the voyage out. They were fed on oats, bran and ship's biscuit moistened with water, and we only lost ten per cent. The survivors, numbering twenty-seven, we divided into two lots, one of which we turned out at Nelson, at the same spot where we drove the deer away, while the others saved us the trouble by leaping out of an open port hole at Lyttleton, 400 miles to the south, and swimming ashore on Bank's Peninsula. In both places they multiplied amazingly, and spread in course of time all over the country, either of their own accord or by being netted and turned out at fresh spots.

It is a singular thing that wherever hares are turned out they are for many years most numerous at the very spot where the original ones were liberated. I know gullies which are a mere speck, as it were, in a wilderness of hill and dale, but where, nevertheless, hares are thicker than anywhere else in the neighborhood, simply because the first that were turned out made their form there years ago. Shooting does not spread hares much; but hunting with harriers or beagles—now a thoroughly established institution both in New Zealand and in Australia—soon disperses them far afield.

The hares, like the deer, commonly attain a size which would be considered abnormal in Europe. I have often been at shooting parties where over 200 hares were bagged in the day, and the majority of them were over 11lbs., and a very respectable minority weighed 13lbs. The hare has the same affinity for red-currant jelly in New Zealand as it has elsewhere, and is equally in favor roasted, jugged or in soup. It has been a most welcome addition to the somewhat narrow *ménu* of a new country.

We took out a great variety of game and song birds, including pheasants, partridges, starlings, blackbirds, thrushes, skylarks, bullfinches, chaffinches, goldfinches, linnets, robin redbreasts, and in most cases with complete success. The various acclimatization societies have continued to import all kinds of birds, so that the colony is now well stocked, except in certain instances where the failure has been equally complete and unaccountable. Pheasants have taken very kindly to the country, especially the Chinese variety; but partridges have been a miserable disappointment. Both the brown English and the red-legged Frenchman have been tried and tried and tried; but every attempt ended sooner or later in the same failure. The birds increased for a year or two, and then diminished and nearly or wholly died out. This is so well ascertained that the societies have given up partridges in despair, and are now trying their luck with grouse.

The bird which has taken possession of the country most effectually is an American, the California quail, a beautiful little crested bird like a diminutive guinea fowl.

I cannot better conclude my article than by saying that American sportsmen will find themselves quite as much at home in New Zealand as is the American quail.

EDWARD WAKEFIELD.

Natural History.

A RATTLESNAKE KILLER.

THERE is a man in Hague, New York, who follows a queer business part of the year. The Albany *Journal's* Lake George correspondent wrote last fall: "Isaac Davis of Hague, who in 4 years has killed upward of 1,400 rattlesnakes, and who last fall at the county fairs of this vicinity was the first to handle rattlesnakes in public exhibitions, recently killed 4 monster rattlesnakes near Sabbath Day Point. This year he has killed upward of 400, for which he has been paid a bounty of 25 cents per snake. He makes rattlesnake hunting, catching and exhibiting his whole business, and is paid $50 a month during the season by property owners about Hague for killing snakes in aid of their extermination. He is believed to be the only man in the world following this occupation. He is an intelligent man, fond of reading, of quiet demeanor and gentle disposition. His friends apprehend that he will meet his death some day in handling these reptiles, but the business seems to have a fascination outside of the remuneration it affords him. He always carries with him a remedy in case he should be bitten, but does not feel any special confidence in its efficacy. He is a man of 45, and killed his first snake before he was 6 years old, but never went into regular snake hunting until 4 years ago. His father before him was the famous snake hunter, 'Mint' Davis, who used to kill them for the oil to sell to druggists. The old man is said to have been bitten several times by snakes and to have cured himself by use of 'rattlesnake weed.' It used to be a standing joke about the lake that when a rattlesnake bit old 'Mint' Davis it was the snake that was poisoned to death. The old man certainly seemed to have no more fear of a rattlesnake than a child had of a kitten."

We wrote to Mr. Davis about this and he replied as follows:

Editor Forest and Stream: The item in the Albany *Journal* was an error. During the past two years I have killed 1,400 rattlesnakes and destroyed eggs to more than three times that number. I devote my time through the month of May and from the 15th of September to the 15th of October to killing the rattlers.

They almost invariably rattle before striking, except during dog days, when they are blind; then they strike at every noise they hear. The blindness is caused by the shedding of their coat or skin, a covering is shed from the

eye at the same time. During this process of change they are totally blind.

The weed grows mostly in wild places or on new-cleared land, varying in height from 3ft. to 6ft., according to soil. Color of stalk is red, with leaves growing exactly opposite and varying in length from 6 to 10in., three-pointed, the center point being much the longer. The top is bushy, flowers yellow.

I once saw a dog bitten on which it was used. About an half hour after bite he was unable to walk. Free use of tea made from the plant and a poultice of the same applied to the wound brought speedy recovery.

My father was twice bitten. He used the tea with liquor, also a poultice of the weed on the wound, and he fully recovered from the wound in a short time.

The oil is a valuable article for many purposes, such as deafness, removing scars, limbering stiffened joints, relaxing contracted cords; and is one of the greatest rheumatic cures of the age. The oil is valued at $1.25 to $1.50 per ounce. ISAAC DAVIS.

North Bolton, N. Y.

BIRDS OF NIAGARA COUNTY, N. Y.

WITH ANNOTATIONS BY J. L. DAVISON, ASSOCIATE MEMBER A. O. U., LOCKPORT, N. Y.

(*Concluded from Page 164.*)

92. *Chordeiles virginianus* (Gmel.), Nighthawk (420).—A common summer resident.

93. *Chaetura pelagica* (Linn.), Chimney Swift (423).—A common summer resident; breeds.

94. *Trochilus colubris* Linn., Ruby-throated Hummingbird (428).—A common summer resident.

95. *Tyrannus tyrannus* (Linn.), Kingbird (444).—A common summer resident.

96. *Myiarchus crinitus* (Linn.), Crested Flycatcher (452).—A common summer resident.

97. *Sayornis phœbe* (Lath.), Phœbe (453).—A common summer resident.

98. *Contopus borealis* (Swains.), Olive-sided Flycatcher (459).—A rare migrant.

99. *Contopus virens* (Linn.), Wood Pewee (461).—A common summer resident.

100. *Empidonax flaviventris* Baird, Yellow-bellied Flycatcher (463).—A rare migrant.

101. *Empidonax acadicus* (Gmel.), Acadian Flycatcher (465).—A rare summer resident. June 14, 1887, I secured nest, eggs and female of this species. The nest is pensile, and composed of the fiber of thistle and dried grasses; a number of the latter hang from the nest, some as long as 18in. The nest is more shallow than that of the red-eyed vireo; outside measurement being 2.50 wide by 1.50 deep, inside 1.75 by 1.00. Eggs cream white with a few dark brown spots at large end. When I first saw the nest I took it for a wisp of grass caught on the limb, and should have passed it had I not seen the bird on the same limb.

102. *Empidonax pusillus traillii* (Aud.), Traill's Flycatcher (466*a*).—A not uncommon migrant.

103. *Empidonax minimus* Baird, Least Flycatcher (467).—A common summer resident.

104. *Otocoris alpestris praticola* (Hensh.), Prairie Horned Lark (474*b*).—A common summer resident. I have seen it every month in the year except January, and I think a few remain through the year.

105. *Cyanocitta cristata* (Linn.), Blue Jay (477).—A common summer resident along the shore of Lake Ontario. I have taken one nest and eggs within the city limits of Lockport.

106. *Corvus americanus* Aud., American Crow (488).—A common resident.

107. *Dolichonyx oryzivorus* (Linn.), Bobolink (494).—A common summer resident, but I have found but one nest in ten years' collecting.

108. *Molothrus ater* (Bodd.), Cowbird (495).—A common summer resident.

109. *Agelaius phœniceus* (Linn.), Red-winged Blackbird (498).—A common summer resident.

110. *Sturnella magna* Linn., Meadowlark (501).—A common summer resident.

111. *Icterus galbula* (Linn.), Baltimore Oriole (507).—A common summer resident.

112. *Scotecophagus carolinus* (Müll.), Rusty Blackbird (509).—A rare migrant.

113. *Quiscalus quiscula æneus* (Ridgw.), Bronzed Grackle (511*b*).—A common summer resident.

114. *Pinicola enucleator* (Linn.). Pine Grosbeak (515).—An occasional winter visitant. Feb. 29, 1883, I secured six specimens, and have not seen any since.

115. *Carpodacus purpureus* (Gmel.), Purple Finch (517).—A common summer resident.

116. *Loxia curvirostra minor* (Brehm), American Crossbill (521).—An occasional spring visitor. On June 8, 1888, I secured a male specimen in a piece of heavy timbered wood. I concluded it was a "straggler," and did not look for its nest. On July 28 I saw another in the same place, but did not succeed in securing it, and I came to the conclusion that the male taken in June was of a pair breeding there.

117. *Acanthis linaria* (Linn.), Redpoll (528).—An occasional winter visitant.

118. *Spinus tristis* (Linn.), American Goldfinch (529).—A common summer resident.

119. *Spinus pinus* (Wils.), Pine Siskin (533).—An occasional winter visitant.

120. *Plectrophenax nivalis* (Linn.), Snowflake (534).—A common winter visitant.

121. *Pooœcetes gramineus* (Gmel.), Vesper Sparrow (540).—A common summer resident.

122. *Ammodramus sandwichensis savanna* (Wils.), Savanna Sparrow (542*a*).—A rare summer resident. Breeds. I have found but one nest of this species in ten years' collecting.

123. *Zonotrichia leucophrys* (Forst.), White-crowned Sparrow (554).—A common migrant.

124. *Zonotrichia albicollis* (Gmel.), White-throated Sparrow (555).—A common migrant.

125. *Spizella monticola* (Gmel.), Tree Sparrow (559).—An abundant migrant.

126. *Spizella socialis* (Wils.), Chipping Sparrow (560).—A common summer resident.

127. *Spizella pusilla* (Wils.), Field Sparrow (563).—A common summer resident.

128. *Junco hyemalis* (Linn.), Slate-colored Junco (567).—A very common migrant; a few remain through the winter; have never seen them during the summer.

129. *Melospiza fasciata* (Gmel.), Song Sparrow (581).—A common summer resident.

130. *Melospiza georgiana* (Lath.), Swamp Sparrow (584).—A rare migrant.

130*a*. *Passerella iliaca* (Merr.), Fox Sparrow (585).—A common migrant in the spring, but rather rare during the fall. On April 19, 1888, I saw a dozen at one time; could have secured half of them. I secured one, which I sent to Mr. Dorr of Buffalo, N. Y. The late Prof. Charles Linden always claimed that they were a very rare migrant in that vicinity during the spring, but not uncommon in the fall, while it is right the reverse in this vicinity.

131. *Pipilo erythrophthalmus* (Linn.), Towhee (587).—A rare summer resident. On May 1 and 10, 1886, I saw and secured the first I had seen of this species, both females. On June 14, 1887, saw a male and female; did not succeed in finding a nest, but concluded that they breed here.

132. *Cardinalis cardinalis* (Linn.), Cardinal (593).—A rare straggler. On May 10, 1883, I secured a female of this species, which was among a flock of warblers, and on two occasions I have seen specimens here in January.

133. *Habia ludoviciana* (Linn.), Rose-breasted Grosbeak (595).—A common migrant; but the past season I found three nests and eggs in a locality where I had never found the bird before. In two instances the male was on the nest during incubation. The third nest contained two young birds three days old and one egg nearly fresh.

134. *Passerina cyanea* (Linn.), Indigo Bunting (598).—A common summer resident.

135. *Piranga erythromelas* Vieill., Scarlet Tanager (608).—A not uncommon summer resident.

136. *Progne subis* (Linn.), Purple Martin (611).—A common summer resident.

137. *Petrochelidon lunifrons* (Say), Cliff Swallow (612).—A common summer resident.

138. *Chelidon erythrogaster* (Bodd.), Barn Swallow (613).—A common summer resident.

139. *Tachycineta bicolor* (Vieill.), Tree Swallow (614).—A common summer resident.

140. *Cliviecla riparia* (Linn.), Bank Swallow (616).—A common summer resident.

141. *Ampelis garrulus* Linn., Bohemian Waxwing (618).—An erratic summer visitant.

142. *Ampelis cedrorum* (Vieill.), Cedar Waxwing (619).—A common summer resident.

143. *Lanius borealis* Vieill., Northern Shrike (621).—A not uncommon winter resident.

144 *Lanius ludovicianus excubitorides* (Swains.), White-rumped Shrike (622*a*).—A not uncommon summer resident.

145. *Vireo olivaceus* (Linn.), Red-eyed Vireo (624).—A common summer resident.

146. *Vireo philadelphicus* (Cass.), Philadelphia Vireo (626.—A rather rare migrant.

147. *Vireo gilvus* (Vieill.), Warbling Vireo (627).—A not uncommon summer resident.

148. *Vireo flavifrons* (Vieill.), Yellow-throated Vireo (628).—A rather rare summer resident. On June 8, 1888, I found a nest of this species, but was unable to get it.

149. *Vireo solitarius* (Wils.), Blue-headed Vireo (629).—A common migrant.

150. *Mniotilta varia* (Linn.), Black and White Warbler (636).—A common migrant. June 14, 1888, I saw a ♂ of this species and a ♂ ruby-throated humming bird disputing as to the possession of a certain locality, and the humming bird "held the fort." As I had never before seen *M. varia* here later than the middle of May I concluded there must be a pair breeding, but I did not succeed in finding the nest.

151. *Helminthophila ruficapilla* (Wils.), Nashville Warbler (645).—A rather rare migrant.

152. *Helminthophila peregrina* (Wils.), Tennessee Warbler (647).—A rare migrant. I have a specimen of this species that flew into an open window of a photograph room, on Maine street, this city, Oct. 31, 1885.

153 *Compsothlypis americana* (Linn.), Parula Warbler (648).—A common migrant.

154. *Dendroica æstiva* (Gmel.), Yellow Warbler (652).—An abundant summer resident.

155. *Dendroica cærulescens* (Gmel.), Black-throated Blue Warbler (654).—A very common migrant. I think a few remain to breed as I have observed them in two instances as late as July 14 and 15.

156. *Dendroica coronata* (Linn.), Myrtle Warbler (655).—A common migrant.

157. *Dendroica maculosa* (Gmel.), Magnolia Warbler (657).—A not uncommon migrant.

158. *Dendroica cærulea* (Wils.), Cerulean Warbler (658).—Until the past season (1888) I have considered this a very rare migrant, having seen but two specimens, both males, in ten years collecting; but during the past season I found three nests, two of which I secured with three eggs each, and the two females taken as they left the nests. On Nov. 3 I sent to Capt. Chas. E. Bendire a nest and three eggs for the Smithsonian Institution collection, having learned that there was but one egg of this species in the collection, and without data or locality. See *Auk* for October, 1888, p. 430, "Breeding of *D. cærulea* in Niagara county, N. Y."

159. *Dendroica pennsylvanica* (Linn.), Chestnut-sided Warbler (659).—A common migrant.

160. *Dendroica castanea* (Wils.), Bay-breasted Warbler (660).—A not common migrant. I have never seen this species during spring migration except in one particular piece of woods, about five acres of second-growth oak, on the late ex-Gov. Washington Hunt's place, "Wyndham Lawn" lately offered to the Masonic fraternity for an asylum, by the present owner, Mr. John Hodge. For the first five years I have found a few of this species there between May 15 and 18, never earlier nor later, none during fall migration.

161. *Dendroica striata* (Forst.), Black-poll Warbler (661).—An abundant migrant.

162. *Dendroica blackburniæ* (Gmel.), Blackburnian Warbler (662).—A common migrant.

163. *Dendroica virens* (Gmel.), Black-throated Green Warbler (667).—A common migrant, and a few stop to breed. I have never yet found the nest and eggs but have seen the bird late in June, and on June 24, 1883, I found a young of this species unable to fly, the male parent being with it.

164. *Dendroica vigorsii* (Aud.), Pine Warbler (671).—A very rare migrant.

165. *Dendroica palmarum* (Gmel.), Palm Warbler (672).—A rather rare migrant.

166. *Sciurus aurocapillus* (Linn.), Oven-bird (674).—A not uncommon summer resident.

167. *Geothlypis philadelphia* (Wils.), Mourning Warbler (679).—A rare migrant. On June 8, 1888, I saw a male of this species and could have secured it, but thinking it had a nest near by I preferred watching it and to find its nest, but did not succeed. June 11 I again visited the same place and saw a female of this species, but after a search of three hours I failed to find the nest.

168. *Geothlypis trichas* (Linn.), Maryland Yellow-throat (681).—A not uncommon migrant.

169. *Sylvania pusilla* (Wils.), Wilson's Warbler (685).—A rare migrant.

170. *Sylvania canadensis* (Linn.), Canadian Warbler (686).—A not uncommon migrant.

171. *Setophaga ruticilla* (Linn.), American Redstart (687).—A common summer resident. June 14, 1888, I found a pair of this species occupying an old nest of the red-eyed vireo. They had relined it, and laid two eggs; and a cowbird had added another. I put the female off the nest three times before I could believe it to be a redstart, as this species is generally so particular about its nest. I have never known a nest to be occupied after I had put my hand into it while it was being built.

172. *Galeoscoptes carolinensis* (Linn.), Catbird (704).—A common summer resident.

173. *Harporhynchus rufus* (Linn.), Brown Thrasher (705).—A common summer resident.

174. *Troglodytes ædon* Vieill., House Wren (721).—A summer resident. Since the advent of the English sparrow this species has become quite rare in the city. A few years ago we had two or three pairs breeding in our yard in boxes put up on the side of the barn and on apple trees, but they were driven off by the sparrows. Afterward I put up boxes with holes only large enough to admit the wrens, and for three years a pair have occupied one of them. After the young had left the nest the past season, I saw the male removing the nest from the box piece by piece; he would bring them out and drop them to the ground. After watching him a long time I thought I would assist him in his labor, and putting a ladder up into the tree, I opened the box and threw out the rest of the nest, and had barely reached the ground when the bird again entered the box, and a moment after it came out, and mounting a limb within 2ft. of the box, and stretching up his neck, poured forth his song of gratitude. Wondering what the effect would be, I picked up the nest, and mounting the ladder placed it on top of the box. Hardly had I reached the ground before he again attacked the nest, and it was not a minute before he had thrown it to the ground, and again mounting the limb finished his song, and departed, and we saw nothing more of our little friends. But we expect them to return next season, or why were they so particular to remove their old nest from the box?

175. *Troglodytes hiemalis* Vieill., Winter Wren (722).—A rather rare migrant.

176. *Cistothorus palustris* (Wils.), Long-billed Marsh Wren (725).—A summer resident along the marshy shore of Lake Ontario.

177. *Certhia familiaris americana* (Bonap.), Brown Creeper (726).—A very common migrant.

178. *Sitta carolinensis* Lath., White-breasted Nuthatch (727).—A common summer resident. May 15, 1883, a nest of this species was found near Sanborn, N. Y., containing nine eggs with incubation well advanced. June 6 three more eggs were taken from the same nest.

179. *Sitta canadensis* Linn., Red-breasted Nuthatch (728).—A not uncommon migrant.

180. *Parus atricapillus* Linn., Chickadee (735).—A common winter resident.

181. *Regulus satrapa* Licht., Golden-crowned Kinglet (748).—A common migrant.

182. *Regulus calendula* (Linn.), Ruby-crowned Kinglet (749).—A common migrant.

183. *Turdus mustelinus* Gmel., Wood Thrush (755).—A common summer resident.

184. *Turdus fuscescens* Steph., Wilson's Thrush (756).—A very common summer resident. In some pieces of woods this bird is more common than any other species, and they do not allow the robin to feed or breed near their nest.

185. *Turdus aliciæ* Baird, Gray-cheeked Thrush (757).—A not common migrant.

186. *Turdus ustulatus swainsonii* (Cab.), Olive-backed Thrush (758*a*).—A common migrant. A few stop to breed along Lake Ontario.

187. *Turdus aonalaschkæ pallasii* (Cab.), Hermit Thrush (759*b*).—A common migrant.

188. *Merula migratoria* (Linn.), American Robin (761).—An abundant summer resident.

189. *Sialia sialis* (Linn.), Bluebird (766).—A common summer resident; but not as common in the city as formerly.

190. *Passer domesticus*, English Sparrow (10,000,000).—A very common resident, altogether too common. They have driven away the bluebirds, wrens and swallows. We formerly had all these breeding in our yard, from two to four pairs of each, and for the past three years have had only one pair of wrens. The first to go were the bluebirds in 1883, and the next year but one pair of (white-bellied) tree swallows, and a pair of house wrens remained. The swallows were our pets. After they had laid their eggs and commenced incubation, we could go to the chimney on which the boxes containing their nests were fastened, open the box and take the bird from the nest and put it back, seemingly without disturbing it; we did this year after year. One day in the spring of 1885 we noticed the sparrows about one of the boxes, and on going up to it found the swallows gone and all the eggs broken. Since then the boxes have not been occupied.

THE FROG'S DIET.—Boston, Sept. 18.—The frog question in your columns has amused me immensely, as various of your correspondents, including J. G. R., would have predicted. One of my earliest recollections dates twenty years ago to the banks of the Cambridge River at Upton, Me. An angler was casting across its muddy waters for practice, before my awe-stricken eyes, now and then landing a 2lbs. chub. As these flopped upon the grass a big bullfrog made desperate attempts to swallow them whole. Yes, boys, a healthy frog will eat, or try to, any living thing that kicks which he is able to master. His whole restriction is that it must be alive or seem to be. I have fished for minnows with bob and sinker, and have seen a dozen frogs start at once from all around the pool straight at the bobbing cork, and have seen them wind up by taking in each other when the cork disappeared. My own pet 2oz. bull will take fly after fly from my fingers quick as a wink, but he won't touch a dead one unless I make it move. He will pick one off a sagittaria leaf six good inches above the surface, without a rest to start from. Can any one tell me where I can get a couple of live crayfish for my small aquarium? I have never seen one, they not being found in eastern Maine to my knowledge, and all my boyhood was confined to that section. Any information in regard to their habits and habitat will be gratefully appreciated and reciprocated, if possible.—JOHN PRESTON TRUE.

BIRDS KILLED BY THE WASHINGTON MONUMENT.—A great many small birds in their migration southward, through Washington city, are meeting death by flying against the Washington Monument. This plain shaft, rising 555ft. into the air, with a width of 50ft., has killed hundreds of birds during the last few years. Sixty-seven dead birds were collected by a gentleman the other morning. These consisted of sparrows, wrens, warblers, etc. The most remarkable thing about it is the fact that there is no light upon the monument to attract the birds, they seem to strike against it entirely by chance.

Game Bag and Gun.

OPEN SEASONS.

Oregon.

Male deer, July 1 to Nov. 1; female deer, Aug. 1 to Jan. 1. Elk, moose, mountain sheep, Aug. 1 to Jan. 1. Wildfowl, Sept. 1 to May 1. Prairie chicken, sage hen, June 15 to April 1. Grouse, pheasant, quail, partridge, July 15 to Jan. 1.

Pennsylvania.

Deer, Oct. 1 to Dec. 15. Black, gray, fox squirrel, Sept. 1 to Jan. 1. Hare, rabbit, Nov. 1 to Jan. 1. Wild turkey, Oct. 15 to Jan. 1. Wildfowl, Sept. 1 to May 1. Upland or grass plover, July 15 to Jan. 1. Woodcock, July 4 to Jan. 1. Quail, Nov. 1 to Dec. 15. Ruffed grouse, pheasant, Oct. 1 to Jan. 1. Rail and reed birds, Sept. 1 to Dec. 1. *Pike County.*—Squirrel closes Dec. 1. Rabbit, Oct. 15 to Dec. 15. Wood or summer duck, Oct. 1 to Jan 1. Woodcock, July 4 to Dec. 15. Quail, Oct. 15 to Dec. 1. Ruffed grouse, Sept. 15 to Dec. 15.

NEW YORK PROTECTORS.

Editor Forest and Stream:

The following is a list of the protectors and the counties comprising their districts as at present assigned to them:

FIRST DISTRICT.—Robert Brown, Jr., Port Richmond—Richmond, Kings, Queens and Suffolk counties.

SECOND DISTRICT.—Willett Kidd, Newburgh—Orange, Rockland, Ulster, Westchester, New York and Putnam counties.

THIRD DISTRICT.—Matthew Keunedy, Hudson—Columbia, Rensselaer, Albany, Green and Dutchess counties.

FOURTH DISTRICT.—S. C. Armstrong, Riparius—Warren, Washington and Saratoga counties.

FIFTH DISTRICT.—J. W. Pond, Malone—Franklin, Clinton and Essex counties.

SIXTH DISTRICT.—Peter R. Leonard, Ogdensburg—St. Lawrence county.

SEVENTH DISTRICT.—George Moyer, Lowville—Lewis, Herkimer and all of Hamilton lying north of a continuation of the south line of Essex county.

EIGHTH DISTRICT.—Thomas Bradly, Rockwood—Fulton, Montgomery, and all of Hamilton south of a continuation of the south line of Essex county.

NINTH DISTRICT.—Francisco Wood, Schoharie—Schoharie, Schenectady, Delaware, Sullivan, Chenango and Broome counties.

TENTH DISTRICT.—Fred P. Drew, chief, headquarters at Albany, home address Washington Mills—Oneida, Madison and Otsego counties.

ELEVENTH DISTRICT.—Daniel Staring, Alexandria Bay—Jefferson, Oswego, Onondaga and Cortland counties.

TWELFTH DISTRICT.—Henry C. Carr, Union Springs—Cayuga, Tioga, Tompkins, Wayne and Seneca counties.

THIRTEENTH DISTRICT.—John Sheridan, Penn Yan—Yates, Schuyler, Chemung, Cattaraugus, Allegany and Steuben counties.

FOURTEENTH DISTRICT.—George M. Schwartz, Rochester—Monroe, Orleans, Genesee, Wyoming, Ontario and Livingston counties.

FIFTEENTH DISTRICT.—Chas. Ripson, Youngstown—Niagara, Erie and Chautauqua counties.

FRED P. DREW,
Chief Game and Fish Protector.

CHIEF GAME AND FISH PROTECTOR'S OFFICE, Albany, Sept. 17.

LOADING REVOLVERS.—Stapleton, S. I.—In your issue of the 19th A. C. Krueger asks how to load .38cal. revolver cartridges. Here is my experience. I had ¼in. cut off the base of the regular .38cal. bullet mold, and then reamed the remainder ¼in. deep to the exact size of inside diameter of shell. The bullet is composed of 1 part tin and 20 of lead, and in charging I use a 10grs. black powder charge cup of wood powder, and seat the ball quite solid. I also recommend A. C. K. to procure some hard rubber plate ¼in. thick (or hard wood will do) and build on both sides of the handle of his revolver, as the makers do not turn out revolvers thick enough in the handle for good holding. I inclose target made with a Merwin & Hulbert .38cal. revolver, 5½in. barrel, 5 shots at 15yds. Please let me know how it compares with the shooting of professional shooters.—C. W. G. [Four of the shots are within a silver quarter, and the fifth is ¼in. away; the target compares well with those made in the galleries.]

QUAIL IN THE RED RIVER BOTTOM.—I.

THE month of January last beheld the raging waters of Father Red bursting through the levees on both sides, some eight miles below Shreveport, La. The entire country from Bayou Pierre to the levee that confined the back water, was a sea of red waters. Those planters, who wisely had made high levees on the rear of the plantations, to keep the water back from their cultivated lands, were comparatively safe; but the water from the river was nearly at the top of the front levees, while sipe water was running through the cultivated lands, nay under the very houses; and grave fears prevailed that the front levees could not be kept from breaking.

The morning was as balmy as one in spring, though it was only the second week in January. The rays of the sun appeared to fall with unusual warmth, and as it were, motherly compassion on the drooping drowned plants, animating them into a renewed lease of life. I was sitting on the veranda steps watching the scene with great interest, when suddenly some pigeons darted across the garden, and on looking up I saw a large hawk in pursuit. In a moment I brought out the Greener from my room: the pigeons had escaped to the rear yard, but the hawk was circling around, each circuit taking it higher into the blue vault of heaven, when I raised the gun and fired. Its wings closed to its breast, and down it fell at the feet of my daughter, who barely had time to avoid its falling on her head. She had noticed it trying to catch the pigeons, and was unaware of my getting the gun to kill it, until she heard the shot, and my exclamation, "Look out for your head, Anne." "You robber," she cried, "never more will you catch my pretty pigeons and Plymouth Rocks; your wings and tail shall serve as fans to keep off mosquitoes this summer, and remind me of this occasion." I went up to where the grand bird lay on its back gasping; its eyes were as piercing and fierce as when in pursuit of its prey; not for one instant did it lose the dauntless, fierce aspect with which it looked straight into the eyes of me, its murderer.

The whole affair roused in me a desire to go shooting. I had not been hunting but a few times for birds the entire season. I now wished to exercise my pointers and to have a day's sport. "Vantura, if you can lay aside your painter's brush to-morrow, I will go with you to the Clyde Pickett plantation, where, I am told, are several bevies of partridges. The negroes will kill them all, as the waters drive them to the high fronts of the levees, and we may as well shoot them as leave them for the negroes. Death anyhow is the result to the birds. I will load shells and we will start after an early breakfast. It is only five miles distant, but the mud and waters will require a three hours' ride to get there."

By 10 o'clock we were on the grounds. A small space of twenty or thirty acres of coco land had been inclosed, a part of which had grown up with red corn-peas, which formed a dense mass of vines, under which a great many peas were lying, as this species of pea does not rot for years, though covered in the earth. Another part was covered with the dew-berry vines, dense and some two feet high. Here and there hogs had rooted deep holes for the coco tubers, which were now filled with sipe water, yet there was dry ground where no holes had been rooted. Here, no less than eight large bevies of partridges were feeding. In the rear of this inclosure was the raging Red River, and on the opposite bank stood the store and many tenant houses of Capt. Billy Robson, the oldest living pioneer in Shreveport. It was death to the poor birds to fly across, death where they were, and almost death to fly to the high grass nearly covered with sipe water.

This was the place to which Vantura and I had come for a morning's sport. I had brought with me my two pointers, black Maud and Dan's Trump. Vantura did not take his setter bitch Cora, because her puppies were only two weeks old. "Look at Dan's," he exclaimed, as the grand young dog was ranging over the grass and sipe water so splendidly. It was a beautiful picture. I gazed with admiration as I saw the puppy strike the scent of the birds several hundred yards off, inside the inclosure. Maud was held back by us, and had not been permitted to range as yet. He did not halt, but threw up his head higher, slightly slackening his speed, and gently moved forward to the wire fence, where he grew rigid as a statue. Maud saw him and backed at once. We got off our horses, put sufficient cartridges into our shooting coats and got over the fence. The birds were feeding in fancied security. By the time we could lower the wire for the dogs to get through they had fed a hundred yards from the fence, when we flushed. Vantura bagged two and I missed with both barrels. The birds were very gentle; did not know their danger; flew a short distance and lighted. Both Maud and Dan's retrieved the birds. As Maud is quite deaf, I waved to her to range ahead. Before getting to the birds, at which he had just shot, each pointer, at the same instant, came to a beautiful point. Dan's had his left hind foot raised to spring, as the warm scent struck his delicate nose, and he grew instantaneously rigid in that position. He looked the exact image of his grandsire, Dilley's Ranger. "You take Dan's birds," I said to Vantura, "I will take Maud's." He flushed a new bevy and missed with both barrels. Old Maud stood as firm as the pillars of Hercules; I advanced before her. Another fresh bevy flew up, and I got two to my two barrels, while Vantura gathered in one and missed one.

The birds were retrieved that I killed, but Dan's made a point as he dashed to recover the bird shot down by Vantura. It was only winged. We reloaded and went to Dan's, Maud followed and backed, turning her head in an opposite position. "There is another bevy here," I said to Vantura, "because the birds we shot at flew to another part of the inclosure. Let Dan's hold your wounded bird while I flush those Maud has pointed. I want to see whether he will keep his point after hearing us shoot."

The birds were flushed, a fresh bevy; I bagged two, Vantura missing; and to my great delight Dan's heeded our shots no more than if he were deaf. Going up we ordered him to "hie on," and he made a spring, seized the wounded bird and brought it to me, as proud as if he had gained a victory. Though such a fine retriever, never hurting the bird, yet he will not give up the bird, but turns his head to one side to prevent its being taken from him, and I cannot get the bird from his mouth until I can hold him and take it away. He never runs off but keeps moving around my feet. Vantura says it is because he is so proud, and that he will get over this habit as he gets older; but I am afraid he never will. I would like to know if any of the readers of the FOREST AND STREAM has had any experience on this point. I am afraid if I punish him and force him to put down the bird he will not retrieve at all. He has always retrieved naturally without any instruction.

We had only taken some thirty cartridges each with us, and these were soon shot away, bagging some thirty partridges in all. I killed a bird or two more than Vantura. We returned home with the determination to go back the next day with more cartridges, and as this was to be my last hunt for partridges, to shoot as long as I could see to shoot and had a bird for my target.

I was very much pleased with the day's sport, with our shooting, and more with the good qualities exhibited by Dan's Trump. If Maud could hear as well as Dan's, I would not exchange her for any dog in the sporting world. As it is, no man can get her. UARDA.

GOLD DUST LANDING, La.

KANSAS MISADVENTURES.

Editor Forest and Stream:

The following outline of a recent hunting episode is not given in a spirit of bravado, but merely as an honest attempt at exemplifying the manner in which the Kansas game laws are enforced by the local powers that be. Please reserve comments, for we appreciate all that might be said to our discredit.

A party of seven started from the Missouri State line for a point 150 miles in the interior of Kansas, which point we will call Dennis, after prairie chickens, five days before the close season was up. Our breaking of the law was on account of authentic information that the farmers had been shooting chickens for a month before our advent, and that if we desired to secure even a sample we must anticipate the open season.

In our party was the private clerk of a railroad dignitary, through whose courtesy we enjoyed the comforts of the latter's private car. Unfortunately a certain physician in the village of Dennis had shortly before our trip been deposed from the position of local surgeon to this railroad, which was combination No. 1. Our pilot to the hunting grounds was a Democratic ex-postmaster of Dennis, and was most thoroughly disliked because a Democratic administration had forced him upon the honest farmers of that burgh. This was combine No. 2. Each member of our party was notorious for paying his debts, and this fact, in connection with the other that the local finances of Dennis were below zero, rendered us fair game from which to replenish a depleted county treasury. This was combination No. 3, all against us.

In our 150 miles of travel to Dennis we passed through some of the best farming country and most extensive areas of corn that it was ever our fortune to see. Mile after mile there was nothing but waving fields of corn, averaging 10ft. high, and every stalk supporting two and three ears. A subsequent trip in a more southerly direction shows the same; the corn crop in this State cannot begin to be moved by the railroads this fall, and the writer is an old railroad man and knows whereof, etc.

Well, we arrived at Dennis at 1 A. M.; commenced to hustle at 3, and had our teams, ice, and all etceteras on the move by 4:30. We had five dogs, and coursed due south, and by daybreak were far enough from town to expect some hunting. Out here, when on a chicken shoot, there being no fences, a party simply sits in a wagon and drives over the prairies, sending out the dogs at will, and only getting out of the wagon when a dog comes to a point. We had one setter who was brought up to chicken ranging, and who would cover twenty rods while you were cocking your gun; one pointer who was a first-class retriever, but who persisted in rushing in after the first chicken was down and bringing in his bird, and three other dogs who were enjoying—to our discomfiture—their first experience, and about which the least said the better.

Our destination was about twenty miles south of Dennis, where we arrived about noon with fourteen chickens. We had understood that Mrs. Dodge, on whose farm we proposed to camp, would feed the outfit; but imagine our disappointment upon arrival to find that, being ten miles from a post office, she had received no word of our coming, and was totally unprepared to take care of us. Everything in the house was at our disposal, but you know what it takes to care for seven men, two drivers and two teams. Mrs. Dodge was not in very good health either, having been blown 100yds. by a cyclone and bitten by a rattlesnake within the past year or so; but in spite of infirmities she acted the mother to us all. By good luck we carried along a little coffee and sugar, and this, with what game we shot, together with some milk and eggs, constituted our commissary until the constables—but we anticipate.

We cast anchor about noon. Our tent poles were lost in the shuffle and were carried back by mistake; there is absolutely no timber in that section of the country, and we stripped the farm before we could secure enough timber to pitch our wall tent; but we finally succeeded, and after dividing up into two parties and getting a couple of dozen more chickens before dark, we dug a trench around our tent by the light of a lantern, for which foresight we were profoundly thankful the next morning, as it rained at daybreak and nearly carried away our whole outfit. Boxes, guns, dogs, drivers and party were piled in one promiscuous mass on top of a little pile of hay as nearly under the peak of the tent as possible, while we expected every moment to see the entire affair collapse with the wind.

The rain spoiled that morning's work, but we turned to in the afternoon and by hard work captured a couple of dozen more, making sixty-two chickens in all. These were drawn as soon as brought to camp, stuffed with grass and packed on ice in a box at the bottom of Mrs. Dodge's cyclone cellar.

At 6 o'clock next morning, just as we were getting ready to start out again, three horsemen rode up to our tent, read a warrant for our arrest, and toted us seventeen miles across the country to the residence of the justice who had issued the warrant. It seems the good people of Dennis had deputized the doctor mentioned heretofore in this article, to swear out a warrant for our arrest, but not to do so until we returned to Dennis and were all ready to leave, but the disciple of Esculapius got drunk—in spite of living in Kansas—hitched up his team and drove over to a justice residing in the town in which we were shooting, swore out the warrant at midnight and insisted upon its being served at once. The result was that his own town derived no benefit from the penalty imposed upon us, while if he had waited until the fruit was ripe the farmers could have squeezed $45 out of our party.

We arrived at the justice's house about 11 o'clock, made friends all around, demanded an immediate trial, which was had as soon as they could send for the complaining witness and States Prosecutor, six miles away, and as the easiest way out of the matter—they had no evidence excepting our intent—we let one of our party plead guilty for all, and the Justice imposed the lowest fine allowed by law and cut his own fees one-half, making a total fine of $20.15. He furthermore said that all the farmers' boys around there were shooting chickens daily and no complaints were made, and if we chose to stay at his house we could unhitch our teams and put up and go right out into the fields and shoot and he would guarantee no molestation on the part of any one.

A great ado was made by the Dennisvillians because the constable failed to secure our chickens. They were so eager to tap our pocketbooks that they overlooked all details, but when the chief constable told them that a search warrant was necessary if they expected him to bring in property they saw the point at once. Our chickens were taken fourteen miles across the country at midnight, shipped by first express and reached home before we did, still on ice and in excellent shape. We were offered $4 per dozen for them, but as we are not pot-hunters money could not purchase a single chicken. While as law-abiding a party as the average we believe the sixty-two chickens we secured are just that number less for the sharks who prosecuted us and for the honest farmers who have been shooting them since before they were able to fly.

No exaggeration to say that in a number of instances on this trip members of the party could have repeatedly killed little toddling quail with a whip. They are very numerous, but still more so in the vicinity of Baileyville, which has been visited by the writer and others during the past week. Col. D. R. Anthony's farm, near Baileyville, is a paradise for quail, and he has five hounds there which he keeps for no other purpose than to course jack rabbits; they will sight and run one down within a mile, and no questions asked.

There were numerous ludicrous incidents interspersed with the hard matters of fact of a genuine hunt, such as our host commanding his dog to "seek the dead" every time a chicken dropped; our drivers helping themselves before all others, and to more; the remark that our railroad man made to the farmer when he saw a toothed hay-knife, that he didn't see how he could have nicked it so badly in cutting hay; but the most laughable thing of all—from our side of the fence—was how we escaped alive from those hungry cormorants. H. A. P.

MORE RIFLE TALK.

BOSTON, Sept. 15.—*Editor Forest and Stream:* In the communication by Mr. Leopold I find this remark, "The sharp twist kept the bullets point on." Question, is it the sharp twist which keeps the bullets point on? I have an old muzzleloading target rifle with gain twist which certainly cannot be (and as nearly as I am able to judge is not nearly so sharp a twist as modern breechloaders, yet it does not make keyholes even at 500yds. My experience is limited in the matter of windage at long ranges, but so far as I am able to judge my muzzleloader with 162-grain bullet, shooting over the same ground at same time, will require less allowance for wind than the .45cal. target gun. The muzzleloader uses a large charge of powder in proportion to the bullet, much larger proportion than the breechloader; it sends its bullet to the mark same as the breechloader. Would not the breechloader do better with less lead and larger proportion of powder to its bullet?

The U. S. Government is now experimenting with a view of using smaller caliber guns (.30 they are trying now) and a larger proportion of powder to its bullets. A writer claims .45-60-300 to be the best charge he knows of. The tendency is to more powder in proportion to the bullet and it seems to be a step in the right direction.

SENEX.

MICHIGAN FEATHERED GAME.—Alma, Mich., Sept. 17.—The weather has been so dry that the woodcock have had to seek more congenial quarters, their usual feeding grounds being dry and hard. Have seen but two in the course of a month. Ruffed grouse fairly numerous, and quail, although not numerous, have increased under protection by law. Last Friday, Sept. 13, while our men were cutting and burning a patch of weeds and bushes they flushed some quail, and after the fire had subsided found a quail's nest with thirteen eggs in it, all pipped and about to hatch, but the heat had been too intense, and hence there will be one less bevy to keep for seed this year. I mention this, as it seems an unusually late incubation.—L. A. S.

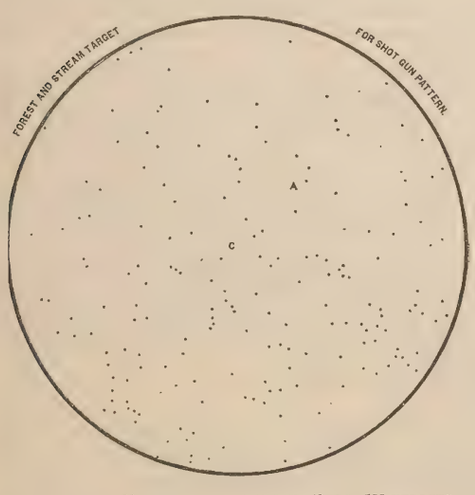
NEW JERSEY.—Perth Amboy, Sept. 23.—Shot an English snipe, in excellent condition, on the Raritan marshes last Monday, and four yelpers Thursday. Also saw several spritgail ducks. There was a great flight of bitterns and reed birds over this locality on Wednesday night, and on Friday morning thousands of flickers and red-headed woodpeckers passed to the southwest, flying against a brisk westerly wind. Many were killed hereabouts. Qesterday was moving day for several species of hawks, of which there was a steady migration from sunrise until late in the afternoon; wind northwest, brisk. —J. L. K.

MARYLAND.—Cecil County, Sept. 19.—The reed and rail bird season epened Sept. 5 in Cecil county. Rail birds are very scarce, 25 birds being high boat on the best tide. Reed birds are more plentiful than for some years. The rabbit hunters report cottontails enough to go round and some over. Quail are on the increase in this county, six and eight coveys being reported from one section where there was not more than one covey three years ago. Squirrels are numerous enough to give good sport.—ED. S. G.

BEAVER, Pa., Sept. 21.—Wednesday morning I took my Bullard .22, and after a little over two hours in the woods brought home a nice mess of gray squirrels. On my trip I saw evidences of a good crop of pheasants (ruffed grouse) and quail, and as for rabbits, "the country is full of them."—G. A. SCROGGS.

PATTERN AND PENETRATION.

FOLSOM BROS.' CHEAP GUNS, 10 AND 12-GAUGE.



THIS time in the narrative of our series of shotgun tests, we sing the song of the under dog in the fight. It is not the high grade, thoroughly satisfactory, eminently respectable Greener or Parker or Scott costing up in the hundreds of dollars, but the mean grade gun of no name. "W. Richards," that nonentity in the gun trade, was stamped on the plate, but they were really only those cheap bits of ordnance which come through our custom houses, pay a duty of 40 per cent., and yet may be placed on the counters of the gun shop at $5 a piece. The FOREST AND STREAM has already in past times expressed its opinion about these pestiferous products of the penurious population clustered on Belgian soil. Liege has much to answer for in that the products of her shops have done to sweep game and every feathered thing, game or not, from off our meadows, shores and woods. Well, it was a pair of these weapons, taken at random from the immense stock in the warehouse of H. & D. Folsom, of this city, which were put to test on Sept.

FOLSOM GUN, 10-GAUGE, RIGHT BARREL, 40YDS., 176 PELLETS.

19. They were double barrel, to be sure, and had the old under snap for locking the breech. The finish was something to make a lover of fine guns weep, yet they were just a pair out of hundreds going out weekly into every nook and corner of the land, and particularly into the southern part of the Union. The arms under examination are sold as cylinder bore and are labeled as retailing at $8 each. The charges were prepared by careful loaders, and every opportunity was given the arms to do their very best.

How well they did a glance at the percentages of shot accounted for will show. The 12-bore was the better arm of the two. It got 40 per cent. of its charge on the target at 40yds., taking the mean of a pair of very uneven barrels. The patterns were fairly well distributed at

FOLSON GUN, 10-GAUGE. LEFT BARREL, 40YDS., 195 PELLETS.

60yds. with the 12-bore, the right barrel was still far ahead, and the average performance of the weapon dropped to 15 per cent. With the 10-bore the barrels ran very evenly, and at 40yds. located 35 per cent. of the charge, and at 60yds. but 11 per cent. The guns kicked in a fashion to shame an army mule, yet they were strong enough to take the charges of black and white powder used in a former test of the Scott gun, while the 12-gauge was tried a couple of shots at each range with the cartridges used with the specially imported test gun Greener.

The day was a good one. The degree of humidity was high, the wind was strong and gusty, but it came from the 12 o'clock quarter, and its only effect was to retard the flying charge a trifle and so lead to a falling from the point aimed at. It would seem from the record that the 12-bore was the better gun of the two, since with a smaller charge it got a larger number of pellets, both actually and by percentage, into the circle. No. 10 showed the usual "unaccountable" in the third shot with the right barrel; so it would appear that these sudden lapses from the average are not confined entirely to full-choke, and more particularly, as some claim, to extra choked arms. Taking each charge as fired, the record of its pellets upon the fixed and selected circles, with the distance between their center, stands as follows:

10-BORE—40YDS.

Right Barrel. Aimed Circle, Pellets.	Selected Circle, Pellets.	Dist. bet. center, In.	Left Barrel. Aimed Circle, Pellets.	Selected Circle, Pellets.	Dist. bet. center, In.

CLAREMONT, N. J., Sept. 19, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Folsom Bros. (Liege) Gun. Cost, $8. No. of gun, 661. Weight 8lbs. Length of barrels, 30in. Gauge, 12. Right barrel, cylinder. Left barrel, cylinder.
Weather—Clear. Direction of wind, 12 o'clock. Force of wind, 17 miles per hour. Thermometer, dry, 61°. Do., wet, 54°. Humidity, 63°. Barometer, 29.7in.
Charge, as given by holder of gun:

BOTH BARRELS.

Shell—Club.
Powder, Brand—FG Dead Shot.
Powder, Quantity—3drs.
Shot—*Make*—LeRoy's. *Quantity*—1⅛oz. *Size*—No. 8 Chilled.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

BOTH BARRELS.

Loading.			Powder.		Shot.
Card over shot; and two P. E. wads over powder.	card	1...	91 grs.	473 grs.	418 pellets.

LEWIS COUNTY, N. Y., Sept. 20.—Extended trips and faithful hunting on the part of the sportsmen in this vicinity confirms the reports of the woodcock shooters in regard to the scarcity of ruffed grouse, at least on their usual haunts. One fair bag in years past for one man was made by two men last week. The score was six grouse and three woodcock. Several bags of two or three are reported. The general verdict, however, seems to be that they are few and far between, or else we do not look for them in the proper places. Next month we expect to find woodcock on the high grounds and we are hoping for a good flight, although no large bags are anticipated. A good-sized buck was seen a short time since on the Utica & Black River R. R. track near the village of Castorland by the section hands. This is some distance from the Adirondacks proper. A few duck are reported on the Black River. The weather is cold and raw; if it continues so migrating birds will soon be going.—OSCEOLA.

THE LOST FLIGHT.—The Cedars, Oakdale, L. I., Sept. 17.—During the heavy northeast storm on Thursday and Friday, Sept. 12 and 13, there was a big flight of large snipe on the Long Island coast. Marlin, willets, curlews and yelpers in great numbers winged their happy way over the numberless empty blinds. As the rain fell in torrents, and the tide was so high, gunning was out of the question.—ALFRED A. FRASER.

UPLAND PLOVER GUNNING.—Mr. W. Howard Pack, of Philadelphia, is stopping at the residence of Joshua Bennett, at Court House. Mr. Pack is one of the finest shots in the State, and spends much of his time in gunning field plovers on horseback, being an accurate shot when his horse is going at the highest speed.—*Atlantic Coast Pilot, Sept 21.*

Sea and River Fishing.

ABOUT GUIDES.

[This paper was among manuscripts left by George Dawson, and was only recently discovered and sent to us. It was intended for one of the "Winter Talks on Summer Pastimes," written for the FOREST AND STREAM just before Mr. Dawson's death.]

HANDY and obliging guides are as necessary to one's comfort in the woods as skilled and good-natured servants are to the peace and harmony of the domestic circle at home. Many a summer's outing has been marred for the want of them. But my experience has taught me that the quality of a guide, like the quality of a domestic, depends very much upon the quality of those who employ them. Oftener than we are willing to admit it is "like master like man," and like mistress like maiden. Neither care to be "nagged," and both are apt to reciprocate in kind.

There is, perhaps, a larger percentage of mild-mannered men in our fraternity than in any other; but all are not as good-natured and considerate as they should be, and for this reason are not always as well served as they might be and as they would be were they less exacting and better tempered. It is the habit of some men always to bully their subordinates. This sometimes pays, no doubt, but it oftener fails to secure cheerful service, especially in the woods, where we haven't even "Hobson's Choice" to fall back upon.

There are few things more helpless than the average angler on unknown waters. He is as dependent upon his guide as the "occasional foreign correspondent" is upon his guide book. Unless he has learned from long experience just where to look for what he seeks, he will not even know were to cast without his guide's suggestion; and if, unhappily, his guide is "tiffed" by his manner, or rendered mulish by his undeserved rebuffs, he will be very likely to be kept ignorant of the best preserves and most prolific waters. Few things bring a better return anywhere than good nature, but nowhere is the habit more remunerative than in the woods, where your pleasure can be very easily made or marred by your pleased or displeased servitor. There is just as much human nature to the square inch in a woods-guide as in any other son of Adam or daughter of Eve, and that angler will make the most of his outing who, in all proper ways, makes the most of his guide.

I once spent a week in May on the Raquette, near where were camped two gentlemen who had never before been on the river at that season. My tent was pitched at Setting Pole Rapids and theirs on the high ground near Lothrop's Chopping. The fishing was superb on the rapids, and I enjoyed it to my heart's content from the fact that all I could kill were gratefully received as a supplement to the scantily provided larder of a logging camp in my immediate vicinity. Notwithstanding the proverbial voracity of a "bushwhacker's" appetite, the fish were so abundant that the supply was never short of the demand and never in excess; for I soon discovered that however many fish I might kill none would be wasted. The result was the busiest and most enjoyable week I ever had had, up to that time, on angling waters. But while I was thus having an absolute surfeit of sport, my neighbors were doing little else than cursing the stupidity of their guides and anathematizing the barrenness of the waters. When I heard of their ill luck, I sent them an invitation to come and try the rapids. But they declined with thanks, as "they preferred to fish in still water." Now every old angler knows that those who fish for trout in still water in May are likely to angle in vain, angle they ever so deftly. Still-water fishing will do in July and August, but it is dull work in May or early June.

I subsequently met one of the guides who accompanied these gentlemen, and his story was something like this: "The difficulty, sir, was just here. They knew nothing about their business, and they were not willing to learn. As soon as they struck the river, instead of halting and casting where the fish were, they halted and cast where the fish weren't; and when I ventured a suggestion they just told me to mind my business and they would mind theirs. As I was agreeable, I concluded to let the darned fools enjoy themselves in their own way. The result was that after fishing every bit of still water between Cold Brook and Lathrop's Chopping they didn't catch fish enough to make one square meal for a hungry man; whereas, by fishing the riffs and swift water, the donkeys might have half filled the canoe. I never went out with a brace of more disagreeable buffers. I could and would have put them where they could have had all the sport they could have desired, but as they 'knew their business,' and were as abusive as they were stupid, I could only get my revenge by permitting them to skin their own skunks after their own fashion. They left Martin's with as poor an opinion of the Raquette as I had of them."

The mistake of these gentlemen was that because on some former occasion they had fair sport in still water and nowhere else in August, they expected equal sport in the same kind of water in May. But that is not according to the order of trout nature. They have their different haunts in different seasons, and those who know their habits will be always sure to have the best sport.

As a rule I have been fortunate with my guides—less, perhaps, because they possesssed any inherent superiority than because I early learned how to get out of them the best that was in them. I always treated them kindly, and uniformly went where they wished to take me—provided they wished to take me where I wished to go. By this seeming acquiescence I always had my own way, and at the same time rendered them as anxious that I should have a "good time" as I was to have it.

But there is, nevertheless, a great difference in guides. Some are stupid, some are lazy, some are willful, and some are so full of conceit as to render them quite unbearable. Others are obliging, industrious and thoroughly posted in every department of their craft. They are expert anglers, good cooks, perfect masters of paddle or oar, and thoroughly acquainted with every rod of forest and every foot of water within the territory where they undertake to pilot their patrons. When one is fortunate enough to secure such guides he is sure to have the best sport and the highest pleasure attainable. A carry of a mile or two doesn't deter them from revealing what may be hoped for by making it. Because the current is stiff or the rapids formidable they don't try to evade their ascent by lying about them. Nor do they wait to be forced to gather fresh boughs and plenty of them to make your couch soft and fragrant. When the evenings are chilly and a roaring fire is necessary for warmth and comfort, they don't wait to be reminded of the fact. With such guides your tent is always tidy, your larder is always protected, and your cooking utensils and tin plates are always clean. They can fry a trout or broil a salmon to perfection; their baked pork and beans would satisfy the most exacting denizen of the Hub; their pancakes are always light and artistically browned; their coffee is never spoiled by over-boiling, and they are never so happy as when assured that they are rendering satisfactory and acceptable service.

While good guides are to be coveted on all waters, they are indispensable on salmon rivers where the canoes are light, the currents heavy, and the rapids formidable. As a rule, Indians are the most expert and safest canoemen, whether handling a paddle or a pole. I have frequently had one Indian and one white man in my canoe, but the Indian was always given precedence, not by my wish alone, but with the assent and concurrence of his white co-laborer as well. They are not only more expert but more cautious than white men, and, on the roughest waters, I soon learned that it was always safe to go wherever my Indian pilot was willing to take me. I only once deemed him too timid, and ordered him to push straight through a rapid around which he wished to carry. He obeyed, with no other protest than a guttural "Ugh! Get wet!" And so we did; for it was "nip and tuck" whether we went over the rapids or went under them. I never afterward asked him to take me where he was not willing to go.

But handling a canoe is not the most difficult office of a guide on salmon waters. There are ten good canoe men where there is one good gaffer. To a looker on it seems easy enough to gaff a 20 or 30lb. fish, but to do so from a canoe, in swift water and while the fish is in full life and in constant motion, or even when drawn near the shore, is about as difficult a piece of work as is connected with the art. A miss is as mortifying to the gaffer as it is provoking to the angler. But misses are common and often fatal. In such cases, if the angler has any "swear words" in his vocabulary, they are pretty sure to be ventilated.

I had killed a great many salmon before I ventured to gaff one; and while I was about it I wished I hadn't undertaken the job. Such scooting and dodging, such dashing and flopping, such striking and missing was never before seen in salmon waters. But I succeeded, thanks, not to my own skill, but to the saintly patience and marvellous manipulations of the Judge who had hooked the fish.

While few guides are perfect in every phase of service, one is seldom met with who cannot be made useful. If he is only willing the rest will follow. With a willing guide all things are possible, if his employer is endowed with the essential gifts of patience and good temper.

G. D.

CHEAP FISHING FOR "PODGERS."

Editor Forest and Stream:

I want to say a word to "Podgers," and not only "Podgers" but all who like him have known the troubles and trials that beset a sportsman around the old time resorts. Did it never occur to "Podgers" that there were places where he could fish, aye, and catch fish, without being bled financially. There are such places; the west coast of Florida is one. If "Podgers" will write to me I will put him in the way of such sport with rod and reel as he never dreamt of, and I'll warrant he will be satisfied with the fish he catches, and the price he pays. I have fished some myself, and I know of no place where a man is so sure of a catch as he is in this vicinity. Boats can be had for from $3 to $5 per day.

I have in mind now a little cabin yawl with accommodations for four, fast, tight and able, that can be had with a man to her, for $5 per day, and the skipper will take his party where they can catch fish, too. What's the matter with that? There is a plenty of groupers and channel bass or redfish, sea trout, Spanish mackerel, lady fish, pompano, jack fish, and in the season tarpum; while there are fresh-water lakes close by, where bigmouth bass are plenty, 5lbs. to 15lbs. in weight.

Just leave Nantucket and Martha's Vineyard severely alone, and give these waters a try. Within a few miles of where I write there are some 12 to 15 varieties of fish who take the fly readily. If one wishes to add the gun to his outfit there is an abundance of beach birds along the shore with quail inland. Bears, deer and turkeys are fairly plenty, but it requires some experience in the country and considerable tramping to get them. They are here though, and there are very few days in the year when we don't have venison or turkey in the market.

Now, "Podgers," don't break your heart, "there are as good fish in the sea as were ever caught," and we have some of them here.

TARPON.

TARPON SPRINGS, Florida.

A LAND FISH.—Surgeon Charles H. White of the U. S. Navy in a recent letter to Dr. Gill, writing from Samoa, gives the following interesting account of the goby (*Periophthalmus*): "I have several specimens of a fish that lives on land and breathes the air. Of course, this thing is not new to you, but it quite surprised me by its antics. It never goes under water as far as my observation goes, but skips along the surface of the pool in a straight line and very rapidly, landing on the mud and hiding at once under a leaf or any other convenient shelter; or, perhaps, jumping up on an overhanging twig and balancing itself there by means of its pectoral fins, which are developed into organs of land locomotion. The only thing that does not look fishy about it is the exophthalmic eye, and these forward flippers. I only saw this fish in one place—on a muddy creek. They seemed to be always sunning themselves when left alone, but fled for shelter at the coming of any one." This fish has been known to naturalists for many years, nevertheless the description by Dr. White of its habits is very interesting and well worth recording. It feeds upon insects and crustaceans largely, which are found upon the beaches. In the Standard Natural History, Vol. III., p. 256, there is a picture showing the very curious habits of this fish upon the land.

NEW JERSEY STRIPED BASS FISHING is reported good at Belmar.

SUSQUEHANNA BASS AND PERCH.

ONE of the beautiful portions of the Susquehanna River, and one that contains some of the best spots known for successful angling, is that portion lying between the Falls (Collins's station, P. R. R.) and the Riffles, one mile south of Bainbridge, Pa. This body of water forms an ideal home for the black bass and pike-perch, being composed of clear running water, forming eddies, pools and rapids, affording excellent spawning grounds for bass and perch.

As is well known the bass were first introduced in this river in 1869 by several citizens of Harrisburg, and in 1873 the State Fish Commissioners commenced the work of stocking the Susquehanna with this fish. Their increase in size and numbers has been rapid, and, if we can believe reports, this applies to the whole river from its headwaters to its mouth, for up stream and down anglers are claiming the largest numbers and the biggest fish.

My first catch of bass from the Susquehanna was made out of season. It was one of the 1873 plant, and its capture came about thus: We (boys) were sitting upon a raft of logs which was moored to the stone wall of the towpath in front of town, and some of the party were fishing. I had no line, but for pastime started to rig one, and this I did out of a piece of cotton cord to which I attached a bent pin to serve as a hook, a small nail did as a sinker, then I let the "hook" down along the edge of the raft, and it had hardly reached "near-the-bottom" when I had a very unusual bite. The fish was soon landed and proved to be a black bass, a small one. We fishermen were filled with wonder, it was a new fish to us and a little larger than our ordinary "sunny," consequently we all considered it a prize. Ex-Sheriff Smith was on the wall and told us what the fish was, and that it would have to go back into the water. Back it went and seemed none the worse for the handling it had received.

The pike-perch is much liked as a game fish in this portion of the river. The first one of this species seen by the writer was about the year 1869. It was captured in the river at Bainbridge, by Mr. Henry Nagle, and weighed something like 8 or 10lbs. For this beautiful fish my father paid $2. We had a royal feast, for we were eating "salmon." As I remember the company at table was very enthusiastic in praising the fish, and it surely was food to be esteemed. By some anglers in Bainbridge the pike-perch is considered the best fish in the river, principally on account of the large size it attains.

Another percoid fish which has been taken in the Susquehanna quite frequently of late years is the red-eye perch or rock bass (*Ambloplites rupestris*). Several years ago I was shown one by Mr. George Depue, who, upon my asking him the name of the fish, said he did not know a name for it, but that it was a cross between the black bass and the common sunfish. I think I learned afterward that Mr. Bernard Doyle was the father of that idea. What else could they think, it surely looks as though it was a hybrid made by the crossing of these two species, and having as many anal spines as both its parents combined. Mr. Frank G. Galbraith obtained one at Wrightsville several years ago, which excited considerable curiosity at the time, and I think Frank showed a shade of disappointment when I told him the fish was probably the "rock bass" after he had given me a verbal description of it. This species has been planted in the Susquehanna, and I hope it will thrive there. It is one of the best pan fishes of this country, and the Pennsylvania State Fish Commission, and other citizens of the State, deserve unlimited praise for their efforts to introduce such valuable fishes into the waters of the State.

As will be seen by the following notes, furnished me by my friend, Stehman Herr, of Bainbridge, the fishing this season has been good, fish plentiful and biting readily. The excessive rainfall has affected the fishing to some extent. Mr. Herr writes under date of Sept. 14: "The fishing was very good until the present wet spell of weather began, yet there have been some good catches this week. Yesterday Mr. Ell. Haldeman caught eleven 'Susquehanna salmon.' On Sept. 1 he landed three that averaged 3lbs. apiece. Messrs. Doyle and Haldeman were up at the Falls to-day fishing for 'salmon,' but met with poor success, catching only three, the largest of which weighed 9lbs. I also drove up to the Falls to-day and interviewed Mr. G. W. Walton. He told me that fishing there is at its best, never better, and will continue good until cold weather interferes. 'Salmon' are numerous and bass are very plentiful. German carp are sometimes caught at the Falls, and eels are in abundance. The water at the present time is in very good condition. Anglers come here from Philadelphia, Lancaster, Harrisburg and from many other sections of eastern Pennsylvania, and those having suitable tackle and knowing how to use it, usually take home good strings of fish. The 'salmon' and bass increase each succeeding season in spite of the large numbers taken out of the river every year. The former species average about 4lbs. in weight, and the bass average from 1 to 1½lbs. The largest bass Mr. Walton has seen caught at the Falls weighed 4lbs. The largest catch of 'salmon' made at the Falls this season was that of Mr. Harry Bricker, of Harrisburg, who succeeded in landing fifteen fine 'salmon' one day last week, among them there being one of 9lbs. weight. This beautiful example was about 3ft. long, and is considered the finest fish caught here up to date.

"Lamprey eels are the best bait; bright-sided minnows or shiners, small catfish and helgramites are also very good. Rod and reel are used, with spoon. The fishing is all done by trolling."

I have spent the greater portion of my life right on this spot, and, therefore, I know that I speak the truth in saying that some of the best angling for the pike-perch (Susquehanna "salmon") and the small-mouthed black bass is to be had on that portion of the river mentioned in the beginning of this article. I have seen strings of from twenty to thirty bass (an unusual number) captured in one day by one rod between Bainbridge and the Riffles. Messrs. Doyle, E. and J. Haldeman, Hipple, McNeil, "Squire" Bear, Smith and others are the local anglers. Hotel expenses there are nominal, while the table is always well supplied. The Pennsylvania Railroad runs through the place, affording ample and easy facilities for getting in or out of town. Good boats and guides are to be had at moderate prices. It is a place where the stranger will not be fleeced.

BARTON A. BEAN.

THE BAY OF QUINTE.

BELLEVILLE, Ont., Sept. 16.—The fishing season in these waters has not been an universal success this season.

Maskinonge have been scarce, as compared with last year, when the number and size of the fish caught in this district were unprecedented. Then 40-pounders were quite common, and a monster of 51lbs. headed the list. Now the big ones are few, the largest recorded being a 36-pounder, which was taken on Saturday afternoon at Mosquito Bay, by Mr. H. K. Smith, one of the vice-presidents of the Forest and Stream Club. The fish, which was beautifully proportioned, was measured in my presence, and its dimensions were found to be as follows: Length, 4ft. 2¼in.; girth, 23¼in. The number of fish caught is not, probably, more than one-sixth of the catch of last year, but they were found to be widely diffused. The same remarks apply to the Bay of Quinte as a whole and to Hay Bay.

Since the departure of the shark or gaspereaux, early in August, bass have been taken in greater numbers than for many years past, and they are still biting freely when the weather is favorable. A party from your side of the line had upward of 100lbs. one day, and an old angler who camped and fished for a week a few miles west of the city told me that he and two companions averaged at least 70lbs. per day. The same angler caught on Thursday last twelve bass which weighed a little more than 40lbs. Four of the string were 15lbs. good weight, and the largest of the lot weighed 4½lbs. Grasshopper and fly were the lures used. At the famous "middle ground," opposite Northport, some enormous catches have been reported. Most of these reports I believe, but cannot personally verify.

Pike and pickerel (doré) have been taken hereabouts in large numbers, and many of them of large size.

The Bay of Quinte is a splendid fishing ground. If properly protected it would be a veritable paradise for anglers. R. S. BELL.

THE WRONG PLACE FOR PLAICE.—*Editor Forest and Stream:* A contributor alluding to the fact that English sparrows are sometimes palmed off for reed birds in the restaurants reminds me that not long since I had occasion to go to the restaurant of the Pennsylvania Railroad depot in Jersey City, and looking over the bill of fare I saw on the fish list "Halibut steak, 40 cents." As this seemed a tempting dish I ordered it, and in a few minutes the waiter brought in a couple of transverse sections from a plaice, which might easily be mistaken for halibut by a man with a very bad cold. I asked the waiter if he couldn't serve a different sort of halibut if I waited a few minutes, and he said, "No sah! that's the only sort of halibut we have, sah." As I am not a kicker I said nothing and paid my bill, but decided to go elsewhere for dinner next time. As stewards can buy the cheap and coarse plaice for a mere trifle, and as the delicious halibut is expensive, I presume that a great many travelers find that they do not care much for halibut.—ROBT. T. MORRIS.

HAVRE DE GRACE, MARYLAND.—We are indebted to Mr. D. W. Kenly for the following notes upon the occurrence of certain fishes at the mouth of the Susquehanna River: Mr. Kenly says the striped bass (*Roccus lineatus*) has been and is very abundant, the river at times being literally alive with these fish. They will not take the hook, much to the angler's disgust, as they find plenty of food in the herring and shad which are swarming in the river. There are millions of young shad at this point, which they do not leave; owing, it is said, to the salinity of the water. These young shad occurring in immense numbers are supposed to be the result of last spring's shad hatching and planting by the U. S. Fish Commission. The report that Mr. Thomas Reynolds of this place caught 2,400lbs. of striped bass in his trammel net is true. The fish varied in size from ½ to 30 and 40lbs. The water at last accounts was clear, favorable to angling for striped bass, and would undoubtedly be very fine but for the presence of the small fish.

BROWN TROUT IN VIRGINIA.—The U. S. Fish Commission, at Washington, has received a beautiful specimen of the brown trout of Europe, which was reared at the U. S. hatchery at Wytheville, Virginia. It is one of nine, which were taken in a seine in Tates Run, Va. This stream flows by the hatchery, from which the trout had escaped. The one here noticed is about 12in. long and of a beautiful coloration. This is very gratifying to the Commission, as the eggs from which these fish were hatched were imported from Germany. It seems settled beyond a doubt that this fine species is to be added to the list of trout to be found in American waters, as several have been captured in different parts of the country this season.

BLACK BASS IN ILLINOIS.—One of the most remarkable features of fishculture work in Illinois is the fact that 80 per cent. of the fish handled there this season are black bass. Carloads of bass are being planted in streams suitable for their reception. Here will be an angler's paradise for bass fishing.

Fishculture.

SAWDUST IN STREAMS.

MR. W. H. ROGERS, late Inspector of Fisheries for Nova Scotia, made a report to the Hon. C. H. Tupper, Minister of Marine and Fisheries, upon the question of sawdust in streams and its effect upon fish. This report was dated at Ottawa, Jan. 1, 1889, and for some reason was suppressed at the time. It has just been published in Halifax by William Macnab, under the title of "The Suppressed Sawdust Report," 12mo., covering 15 pages, with an addendum of 5 pages made up of the following articles, all of which have appeared in FOREST AND STREAM during the present year: "A Century of Sawdust," Hallock; "The Sawdust Question," Peirce;" "Effect of Sawdust on Fish," Piscator.

The report of Mr. Rogers is a strong argument against the belief that sawdust is injurious to fish life in streams, and it wholly disproves the supposition that fish are driven from waters in which much sawdust is thrown. Mr. Rogers states that he usually found the most fish at the run of water from the mill wheels, and that is where the sawdust is thickest, and he further says that "so well is this known by men employed in saw mills that during the salmon season, so soon as the mill is stopped for any purpose, a man or two will be seen under it with dip-net or spear, endeavoring to capture the fish which have gathered there while the mill was in operation." Mr. Rogers's connection with the Department of Fisheries, and the fact that the Province in which he has lived and worked has numerous small streams flowing to the sea which are well stocked with anadromous fishes, and which have many saw mills upon their banks, has afforded him excellent opportunity for a study of this question, and after making extensive investigation of the subject he states that he has been unable to obtain evidence to sustain the belief that sawdust is injurious to fish. Mr. Rogers quotes at length from letters received by him from Overseers of Fisheries in the different counties of Nova Scotia. These overseers are for the most part of the belief that the sawdust is not injurious except where it covers the spawning beds, which it seldom does, owing to the fact that the swift running waters of the beds do not allow the dust to settle there. They obtain no evidence going to prove that the fish are poisoned by sawdust, but say that the dams are the principal cause of failure in the fishery for anadromous fishes.

Mr. Rogers quotes from a letter received by him from Commissioner Stilwell, of Bangor, Me., viz.: "In answer to your esteemed favor of the 28th ult. (November, 1880), we have no reports or papers upon the subject of sawdust. We have not succeeded in keeping it out of our rivers. It does not seem to seriously affect the anadromous fishes where thrown out below their spawning grounds; if thrown in above I think it would. Our anadromous fish seem to make their way through it readily enough." In referring to correspondence had with Mr. Henry O. Stanley, Fish Commissioner, Maine, Mr. Rogers says: "He (Stanley) has had no experience as to the effect of it if lodged on the upper portions of rivers or on spawning beds, and thinks that in such cases it would injure the salmon fishery, and I am inclined to think so too, but I have never been able to find any lodged where salmon would spawn, as there is too much force of water in such places to allow it to remain, salmon always spawning in shallow rapid running water. Some of our rivers have been receiving sawdust at their very headwaters for many years, and one looks in vain for sawdust where there is any likelihood of salmon spawning. Maine has much more sawdust in her streams than we have and her officers are close and keen observers of long experience."

One very remarkable case recited is that of the St. John River, of which Mr. Rogers speaks as follows: "It will not be denied that there is and has been for very many years past more sawdust thrown into the St. John River than into any other in the Lower Provinces. Gilson's large mills and others on the Nashwaak with numerous others all along the smaller streams which flow into the St. John on both sides, from the Grand Falls down the river almost to its mouth, allow their dust to pass into the water. All the other large fish-producing rivers, however, are clean as to sawdust, and yet the shad and other fish on the St. John are increasing, and decreasing on other rivers where there is little or no sawdust." A table is given showing a gradual increase in the number of shad taken from the St. John River from 1878, when the catch was reported as but 428 barrels, to 1887, in which year the reported catch amounted to 2,793 barrels. From 1876 to 1881, six years, the annual catch of salmon on this river was 172,492lbs., and from 1882 to 1887 210,066lbs., an average annual increase of 37,424lbs. for the latter period. During the same season a large increase in the catch of alewives is noted. This is more remarkable, as in the whole province there was a decrease in the catch of salmon amounting to an average of 596,950lbs. annually.

Mr. Rogers presents a table showing the catches of salmon in the rivers of Nova Scotia proper, where sawdust abounds, and also the catches made in the rivers of Cape Breton, which are comparatively clean. During the years 1880 to 1887 there was an increase of nearly three hundred per cent. in Nova Scotia, while in the rivers of Cape Breton there was no increase whatever.

"The Clyde River was for many years almost entirely barren of fish. We never received an account of a pound of fish of any kind from it until after the dam was opened by a patent fishway in 1879. Sawdust has continued to run into it for many years, and it is still running." The catch of salmon in this river in 1885 is given as 350lbs., and a gradual increase is noted up to 1888, when the catch was 3,975lbs.

Mr. Rogers cites numerous cases similar to the ones given above, and says: "The natural and only rational deduction from this state of facts is, that the best way to stop complaints as to sawdust is to open the dams and make natural falls passable for all kinds of anadromous fishes;" and he concludes as follows: "In conclusion I may say that those who affirm that sawdust injures the fisheries to the extent claimed by them should be in a position to show facts and produce instances clearly proving their assertions. This should, of course, have been done before their, in my opinion, untenable views were placed in the form of law; but even now that the law has to a large extent been allowed to fall into desuetude, and when the important milling interests of the country are likely to be so seriously affected, there should, I think, be a careful examination or inquiries into the whole subject."

A NOVEL WAY TO CAPTURE FISH.—Mr. E. M. Robinson, of the U. S. Fish Commission, who has been stationed at the Wytheville, Va., hatchery, used a McDonald fishway in capturing escaped trout a few days ago. He placed the fishway in position in Tates Run, which flows by the hatchery, having a pool at the head of the way into which the fish fell as they crossed the structure. In this way he captured 108 trout, most of which were the speckled or common brook trout, and a few brown trout. Mr. Robinson has gone to Leadville, Col., where he is to superintend the work of fish hatching. It is his intention to try the fishway as a means for capturing the native trout of that region for breeding purposes. As the fish receive no injury whatever from this method, it may prove of great use in this work.

FISH HATCHERY AT LEADVILLE, COLORADO.—It is expected to have the Leadville station ready for trout hatching on or before the first of November. The work at first will have to be done in a temporary building; this building to be a part of the permanent establishment. Mr. E. M. Robinson, superintendent of the station at Leadville, has been ordered to Washington, where he will receive necessary instructions and then proceed to his new station. The work at this station during the coming season will be carried on to as great an extent as possible under the circumstances, and, although it may be somewhat limited, good results can be looked for.

WHITEFISH WORK ON LAKE ERIE.—Col. John Gay, Inspector of Stations of the U. S. Fish Commission, who has had charge of the establishment of a station at Leadville, Colorado, will go from that place to Put in-Bay, Lake Erie, to take charge of the collection and distribution of the whitefish. The work will be carried on under the same arrangement as last season, the eggs being collected on the lake and taken to the State Fish Commission hatchery at Sandusky to be hatched out. If the season is favorable for the obtainment of eggs, the work done will be upon a large scale, as under the existing arrangement large quantities of eggs can be handled.

FISHES FROM THE YELLOWSTONE.—It is expected that car No. 1, of the U. S. Fish Commission, will carry to Washington, on its return from the Yellowstone Park, a good series of the food fishes of that region. This series will include the black-spotted trout of that country, the whitefish and the grayling. These will be exhibited in the Fish Commission aquaria in Washington, and will no doubt prove a great attraction.

The Kennel.

FIXTURES.

DOG SHOWS.

Oct. 1 to 3.—Third Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. F. C. Barnes, Secretary.

Oct. 8 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary. Entries close Sept. 28.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

TORONTO DOG SHOW.

[*Special Report.*]

THE Dominion of Canada Kennel Clubs' Exhibition, held in connection with the Industrial Fair and Exposition, Sept. 16–20, is considered the most successful dog show that has ever been held in Canada. Notwithstanding that a dog show was being held in Elmira the entries footed up about 335 all told, and the quality was decidedly better than average. These figures are far in excess of any benched by the other fall shows; and a well-known judge who was present at London declared that Toronto was so vastly superior, both in number and quality, that the smaller exhibition was "out-classed." In regard to the attendance all we need say is that on Tuesday nearly 5,000 persons paid for admission, and that when the president of the Industrial Fair called to have a look at the dogs he was unable to get into the building. The fair people are so much pleased with the outcome of affairs that next year they will erect a larger and more suitable building especially for the dogs. Better prizes will be given, and the Toronto dog show of 1890 will probably have 500 entries.

Captain C. Grevile Harston, who had most to do with the management, is not a new hand at the business. He is a downright hard worker, and it will not be owing to a lack of appreciation on the part of exhibitors if he is not again seen in the same capacity. Before the closing of the show he was presented with a suitable testimonial which contained the signatures of all the prominent exhibitors present. This compliment to his devotion was well merited. He was ably assisted by Mr. W. S. Jackson and Mr. J. Massey, both good dog men, and by Mr. Dean and other friends and members of the club. The judging was done in a large tent off the main building, and the management is to be commended for the quick manner in which the rings were served, considering the tremendous crowd that was gathered about the benches. Mr. McEwen of London was ring steward for Mr. Davidson, and Mr. Jackson officiated in the same capacity for Mr. Mason. Mr. Davidson, who had to leave for Elmira on Tuesday afternoon, commenced his duties on Monday at noon, but Mr. Mason did not get to work until nearly 4 o'clock. The awards were all made before noon on Tuesday, and on Wednesday a catalogue with printed list of awards was on sale.

It is scarcely necessary to add that our visit was a most pleasant one, and that we were received with generous Canada hospitality; but we cannot commence on the dogs without first thanking the club members for the many courtesies and kindnesses received at their hands.

MASTIFFS—(MR. MASON).

In point of quality this was probably the best class that has been seen in Canada. Beaufort, the English champion, was entered, but not sent, and the competition lay between Sears' Monarch, a well known winner, and Mode, a promising young dog, owned by Mr. Hugh Falconer, of Shelburn, Ont. Monarch has an advantage in length of body, strength of loin, spring of ribs, muscular development, bend in hocks and straightness in forelegs, and these are the points that pulled him through. Mode is a trifle better in head and vastly superior in bone, but his rather short body, not very well sprung ribs, straight hocks and out-turning feet put him back. The Melrose dog, too, had a decided advantage in condition. Mode was catalogued at $200, and if any one wants a cheap dog here is a chance. Rosedale Bruce, owned by Mr. J. Massey, who is one of Toronto's most popular fanciers, was a good third. He lacks in width of muzzle, depth of stop, strength of quarters, massiveness of body, and would be improved with more bone, better bent hocks and by less length in legs. King, hc., lacks in head, ears, strength of limbs, muscular development and general massiveness. Hector, hc., is not typical in head, and the forehead especially is of wrong formation; it should be flat. He also lacks in size, bone, and formation of hindquarters. Major II., unnoticed, lacks in muzzle, hang of lips, color of eyes, massiveness of body, strength of limbs, formation of feet and in one or two other minor points. He is a useful-looking dog, but not a show mastiff. In bitches Countess of Dunsmore, an old face that is well known to mastiff men, scored a very easy first. Bess, second prize, was beaten in all head properties, and owing to suckling a litter was not in bench show condition. Fawn, unnoticed, is very shallow in head, wrong in muzzle and lips, light in bone and lacking in massiveness of body. Flora, unnoticed, was entered as a yellow dog. Fawn, yellow or brindle, she is not a show dog, being altogether wrong in head, bad in ears, slab-sided, leggy and weak in bone. Lady, another of the unnoticed division, lacks in head, ears, bone and condition, and in none of the other points is she first-class. Minting Minor, one of the best of the get of the deceased champion that we have seen, made mincemeat of the rest of the puppy class. If his ears and eyes were of better color he would look much better. If given proper attention dur-

ing the next six months he should certainly be heard from again. Crown Prince (this is much too good a name for so bad a dog) was clearly outclassed in head, ears, body and limbs. The special for best mastiff bred in Canada or the United States was won by Sears' Monarch, and the brace prize went to the same dog and his kennel companion, Countess of Dunsmore.

ST. BERNARDS—(MR. MASON).

In the class for dogs, rough or smooth, Plinlimmon, Jr., although shown light in flesh, was clearly the best of the class. Bruce, second prize, also was not in good condition. In body and limbs he is decidedly above average, and his head, although not good, is not actually bad. Monk III. and Don Pedro were each given a third prize. The former is too full in cheeks, defective in stop, plain in hindquarters and lacking in size. The latter is a smooth-coated specimen that lacks massiveness in head and body and runs too much to the hound type. Duke, hc., is plain in head and defective in markings. Leo, hc., lacks in head, eyes, expression and in face-markings. Bernie, unnoticed, is plain and out of condition. In the bitch class the beautiful Lady Wellington smothered her competitors, being away ahead of the class in almost every St. Bernard attribute. The Meadowthorpe Kennels' Nora, that took second, like Lady Wellington, has already been fully described in these columns. Nellie, vhc., is too houndy. She is also small and not in condition. Beulah, third prize, lacks character and is wrong in color and markings. Duchess, hc., is an eleven-month-old puppy that will never make a mark in good company. Vola, unnoticed, is a Berghund, and a poor one at that. Garibaldi, first in puppies, has neat ears, but his light eyes and full cheeks, besides several defects behind the occiput, will handicap him heavily when he meets good company. Hector, vhc., lacks volume in head. Duchess, hc., although undersize and defective in head, shows some character, and may some day turn the tables on Hector. Priam II., unnoticed, is washy in color and bad in head. The brace prize was won by Plinlimmon and Lady Wellington, and her ladyship outclassed everything in competition for the special for best bitch.

GREAT DANES—(MR. MASON).

Although there were thirteen entries in these classes only one need be mentioned. This is Lord, a useful-looking second-rater, that was placed at the head of the dog class. He should do some winning if shown in better company than he met on this occasion, but a Cedric the Saxon would leave very little of him but his color. The most that can be said of the great Danes in this country is that they are a very seedy lot.

NEWFOUNDLANDS—(MR. MASON).

Lead, first in this class, bears a very strong resemblance to Leo, that was once shown by Dan O'Shea. He has a very bad temper, a most serious failing in a dog of this breed, but this is not all. Duke, second prize, is undersize, sour in expression, better than average in body, legs and feet, and just fair in coat. Victoria, unnoticed, was first at London. This is not a Newfoundland at all, and it seems strange that so good a fancier as Mr. Lædlaw should have so little confidence in a judge's ability as was demonstrated when he entered a mongrel, over-grown setter in the Newfoundland class. Bruce, another mongrel with wretched head, gooseberry eyes and infernal coat, was also dismissed without notice.

SETTERS—(MR. DAVIDSON).

The class for English dogs contained several very useful-looking specimens. Locksley, catalogued at $200, but not sold, was placed at the head of affairs; we would have placed him second to Gladstone, that, although not his equal in head, is decidedly his superior in ribs, back, loin, hindquarters, stern, carriage of stern, and in legs and feet. Brighton Dick, vhc., was too thick in head as a puppy, and it has since grown coarser, still there is much in the dog that we admire. Rock, vhc., is a bit coarse in skull and muzzle and long in tail. He has good bone. Grouse, vhc., we liked better than Rock although he is rather wide in skull and not perfectly straight in front. Dick Bondhu, vhc., while defective in head and undersized, is of a useful sort. Rockingham, hc., has plenty of ear, is somewhat coarse in head and not perfectly straight on his pins. Of the unnoticed ones Rupert is open in coat, stumpy and sour in head and wrong from the shoulders down. Shot (Perryman's) is leggy and wrong in front. His feet are his best points. Rex shows Irish character. Don is all out of condition, added to which he has many defects. Jake lacks in head, feet, position of ears and in neck. Rock is defective in head, eyes, coat and hocks. Shot (Toronto Setter Kennel Club's) is strong in head, hardly straight in front and too straight behind; good back and chest. Duke is leggy and rather light behind. Shot, third prize, was not on the bench when we called. In bitches old Genevieve, in creditable condition, was well placed first. Canadian Lillie, second prize, is a racy-looking one that is hardly right in head or neck and too light behind the short ribs. Countess Daisy, third prize, has too much ear. She lacks also in expression and in spring of ribs; she has some quality. Liddesdale II., vhc., lacks in skull, bone and stern, but notwithstanding these defects she has some quality. Scottish Belle, hc., lacks in stop and is not clean below the eyes; good back and loin. Belle, hc., is fairly good in head, but very throaty; she was not in show trim. Jep, c., is wide in front, rather weak in head and not just the thing in set of ears. Lady Romp, c., is much too small, and in addition is coarse in head, wrong in ears and shoulders, light in bone and out of condition. Pearl, unnoticed, is coarse in head and eyes, wrong in set of legs, not strong in knees and straight behind. She was shown fat and out of coat. Sir Tatton, that is not in condition for the show bench, did not compete. His owner showed good judgment in not putting him before Mr. Davidson in his present condition. Of the puppies shown probably not one will be heard from in the future.

The Irish setter dogs, Jack Malone, first prize, Redstone, third prize, and Rover, vhc., are well-known winners that have been fully described time and again in these columns. We like Redstone for first place. Paddy Sarsfield, second prize, is rather on the undersize, too flat in head, ribs and loin, a trifle short in body and not all that could be desired in knees. He stands on good feet. Shaun Rhue, hc., is a bit coarse in head and flat in ribs. His coat was in bad condition, and taken all in all he is not quite a show dog. Drake, vhc., is coarse in skull, light in eyes and straight behind. Bang, c., is rather coarse and sour in head, too light in quarters and not quite right in forelegs. In bitches Irene, with a fairly good head, but too weedy for our fancy, was first, and Pearsall's well-known Belle Ida was second, with Juno, too flat in head, not quite right in set of ears and on the weedy side, third. Lady Noreen, vhc., while not very neat in stop, nor clean below the eyes, and showing slight coarseness, would probably have been our choice for first. Mr. Davidson stuck to the little ones, and his awards were perfectly consistent. Bob, first in puppies, is decidedly better than average in head and is fairly good in body and limbs. His long stern does not add to the appearance of his hindquarters. Jennie and Biddie, unnoticed, are very nearly as good as Bob, and we would have given both vhc. cards.

Belmont represented champion Gordons, and also secured the special for best Gordon of all classes. Heather Harold, Roy and Simcoe, winners in the open dog class and the only ones shown, are a trio of well-known faces and were properly placd. The same may be said of Becky Sharp and Blossom, that were first and second in the bitch class. Queen Anu, third prize, has a sweet head, but it is of English type; color, hocks and loin not first-class. Hilda, vhc., is not good in ears; they are too wide. Strong, useful-looking limbs and correct feet are her best points.

POINTERS—(MR. DAVIDSON).

This class is nearly always a weak one at Dominion shows, and here it was no exception. The winner in the dog class is not of correct type, being light behind, not well sprung in ribs, light and flat in loin, not just right in set of forelegs, a trifle leggy, only moderate in head and having a dark nose, which, as we have repeatedly pointed out, is a defect in a lemon and white dog. He would be outclassed in good company, although clearly the best in the class on this occasion. Shot, second prize, lacks in stop, cheeks, neck, ears, second thighs, hocks, shoulders and set of forelegs. The middle part of him is the best. The other Shot, that took third, is light in quarters, straight in hocks, not well turned in loin, rather stilty behind and not right in front. He is a lemon and white, by Old Shot out of Belle. We cannot say that any of these Shots bear a very striking resemblance to Shorthose's Shot, that was a winner in England fifteen years ago; in fact, the Shots do not appear to be improving. Hector, vhc., is coarse in head, wrong in set of ears, not correct in color of eyes, heavy in shoulders, and in knees and hocks there is much room for improvement. Nellie, first in bitches, is strong in head, light in eyes, straight in hocks, weak in knees, not well let down in chest, short between the couplings and not quite the thing in position of forelegs.

FOXHOUNDS—(MR. DAVIDSON).

First prize in this class was rightly awarded to Dan O'Shea's Ranger, shown by W. J. Watson. His defects, and there are plenty of them, need not be enumerated. Rip Van Winkle, second prize, is a Rip that we would not care to follow in the hunting field. Shoulders, knees and feet all defective, and these are most serious defects in a dog of this breed. He is better than average in head, but is decidedly wrong in brush. Ringwood, third prize, is coarse in head, not well sprung in ribs, poor in coat and brush, heavy in shoulders, flat in loin, in fact, not quite a show dog. Anthony, vhc., is of Yankee type, which takes in everything objectionable in coat, brush, legs, feet and bone. Ned, hc., is a half-bred pointer, so is Driver, who was commended. "Honest John" must have been in a generous frame of mind to recognize these animals.

BEAGLES—(MR. DAVIDSON).

This was a splendid class of six, and the competition for the blue ribbon was soon narrowed down to Jessie and Rattler. Jessie, a bitch we do not remember having seen before, was given the prize, and undoubtedly she is a good one. In legs and feet she had no equal in the class; her shoulders are well placed and she has a good head which is marred by slight coarseness in skull. In hindquarters, coat, brush and true beagle character she is decidedly above average. Unfortunately she was shown out of condition and very light of loin, and on this account we would have pegged her back to third place, leaving Rattler and Fitzhugh Lee to fight out the battle. Rattler, that has been on the shelf for some time, came out in great form and we should have placed him first. He is decidedly inferior to Fitzhugh Lee in legs and feet, but beats that dog many points in head, eyes, expression and ears. The third prize winner is a bit monkey-faced and we cannot recognize it as a better specimen than Fitzhugh Lee. We would have placed the class in this order, viz., Rattler first, Fitzhugh Lee second, Jessie third, Fardinade III. vhc., Cleopatra hc. and Gypsey c.

SPANIELS—(MR. DAVIDSON).

Two Irishmen faced the judge, with Handy Andy properly placed first. While not a badly formed dog he is too light all over for our fancy and is spoiled by gooseberry eyes; head better than average. Shake, second prize, is light in color and neither good in body nor leg-coat. In bitches there was little to choose between Ochtwan Biddy and Biddy Shaugraun. The winner is fairly good in head, but lacks in ears and is wrong in body and leg-coat. The second prize winner is altogether wrong in formation of head.

Boss III. was the only entry in the class for Clumber dogs. He is undoubtedly a Clumber, but he is not the dog he has more than once been represented. In forehead, stop, expression, formation of foreface near the eyes, and also in ears there is plenty of room for improvement, and in addition to these defects he is not flat in coat about the neck, and his forelegs are not straight. In formation and massiveness of body, length and strength of limbs, bone and feather he outclasses the so-called Clumbers that have hitherto been shown in this country. But we cannot leave him without assuring his owners that if Boss III. had been shown against a typical dog like old Nabob he would not now be a champion. He has a clear field in the dog class for Clumbers in this country, as there is nothing to show against him. Bromine, first in bitches, is probably a better specimen than Boss III., but of this we cannot be certain until we see her in decent condition. She stands as far ahead of the bitches as Boss III. does of the dogs. Lucy II., second prize, is wrong in formation of head and in set and formation of ears. She is also light in eyes, throaty and shows lots of room for improvement in shoulders, knees and hocks. We have been condemned for having repeatedly stated that the Clumber spaniels in this country were little better than a lot of mongrels, just as we were condemned for our denunciation of a lot of spiked-nosed mastiffs and snipy-faced pointers. The proof is now on hand that we wrote not one word too many against this class of dogs.

In the open class for field spaniel dogs, Kaffir, that is only fair in head, too long in legs, and not heavy enough in bone, was given first, although closely pressed by Sweep, that is also defective in head and too far from the ground. His straight legs are to be commended. Friday, third prize, is of cocker type. Bluff, vhc., is an over-sized cocker and was shown out of coat. He looks like a workman. Blackie was the only field bitch shown. She, too, runs too much to the cocker type. Mike was the only entry in the challenge class for cockers. A queer dog this for champion honors. The competition in the open class for dogs was very keen, and we did not envy the judge. Obo, Jr., first prize, is a dog of far more than average merit, although not one that will win in the best of company. He has a fairly good head that would be improved by cleanness below the eyes and a lower carriage of lips near the nose. He is also slightly underhung, not quite first-class in coat, not perfect in hindquarters and not merry enough in his movements for our liking. He begins to show age. Black Graf, second prize, came out in great form, and we would not have known this old face without the assistance of the catalogue. Black Duke, third prize, was about the equal of anything in the class, although not perfect in head and shown too light in body. Pedro, vhc., is a puppy that may be heard from again, although he may go coarse in head. His thin tail and scanty coat told against him on this occasion, and we thought we noticed something wrong in his back action. Smutt, vhc., is not right in muzzle, stands rather too high, and is slightly underhung. Rabbi, vhc., is getting worse in head. Bronte, vhc., might be improved in lips. His coat is too short and he is light in bone. Rabbi can beat him. Troy, hc., gets his flag too high, and in addition is full in cheeks, wide in muzzle and not first-class in ears. Billy, unnoticed, is coarse before the eyes, but he moves well, and what a back! Pekoe runs to the field type and is crooked in front. He is too long and too low for a cocker, but has good bone. Kespie is very defective in limb and is decidedly too long-cast. Silver King should have had a card, and Bob Obo, fair in head, not just right in lips or perfect in stop, too curly in coat, and with stern carried high, was also deserving of notice. Dandy is bad in head and muzzle, short in feather, and light in bone. First in bitches went to Vic, that shows field character, especially in head. She shows some quality and would be improved by darker eyes and more bone. Madgy, second prize, is deficient in muzzle, expression and eyes. Her eyes are not bad in color, but they are much too small. She is also too large, and will probably some day find herself in the field class. Yarrow, third prize, lacks in eyes and coat, and her nostrils are not well displayed. Mollie, vhc., stands rather high, is too light in bone, and not just right in muzzle. Miss Nance, vhc., is well known. She begins to show age. Veno, hc., is faulty in muzzle, light in bone and a bit sour in expression. Shela, hc., turns out her feet and is short in coat. In other points she is decidedly ahead of nearly everything in the class, and should, we think, have been higher. Fitte, c., is rather light in eyes and not quite right in front of them. She has straight legs and good body. In the novice class, Bronte, already referred to, took the only prize offered, and in the puppy class Pedro, that was vhc. in the open dog class, won.

COLLIES—(MR. DAVIDSON).

The challenge class contained two good ones in Dublin Scot and Scotilla, the latter winning with many points to spare. The old dog grows coarser in head and worse in shoulders, whereas Scotilla, that was once a bit too fine in head, has improved, and as the dogs appeared in the ring on this occasion, Dublin Scot seemed to us to be almost outclassed. First in the open class for dogs was won by Colonel Scot, a youngster by Dublin Scot out of Flurry III. He is rather heavy in skull for a puppy, and is at present all out of coat. He carries his ears well, has good bone and stands on fairly good legs and feet. Charleroi II., second prize, while not so good in carriage of ears, shoulders or carriage of stern, was shown in far better condition, and we would have placed him first, although it must be a close thing between them when both are equal in condition. Maxwell, third prize, is many points behind the first and second prize winners. He is coarse in skull, wrong in carriage of ears, not good in undercoat and only moderate in back and loin. Glenroy, vhc., is light in eyes, wrong in expression, and soft, open and short in coat. Melton Wonder is plain in head and entirely wrong in ears. His coat is of good quality, although hardly close enough, and he has plenty of bone. Bendigo, hc., is a useful-looking dog, with moderate head and defective ears. Jordan, c., was not on the bench when we called. In bitches, Roslyn Clara, a rare bred one by Caractacus out of Pitch Dark, was placed first. She has a well-formed head, which is sadly marred by a stupid expression, and her eyes are too light in color. She stands rather low at the shoulders, is an inch too short in loin, carries her brush too high and is badly formed from the hips to set-on of tail. She has an excellent puppy coat and the very best of ears. When matured she will be beaten out of sight by a bitch like Flurry III. Spoiled Miss, not in full coat, but shown with more flesh than we have ever seen her, is so vastly better in expression, formation of body and other collie attributes, that we would have placed her first. Mermaid, third prize, is too round in skull, her ears are inclined to prick and she is short in brush, rather light in bone and not very strong in pasterns. When matured she will probably have a good coat; but no matter how good it may be, she will not be a winner over good ones. Roslyn Clara was clearly ahead of the novice class, and Colonel Scot had an equally easy victory in puppies. Glen Locksie, a clean-headed youngster, was Colonel Scot's most dangerous competitor. Driver, vhc., is wrong in ears, brow and coat. Turk III., c., is bad in head and ears, and will never be a show dog. Scotilla was a very easy winner of the special for best collie of all classes.

GREYHOUNDS—(MR. MASON).

Balkis, the sturdy hero of many a well-earned victory a-field and on the bench, was alone in the champion class. In the open class for dogs, Douglas Fleming, that has gone all to pieces in loin and hindquarters, was easily defeated by the plain-fronted Fleetwood. Scavenger, third prize, is a dog of good hard color, and there was little to choose between him and Douglas Fleming, notwithstanding that he lacks liberty and is decidedly heavy in shoulders. Milo, hc., lacks size and has not improved on his puppy form. Blucher, vhc., is a useful-looking dog, although lacking in quality and character. Fly, hc., has rather a nice outline, but he lacks power behind, shows age and is not well sprung in ribs. Barnaby, c., lacks in eyes and is weak in front of them. He is also wanting in muscular development in back, loin and thighs. Spider, first in bitches, was clearly the best, but her plain head and heavy shoulders would put her back in good company. Second prize was withheld for want of merit. Second Light, third prize, shows far more strength than quality. Alla-Greta, vhc., was first at Toledo. This is a fifth-rater. She is weak in jaw, flat and light in loin, very deficient in hindparts, light in bone, weak in pasterns and very bad in feet. Fly, hc., is a better greyhound, but she shows age and was not in good condition.

BULLDOGS—(MR. MASON).

Lion and Portswood Tiger were the entries in the dog classes. Lion, superior in head and true bulldog character, notwithstanding his poor condition, was given first. Met, first in bitches, is wrong before the eyes and not well let down.

TERRIERS—(MR. MASON).

Mr. Dole, as usual, took most of the prizes for bull-terriers and we are pleased to see that his dogs are at last in good condition. The class was divided for dogs and bitches. Don Pedro, first in dogs, is a fairly good puppy, with too much jowl and cheek for a youngster. In body and limbs he will do. Spotless Duke, second prize, is too round in skull, and we fear it will never tone down. In bitches the beautiful Starlight was many points ahead of her kennel companion, White Daisy. The latter, although by no means a bad one, is too cheeky and defective before the eyes to win in good company. Daisy II., third prize, is short in foreface and light in eyes.

There was nothing very good in the fox-terrier classes. Village Belle, an old-timer, represented the champions. Her condition was first class. Blemton Trump, first in the open class for dogs, was fully criticised in these columns when owned by the Blemton Kennels. Zigzag, second prize, is a gay little fellow, but too light at all points. Viper III., third prize, is as much too coarse as Zigzag is light. His front would not do at all in good company. Ebor Speedy, first in bitches, is not one of our sort, being poor in expression, big in ears and too soft in coat. Bacchante, second prize, is better in expression, but her coarse skull, wide front and heavy shoulders put her in the second place. Puppies were a bad lot. Oxford Duke, the winner, is entirely wrong in head, and it is a head that cannot possibly improve. The winners in the wire-haired classes are well known and need not be described. Blemton Trump had an easy task in winning the special for best of all classes.

Mr. W. S. Jackson's well known Bedlingtons being out of condition, this class was poorly represented. Sentinel and Zulu II., the prize winners, are not of correct type, being too long in body and too near the ground.

In Yorkshires, Dolly, that has grown into a most lovely silver, fairly smothered Fanny and Minnie, that were both out of coat. Sweep, vhc., is a puppy of more than average merit, and one that may be heard from again. No fault could have been found if the judge had withheld second money in this class.

Scotch terriers contained only one of correct type, but a second prize was given to Dundee, that is of a useful-looking old sort.

Chummey, second prize in Irish terriers, was the only one

with any character. Peggy, shown in this class, is not bad in head, but she is decidedly coarse and her coat is all wrong.

The Meadowthorpe Kennels' good Dandie Dinmont Riever had the class to himself.

Black and tans brought out a new one in Kaiser, shown by Mr. F. F. Dole, of bull-terrier celebrity. He scored a very easy win, being better in color than his competitors, and decidedly superior in head. Rochelle Lass, second prize, is going wrong in head and color, and Desdemona, third prize, continues to get wider in front and thicker in skull. Kaiser should breed well with this bitch as he has a clean, narrow front, and excels in other points where she is deficient.

Toys as usual were a weak class and first prize was withheld. Weak faces and apple-heads were very conspicuous.

TOY SPANIELS—(MR. MASON).

The unnamed winner in this class is too long in forefnce, but in other points will do to show again. Topsy, second prize, was beaten many points in head and color. Fannie, unnoticed, is closely related to some cocker.

PUGS—(MR. MASON).

Midget, first prize, was a very easy winner, and if her head were as good as her body it would take a red-hot one to beat her. All the other noticed ones are defective in head.

MISCELLANEOUS—(MR. MASON).

The Chestnut Hill Kennels' smooth-coated collie, Ladybird, was decidedly the best exhibit in these classes. The retriever that won second, is bad in stern and moderate in head. Snowflake, a white English retriever, is marred by a marked ear.

Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—No entry.—OPEN—*Dogs:* 1st, E. B. Sears's Sears' Monarch; 2d, H. Falconer's Mode; 3d, J. Massey's Rosedale Bruce. High com., A. J. Calhoun's King and W. Barclay's Hector. *Bitches:* 1st, E. B. Sears's Countess of Dunsmore; 2d, J. M. Willis's Fawn. *Puppies:* 1st, C. H. Nelson's Minting Minor. Best bred in Canada or United States, Sears' Monarch; best pair, the same with Countess of Dunsmore.

ST. BERNARDS.—CHALLENGE—No entry.—OPEN—*Dogs:* 1st, E. B. Sears's Plinlimmon Jr.; 2d, W. Miller's Bruce; equal 3d, C. B. Glass's Don Pedro and A. St. L. Mackintosh's Monk III. High com., T. Crooks's Duke and H. F. Baker's Leo. *Bitches:* 1st, E. B. Sears's Lady Wellington; 2d, Meadowthorpe Kennels' Nora; 3d, J. S. Williams's Beulah. Very high com., F. W. Wilson's Nellie. High com., A. F. Jones's Duchess. *Puppies:* 1st, H. G. Charlesworth's Garibaldi. Very high com., J. A. Glass's Hector. High com., A. F. Jones's Duchess. Best dog and bitch, Plinlimmon, Jr. and Lady Wellington; bitch, Lady Wellington.

BLOODHOUNDS.—Absent.

GREAT DANES.—*Dogs:* 1st, T. Roldier's Lord; 2d and 3d, F. W. Wilson's Dudley Snow and Pollux. *Bitches:* 1st, 2d and high com., F. W. Wilson's Feida, Flora and May; 3d, M. Herzog's Juno. Best pair, Dudley Snow and Feida.

NEWFOUNDLANDS.—1st, W. J. Watson's Lead; 2d, W. Saulter's Duke.

ENGLISH SETTERS.—CHALLENGE—No entry.—OPEN—*Dogs:* 1st and very high com., T. G. Davey's Locksley and Brighton Dick; 2d and very high com., Thos. Johnson's Manitoba Gladstone and Dick Bondhu; 3d, J. James's Shot. Very high com., Toronto Setter Kennel Club's Rock and Grouse. High com., G. A. Thomas's Rockingham. *Bitches:* 1st, A. G. Habbick's Genevieve; 2d, very high com. and com., T. G. Davey's Canadian Lillie, Liddesdale II. and Lady Romp; 3d, T. P. Hebblewhite's Countess Daisy. High com., E. J. Walsh's Scottish Belle and J. Kennedy's Belle. Com., P. E. Perryman's Jep. *Puppies:* 1st and 2d, C. H. Corbett's Glen and Flo II. Kennel, T. G. Davey; owned in Toronto, Toronto Setter Kennel Club; brace, Locksley and Canadian Lillie; dog, Locksley; in Toronto, Shot; in Canada (previous named barred), Genevieve; brood bitch, Lady Romp; in Toronto, Pearl; litter puppies, C. H. Corbett.

IRISH SETTERS.—CHALLENGE—No entry.—OPEN—*Dogs:* 1st and 3d, A. W. Pearsall's Jack Malone and Redstone; 2d, D. Ward's Paddy Sarsfield. Very high com., C. W. Temple's Drake and Meadowthorpe Kennel Club's Rover. High com., J. F. Quill's Shawn Rhu. Com., J. Maughan's Bang. *Bitches:* 1st, J. Douglass's Irene; 2d and very high com., A. W. Pearsall's Belle Ida and Lady Noreen; 3d, C. A. Temple's Juno. Very high com., Dr. Temple's Belle. *Puppies:* 1st, D. Ward's Bob, Brace, Jack Malone and Belle Ida. Best owned in Canada, Irene; in Toronto (2), Paddy Sarsfield. Brood bitch (2), Irene.

GORDON SETTERS—CHALLENGE—1st, Meadowthorpe Kennel Club's Belmont.—OPEN—*Dogs:* 1st and 2d, Meadowthorpe Kennel Club's Heather Harold and Roy; 3d, J. L. Campbell's Simcoe. *Bitches:* 1st, J. L. Campbell's Becky Sharp; 2d, Meadowthorpe Kennel Club's Blossom; 3d, T. P. Hebblewhite's Queen Ann. Very high com., Mount Royal Kennels' Hilda. Best, Belmont. Brace, the same and Heather Harold.

POINTERS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st, Meadowthorpe Kennel Club's Duke; 2d, W. J. Dandy's Shot L.; 3d, J. D. T. Mackie's Shot. Very high com., J. E. Robertson's Hector. *Bitches:* 1st, H. M. Kipp's Nellie. Best puppy (2) Hector.

FOXHOUNDS.—1st, W. J. Watson's Ranger; 2d, 3d and very high com., W. S. Gold's Rip Van Winkle, Ringwood and Anthony. High com. and com., T. C. Stegmann's Ned and Driver. Kennel, W. S. Gold. Puppy, J. Leslie's Nip.

BEAGLES.—1st and very high com. (3), Clark & Rutter's Jessie, Fitzhugh Lee, Cleopatra and Gypsy; 2d and 3d, W. J. Watson's Rattler and Fairmaid. Kennel, Clark & Rutter.

IRISH WATER SPANIELS.—*Dogs:* 1st, Dr. J. Ross, Jr.'s Handy Andy; 2d, H. Habart's Snako. *Bitches:* 1st, A. E. Gooderham's Ochtwan Biddy; 2d, Dr. J. Ross. Jr.'s Biddy Shaughraun. Best pair (2), Handy Andy and Biddy Shaughran.

CLUMBER SPANIELS.—*Dogs:* 1st, Bate & Geddes's Boss III. *Bitches:* 1st, Bate & Geddes's Eromine; 2d, H. B. D. Bruce's Lucy II. Best, Boss III.; brace, Boss III. and Bromine.

FIELD SPANIELS.—*Dogs:* 1st, Woodstock Spaniel Kennels' Kaffir; 2d, J. Scully's Sweep; 3d, P. J. Keating's Friday. Very high com., G. Evan's Bluff. *Bitches:* 1st, Woodstock Spaniel Kennels' Blackie. Best, Blackie; pair, Blackie and Kaffir.

COCKER SPANIELS.—CHALLENGE—1st, C. H. Nelles's Mike.—OPEN—*Dogs:* 1st, P. G. Keyes's Obo, Jr.; 2d, H. G. Charlesworth's Black Graf; 3d, Woodland Kennels' Black Duke. Very high com., A. K. Ross's Smutt, S. R. Hemingway's Rabbi, S. W. Bunting's Pedro, and Woodstock Spaniel Kennels' Bronte. High com., Woodstock Spaniel Kennels' Troy. *Bitches:* 1st, W. G. McCullagh's Vic; 2d, A. G. Charlesworth's Madgy; 3d, Woodstock Spaniel Kennels' Yarrow. Very high com., T. J. F. Fitzsimmons's Mollie and S. R. Heminway's Miss Nance. High com., S. W. Bunting's Sheila and T. P. Hebblewhite's Veno. Com., R. E. Cooper's Fitte.—NOVICE—1st, Woodstock Spaniel Kennels' Bronte. *Puppies:* 1st, S. W. Bunting's Pedro. Kennel, H. G. Charlesworth; stud dog, Black Graf; best in open classes, Obo, Jr.

COLLIES.—CHALLENGE.—1st, Chestnut Hill Kennels' Scotilla.—OPEN—*Dogs:* 1st and 2d, Chestnut Hill Kennels' Colonel Sept and Charleroi II.; 3d and com., McEwen & Gibson's Maxwell and Jordan. Very high com., Mrs. G. Pellet's Glenroy. High com., R. Davis's Melton Wonder and A. Burland's Bendigo. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Roslyn Clara and Spoiled Miss; 3d, McEwen & Gibson's Mermaid.—NOVICE—1st, Chestnut Hill Kennels' Roslyn Clara. *Puppies:* 1st, Chestnut Hill Kennels' Colonel Scot; 2d, R. Cureston's Glen Locksie; 3d, McEwen & Gibson's Jordan. Very high com. and com., A. Burland's Driver and Turk III. Kennel, Chestnut Hill Kennels. Stud dog, Dublin Scot. Owned by member of Collie Club, Maxwell. Best, Scotilla; dog in Canada, Maxwell; bitch, Mermaid. Second best puppy, Glen Locksie.

GREYHOUNDS.—CHALLENGE—1st, H. W. Huntington's Balkis.—OPEN—*Dogs:* 1st, G. Stanton's Fleetwood; 2d, Meadowthorpe Kennel Club's Douglass Fleming; 3d and high com., G. C. Taylor's Scavenger and Milo. Very high com. and com., F. Habert's Blucher and Barnaby. High com., H. J. Thompson's Fly. *Bitches:* 1st, T. P. Hebblewhite's Spider; 2d, withheld; 3d, G. C. Taylor's Second Light. Very high com., Meadowthorpe Kennel Club's Alla-Greta. High com., F. Habert's Fly. Com., H. H. Davidson's Fly. Best, Balkis; brace, Douglass Fleming and Alla-Greta.

BULLDOGS.—*Dogs:* 1st and 2d, R. B. Sawyer's Lion and Portswood Tiger. *Bitches:* 1st, H. J. Leslie's Met.

BULL-TERRIERS.—*Dogs:* 1st and 2d, F. F. Dole's Don Pedro and Spotless Duke. *Bitches:* 1st and 2d, F. F Dole's Starlight and White Daisy; 3d, R. Cureston's Daisy II. *Puppies:* 1st and 2d, F. F. Dole's Don Pedro and Spotless Duke. Kennel, F. F. Dole; best owned in Canada, Daisy II.

FOX-TERRIERS.—CHALLENGE—1st, Oxford Kennels' Village Belle.—OPEN—*Dogs:* 1st, A. Macdonald's Blemton Trump; 2d, H. P. Thompson's Zig-Zag; 3d, Mrs. J. Smith's Viper III. High com., W. Barber & Co.'s Jack and J. W. Wilson's Dudley Rant. *Bitches:* 1st, M. McPherson's Ebor Speedy; 2d and high com., H. P. Thompson's Bacchante and Elora Tatters. Very high com., F. Randall's Vic. High com., J. G. Mitchener's Carleton Vic.—NOVICE—Withheld. Very high com., Dr. W. Mills's Royal Dart. High com., W. Barber & Co.'s Jack and J. G. Mitchiner's Carleton Vic. *Puppies:* 1st, Oxford Kennels' Oxford Duke. Very high com., Mount Royal Kennels' Royal Dart.—WIRE-HAIRED—*Dogs:* 1st, Oxford Kennels' Billet; 2d, G. M. Hendrie's Eskdale Broom; 3d, F. F. Dole's Cotswold Jocko. High com., M. MacPherson's Adswood Jim II. *Bitches:* 1st, Oxford Kennels' Capsicum. Kennel, Oxford Kennel. Puppy, Oxford Duke. Pair owned in Canada, Billet and Capsicum. Bitch in novice class, Royal Dart. Best owned in Toronto, Blemton Trump.

BEDLINGTON TERRIERS.—*Dogs:* 1st, withheld; 2d, A. F. Jones's Sentinel II. *Bitches:* 1st, W. J. Watson's Zulu II. Best, Zulu II.

YORKSHIRE TERRIERS.—1st, J. Hackett's Dolly; equal 2d, Meadowthorpe Kennel Club's Fairy and J. F. Campbell's Minnie. Very high com., J. F. Campbell's Sweep. Best owned in Canada, Dolly.

SCOTCH TERRIERS.—1st, Meadowthorpe Kennel Club's Donald; 2d, J. C. Morgan's Dundee. Best owned in Canada, Dundee.

IRISH TERRIERS.—1st, withheld, 2d and special, J. B. Boomer's Chummey.

DANDIE DINMONTS.—1st and special, Meadowthorpe's Kennel Club's Reiver.

BLACK AND TAN TERRIERS.—1st and special, F. F. Dole's Kaiser; 2d, Rochelle Kennels' Rochelle Lass; 3d, J. F. Campbell's Desdemona.

TOY TERRIERS—SMOOTH—1st, withheld; 2d and special, J. Mills's Daisy Beali. High com., Miss Carrie Habart's Charie and J. Kennedy's Tim.—ROUGH—1st, withheld; 2d and special and high com., W. R. Bingham's Boozer and Fairy.

TOY SPANIELS.—1st and special, A. Triblecock's unnamed; 2d, J. Yorke's Topsey.

PUGS.—1st, T. P. Hebblewhite's Midget; 2d, Miss K. H. Bell's Stingo; 3d, C. P. Reid's Judy. High com., Kitty V. Fustbrook's Okeechobee and C. H. A. Lee's Patsy. Brood bitch, Midget. Puppy, Stingo.

FOREIGN BREEDS.—1st, withheld; equal 2d, Mr. Irwin's Patrick, H. Piper's Met-La-Katla and C. Cluthie's Bismark.

MISCELLANEOUS.—1st, Chestnut Hill Kennels' smooth collie Lady Bird; 2d and special, Meadowthorpe Kennel Club's retriever Black Diamond; 3d, J. F. Scholes's white English terrier Snow Flake.

M.

ELMIRA DOG SHOW.

[*Special Report.*]

ELMIRA, Sept. 20.—*Editor Forest and Stream:* The dog show held here the past week has been quite an attractive feature of the fair. This is the first show of the Pet Stock Association and the managers have labored under many disadvantages as none of them were posted as to what it was necessary to do to insure success. As a natural consequence things were somewhat mixed. Uncle Dick worked like a beaver to straighten matters and did so to a certain extent, but one man cannot do all the work even for a small show. The experience gained this year will undoubtedly be utilized in giving us a much better show next year. Mr. John Davidson judged pointers and setters and Mr. H. W. Lacy the remaining classes. The judging was not finished until late on Wednesday as Mr. Davidson did not arrive until the afternoon of that day. I was unable to procure a catalogue until yesterday. There were 138 entries with 11 absentees. Many of the breeds had but one or two representatives, but although the classes were small the quality was very good in most of them. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, F. P. Kirby's Dan; 2d, G. M. Diven's Derbyshire Lad; 3d, C. A. White's Turk. *Bitches:* Absent.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, J. Marshall's Tantalon. *Bitches:* No entry.

NEWFOUNDLANDS.—1st, J. Marshall's Prince George; 2d, H. Hartman's Rover.

GREYHOUNDS.—CHALLENGE—*Dogs:* 1st, Hornell-Harmony Kennels' Memnon. *Bitches:* 1st, Hornell-Harmony Kennels' Harmony.—OPEN—*Dogs:* 1st, Hornell-Harmony Kennels' Hazelhurst; 2d, M. G. Casey's Hindoo *Bitches:* 1st and 2d, Hornell-Harmony Kennels' Lady Olivia and Fannie M.—PUPPIES—*Dogs:* 1st, 2d and very high com., Hornell-Harmony Kennels' Spy, Leon and Yoland. Very high com., E. S. Vanderburgh's Tourist. *Bitches:* 1st and 2d, Hornell-Harmony Kennels' Queen Vic and Kaoka.

FOXHOUNDS.—1st, Hornell-Harmony Kennels' Pride of Hornell; 2d, 3d, high com. and com., T. McCann's Jack, Driver, Sing and Duke. Very high com., A. J. Mathews's Gabe.

POINTERS.—LARGE—*Dogs:* 1st, J. M. Barney's Tom Pinch; 2d, Hornell-Harmony Kennels' Sam; 3d, Dr. Dixon's Ike. Very high com., G. F. Gray's Prince Bang. High com., W. J. Spafford's Lad. *Bitches:* 1st, J. M. Barney's Lady Pinch; 2d, W. Barnes' Devonshire Countess; 3d, J. E. Gill's Don's Doi. SMALL—*Dogs:* 1st, A. Marshall's Forest King; 2d, E. C. Mann's Neb B. *Bitches:* 1st, B. F. Lewis's Venice; 2d, T. M. Barney's Galatea; 3d G. C. McNett's Nadja. *Puppies:* 1st and 3d, E. L. Risley's unnamed, 2d and high com., F. Smith's Don and Rock.

ENGLISH SETTERS.—*Dogs:* 1st, J. J. Snellenburg's Count Henricks. *Bitches:* Absent.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, E. W. Clark, Jr.'s Blarney. *Bitches:* 1st, C. T. Thompson's Mollie Bawn.—OPEN—*Dogs:* 1st, W. C. Hudson's Kenmore; 2d, E. Maher's Larry S.; 3d, M. Flynn, Jr.'s O'Donovan Rossa. *Bitches:* 1st, J. F. Wolf, Jr.'s Aileen Aroon; 2d, W. C. Hudson's Cora B.; 3d, H. G. Bryan's Chipeta. Very high com., J. Gallagher's Peggy. High com., F. P. Kirby's Nell Gwynne. Com., M. Flynn, Jr.'s Sedan.—PUPPIES—*Dogs:* 1st, W. C. Hudson's Rossmore. *Bitches:* 1st, W. C. Hudson's Lady; 2d, M. Flynn, Jr.'s Kitty Glendyne; 3d, Bowman & Thornton's Quail.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, S. G. Dixon's Little Boy. *Bitches:* 1st, Tioga Kennels' Vic.—OPEN—*Dogs:* No entry. *Bitches:* 1st, W. A. Mitchell's Vic II.; 2d, F. P. Kirby's Daisy.

IRISH WATER SPANIELS.—1st, Hornell-Harmony Kennels' Capt. Muldoon.

COCKER SPANIELS.—CHALLENGE—1st, Hornell-Harmony Kennels' Hornell Silk.—BLACK—*Dogs:* 1st, G. Bell's Second Obo. *Bitches:* 1st, Lake Shore Kennels' Bone Silk; 2d, Hornell-Harmony Kennels' Hornell Martha; 3d, G. Bell's Lady of Lyons. *Puppies:* 1st, Hornell-Harmony Kennels' Hornell Lady.—ANY OTHER COLOR—1st and 3d, Hornell-Harmony Kennels' Hornell Dick and Hornell Fancy; 2d, W. Barnes' Red Doc. *Puppies:* 1st and 2d, Hornell-Harmony Kennels' Bend Or and Little Tycoon.

BEAGLES.—CHALLENGE—1st, W. D. Hughes's Lou; Hornell-Harmony Kennels' Myrtle.—OPEN—*Dogs:* 1st and 2d, Hornell-Harmony Kennels' Royal Krueger and Uncle Dick II. *Bitches:* 1st, 3d and com., Hornell-Harmony Kennels' Una, Yonnie W. and Frissa W.; 2d, Clark & Rutter's Molly.

COLLIES.—CHALLENGE—*Dogs:* 1st, Jas. Watson's Clipper. *Bitches:* 1st, W. D. Hughes' Bonnie Brae.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Roslyn Sensation; 2d, H. W. Harding's Bonnie Scott; 3d, W. D. Hughes' Nullamore. High com., L. Bacorne's Tom. Com., H. H. York's Laddie.

BULLDOGS.—Withheld.

BULL-TERRIERS.—CHALLENGE—1st, F. F. Dole's Trentham Baron.—OPEN—*Dogs:* 1st, W. F. Hobbie's Spotless Prince; 2d and 3d, F. F. Dole's Hinks and Rockey. *Bitches:* 1st, W. F. Hobbie's Enterprise; 2d, F. F. Dole's Lady Melville; 3d, F. P. Kirby's Nell

FOX-TERRIERS.—*Dogs and bitches:* No entries.—PUPPIES—*Dogs:* 1st and 2d, E. L. Vanderburgh's Bob White and Ketch. *Bitches:* 1st and 2d, E. L. Vanderburgh's Romp and Fanchon.

BLACK AND TAN TERRIERS.—1st, Rochelle Kennels' Meersbrook Maiden.

SKYE TERRIERS.—*Dogs:* 1st, W. H. York's Prince Victor. *Bitches:* 1st, F. Kirby's Lady Maud.

IRISH TERRIERS.—*Dogs:* 1st, Winslow & Lewis's Burnside. *Bitches:* Absent.

YORKSHIRE TERRIERS.—1st, J. Cumming's Dandy; 2d, J Marshall's Marquis.

TOY TERRIERS.—1st, M. D. Reid's Flossie.

PUGS.—CHALLENGE—1st, Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st and 2d, Dr. M. H. Cryer's Bob Ivy and Othello; 3d, F. P. Kirby's Frankie. *Bitches:* 1st, G. W. Fisher's Tra-la-la; 2d, Dr. M. H. Cryer's Ino.

BLENHEIM SPANIELS.—1st, M. Dallett's Little Banjo.

ITALIAN GREYHOUNDS.—1st, F. P. Kirby's Daisy.

MISCELLANEOUS.—LARGE—Equal 1st, F. P. Kirby's Nero and Hornell-Harmony Kennels' Hornell Rover.—SMALL—1st, J. E. Reade's Sport; 2d, Miss Lucas's Dash.

SPECIAL PRIZES.

Largest entry, 1st, Hornell-Harmony Kennels; 2d, F. P. Kirby; handler of largest number, 1st, J. Stout 2d, B. F. Lewis; four working spaniels, Hornell-Harmony Kennels; pair greyhounds, the same; beagles, the same; beagle stud dog, Royal Krueger.

S.

AMERICAN KENNEL CLUB MEETING.

THE regular quarterly meeting of the American Kennel Club was held at 44 Broadway, New York, Sept. 19. Following is a list of the members present: Associate members: Dr. J. F. Perry and Mr. H. W. Huntington. Cincinnati Sportsman's Club, Mr. J. T. Richards; Collie Club, Mr. T. H. Terry; Long Island Live Stock Fair Association, Mr. T. Prime; Michigan Kennel Club, Major J. M. Taylor; New England Kennel Club, Mr. F. B. Fay; American English Beagle Club, Mr. H. F. Schellhass; New Jersey Kennel Club, Mr. A. C. Wilmerding; Westminster Kennel Club, Mr. F. R. Hitchcock; American Spaniel Club, Mr. James Watson; St. Bernard Club, Mr. S. B. Macfarlane; Virginia Field Sports Association, Hon. John S. Wise; Mascoutah Kennel Club, Mr. James Mortimer; St. Paul and Minnesota Kennel Club, Mr. A. D. Lewis; Southern Field Trial Club, Mr. J. L. Anthony.

The meeting was called to order at 1:30, Mr. Thomas H. Terry, the vice-president, in the chair. Minutes of the previous meeting were read and approved. Applications for membership were read from the American Spaniel Club and the American Pet Dog Club. The report of the secretary was accepted and ordered laid on the table. The president, Mr. Belmont, now took the chair. The treasurer's report was read and adopted. The report showed a cash balance on hand of $829 07, and a further balance due on the books of $534. The receipts from all sources for the year are $6,002.81; expenditures $5,173.74. The report of the Advisory Committee was adopted and approved, as was the report of the Stud Book Committee.

Members were elected as follows: American Spaniel Club, Elmira Poultry and Pet Stock Association, Southern California Kennel Club, and Montana Kennel Club. It was voted not to recognize the wins at the recent show of the Southern California Club held at Los Angeles, Cal., owing to non-compliance with the rules. The application of the Brooklyn Kennel Club was refused. The application of the American Pet Dog Club was referred to the Advisory Committee. It appeared to be the sense of the meeting that the Pet Dog Club should not include in its list breeds that are already taken care of by specialist clubs. The application of the California Kennel Club was laid over until the advisability of admitting two members from the same city could be determined.

The secretary read complaint that some of the prizes at the Albany show had not been paid. The matter was referred to the Advisory Committee. Messrs. Poyneer and Smith, of Malvern, Ia., requested the club to adopt the standard reported by the committee for the Chesapeake Bay dog. A long discussion followed as to the propriety of the club taking such action, and it appeared to be the sense of the meeting that this was a matter that should be attended to by the breeders and owners of the different breeds through the specialty clubs, and it was voted that the club recommend that the standard in question be used by bench shows until such time as a special club for that breed be formed.

Mr. R. Leslie gave notice of a proposed amendment to Rule IX., making it necessary that a veterinary should be approved by a committee of three before he can serve at a show. Dr. Perry gave notice of a proposed amendment to Rule XXVIII., making it the duty of dog show secretaries to forward to the secretary of the A. K. C. a report by the judges at each show. Both of the above were laid over under the rules. The Richmond County Poultry and Pet Stock Association gave notice that the name had been changed to the Georgia Pet Stock and Bench Show Association, and requested that the A. K. C. recognize the change, and it was so voted.

A letter was received from Mr. Amory B. Starr, president of the Texas Field Trial Club, requesting that wins at field trials be allowed to count as well as bench show wins as a qualification for registry in the Stud Book. Referred to the Stud Book Committee. Mr. A. Laidlaw preferred charges against Mr. H. P. Rennie, of Oakland, Cal., stating that he had not paid for the spaniels Giffee and Woodstock Belle, and requesting that he and the dogs be disqualified. Referred to the Advisory Committee. Dr. H. T. Foote requested that the wins of his black and tan terriers Meersbrook Maiden and Meersbrook Girl be recognized. After some discussion it was voted that the Stud Book Committee be instructed to place the record in the next volume of the Stud Book.

A letter from Mr. Elliot Smith was read, in which he suggested that as the rules of the different bench shows were not uniform, they should be changed. Upon motion Messrs. Hitchcock, Terry and Lewis were appointed a committee to codify the rules as suggested. A letter was read from Mr. C. J. Peshall, stating that the minutes of the July meeting were incorrect in saying that he moved a vote of thanks to the president for his offer to guarantee the *Gazette* against loss, and that the motion was made by Mr. Terry. Letter placed on file and claim disallowed. Mr. Huntington suggested that the delegates of the Associate Members be allowed their expenses in attending meetings of the club. Referred to the Advisory Committee. The protest against the Rochester Kennel Club was referred to the Advisory Committee. Adjourned.

FIELD TRIALS.

DO not forget that entries close next Monday, Oct. 1, for the Indiana and the Eastern field trials.

BULL-TERRIER IMPORTATION.—New Haven, Conn., Sept. 24.—*Editor Forest and Stream:* I have just received from England, per State of Nebraska, the celebrated bull-terrier dogs Bendigo and the undefeated Queen Bendigo. Bendigo is the sire of more prize winners than any dog living. The following are a few: Visnomy, Jubilee, Principo, Queen Bendigo, Vesper Bell, Lady Beatrice, King Patrick Cleves, Billy Fair Play, Crow Berry, Bendigo II., Excelsior, etc. Queen Bendigo has met all the best dogs and bitches in England, and has never been defeated. I have sold the well-known bull-terrier dog Trentham Baron and the bull-terrier bitch Dauntless. These dogs go to Vera Cruz, Mexico, and are for Senor Francisco Hernandez.—FRANK F. DOLE.

ST. BERNARD IMPORTATION.—Pittsburgh, Sept. 20.—*Editor Forest and Stream:* The Keystone and Mascot Kennels have just received by steamer England the rough-coated St. Bernard dog Liverpool Duke. He stands full 32in. at shoulder, has a rich orange color, perfect white markings, and dark face shadings, and combines the blood of champions Beauchief and Nero III. He will stay at Keystone Kennels, Pittsburgh.—A. STUCKY.

GERMAN DOGDOM.

Editor Forest and Stream:

I was once rash enough to venture within the precincts of a German dog show held by the Gifno Munnybrize Glub at Veel-under-Dün. The show was inaugurated under the special patronage of H. S. H. the Emperor of all the Germans, and was supported by 200 real live princes, 400 ditto dukes, and a list of counts that filled twenty pages of the catalogue. Resolved to luxuriate in the realms of royalty for once in my life, and to allow my dogs the privilege of receiving a princely pat, I entered them at the show, and my experiences I detail for the benefit of your readers.

My reason for recounting the thrilling incidents which happened to me is, that several people on this side are advocating at the present moment the imperative necessity of tempting one of the Kaiser's "faithful children" from his fatherland, in order to enlighten the children of liberty and freedom, with respect to the graceful proportions of the breed of dogs known as the "Deutsche Doggen," or in vulgar parlance, the great Dane. It is not my intention to inflict on my readers the pros and cons of that vital question, "Whether the English for the breed should be great Dane, boarhound, sooner, or any other title," but it will be my best endeavor to prove, by stating facts, the thorough competency of any one of the "Kaiser's children," to undertake the duties of enlightening a nation with respect to this grand and noble breed.

In May last year a friend and myself conceived the idea of taking a string of dogs to a show held in Germany, at Veel-under-Dün. On the list of judges were Princes, Counts, Dukes, a scattering of Herr Von's, and a meagre display of plain Herrs. To have our dogs handled by such distinguished officials made our plebian veins swell again and again in anticipation of future honors.

Our entries came to twenty-seven all told. They included a champion deerhound, a champion otterhound, a ditto mastiff, two bloodhounds, a champion great Dane, ditto smooth and wire fox-terrier, etc., etc., some of which we borrowed of friends, but of course we entered them in the proper owners' names.

Our route was from London, via Harwich and Antwerp, a Monday morning smiling on the commencement of our undertaking. Everything went well until half way across the German ocean, when a dense fog persistently enveloped us for several hours; this made our arrival at Antwerp late, and consequently the fat-headed driver of the van that was to convey our dogs across the city to the station, which is naturally a long way from the quay, had, with that perspicuity which so distinguishes many of his class, driven away just before our arrival, therefore we had to wait two hours at the sweet will of this sublimely uncultured and unwashed child of the soil. After nearly breaking a blood vessel in his heart-rending endeavor to prove how prostrated he was with grief at his negligence, and after giving apoplexy a chance of utterly extinguishing what was undoubtedly a noble nature, and having proved beyond a doubt that we were the two greatest men on the face of the earth, this intelligent creature rallied sufficiently to undertake the task of serving us, the delights of which had enthralled him all his life; so eventually we had the satisfaction of seeing our dogs duly ensconsed, in a special wagon, at a special charge, to be delivered at Veel-under-Dün at a special rate of speed. The hour of departure from this interesting seaport was 5 P. M. Tuesday. The understanding between Smith and myself was, as long as we were in a French-speaking country I was to enlighten its subjects as to the proper pronunciation of their language, but when we arrived on German territory he would distinguish himself by his fluency in that tongue, and as I could not speak a word of the latter this arrangement seemed feasible.

We had not got far out of Brussels before I began to have misgivings as to the genuineness of the solemn assurances given us at Antwerp that the dogs would travel by the same train we were in, and at every stop with great volubility I demonstrated my knowledge of French and the purity of my pronunciation. However, all things come to an end; at 10 that night my career as a linguist had terminated, and it was Smith's turn to pour forth his rich mine of knowledge, for at Aix la Chapelle we had arrived on German territory, and here it was where he could utterly eclipse all my previous efforts.

Out he jumped, his breast swelling with self-conscious superiority, raised his hat to the station master, and addressed him in these words, the meaning of which I have never yet been able to have interpreted, "Das Hunden-Wagon; das Hunden." The station master smiled pleasantly and in a confident tone replied, "Yah, yah; yah, yah." "All right, old man," says Smith, "the dogs are on the same train." But as "yah" repeated four times didn't seem to me to have sufficient variety to mean that the dogs were all right, etc., I went to look for myself; but there they were. So I came to the conclusion that I at least knew one sentence in German, and that was that "yah" repeated four times had reference to dogs in a train, etc. When at Cologne, and subsequently Mayence, Smith repeated the same mystic words and "yah" multiplied four times was always the response. I was then confident I could add German to my many other accomplishments; but at 6 Wednesday morning my power as a German linguist and Smith's evident control of the language received a body blow, for at this hour we arrived at Veel-under-Dün, and evidently minus our dogs. Then it was I discovered the extent of Smith's fluency by the rapid and unvaried way in which he thrust "Das Hunden-Wagon" upon the unhappy head of the station master, who could only repeat "yah, yah," which revealed to me the fact that Smith, as a linguist, was a most untarnished fraud, and that anything a German did not understand was answered by "yah, yah" out of politeness.

Well, here was a pretty kettle of fish; the dogs had had nothing to eat since Tuesday midday, and this was Wednesday dawning upon us, and all we could gather about them, was "Yah, yah;" so, much to Smith's disgust and annoyance, I engaged an interpreter to get at the bottom of things as soon as possible. He gathered the interesting fact that the station master knew nothing about the dogs, what route they would come, where they were likely to be, or anything else; the only thing he was confident about was, that no dogs would come to that station, but would be sure to arrive at another, about two miles off. Here we comforted ourselves by learning that they certainly would not come there, but to another station only two miles further away. Thither we went, only to receive the respectful assurance of its station master, that no dogs could possibly arrive there, but would without doubt arrive at the one we had come from. Well, to cut a long story short, all Wednesday was spent in telegraphing to every important station in Germany, Belgium and Holland, but not a trace could we get of the dogs, and as judging commenced at 7 Thursday morning, and the poor beggars were still at the mercy of some frivolous son of the Fatherland or other, Smith and myself began to have a gulpy feeling in the throat, as we thought of a favorite locked in his box, perhaps dying from suffocation or thirst. Never again do I want to go through what I did that Wednesday, and especially during the night; but what joy it was, when at 6, Thursday morning we were unfastening the boxes, and fondling each dog as he came jumping out. At last our continual traverse of the equilateral triangle formed by the three stations was at an end, and our long anticipated enjoyment of princely association was to be realized, so with glad hearts and happy thoughts we attended to our dogs' wants, and spruced them up for their coming contests.

The ordinary details of the show were excellent, Spratts doing the benching and feeding, and everything else being carried out on an elaborate scale. There were spaciously fenced in judging rings, which, by the by, had a notice posted up that owners wishing to use them for their dogs could do so on payment of a certain sum, which imposition was judiciously not enforced, and everything conducive to the comfort of the dogs had evidently been made a study. The number of entries were, I believe, in excess of any previous show in Germany, and "specialist" judges had been engaged; real live, full-blown soldiers were for the nonce engaged in looking after the dogs' instead of their country, an occupation they apparently relished after the monotony of garrison life. Away at some distance from the spacious building was a large artistically arranged stand, in which one of the military bands performed that music for which the country is so noted; in fact, everything was on a gorgeous scale, even to the ponderous badges which each official conspicuously exposed to the admiring gaze of the crowd.

But, although everything connected with this great exhibition was on so lavish a scale, all paled at the imposing demeanor of the judges, as they walked with dignified and self-conscious air into the different rings. Never shall I forget the reverence and awe with which they inspired me; had I been in the presence of some great tribunal, its effect could not have been more complete. These men were judges, judges which until then had been but an indistinct flicker of my imagination; judges whose glance should have rendered immortal every dog on whom it fell; judges whose slightest commendation should perpetuate forever and ever the image of that dog who was the lucky recipient. Such were the impressions that passed through my mind as I felt the influence of these grandiose airs.

An otter hound, considered in England the best of its variety, was the first to share with me this trying ordeal, and may such an experience, as was this my novitiate, never fall to the lot of any reader of these lines; for having accustomed myself to the great atmospheric oppressiveness, over which three of these inspiring individuals reigned supreme; cold-blooded reality revealed to me the fact they, one and all, were intently studying the records of each dog as laid down in the catalogue. Yes, these unapproachable arbiters of dogs' destinies were determining their fate by a previous list of wins. Talk about the thunderbolt on Brooklyn's balmy heights, not even that could produce such a shock as did this exposure of utter incompetency on the part of these sumptuously decorated officials. Defeat seemed certain from a long-bodied, hollow-backed thing, that I discovered had never been beaten in this land of a paternal king, and all its population, "his children." A bold stroke was necessary, and having fortunately discovered the only committeeman who appeared to me to understand the language of this country, I divulged to him, as a deep secret, the fact that my dog was considered in England the best ever seen. Such a secret was a great deal too burdensome to confide to a not over-strong but highly over-strung nature, and consequently he gave it away to one of the impostors, who in turn transferred it to his fellow participators in the attitudinizing line. Therefore, Q. E. D., as Euclid would say, these benefactors to the canine concluded, after inflicting my hound and his hollow-backed opponent with an hour of ostentatious officiousness, garnished with an active display of incessant jabbering, much sapient shaking of heads, and other details so esssential a part of the duties of an official judge, that my dog, after a contest which for closeness was unparalleled, was the hundredth part of an inch longer in ear than his opponent, and on this superiority they awarded him the prize. So ended my first experience of a German as a judge of dogs.

As the day progressed many and varied were the antics which the other exhibitors and myself were called upon to witness. Smith, whose first exhibit was a Newfoundland, had not fared so well as I; although Lion was a real good typical dog, with a proper flat coat, he had only succeeded in getting vhc. to a pack of curly-coated brutes, whose sole claim to the breed was their color. He, unfortunately, had discovered the *modus operandi* too late, and had to defer proclaiming the many prizes his dogs had won until another opportunity occurred; but poor Smith had not long to wait, for he was showing one of the national dogs, the "Deutsche Doggen," or great Danes. This breed being judged by three professed specialists this time, there was no timid hesitancy in telling *the* professed specialist of the three p. s.; how she had always been considered *the* speciman of all others in England. Result, ecstatic rhapsodies on the professed specialists' part in behalf "de most beautifullest Deutsche Doggen as had ever was;" but when the crucial point arrived, "de most beautifullest," etc., was only awarded second to "de most miserablest, light-boned, skimped-up blue devil as ever was." The explanation was that the disgrace would be too much for a great Dane to come from England and beat all the specimens on their own soil. This may seem the wild, acrid statement of a prejudiced mind, but I respectfully beg to correct any such erroneous idea, for it is nothing but the plain unadorned truth. Had another, that was led by a private soldier in the guise of a keeper, been placed first, then one could have excused any previous discrepancies, as she was really better than the one Smith was showing, but as she had never been exhibited before, there was unfortunately no string of wins attached to her name, and as an ordinary attendant led her in the ring, the three pretenders had no line whatever, except their own fathomless discernment, to go on with, which f. d. determined that she was worthy of a commendation; but I noticed that after a good offer for this commended specimen of "Deutsche Doggen" had come from England, she carried all before her, and beat those, that until this English offer came, had beaten her.

Another little incident, and I am through. Smith was awarded second in another breed, with a bitch who was a champion and at the top of the tree; on remonstrating about the decision, the judge informed him that on no consideration would he put a bitch over a dog; consequently he awarded the best dog first. This was the culminating blow to an already long list of misadventures, and as Smith falls lifeless in my arms, let a thin gauze of hazy indistinctness fall o'er the scenes of my first, and if the Lord be merciful, my last, experience of the German as a judge of dogs.

BRITTLE.

CENTRAL CLUB'S FREE-FOR-ALL.

Editor Forest and Stream:

Our club has decided to give an additional stake, which will be known as the "Free-for-All Stake," open to all pointers and setters without regard to previous winnings. There will be but one money ($1,000) to winner, no second or third place, $50 forfeit, $50 additional to fill. Entries for this stake will close Nov. 1. Pointers and setters will be drawn together, not separately, as in the All-Aged Stake. The Free-for-All State will be run at Lexington, N. C., and will be started within three days after the running of the All-Aged Stake is completed. We will issue separate entry blanks for the Free-for-All Stake, and trust that none of our patrons will confound this stake with our All-Aged Stake, which closes Oct. 12, in which setters will be run by themselves and the pointers by themselves. Forfeit money must accompany the entry and the additional money to fill must be paid when the drawing takes place the night before the race is started. The published rules of the Central Field Trial Club will govern this race, except that each heat will be exactly four hours, neither more nor less. There will be no preliminary series, but the winner and loser of each heat will be declared in the first series. For entry blank and other information our patrons will kindly apply to

CENTRAL FIELD TRIAL CLUB,
C. H. ODELL, Sec'y and Treas., Mills Building, N. Y.

DOG TALK.

DR. WILLIAM A. HAMMOND asserts that there is on record no authenticated case of a cure of hydrophobia; but probably Dr. Hammond never heard of Mr. G. L. Brown, of 285 Devonshire street, Boston, and his pills. The pills are warranted to cure, nay, have cured, the most aggravated cases of sure-enough hydrophobia. They are compounded by a secret formula, bought of a Maryland man who said his grandfather gave $1,000 for it. Mr. Brown, having secured the recipe, now turns out the pills himself and recommends every dog owner to have them in the house. He charges $1 a piece for them, but they are "large pills," so the price is not out of proportion. Mr. Brown sets forth that his main purpose is to benefit his fellow men by selling them hydrophobia pills; if he is really hungering after fame as a philanthropist we advise him to send his pill secret to us for publication. If hydrophobia pills are to be consumed in large quantities by an appreciative and grateful public the $1 tax must be taken off, for most people are stupid enough to fool with biting dogs, and never a pill in their pockets.

Mr. J. C. Anderson, of Chattanooga, Tenn., has received from the kennel of Mr. S. W. Smith, Leeds, Eng., two St. Bernards that will undoubtedly prove a great acquisition not only to their owner, but to the breeders in his vicinity. Prince Regent (formerly Don of Leeds) is a large dog of good color and markings. He stands nearly 35in. at the shoulder and weighs in poor condition about 180lbs. He was whelped in February, 1887, and is by Plinlimmon and out of Smith's Miss Meg. Commodore Valentine, the other one, is not yet mature; he is very promising. He was whelped May 28, 1888, and is by Plinlimmon and out of Lady Adelaide.

Mr. Hough sends us this from Chicago: "The intelligent telegraph editor of the daily press has been once more getting in his work in the matter of field sports. I note that the dispatches in one of our big dailies here show the results of the recent 'rabbit-chasing contests' of the N. C. A. at Louisville, and mention among other things the fact that 'Landrun's blue and white dog Count ran with Abye.' I think this is the same old Abye that I have met while trying to send a telegraphic report of a coursing meet to the Associated Press. The intelligent telegraph editor knows more about a left-hand biff than he does about a bye-dog."

Two correspondents sign their names to a note sent to *Land and Water*, recording that a sportsman, who was out shooting with a favorite black retriever, in the act of firing at a rabbit, accidentally shot the dog. Seeing that the dog was wounded, he was too overcome for a moment to go and see what damage he had done. Before he had recovered himself the dog came to him retrieving his own tail, which had been shot clean off, and laid it at his master's feet.

Entries for the Danbury dog show close on Saturday. Although the fair is held during the whole of the week, the dog department will be run only from Wednesday morning until Saturday at 10 o'clock A. M. The judges are Mr. E. S. Porter, New Haven, Conn., and Mr. James Watson, Philadelphia. The address of the secretary is B. C. Lyons, Danbury, Conn.

The first annual dog show of the Georgia Pet Stock and Bench Show Association will be held at Augusta, Ga., Jan. 13 to 18. The management announce that a liberal premium list will be issued. Mr. John Davidson will judge all classes. Mr. A. H. Vonderleith, Augusta, Ga., is the secretary.

The report of the annual meeting of the Canadian Kennel Club is unavoidably crowded out this week.

DEATH OF OTHO.—Arlington, N. J., Sept. 21.—*Editor Forest and Stream:* Champion Otho died on the 19th from disease of the kidneys. He was born in August, 1882, was bred by Mr. F. W. Rothera, Simcoe, Ont., and was by Rollo out of champion Lady Abbess. He was well known all over the country for his magnificent head and front. We miss him as much as if he had been a member of our family. Will there ever be another St. Bernard raised in this country with a model head like Otho's?—K. E. HOPF.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Yellow River Joe. By L. K. Avery, Bremen, Ind., for black, white and tan beagle dog, whelped June 6, 1884, by Mark Anthony (imported Major—Diana) out of Flora (imported Ringwood—Juliet).

Yellow River Music. By L. K. Avery, Bremen, Ind., for black and white beagle bitch, whelped July 17, 1886, by Goodwood Rattler (A.K.R. 8812) out of Goodwood Music (A.K.R. 9311).

Lord Chandler, Lord Elesmere, Parone, Virgie E. and Lulu Lee. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pugs, three dogs and two bitches, whelped Sept. 1, 1889, by Joe II. (champion Joe—Maudie) out of East Lake Virgie (champion Bradford Ruby—Puss B.).

Dido II. By Joseph Hayes, Manchester, N. H., for red Irish setter bitch, whelped July 1, 1887, by Suil-a-Mor (Claremont—Dido) out of Nora (Cigar—Belle).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Hilda—Gruss Bajard. T. N. Vail's (Roxbury, Mass.) St. Bernard bitch Hilda to American Kennels' Grus Bayard, Aug. 24.

Knight's Belle—Monk of Furness. Elms Kennels' (Forest Lake, Minn.) English setter bitch Knight's Belle to P. H. Gotzian's Monk of Furness, Sept. 8.

Spunkey—Little Red Rover. Theo. J. Hook's (Rome, N. Y.) cocker spaniel bitch Spunkey (A.K.R. 6572) to his champion Little Red Rover (champion Obo II.—Woodstock Dinah), July 8.

Walkill Bess—Little Red Rover. F. P. Servey's (Rome, N. Y.) cocker spaniel bitch Walkill Bess (Walkill Silk—Walkill Blanche) to Theo. J. Hook's champion Little Red Rover (champion Obo II.—Woodstock Dinah), Sept. 6.

New Forest Russet—Tenbroeck. T. J. Tyrell's (Philadelphia, Pa.) fox-terrier bitch New Forest Russet (New Forest Rustic—Gay) to W. T. McAlees's Tenbroeck (Ruby Mixer—Temptation), Sept. 15.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Fly. E. F. Vacheron's (Woodhaven, L. I.) greyhound bitch Fly (George Washington—Louisette). Aug. 14, eight (three dogs), by H. W. Huntington's champion Balkis (Clyto—Primrose).

Miss Pug. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Miss Pug, Aug. 3, five (three dogs), by their Bradford Ruby II. (champion Bradford Ruby—Puss B.).

Miss Topsy. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Miss Topsy, Aug. 23, four (two dogs), by their Douglass II. (Douglass I.—Juue).

Pandora. John Rogge's (New York) English setter bitch Pandora (A.K.R. 2425), May 21, four (three dogs), by Rock Belton (Yale Belton—Princess Lilly).

Spunkey. Theo. J. Hook's (Rome, N. Y.) cocker spaniel bitch Spunkey (A.K.R. 6572), Sept. 12, seven dogs, by his champion Little Red Rover (champion Obo II.—Woodstock Dinah); one red.

Goldsmith Venus. A. M. Goldsmith's (Chicago, Ill.) Yorkshire terrier bitch Goldsmith Venus (Bradford Harry—Biddy), Aug. 21, two bitches, by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady); both since dead.

PRESENTATIONS.

Pandora. Blue belton English setter bitch, whelped July 25, 1884, by Don Juan out of Petrel III., by C. H. McIlwain, Trenton, N. J., to John Rogge, New York.

Rock Belton—Pandora whelps. Black, white and tan English setters, whelped May 21, 1889, by John Rogge, New York, a dog to Dr. C. H. McIlwaine, Trenton, N. J., and a bitch to Dr. Bathgate, Morrisania, N. Y.

Rifle and Trap Shooting

RANGE AND GALLERY.

THE INTER-STATE MATCH WRANGLE.

SOME very reckless statements have been put in print by members of the Pennsylvania team since they went away from Creedmoor without the possession of the Hilton trophy which they had virtually won but from which they were technically though justly shut out.

Gen. Robbins, though brusque and inclined to be a martinet in matters military, is a capital shot and has the interests of rifle shooting and Creedmoor thoroughly at heart. For those who know him best many of the assertions set afloat appear supersensitive. The history of the match is a very simple one. There was a great desire on all sides to win the trophy. The "world beaters" were there from Massachusetts with their record of the season to round out in another victory. The New York team were at home and were specially anxious in view of criticisms to the manner of selections of the team to score a win, and finally the Pennsylvanians had come over from their Gretna range ready and confident to beat the crack team from down East. There was much challenging all day and the visitors cannot say that they were not given all their rights in the way of having their challenges considered and in the majority of cases sustained. Had they been denied their rights as competitors, they had and have the privilege for appeal to the directors of the N. R. A., and this appeal will hold just as good at the point of time as any other. If the visitors had not the time properly theirs to finish the match under the conditions, they have the right of appeal. That no such appeal has been made is the very best proof to any outside unbiassed observer that they have no proper ground for one.

Gen. Robbins, when talked to on the matter, reviewed the history of the day very fully and said:

"It was agreed that a minute a shot should be allowed the competing teams. At 200yds. we shot the Inter-State and Hilton trophy matches in conjunction. Two targets were assigned to each team, which gave us 17 shots to be fired by 6 men, or 102 in the aggregate. The 2 hours from 10 to 12 really allowed 1 minute and 42 seconds per shot. The match was begun at 10:15. New York had two protested shots, for which 2 minutes and the other 3 minutes were allowed. Massachusetts and Pennsylvania each protested one shot, thereby gaining an allowance of 3 minutes. In addition to this it was found necessary to provide a further allowance of 15 minutes for retouching the targets in consequence of the rain. This would have required that New York should have finished at 12:35 and Massachusetts at 12:33, respectively. As a matter of fact, New York completed its off-shoulder score at 12:18 and Massachusetts and Pennsylvania at 12:10. In the afternoon pool targets were opened at 1 o'clock on the understanding that they were to be closed at 1:45. It was proposed to begin shooting the second stage of the matches at 2 o'clock. Col. Rockwell came to me and wanted to know if the time of opening could not be advanced. I was willing to accommodate him, and as a result shooting at 500yds. began at 1:38 instead of 2 o'clock. We thus gained 2 minutes. I had informed the captains of the contesting teams that 3 hours would be allowed for the firing of the 144 shots on each target. This arrangement would have necessitated the closing of the matches at 4:58. Ten minutes were, however allowed for changing distances between 500 and 600yds. New York finished its team score at 5:05. Massachusetts at the expiration of the time limit had one and Pennsylvania two shots to fire. Promptly at 5:08 I directed the horn to be sounded. At that time I had no knowledge whatever as to how the scores stood, as has been my invariable custom."

Secretary Shepherd of the Association, who was a member of the defeated New York team, spoke both as a competitor and an officer of the Association and said: "General Robbins is as fair and honorable a man as ever lived. He was the executive officer in charge of the match, and as Inspector-General of this State he was the captain of the New York team, but he would not give a wrong decision even if the fate of the trophy depended upon it. As for shutting out the Pennsylvania team before they had finished, the captain of that team told his men that it served them right. In 1885 General Robbins, at the demand of the Pennsylvania men, gave the order to cease firing when the New Yorks had still nine shots, giving the Pennsylvania team the place that the New Yorks would probably have otherwise had. The markers could not possibly have known which target the New York team was firing at. General Robbins has been at Creedmoor a number of years, and has always given perfect satisfaction.

"There is no foundation for the charges of unfairness, however. We generally get our markers from Willet's Point. They are men who are in the employ of the United States, and are thoroughly competent. They were in the pits some time before we tossed up for targets. Of course they might have found out during the match what targets our team was on, but that would have made no difference to them. One of the Pennsylvania team watched with a glass the result of the firing of our men. He challenged the mark for one of the shots on the 200yds. range, and General Robbins sent a Massachusetts man, together with a representative of the Philadelphia team and the superintendent of the rifle range, down to the target, and they sustained the challenge. A second was given perfect satisfaction, but a third challenge resulted in favor of our team. There was much challenging all day, and the decisions as a whole were rather in favor of the Pennsylvanians."

George S. Scott, of the New York team, said; "There is no doubt the Pennsylvanians would have won the match if they had finished their firing, but they can only blame themselves. They should have finished as soon as the other teams did. When the Massachusetts men went down to Creedmoor they were glad that General Robbins was in charge, as they had every confidence in him, knowing that he was fair and competent. General Robbins hurried us up toward the last. I was one of the last two men to shoot. One of us was loading while the other was firing, and the consequence was we made the poorest record made by any of our team on that target. We did not have time to blow out our guns to keep them in condition. If the other teams had done the same thing they would have finished as soon as we did. The order to cease firing was not given, however, as soon as we were done, but several minutes after we had stopped. General Robbins was undoubtedly fair and honest in all his decisions, and there are no grounds at all for complaint."

The following pair of letters from Pennsylvanians who were present, connected with the fight, tell their side of the unfortunate wrangle:

PHILADELPHIA, Sept. 21.—*Editor Forest and Stream:* Your editorial in regard to the Creedmoor meeting as to time limit I partly agree, but no match is finished until the last shot is fired. If Gen. Robbins had stopped all shooting at 5 P. M. then there would be no cause for complaint, and on behalf of all the captains of the teams to had continued to a finish (as has been the practice heretofore) everything would have been satisfactory; but no, he allowed the New York team to finish, and it took until after 5 o'clock to do so, showing very clearly that knowing the New York team to be in the lead from 500yds., by shutting out the Massachusetts and Pennsylvania teams they would win, but he overstepped the mark and was left. I inclose you an open letter to Col. L. A. Watres, from our supervisor of the New York team.—
JOHN J. MOUNTJOY.

NEW YORK, Sept. 15.

Col. L. A. Watres, Inspector General of Rifle Practice, N. G. P.:

COLONEL—I desire to make you a personal report of the manner in which the Pennsylvania State rifle team has been treated at Creedmoor, as well as to show you (conclusively, if I can) that General Robbins was extremely partial to the New York State team, and by his sharp practice expected to win the Hilton trophy match for that State.

It will take considerable space to give you the matter in detail, but I very much desire that you should understand it in every detail, and therefore I take the time to give it to you, as follows: On the morning of the match I was detailed with glass and score card to keep the records and watch the shots as they were fired upon the two targets by the New York State team.

From the manner of marking the shots that were close to the line, I am convinced that the markers in the pits knew they were marking for the New York team, and from the manner of decisions of General Robbins on contested shots, I am almost sure that he knew it. I instance the following: At 200yds. in the Hilton trophy match, Underwood, in his sixth shot, made a close four at 1 o'clock, and it was so spotted by myself and the captain of the New York team, and so marked by the marker in the pit. After marking the shot, and before another shot had been fired, he (the marker) again raised the trap and marked a bullseye over at 10 o'clock, and the man Underwood then claimed the last mark on a bullseye, which I challenged. Gen. Robbins was appealed to, and he decided without investigation that it was a bullseye, although the captain of the team, who saw the shot made, refused to say it was other than a four at 1 o'clock.

The next challenge I made was on the fourth shot at 200yds., Hilton-Brohm match, made by Major Gaus, which was marked an eye. My challenge was sustained after a visit to the target, and he was given a four (4). The next challenge was on the fourth shot, by Elliott, same match and same distance, for which was marked an eye, and my challenge reduced it to a (4). The next challenge was on the sixth shot, by Stein, for which he was marked an eye, and my challenge reduced it to a (4), thus securing a reduction of three points at this distance in this match. Just the number we are credited with beating them.

In the Inter-State match at 500yds. the same thing was attempted, and at the third shot for Hamilton a 4 was marked which was at least 3in. outside of the 3-line at 10 o'clock. My challenger made it a 3 without investigation, Gen. Robbins being at the time lying down beside Hamilton coaching him. At my challenging the shot he simply turned to the captain of the team, who also had a glass, and asked, "How about that, captain?" The captain answered, "Call it a three." Gen. Robbins then said, without further investigation, to mark it so, which we did. An exactly similar occurrence happened when Major Gaus fired his eighth shot in this same match and was allowed as before, with this additional remark by Gen. Robbins, "Captain, I would sustain that challenge and investigate it, but it would take up more time than the point is worth, and it is time we are watching."

All this to show you that the markers were giving the New York team every point they could and trusting that they would not be challenged. No such marking was done on any other targets, and I do not believe any one made a single challenge during the entire matches but myself. Gen. Robbins personally coached Hamilton and Stokes, of the New York team, at both 500 and 600 yards. At 17 minutes before the matches were stopped Gen. Robbins called to him the two officers who were coaching at the two firing points of the New York team, and in a low voice said: "Now! you must hurry your firing. You have only 17 minutes to get through, and I am going to call the matches off when the time is up." The officers immediately returned to their firing points and the firing was so rapid after that so that I could not get the shots on the targets as they were fired.

I called Lieut. Newton, of our team, and gave him the information I had overheard, and he immediately went back to the Pennsylvania team's firing point and gave the information.

At 12 minutes before, and also at 5 minutes before the closing of the match Gen. Robbins again cautioned the New York team to hurry, that the time was up. They continued firing, however, rapidly until they had finished, which was 4 minutes after the time allotted, and then Gen. Robbins gave the order to cease firing—thinking, of course, that New York had won, because they came up from the 500 yards firing point to the 600 in the lead of both Massachusetts and Pennsylvania, and now that they had finished and the time limit expired, it was their great chance to win. But they did not. The Massachusetts team, with one shot to fire, stood 1,057; Pennsylvania, with two shots to fire, 1,055, and New York finished with 1,052.

There is no doubt but had the match been finished on its merits we would have won. I have no suggestions to make that might alter the result. But I do believe that it was a clear case of robbery on the part of Gen. Robbins, who fully expected that his team had won. Very respectfully submitted,

ROBERT C. PATTERSON,
First Lieut. and Q. M. 14th Reg't, N. G. P., Pittsburgh, Pa.

Editor Forest and Stream:

I notice in the last issue of your valuable paper that at the meeting of the National Rifle Association just closed at Creedmoor, the Massachusetts team again won the Hilton Trophy, beating the Pennsylvania team on a technicality caused by the strict observance of the time limit. Of course the Massachusetts boys cannot feel very highly elated over such a victory, but the team from Pennsylvania should be the last on earth to make a fuss, as they virtually stole the Hilton Trophy match from the Michigan team in 1882, by scoring a ricochet shot as an inner instead of a miss, as it should have been. There are several members of other teams who were eye witnesses of this bare-faced robbery; and now Pennsylvania knows how it is herself, although it has taken seven years for her chickens to come home to roost.

KALAMAZOO, Mich. BEN. O. BUSH.

NATIONAL RIFLE CLUB.

Editor Forest and Stream:

The annual meeting of the National Rifle Club was held at Vernon, Vt., Sept. 3 and 4. Early Monday morning the shooters began to assemble, and during the day all but one or two had arrived. The greatest feature was the presence of the president, John Williamson, who has for years suffered intensely from rheumatism and been unable to walk except with great difficulty, and it was only by making extraordinary efforts that he was able to be present after an absence of many years. Though his bodily health is impaired, his mental powers are as active as ever, and he kept all in good humor by his lively conversation. One pleasing feature of these shoots is their social character and freedom from all discord. All seem anxious to assist one another in putting up rests, bags and all the little devices incident to a shoot of this character.

After the rests were put in place came a little practice to get everything in readiness for the next day's shoot. Then came supper, mingled with such conversation as only riflemen indulge in. After supper the pent-up volcanoes found relief, and theories were propounded and discussed, the latest news in the rifle world was given, letters from absent friends were read and commented upon, each one contributing his mite to the general conversation; and at an early hour the party retired to be in readiness for the morrow. Tuesday opened very foggy and damp, with very little air stirring. As the morning advanced the fog melted away, but the wind remined very light, promising to be a fine day for short shooting. The morning was given to practice shooting, and at 2 o'clock the match was called. The promise of the morning was partly fulfilled, and some excellent shooting was done. In the evening the strings were measured and Low and Brockway were found to be ahead, and much conjecture was raised as to how the result would stand on the following day.

The fine conditions of Tuesday prevailed part of the forenoon of Wednesday. About 10 A. M. the air began to grow very dry and a light wind sprang up, upsetting many fine calculations. The result of the shooting gave Brockway the medal for the shortest aggregate of the 50 shots with a string of 55⅝in. The detailed result of the shooting is given below, in string measurement, 10 shots each string; double rest:

First String.

W V Lowe	$10^2{}_{16}$	N S Brockway	$11^6{}_{16}$
H W Smith	$11^{11}{}_{16}$		

Second String.

W V Lowe	$7^4{}_{16}$	R C Cressy	$8^{12}{}_{16}$
N S Brockway	$9^6{}_{16}$		

Third String.

N S Brockway	$9^{13}{}_{16}$	W V Low	$10^{15}{}_{16}$
D A Brown	$11^6{}_{16}$		

Fourth String.

N S Brockway	$12^5{}_{16}$	R C Cressy	$12^{11}{}_{16}$
W V Lowe	$12^{13}{}_{16}$		

Fifth String.

L Park	$12^7{}_{16}$	N S Brockway	$13^{14}{}_{16}$
D A Brown	$15^2{}_{16}$		

The above was done under the rules of the club, which allows ⅛in. per pound on each string of 10 shots for every pound the gun weighs less than 20lbs., which is the standard weight of guns as fired. Brockway was allowed ⅛, H. W. Smith ⅜, Cressy ⅛, Brown ⅜. Besides those before mentioned there were present the veteran N. Washburn, Frank J. Fenn, David Cox, Martin Wilbur, of Omaha, Neb., J. R. Moore, E. B. Stephenson, and a number who simply "looked on." The meeting was one of the most enjoyable ever held, and many promises were made for the spring shoot next May. William Hayes, C. H. Remer and Col. H. F. Hart had made arrangement to attend, but were obliged to give up their intentions at the last moment.

At every meeting we hear of some new person who has become interested in this style of shooting. Long-range shooting, which is next to it in science and skill involved, has died out, principally because men object to being pounded to death by a kicking rifle. In this style of shooting one may use a rifle of light or heavy weight as desired; should there be a heavy recoil it is not noticed. The outfit for this style of shooting is very simple and inexpensive. The results obtained are very satisfactory. As a means of testing the accuracy of a rifle, one can more thoroughly test a rifle in half a day than by several days' firing from the shoulder. To test a rifle one must first be sure it is held exactly alike every time, and in no other manner known to the writer is this uniformity secured.

The chief requisite to a proper enjoyment of the sport is a fine shooting rifle. Fine shooting rifles can be bought, but my experience is that fully three-quarters of the regular breechloading rifles on the market will not show steady shooting when tested from a double rest. All rifles can be made to shoot well and in adjusting ammunition to guns it is well to adopt those methods which experience shows give the most satisfactory results, which method, above all others I believe, to be testing from double rest.

Ambitious riflemen, who desire to keep posted, should make efforts to attend the shoots of the National Rifle Club, at Vernon, VT., where they will be given every opportunity to add to their store of knowledge. WILLIAM V. LOWE.

BOSTON, Sept. 21.—The Massachusetts Rifle Association held its weekly shoot to-day, with a large attendance of riflemen. All matches were well filled and some good scores made. Mr. Eames won the gold medal in the 20-shot rest match, and Mr. Clarke the champion gold medal. Mr. Eastman won the silver membership badge, and Messrs. Lounsbury and Pettman each won the bronze military medal. Next Wednesday at 12:30 P. M. the range will be open for rifle and pistol shooting. Following are the best scores made to-day:

20-Shot Rest Match.

J N Eames	12 11 9 10 10 11 11 10 12 11

WAKEFIELD, Mass., Sept. 21.—The rifle team of the Richardson Light Guards, Company A, Sixth Regiment, shot two friendly matches this afternoon with Company C, Sixth Regiment, of Lowell, and the Fifth Regiment staff team, and succeeded in winning both matches. After the shoot the visitors were invited to Company A's armory, where a collation was spread. Following are the scores, 7 shots at 200yds., Creedmoor count:

Company A, Sixth Regiment.		Company C, Sixth Regiment.	
Lieut Gihon	4545445—31	Lieut Worthen	4545444—30
Capt Taylor	4554445—31	Capt Pratt	4354455—30
Pvt Babbett	5444445—30	Sergt Foster	4554444—28
Pvt Horton	4444454—29	Pvt Kincade	4445455—31
Pvt Keough	4445444—29	Pvt Farnsworth	3444434—26
Pvt Killam	5454344—29	Pvt Petters	3444334—25
Pvt Howard	3445441—28—207	Pvt Tarrell	3443243—23—193
Company A, Sixth Regiment.		Fifth Regiment Staff Team.	
Lieut Gihon	5544445—31	Lieut Eades	4444455—30
Pvt Babbett	4555444—31	Maj Foster	4344444—27
Capt Taylor	4543344—30	Major Benyon	3534435—25
Pvt Horton	4344444—27	Sergt Hill	3534543—25
Pvt Keough	3443434—24—143	Average	—27—134

This team shot with four men, and was allowed an average score.

TORONTO, Sept. 17.—The eighth match of the Off-Hand Rifle Association was shot over the different ranges to-day. There are two more matches to be shot, the last being at Orillia on Oct. 8, when all clubs in the association will meet face to face and shoot for the final championship in a series of 10 matches. At the same time there will be a three-day tournament, when upward of $200 in prizes will be competed for. Below is the result of the last shoot

	Points.	Matches Won.	Matches Lost.
Orillia	758	62	6
Scarboro	803	58	10
Newton Brook	734	55	13
King City	788	42	26
Tottenham	632	29	39
Point Edward	646	26	42
Alliston	484	15	53

VILLISCA, Iowa, Sept. 17.—Company B, 5th Regiment Rifle Team, I. N. G., strong northwest wind, fish-tail, 5 shots at each range, Creedmoor target, 200, 300 and 500yds.

	200yds.	300yds.	500yds.
Capt West	24344	34353	43554—56
Lieut Harris	24443	45333	30432—47
Sergt Overman	44443	34444	34455—57
Sergt Ashmore	23444	33003	33323—40
Pvt Bevans	54332	24504	32443—48

MASSACHUSETTS MARKSMEN.—Under the direction of Col. Horace T. Rockwell, inspector-general of rifle practice, M. V. M., the State rifle matches will take place at the range of the State camp ground, South Framingham, to-day. There will be a staff team match, a company team match, an officers' match and an enlisted men's match. Officers and men will appear in fatigue uniform. Each company team will consist of seven members and one substitute, and will be under the command of a commissioned officer. The staff teams will consist of five members and one substitute. Shooting will begin at 8:30 A. M. The trophies to be competed for will be as follows: For staff teams, one trophy; for company teams, four trophies; also for the team (excluding the first four) making the best gain in points compared with 1888, one trophy; also for teams using carbines, one trophy; for staff officers, two trophies, and for line officers, three trophies. For enlisted men, three trophies, and one additional for the best score in each regiment of infantry; also one for the best score in each cadet corps, in the signal and ambulance (combined), and in the cavalry using carbines—if neither of the first four trophies are won by the members of the corps named. All competitors in the team matches making centers or better on their team score, will continue shooting for seven additional shots. Other competitors for individual prizes will follow the same rule, and the aggregate of fourteen shots will determine the winners of individual prizes.

BROOKLYN, N. Y., Sept. 17.—Nearly 1,000 persons were present at Woodlawn Park, Gravesend, Long Island, to-day, the occasion being the first annual festival and prize shooting of the Farmers' Hook and Ladder Company, No. 2, of Parkville, L. I., the officers of which are: G. W. Joppert, Acting Foreman; H. Blackley, Treasurer, and D. Justus, Secretary. In the prize shooting contests there were about 80 entries. At the regulation bullseye targets, with 8 shots per man, Acting Foreman G. W. Joppert won first prize, scoring two bullseyes and one center. William Staite second, A. Erzinger third, Harry Blackley fourth, Edward Levine fifth, and D. Justus sixth. The Judges' prize was won by Charles Cooke, of Bay View, with the score of 32 out of a possible 39, J. Scharff second with 31. For the Woodlawn Park Grand Badge, presented by B. Koenig, Harry Blackley made 32 out of a possible 39, William Staite was second with 29, and G. W. Joppert third with 28. This competition was at the ring target, range 50yds., and 25 competed.

MONTREAL.—The Montreal Rifle Association, as a *finale* for the most successful season in the history of military rifle shooting in Canada, are endeavoring to arrange a gigantic telegraphic rifle match between the clubs of the leading cities of the Dominion, the match to be fired on each club's own ranges on Saturday, Oct. 5, with Martini-Henry rifles, at 200, 500 and 600yds., 7 shots at each range, 20 men on a team. The "range totals" and weather details are to be exchanged by telegraph. The following associations have been asked to take part: Toronto, Ottawa, Hamilton, Bowmanville, St. Catherines, Guelph, Winnipeg, Vancouver, B. C., Victoria, B. C., Montreal, Quebec, St. John, N. B., Halifax, N. S., and Prince Edward Island.—W. R. PRINGLE, Acting Secretary M. R. A., P. O. Box 234, Montreal.

HAMILTON, Ont., Sept. 20.—At the annual meeting of the Hamilton Association these officers were elected: Captain Zealand, President; D. Mitchell, Vice-President; J. R. Adam, Secretary-Treasurer; Committee, W. M. Goodwin, Peter Robertson, H. Marris and Captain Adam. Captain Adam and W. H. Clark, the retiring president and secretary, retire after holding office for six years, during which they have done much to encourage rifle shooting in this city. It was decided to hold the annual matches on Saturday, September 28.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

CENTRAL ILLINOIS SHOOT.

JERSEYVILLE, Ill., Sept. 17.—The eleventh annual tournament of the Central Illinois Sportsman's Association began at this place to-day, with an attendance of something like forty shooters. The cold weather which has for the last few days been prevalent throughout this region made itself disagreeably manifest, and the shooters at the grounds had anything but a pleasant time in the cold and raw wind that blew during the greater part of the day. After supper fourteen shooters took trains for their home, somewhat cutting down the prospects for the following day. The unkindly weather doubtless had much to do with this.

Jerseyville is a pretty and well shaded little town in the southern end of the State of Illinois, about forty miles from St. Louis. It claims a population of 2,500, and by vote of the Association is entitled to this shoot for three years, next year concluding its term. It has made a better success of the shoots than any other town, and the Central Illinois shoot has in the past been one of the top events of the shooting year in this State. It is largely attended by the individual shooters scattered through the central and lower parts of the State, and this holds up the numbers, although the bond which holds the club organizations together seems unfortunately to be becoming weaker and weaker. There were only four different foreign clubs represented at this meet to-day, the Hankerville, Edwardsville, Carlinville and Audubon clubs, the latter coming from Jacksonville.

The Association makes little claims in the matter of game protection or allied topics, and frankly devotes itself to a rousing trap shoot every year. There is on record only one case in which it has prosecuted for a violation of the game laws. As the country covered by this association embraces some of the best upland shooting in this State, and as violations have been so open that to-day one shooter boasted he had killed illegally two hundred and fifty chickens last year, and numbers this year, it would be a consummation devoutly to be wished should the question of game protection be taken up and pushed by this body.

The shoot is given under the auspices of the Jerseyville Fishing and Gun Club, whose grounds, nicely located at a distance of perhaps half a mile from the center of the town, are admirably adapted to the purposes involved, being spacious, clean and of good background for shooting. A number of tents are on the grounds, and the management, active among whom are Mr. Cam. R. Hutchinson, president, Mr. John Fox, treasurer, and Mr. L. S. Hansell, secretary, have provided amply and intelligently for all the needs of the boys. Intoxicating liquors are not allowed upon the grounds. The ladies of the Episcopal Church are out in force, and at noon provided a lunch for the shivering shooters, which sent them away warmer and happier.

It was announced on the programmes that professionals would be barred. The class of shooters is purely amateur, but a look at the scores will show that a mighty good shooting and staying are necessary to win. The most interesting feature of the day has been the shooting of the two boys, Walter and Charles Spencer, who with their father, Dr. E. L. Spencer, are here from Bunker Hill. Neither of the boys is large for his age. Charles is only sixteen and Walter, but fourteen years of age, is a mite of a fellow, about as big as a chew of tobacco; but they shoot all day long in rattling good shape, and did work that any man might hold a credit. They both break their birds dead center, and smash them into powder. Dr. Spencer says the boys have only been shooting about a year. They form a unique feature and excite much comment, and with FOREST AND STREAM'S blessing they ought to make dandies when they have their growth.

Mr. Paul North, of the Bilrock Company, is here from Cleveland. Mr. Fred A. Fodde is here from St. Louis, and is handing around programmes of his second annual tournament at St. Louis, Oct. 8 to 11, which also will be a good shoot. Mr. Fodde is rod and gun man on the St. Louis *Republican*, and a gatherer of sporting news for other papers also, sending in occasional items to FOREST AND STREAM over the name of "Unser Fritz." Mr. J. F. Schick is here from Mt. Pulaski in company with a 12-pound gun which makes some of the boys look sad. Mr. Schick weighs 285lbs., and has a hand as large as the hand of Providence. He was cut off early in his growth, or he might have grown up into a good deal of a boy. Mr. C. W. Parent, of Marshall, Mo., is also here, and asks after old friends in Chicago.

At the business meeting, held at the court house at 8:30 P. M., little business was found necessary to be transacted beyond the election of officers. Mr. L. S. Hansell, this year's secretary, was elected president; Mr. Cam. R. Hutchison, this year's president, was elected secretary; Mr. John Fox was reelected treasurer. All these gentlemen are of Jerseyville. Dr. E. L. Spencer, of Bunker Hill, was reelected vice-president. Directors for the following year are: Dr. Chas. Henry, of Jacksonville; Mr. Weeden C. Smith, of Mt. Zion; Mr. Chas. McAninch, of Carrollton; Mr. C. W. Parent, of Marshall, Mo.; Mr. H. W. Metcalf, of Chicago, and Mr. A. M. Tack, of Jerseyville. The executive committee of the local club has usually had charge of details in these association shoots. It consists of Messrs. G. N. Burleigh, W. B. Skelly, Jas. D. Perrings, L. S. Hansell and Mark A. Warren. Mr. Fodde acted as referee in all association events, while Mr. Skelly took care of the specials. Score:

Shoot No. 1, sweepstakes, 9 single champion clay birds, entrance $1, 50, 30 and 20 per cent.:

Bauer	111111111—9	A C Aden	101111111—8
Edwards	011111101—7	Taylor	111111101—8
Ed Spencer	111111111—9	Tack	011111111—8
Robley	111111111—9	Warren	111111111—9
Ranson	011000001—3	Rexroat	100010101—4
E Bess	111110111—8	Harris	111111111—9
Parent	111111110—8	Nash	110100111—6
W S Duer	111110110—7	Lee	111111101—8
Perrings	110111011—7	Stonckel	101111111—8
McAninch	101010111—7	Chappell	111111011—8
Pugh	111011011—7	O'Neill	111011111—8
Waller	111111011—8	Dr Spencer	111011111—8

Bauer, Ed. Spencer, Warren and Harris div. first; O'Neill shot out and won second, needing 18 straight to shoot out Aden, 17 straight; Perrings and Pugh shot out and div. third.

Shoot No. 2, Association. 10 single standards, entrance $1.25, prizes valued $7, $5, $4.50, $3:

Dr Spencer	0011111110— 7	J T Ranson	0010111001— 5
Al Tack	1111111011— 9	W S Duer	0001111110— 6
Perrings	1111111111—10	Hutchison	1111111101— 9
McAninch	0111111011— 8	Parent	1111111101— 9
Taylor	0010010010— 4	Herman	0111101111— 8
Warren	1011111111— 9	Speer	1111010111— 8
Hansell	1111100111— 8	Long	1010010101— 5
Lee	1111110010— 7	Geo Beatty	0011010001— 4
Rexroat	1110110111— 8	Geo Henry	1110710111— 8
Bauer	0111111111— 9	Robley	1111111011— 9
E Bess	1101010010— 5	Nash	1110111000— 6
C Spencer	0101111111— 8	Ed Spencer	1111111101— 9
Fred Chappell	1111101111— 9	W Spencer	1110010111— 7
A C Aden	1101111110— 8	A Harris	1110011111— 8
E B Range	1101111011— 8		

Ed Spencer won first on shoot off, breaking 18 in ties to beat Bauer's 17. Harris won second in shoot off, breaking 20 straight in the ties. Walter Spencer (the fourteen-year-old boy) won third in the shoot off, shooting out his father and making 20 straight in the tie. Duer won fourth alone.

Shoot No. 3, sweepstakes, 3 moneys, 9 single champion clay birds, entrance $2, prize value $4 added to first:

Chappell	100110111—6	Westfield	110111110—7
Range	011110111—7	Bauer	111111110—8
Robley	011111011—7	Parent	111111011—8
Duer	110110111—7	Taylor	000011111—5

Aden	111101—5	E Spencer	011111—5
Hutchinson	011111—5	Robley	110001—3
Dr Spencer	111111—6	Perrings	010110—3
O'Neil	111111—6		

All ties divided. A few sweeps were shot during the day besides the programme events.

Second Day, Wednesday, Sept. 18.—The weather was milder today, and the day a pleasant one for shooting. A moderate wind blew from the traps. The ladies of the church had a good dinner again. The number of shooters was somewhat less than yesterday, but nearly all present took a hand, and the interest was well maintained throughout the day. Score:

Shoot No. 8, Association, 15 single standard targets, 4 moneys, entrance $1.50, prizes, value $6, $4.50, $3, $2:

Duer	111010111101111—12	Perrings	111111111111111—15
Bauer	111111101110110—12	Whitehead	111111111111101—14

Felter	0010111110— 6	Parent	0011111111— 8
Long	1111011111— 9	North	1011111101— 8
Speer	0111111111— 9		

Ties on 10 div., Bauer shot out and won second, Spencer, Hutchinson, Parent and North div. third, O'Neil won fourth alone.

A few minor sweeps were shot during the day. There were two sets of traps, one of five Keystones and one of three bluerocks, alternated with the American clay bird traps. Keystone system, traps at known angles, was followed. There were no delays of consequence in the trapping, and the shoot moved on with fair promptness and regularity. The system of scoring employed is very loose and it should be improved. No book record of the scores is kept at all, and the loose score cards were often lost when the time came for them to be needed. This is a method hardly worthy of so large an event as this is. The utmost of cheerfulness and good feeling has prevailed throughout the day. There is hardly a kicker here, and the air is consequently quieter than is ordinarily the case at a big shoot.

Third Day, Thursday, Sept. 19.—The weather was delightful throughout the day, with little or no wind. The attendance was not heavy, and it was thought that the races at Alton had something to do with this. The last day of this shoot is usually the best. Considerable interest is anticipated for the club team shoot of to-morrow, which will probably call out a larger crowd than was present to-day. The brass band of a barn-storming theatrical troupe came out to the grounds this afternoon, and made a good deal of noise for a while, but barring that, everything was pleasant. Score:

Shoot No. 15, sweepstakes, three moneys, 3 singles and 3 pairs champion clay birds, entrance $1.50; fourth prize, value $2.50:

Ed Spencer	111 10 10—6	Parent	101 10 10 10—5
Bauer	111 11 11 10—8	Chappell	110 10 00 11—5

Parent	111111111111111—15	Cadwallader	110100100111110—10
Harris	111111111111111—15	Duer	111011010111111—13
Ed Chappell	101111010101011—11		

Ed. Spencer, Parent, Harris and Westfield div. first, $11, and also div. the cigars; Perrings, Hutchison and Dr. Spencer div. second, $6.60; Hutchison won the reading tools and slippers; Bauer, Long, Range, Burleigh and C. Spencer div. third, $4.40. Burleigh won the flour in shoot off; Tremblett and Chappell div. fourth, the 100 shells.

Shoot No. 21, sweepstakes, three moneys, 9 single clay birds, entrance $1.25; fourth prize, value $2.50:

Ed Spencer	103110101—5	Spear	110111111—8
Westfield	111111111—9	Dr Spencer	101111111—8
Bauer	111111111—9	Perrings	111100111—7
Harris	011101111—7	F Chappell	111001111—7
Parent	111111101—8	Warren	001111111—7
Range	111111001—7	Tremblett	111001010—5

Westfield and Bauer div. first, $5.88; Parent, Spear and Dr. Spencer div. second, $3.50; Harris and Perrings shot out and div. third, $2.35; Ed. Spencer won the 50 cigars on shoot-off.

Scores were handed in of a side match, 50 inanimates, shot late last evening between Perrings and Watts. Perrings 46, Watts 45. The usual number of sweeps were shot to-day. Entrances ran small and the winners won little.

Friday, Fourth Day, Sept. 20.—The weather was pleasant as could be asked to-day. In the afternoon a strong wind blew from the score. The attendance in the morning barely held its own, but in the afternoon the grand stand showed a number of spectators, mostly church ladies connected with the restaurant, who gathered about their rector upon the top seats. The shooting dragged badly, and there were long interims of silence at the traps, which suggested that the tournament was in an acephalous condition. A better and more snappy executive would have been a good improvement. Considerable interest was manifested in the club team shoot. It required a good deal of talk, argument and demur before the teams were finally organized. During the day Mr. Ed.

Spencer gave brief exhibitions of wing-shooting with the rifle, hitting glass balls, coins, etc., with tolerable regularity at short range. Shortly after dinner the barn-storming brass band approached within a block or two of the grounds and threatened to come in. This danger, however, was happily averted by the presence of mind of the management. Toward the close of the day, as the awards of the last special prizes fell due, the interest became intense, and the applause which grected the announcement that Dr. Spencer had won the special prize of one bottle of Pitts's Wonderful Black Liniment was only equalled by that which followed the news of the division among several fortunate shooters of the $1 worth of bread tickets which constituted another prize. It may thus be seen how useful to a man of family may be his skill with the gun, and all decryers of shooting at the trap should take a lesson hereby. Score:

Shoot No. 22. Association, 10 single standards, usual rise, use of both barrels; entrance $1.50, three moneys; prizes value $6, $5, $4.50, $1:

Parent	0011111101—7	Tack	1211111121—10
Ed Spencer	1111111111—10	Burleigh	1211112112—10
Bauer	1112111111—10	Perrings	1101111111—9
Westfield	1112011111—9	Spear	2111111021—9

Govro	1111111101—9	McAninch	2211110211—9

Ed. Spencer, Bauer, W. Spencer, Scott, Burleigh and Beatty div. first, $12; Bauer and W. Spencer shot out and div. the powder; Chappell, Westfield, Govro, Perrings, Harris, Spear and McAninch div. second, $7.50; Spear won subscription; Warren, Range and Hutchison div. third, $4.80; the two former div. the keg powder; Parent won fourth and the subscription.

Shoot No. 23, sweepstakes, "walking match," three moneys; 6 champion clay birds, entrance $1; fourth prize value $2.50. (The match shot by shooter calling "ready" and walking toward trap; the trapper to pull any time thereafter he liked.):

Bauer	100111—4	Scott	101011—4
Tack	111101—5	Ed Spencer	111111—6
Burleigh	111110—5	Govro	110011—4
Harris	101101—4	Baker	111111—6
Perrings	001111—4	Westfield	111111—6
Parent	101010—3	Dr Spencer	101011—4

Ties on 6 div. $6.25; ties on 5 div. $3.75; ties on 4 div. $2.50; Parent won cigars.

Shoot No. 24, Association team shoot, 15 standards to each man, 4 men to team, entrance $4 per team, four prizes—$40, $18, $12 and $9:

Bunker Hill Team.		Second Jerseyville Team.	
W Spencer	111111111011011—13	Tack	101111111111111—14
Dr Spencer	111111010110111—12	Perrings	111111010101111—13
C Spencer	001011111111101—11	Parent	111010111111111—13
Bauer	111111111111111—15—51	Ed Spencer	101111111111111—14—54
Taylorville Team.		Woodburn Team.	
Range	111111111111111—15	Govro	001111011111111—12
Long	101111000010111—10	Harris	111111111111111—15
Spear	110111010111111—13	Scott	111100111111111—13
Westfield	111101111111010—12—50	Baker	111110100111011—11—51
Jerseyville Team.		Carrolton Team.	
Warren	110101111011111—12	Beatty	111111101011111—13
Hutchins'n	111111011111011—13	Hansell	101110100000000— 6
Chappell	111111011101111—13	Stoeckel	110101111111111—13
Burleigh	101101011111110—11—49	McAninch	111111111111111—15—47

Second Jerseyville won first. The tie between Bunker Hill and Woodburn was shot off as below, in ties of 5:

Bunker Hill Ties.		Woodburn Ties.	
W Spencer	11111—5	Govro	11100—3
Dr Spencer	11011—4	Harris	11111—5
C Spencer	10101—3	Scott	11101—4
Bauer	10111—4	Baker	11011—4
	16		16
	15—31		17—33

Woodburn won second. Taylorville third. Jerseyville fourth.

Shoot No. 25, sweepstakes, 4 moneys, $25 guaranteed, 12 single standard targets, entrance $2.50, fifth place $2.50.

Westfield	111011111111—11	Harris	111111111111—12
Bauer	11111 01111111—11	Scott	111111111110—11
Spear	111111111111—12	Perrings	111111111111—12
Parent	111110110101— 9	Govro	111011110111—10
Baker	111101101111—10	Ed Spencer	101111101111—10
Hutchison	111111111110—11	Dr Spencer	111111111111—12
Hodge	011101110110— 8	Warren	111110001111— 9
Range	111111111111—12		

Dr. Spencer, Spear and Harris div. first, $12.85. Westfield, Bauer, Hutchison, Range and Scott div. second, $9.65. Baker, Govro and Ed. Spencer div. fourth, $6.40, Warren and Parent div. fourth, $3.20, and Hodges won the cigars.

Shoot No. 26, Association, 3 moneys, 5 single standards and 5 pairs, entrance $1.50, prizes $5, $3, $2:

Harris	11111	10 11 10 11 10—12	
Scott	11101	11 00 10 10 11—10	
Parent	11101	01 00 11 11 10—11	
Ed Spencer	11101	10 11 11 11 01—12	
Perrings	11100	10 11 10 11 00— 9	
Chappell	11101	10 11 00 11 01—10	
Bauer	11011	00 00 01 11 11—10	
Spear	01111	10 11 00 10 10— 9	
Range	11111	10 10 10 10 10—10	
Baker	10111	10 11 10 11 10—11	
Westfield	11111	10 11 11 11 11—14	
Govro	00111	11 11 10 11 10—11	

Westfield first, $6.40, and the beer; Harris and Ed Spencer divided second, $3.85; Harris won the coat in shoot off; Parent, Baker and Govro divided third, $2.55, and also divided equitably the bread tickets.

Shoot No. 27, sweepstakes, 3 moneys, at 9 single champion clay birds, entrance $1.50:

Harris	111111111—9	Range	111011111—8
Westfield	111111001—7	Ed Spencer	111111101—8
Dr Spencer	110111110—7	Perrings	111111110—8
Parent	101001111—6	Govro	111111111—9
Scott	101111101—8	Tack	010110101—5
Baker	101011111—7	Spear	101011111—7
Bauer	111111111—9		

Ties on 9 had $8.57, Govro drew out entrance, and Harris shot Bauer out, ties on 8 div. $5.15, ties on 7 div. $3.40.

Shoot No. 28, Association, three moneys, 10 single standard targets, entrance $1.25; prizes value $3 and $2:

Harris	1101101111— 8	Parent	1101111111—9
Ed Spencer	1111111111—10	Burleigh	0111111111—9
Perrings	1111111110— 9	McAninch	1010110111—7
Scott	1110101011— 7	Warren	1111111110—9

Ed. Spencer won first, $3.50, and the silver cup. Parent, Burleigh, Warren, Perrings, div. second, $2.30, and Parent and Burleigh won prize in shoot-off. Harris won third, $1.50.

This closed the day's hostilities and ended the shoot. It remained only to distribute the prizes for averages. Mr. Cam. R. Hutchison, best average in shoot No. 6 by Jersey county boy, received one year's subscription to Jersey county *Democrat*; Mr. Al Tack, second average, one year's subscription to *Weekly Call*. In figuring other averages the management reaped the fruit of its loose system of scoring. The reporters had carried off the loose score cards, some of which were in New York, and some under the bed in Room 3, Commercial Hotel, Jerseyville. It was certain, however, that Mr. Ed. Spencer won the handsome silver goblet for the best average in shoots 2, 4, 6, 8, 10, 12, 16, 18, 20, 26 and 28, and that "Westfield" won the cash prize, 60 per cent. of $12.50, for best average in four days throughout. Westfield's real name is Crosby, and he is a farmer boy from O'Fallon Station. He is a steady shot, and at one stage of the game he had broken 173 out of 175 birds shot at. Spencer is a very quick shot, but more subject to "unaccountables." His home is at Carrolton, and he also is a farmer boy. Both are professional shots in a way.

It may be noticed from the scores that the light entry and low entrance made it impossible for any one to win much. Nearly everything was divided. Trap shooting seems to be no longer a test of skill, but a struggle to make something, and as such to be surrounded with due caution. The races were too short, and the resulting ties too numerous. Longer races and larger entrances would be better in a shoot of this presumed magnitude.

The shoot was hurt by divers outside causes, such as the Alton races, and the management say it is not up to those of previous years. It has been, however, a very pleasant and sociable little affair, and one in which no one can regret his participation. The citizens of the town have been exceptionally liberal and attentive, and if they gave freely not only of their silver and gold, but also of their liniment and bread tickets, it shows that their hearts were in the right place for the boys, and next year the boys will all be back again.

E. HOUGH.

THE RUTHERFORD PLEASURE CLUB was organized Thursday, Sept. 19, with Richard Curran, Pres.; Chas. Kirsch, Vice-Pres. Walton L. Lockwood Sec.-Treas. It has temporary rooms at 9 St. Marks Place, New York.

ST. PAUL TOURNAMENT.

ST. PAUL, Minn.—*Editor Forest and Stream:* The fourth annual tournament of the St. Paul Gun Club was a success in every particular. Perfect weather prevailed, and good shooting was done, as the scores will show. There were sixty-four entries the first day, but that dwindled to fifty the second, and from forty to twenty-five the last event. Everything moved like clockwork under President Blakely's excellent management, and the popping of guns was continuous and so fast that it was somewhat difficult to score correctly, still there was no trouble from that source, in fact, no cause for complaint about anything, and there was none, every one appearing satisfied.

The tournament was held on the fair grounds, midway between Minneapolis and St. Paul, during the great State fair, and the crowd of on-lookers was large. They were separated from the shooters by a substantial wire fence, and everything was arranged admirably. Five Peoria traps were used under the Keystone system, otherwise American rules. Among the shots present were Paul North of Cleveland, O.; H. Durant and J. G. Smith, Algona, Ia., the latter the president of Iowa State Sportmen's Association; H. S. Grimm, Clear Lake, Ia., who captured seventh average; several members of the LeMars, Ia., Gun Club, H. S. Tyler, Bismark, Dak.; S. A. Cundy and son, Sault Ste. Marie, Mich.; H. A. Stone, Larmore, Dak.; J. H. Block, sheriff of Nicollett county, St. Peter, Minn., who always captures first average; J. W. Balsam, Hudson, Wis., who captured second average; C. J. Gress, Sleepy Eye, Minn.; J. H. Kayser, Marshall, Minn.; President Harrison of the Minneapolis Gun Club, and Nicholson, Ensign, Dunn, Lawrence, Cutter, members of the same; A. C. Cowing and J. Morrissey, Crookston; Hon. R. M. Anderson, Stillwater, Minn.; P. E. Hanson, Litchfield, Minn; H. A. Jones, Atwater, Minn.; C. B. Howard, Davenport, Ia.; L. Thieleman, St. Cloud, Minn.; S. P. Greaner and H. A. Westeson, Hastings, Minn.; C. H. Grant, Owatonna, Minn., and many others.

The traps face north, and the first two days the wind was from the southeast, the last day from the northwest, but not very strong at any time. The following are the scores:

First Day, Sept. 10.—First event, 10 single Peorias, $1.50 entrance, four moneys:

Max	0111010111— 7	Ruble	1111111001— 8

Hamlin	111011011111110—12		

Parker, Grimm, Block and Wilson first, Skiuner, Pfister and Holt second, ties on 13 third, Hamlin fourth.

Tenth event, 10 singles: Stone 6, Hastings 6, Hanson 6, Bennett 10, Jones 9, Blakely 8, Nicholson 9, Tyler 9, J. C. 6, North 8, Parker 10, Grant 10, Grimm 9, Morrissey 6, Kennedy 7, Block 9, Hamlin 9, Cundy 6, Max 9, White 9, Ensign 8, Burke 8, Baldwin No. 1 8, Forbes 8, Parks 7, Skinner 9, Barnes 8, Wilson 7, Pfister 7, Catamaran 7, Murphy 9, Baldwin No. 2 8, Newlin 7, Holt 10, Rogers 5. Ties on 10 div. first, White second, Baldwin and Forbes third, Pfister fourth.

The scores of three other events are "lost in the shuffle," but I send you a list of the average winners. The number of birds shot at was 162: Block, first, $60, 147; Balsam, second, $50, 145; Hamline third, $49, 144; Sinner, fourth, $30, 143; Ensign, fifth, $25, 142; Bennett, sixth, $20, 140; Grimm, seventh, $15, 139; Pfister, eighth, $10, 137.

WILLIAMS.

CORRY, PA., GUN CLUB, Sept. 19.—The following are the scores made at the weekly club shoot of the Corry Gun Club, also score of a very interesting team race after club shoot, for birds and ammunition. The day was cold and rainy, and the weather seemed to affect some of the good shots. Penrose won gold medal, and Starbird silver medal. Keystone rules, trap and targets were used:

Penrose	1011111011111111111111111—23
Edwards	1001000110010110011111011—14
Starbird	1011111011111111110111111—22
Ward	0111111010101111111110110—19
Wetmore	1001000111101100101000001—11
Swan	1111101101001000000100110—12
M Arnold	1010111011111101011111111—21
Ellis	1000000010100011000010101— 8
Batton	0000000000000000000000000— 0
Laurie	1011111111000101001100111—17
Austin	0101111111111011011101111—20

Team shoot:

Penrose	1011110111001111101111111—21
Edwards	1110101010110011111110—18

Swan	1100100101111101111111111—19
M Arnold	1101111110111111111111010—21—77

CONNECTICUT TOURNAMENT.

MERIDEN, Conn.—A three days' shoot at Keystone targets was held here on the 17th, 18th and 19th, in connection with the State fair. Several medals and purses had been offered by the Fair Association, and in addition to these events a large number of open sweepstakes were shot. The first two days were rainy and very disagreeable, so a much smaller number of contestants were in attendance than was hoped for. On the last day the conditions changed, and with the exception of one hard shower in the afternoon, during which all were forced to seek shelter, the weather was very pleasant. The scores are here given in full.

First Day.—Event No. 1, 10 singles, 75 cents entrance, 3 moneys, ties div.:

E Ames	1111111110—9	Sherman	1111111111—10
Johnson	1001111011—7	Gould	1111111111—10
Savage	1110010111—7	Bristol	1101111111—9
Folsom	1111611010—7		

No. 2, same conditions, ties div.:

Folsom	1111110110—8	Gould	1111111011—9
Johnson	1111111111—10	Avery	1111111111—10
Sherman	1111111010—8	Bristol	1101111111—9
Savage	1110101101—8		

No. 3, same conditions. Ties div.:

Johnson	1100111111—8	Savage	1010100101—5
Avery	1111101111—9	Sterry	1111111001—8
Folsom	1111001001—6	Bristol	1011111111—9
Gould	1111111111—10	Sherman	1111111101—9

No. 4, at 15 singles, $2 entrance, 4 moneys:

Gould	011111111111111—14	Woodford	111101011001111—11
Avery	110110111111111—13	Bristol	111111111111111—15
Johnson	111011111111101—13	Alcott	111111111111110—14
Savage	111111110111101 -13	Langdon	111110011111111—13
Folsom	011110101101110—10	Widman	001110111101111—11
Sterry	111111111111001—13	Hill	011010101110111—11
Sherman	111111111101110—13		

Ties all div. except on 13, which was shot off and div. by Avery and Johnson.

No. 5, at 10 singles, entrance $1.25, 3 moneys. Ties div.:

Johnson	1010111111—8	Sterry	1010011111—8
Gould	1111011111—9	Sherman	1101111101—8
Avery	1111111111—10	Bristol	1111110010—8
Folsom	1111011111—9		

No. 6, at 5 pairs, entrance $1.25, 3 moneys, ties div.:

Gould	01 10 01 11 11—7	Avery	11 11 11 11 10—9
Johnson	11 11 11 11 10—9	Folsom	10 10 11 11 11—8
Sterry	11 10 11 11 10—8	Bristol	11 00 11 00 11—6
Sherman	11 11 11 11 11—10	Savage	11 11 11 10 10—8

No 7, at 5 pairs, same conditions, ties div.:

Gould	10 11 11 00 11—7	Avery	11 11 11 11 11—10
Johnson	10 11 11 11 11—9	Folsom	11 11 11 10 10—8
Sterry	10 10 11 10 11—7	Savage	11 11 11 00 11—8
Sherman	11 11 11 10 11—9		

No. 8, at 10 singles, same conditions, ties div.:

Gould	1110111111—9	Avery	1011111111—9
Johnson	1111111101—9	Folsom	1111010111—8
Sterry	1110101111—8	Savage	0110101100—5
Sherman	1111111111—10	Bristol	1111111111—10

No. 9, same conditions:

Gould	1111111010—8	Folsom	1111011001—7
Johnson	1111111011—9	Savage	0111111111—9
Sterry	1111111111—10	Bristol	1111011111—9
Sherman	1111111111—10	Brown	1111101110—8
Avery	1001111111—8		

Ties div. except on 8 which was shot off and won by Gould.

No. 10, at 6 singles, 25 cents entrance:

Gould	111110—5	Savage	010101—3
Sterry	111101—5	Bristol	111111—6
Woodford	100111—4	Sherman	111111—6
Higby	010011—3	Avery	111111—6
Goodwin	110111—5	Folsom	011111—5
Johnson	111111—6		

Ties div. except on 5, shot off and won by Folsom.

No. 11, at 10 singles, $1.25 entrance, four moneys:

Hill	1110111111—9	Burbridge	1110100111—7
Bristol	1111011111—9	Avery	1110111101—8
Gould	1010111111—8	Strong	1111111101—9
Willey	1111111111—10	Savage	1110111111—9
Johnson	1111010111—7	Sherman	1111111110—9
Ames	1111010111—8	Sterry	1010111010—6
Langdon	1111011111—9	Folsom	1110111011—8
Widman	0011111111—8	Woodford	0101010111—6
Cady	1111111101—9		

Second div. by those breaking 5 in shoot-off, and third won by Avery, shooting off.

No. 12, at 10 single straightaways, entrance 75 cts., four moneys, ties div.:

Langdon	00111010w.	Willey	1111111111—10
Widman	1111111011—9	Goodwin	1101111111—9
Ames	1001110w.	Folsom	1111001101—7
Cady	1101111120—8	Gould	1011111011—8
Johnson	1011010011—6	Strong	0111110111—8
Woodford	1111101001—7	Hill	1111111111—10
Burbridge	1110111111—9	Brown	1011110111—8
Sterry	1011111111—9	Sherman	1111111010—8

No. 13, two-men team match at 25 birds per man, medal and $10 to winners:

Folsom won medal and purse.

NEW JERSEY ASSOCIATION.

THE annual meeting of the New Jersey State Sportsmen's Association was held on Monday evening, Sept. 23, at 842 Broad street, Newark, N. J. The President, Dr. W. N. Pindell brought the meeting to order at 8:45 and Secretary Wm. Hayes called the roll to which the following delegates responded: Jersey City Heights Gun Club, Al. Heritage; Middlesex Gun Club, Seymour G. Smith and W. L. Force; South Side Gun Club, J. A. Bennett and W. R. Hobart; Forester Gun Club, Jacob Pentz; Newark Gun Club, C. M. Hedden and Jacob Pentz; Essex Gun Club, W. Hayes, R. H. Brientnall and Dr. W. N. Pindell. The minutes of the last regular meeting, also of a special meeting were read and approved. Two new clubs were unanimously elected to membership. The Bergen Gun Club, Mr. Orth, Secretary, of Hackensack, and the Riverside Gun Club, B. S. Paine President, of Red Banks. Under the head of reports of committees, Mr. Hayes said there were none to receive except that of a committee appointed to embody the new shooting rules in constitution and by-laws and they were not ready to report. Mr. W. Fred Quimby then moved a reconsideration of the recent change in rules which compels the gun to be held below the armpit until the bird is on the wing. At the last special meeting the American Shooting Association rules were adopted with certain changes, one of which was as above; motion seconded by Mr. Hobart. The chair questioned whether a reconsideration was proper at this meeting when the representatives were not the same as present at former meeting; he said no notice had been given that this question would be brought up and that some who voted for the change were not present to uphold that action. Mr. Quimby replied that when the change was made, no previous notice had been given, so the situations were identical, and claimed that a motion to reconsider was always in order. The chair then put the motion and it was carried with a few dissenting votes.

Mr. Pentz questioned whether, after having advertised to hold the present tournament under certain rules, it was advisable to change them now; and in looking over the by-laws the secretary discovered a section reading "that any changes of shooting rules that may be made shall not apply to the present tournament." This made the action in adopting rules at last meeting, which were intended to govern this year's shoot, out of order, and Mr. Pentz moved that as the alteration of Rule 16 and others having been a violation of the by-laws of the Association, the action be rescinded and expunged from the minutes. Seconded and carried. It was then said that the tournament would have to be shot under the old rules of the Association, but upon inquiry as to what the rules were, no record of them could be found. A lengthy discussion on rules ensued, and a motion to suspend Section 8 of the Constitution so as to allow a change or adoption of new rules was declared illegal by the chair. Mr. Quimby then appealed to the Association, reminded them of a conversation which took place when the Jersey City Heights Club was requested to give the tournament—that they then claimed it would be impossible to give a sucessful shoot under the old rules, which call for 21yds. rise, plunge traps, use of one barrel only—that on the understanding that new rules would be adopted suitable to the present style of shooting, they had gone ahead and incurred expenses in preparing for the tournament, and would up by saying that the Association had no right to compel the use of the old rules. He made a motion that the American Shooting Association rules be adopted by the New Jersey State Sportsmen's Association to govern all their contests. Motion seconded, but declared illegal by the chair. An appeal was taken from this decision, and the chair not sustained. Motion then put and carried.

Under the head of new business Mr. Hobart desired some information about the expenses attendant on the recent movement among certain clubs, which resulted in the legislation, legalizing pigeon shooting, said he thought the Association should indorse this action, see that all claims for services were settled, and moved that Mr. Quimby be allowed to draw on the Association for a sum not to exceed $100 to help defray any expenses which might accrue from the efforts to pass said bill. Motion seconded and carried. After some talk, as it seemed to be the sense of the meeting that the Association should uphold this action which resulted in the passage of the law, and should be at the head of all movements to sustain the law, prosecute offenders, etc. Mr. Quimby moved that the Association accept all the books, papers, etc., connected with the meeting held at the Astor House in March, also the contributions then pledged by various clubs, and use the same to pay any outstanding bills and the balance as a fund to carry on future work. Seconded and carried. The following officers were then elected for the coming year: President, Al. Heritage, Jersey City Heights Gun Club; First Vice-President, Seymour G. Smith, Middlesex Gun Club; Second Vice-President, Frank E. Hyer, Midway Gun Club; Recording Secretary, Jacob Pentz, Newark Gun Club; Corresponding Secretary, W. R. Hobart, South Side Gun Club; Treasurer, W. Fred Quimby.

A vote of thanks was tendered to the retiring officers and the meeting adjourned.

FIXTURES.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

CATSKILL, N. Y., Sept. 18.—*Editor Forest and Stream:* Although a number of shooters who were expected to take part were deterred by the rain, Fred. Tolley's trap-shooting contest to-day was a success, Mr. Tolley having temporary shelter for shooters at the firing point. It became quite muddy after traveling over the firing point, but the shooters accepted the situation of things, considering it was the first attempt at anything in the way of a shooting tournament in Catskill. Clubs from the Hudson River Valley were represented as the scores will show. Kingbirds were used from 5 traps, ties div. First event, 10 kingbirds, 75 cents entrance:

DR TOLL.

THE ESSEX GUN CLUB, of Newark, N. J., held their regular monthly shoot on Wednesday, Oct. 18, at Jersey City Heights Gun Club grounds at Marion, N. J. The attendance was small as compared with usual Essex shoots, but this was due entirely to the weather, which, for the past ten days, had effectually put a stop to sport at the trap. The shooting was all at live birds, furnished by Al. Heritage, and they were in the main good flyers. A club event at handicap rises was first put through, and then two open sweeps. The latter was a close and exciting race, in which all the contestants made an equal score. In shooting off the tie 17 birds were necessary to decide it, and it was finally divided by Class and C. M. Hedden. All the contestants were shooting well. Dr. Pindell made some remarkable long kills. Hayes was in great form, also Class and Hedden. Trophy shoot, Essex rules, handicap rises at 10 live birds:

C M Hedden (30)	0221111222—9	E D Terril (26)	0222010000— 4
Al Hedden (28)	1221112011—9	Hugh Leddy (28)	1022201111— 8
Frank Class (30)	1121121011—9	W Hayes (30)	2111221111—10
E Morris (26)	1212022001—7	Dr Pindell (28)	2111011211— 9

Open sweep at 4 live birds, Hurlingham rules, $3 entrance, three moneys:

Class	1211—4	W Hayes	1111—4
Al Hedden	1211—4	Leddy	0200—1
C M Hedden	2110—3	Tee Kay	2210—3
Dr Pindell	2111—4		

Ties divided.

Open sweep at 4 live birds, same conditions:

Class	1221—4	Pindell	1111—4
Al Hedden	1212—4	W Hayes	1111—4
C M Hedden	2121—4	Leddy	2221—4

Tie:

Class	2121211122221111—17	Pindell	2112110 — 7
Al Hedden	20 — 1	Hayes	1112221211110—12
C M Hedden	1111221111212221—17	Leddy	222110 — 5

Class and Hedden divided the money.

POTSDAM, N. Y., Sept. 20.—Regular semi-monthly shoot of the Potsdam Gun Club. The attendance was light owing to inclement weather; a high wind accounts for poor scores. Match at 6 kingbirds, 3 traps, 18yds, rise, National rules, badge prize:

Heath	010010—2	Watkins	100100—2
Leete	010001—2	F A Weed	011110—4
Lewis	001011—3	W A Weed	011010—3

Team match at 9 kingbirds, 3 traps:

W R Weed	011100001—4	Lewis	010001111—5
Heath	011000110—4	F A Weed	100101110—5
Watkins	110010110—5—13	Leete	101100110 —5—15

THE AMERICAN SHOOTING ASSOCIATION are anxious to give a shoot at some western point before the season closes—and have been corresponding with parties at a number of points. It is rumored they will give a tournament about the middle of October at Kansas City.

PENNSYLVANIA SHOOTERS.—Score of a friendly shoot between the Lansdale and Forest gun clubs on the grounds of the latter, Sept. 14:

Lansdale Gun Club.		Forest Gun Club.	
L Schantz	12	Mills	7
I Henry	12	Ramsly	7
J Yearfuss	6	Hallowell	1
S Mitchell	7	Robinson	10
H Yearfuss	8	Ely	5
J Armstrong	2	Reed	6
J W White	3	Redmond	4
C D Locke	7	Morrison	9
J Genthner	2	Brolsford	7
F Henry	3	Ezrah	5
R S Yearfuss	8	Knipeton	5
D Smith	8	Sayres	5
H H Locke	3	Smith	3
W B Moyer	6	Jones	10
G Young	5—98	Meld	7—89

The return match between the Penn Gun Club, of Norristown, Pa., and the Matsunk Gun Club, of Matsunk, Pa., was shot on the grounds of the latter at Matsunk, on Sept. 14. The match was the second one between the two clubs, the Matsunk having defeated the Penn Club at Norristown by 26 breaks. Score, 25 targets per man:

Penn Gun Club.		Matsunk Gun Club.	
Kerper	11	Cressman	18
Gross	15	Nettles	19
Cassel	17	Carter, J C	13
Yost, P	15	Carter, S	14
Fry	15	Noblitt	17
Yost, J	13	Ritter	17
Aschenfelter	7	Miller	11
Hass	12	O'Brien	14
Gehringer	19	Heffelfinger	12
Sheetz	16	Smith	14
Stanger	20	Bell	16
Mack	19	Dewees	13
Taney	10—189	Swartley	18—196

The following is the score made at a shooting match on Thursday, 19th inst., at Bryn Mawr, between the Bryn Mawr and Keystone Gun Clubs:

Bryn Mawr.		Keystone Club.	
J Kerrigan	9	H Hathaway	13
Geo Soley	13	F Troupe	6
C Moore	8	McKinley	3
W Soley	14	J Baird	7
H McClellan	18	Lafferty	6
F H Shank	14	Pettit	2
D Harner	18	Gray	9
J Oberholtzer	15	R Johnson	3
Wm Batty	13—121	H Baird	9 — 58

JEANNETTE CLUB, Sept. 20.—The Jeannette Gun Club held a tournament at Greenwald's Shooting Park, at New Dorp, Staten Island, to-day, and the shoot proved to be one of the best of the present active year. The officers of the club are: President, Capt. H. H. Cordts; Treasurer, Charles N. Brune; Secretary, Aug. J. Christian; Financial Secretary, Charles Meyer. Mr. C. Offermann, of the Falcon and Fountain Gun Clubs, was elected a member. A stiff wind blew across the traps and hurt the scores. The live birds did not arrive on the grounds until nearly 11 o'clock, and those present indulged in a sweepstakes at clay birds. The classified shoots at live birds resulted as follows:

Class A, 28yds.

C Meyer	1011111111—9	C Steffens	1111111100—8
C Fricke	1111011111—9	C N Brune	0011111111—8
J Vadtz	0111111011—8	H Otten	1111100001—6

Class B, 25yds.

C Offermann	1111111110—9	H H Cordts	1111111100—8
A T Christian	1110111111—9	H Erbstein	1111110000—7
C Dish	0101111111—8		

Class C, 21yds.

L Erbstein	1111111111—10	L Ahders	1101010111—7
H Winters	1111111101— 9	C Ahders	1010110110—6
G Meyer	0011111111— 8	H B Duke	0101011110—6
R Monthey	1010111110— 7	C Morrison	0101010111—6
J Burger	0011111101— 7	J Rodegest	0101101010— 5

Live bird sweepstake at 5 birds each, entrance $2.50: Cordts first, Meyer and Brune div. second and third. In each of the three classified shoots, A, B and C, a medal is awarded, which must be won three times, not necessarily consecutive, before becoming the personal property of any one shooting for it. Winters held the medal for Class C, but lost it to Erbstein, who won it for the second time. Winters's ninth bird falling dead out of bounds. Christian won the Class B medal for the third time and thus retains the handsome trophy. Class A medal was a tie between Meyer and Fricke. The final shoot of the season will be held at Greenwald's Shooting Park on Friday Oct. 18. Sweepstakes at live birds and clay-pigeons will be contested, and so will the final competitions for the gold medals in the classified shoots. The members of the Jeannette Gun Club will go to Sullivan county on Oct. 5, on their annual partridge shoot.

WALNUT HILL, Sept. 18.—A foggy, dark day, with drizzling rain, greeted the baker's dozen of shotgun men who met at the range to compete in the gold coin match and other events. The scores of Messrs. Black and Perry—29 each out of a possible 30—in the gold coin match, are fine, and other good scores were frequent. Gold coin match, 15 clay-pigeons and 15 Keystone targets, Keystone squad system:

	Clays.	Keystones.
Black	110111111111111—14	111111111111111—15—29
Perry	011111111111111—14	111111111111111—15—29
Stanton	111111111111011—14	111111011110111—13—27
Lee	111101111111110—13	111111111011111—14—27

Nelson	011111110111000—10	010011101000100— 7—17

Sweepstakes Events.—Ten standard targets, Dodge 9, Bowker and Crown 7, Knowles 6; 6 Chicago tin pigeons, Nichols and Crown 6, Bowker and Knowles 5, Dodge 4; 10 clay-pigeons, Knowles and Dodge 9, Crown and Bowker 7, Nichols 6; 6 standard targets, Knowles 6, Dodge and Nichols 4, Crown 3; 6 Chicago tin pigeons, Dodge, Stanton and Knowles 5, Bowker and Crown 4, Swift and Nichols 3; 5 clay-pigeons, Knowles 5, Dodge and Stanton 4, Nichols and Swift 3; 3 pair standard targets, Nichols 6, Knowles 4, Crown 3; 10 Keystone targets, Keystone system, Stanton and Swift 9, Crown 8, Nichols and Knowles 7; 7 standard targets, Bowker 7, Stanton 6, Dodge 4; 10 clay-pigeons, Keystone system, Swift and Knowles 10, Stanton, Neal and Black 9, Dodge 8; 7 standard targets, Perry 7, Black 6, Nichols and Swift 5; 15 clay-pigeons, Keystone system, Knowles 15, Stanton, Black and Perry 14, Swift, Hosmer and Dodge 13; 6 Chicago tin pigeons, Hosmer and Perry 6, Stanton 5, Swift 4, Nichols 3; 15 clay-pigeons, Keystone system, Stanton and Black 10, Hosmer 9, Knowles 8; 5 pairs standard targets, Stanton 9, Nichols 6; 10 clay-pigeons, Stanton and Knowles 9, Black 8, Nichols 6; 15 clay-pigeons, Black and Stanton 14, Knowles 11; miss and out, Stanton. The next shotgun shoot at Walnut Hill will be held Oct. 2

JERSEY CITY, Sept. 14.—The annual prize pigeon match between the Brooklyn and Jersey City Rod and Gun clubs was held at the latter's grounds this afternoon. There was a large number of ladies and gentlemen present, and the sweepstakes were of $100. The conditions required teams of 6 members, at 20 birds. The birds were furnished by S. A. Gardner and were a very fine strong and swift flying lot. P. H. Michell was the trapper and J. R. Moore referee for the clubs. The following was the score:

Jersey City Gun Club.	
J J Clark	01101110111111010111—16
C W Bunce	10111101010011101110—13
T Smith	11001110101011011011—14
P R Moeram	10111000101011111101—13
J L Drill	01111101110011111011—17
G H Wade	11001111010111101011—14— 86
Brooklyn Gun Club.	
W H Weaver	11111111111111110111—18
Geo Harkness	10111111011111111111—19
W A Reed	10111111111111011011—17
J W Parker	01010111010111010111—14
C H Johnson	11110111111111111011—18
J J Buckley	01001111111111111011—16—102

WELLINGTON, Mass., Sept. 21.—At the regular weekly shoot of the Wellington Club to-day Bond and Bowker tied with 14 each for the silver pitcher, but as Bowker is not a member of the club Bond was declared the winner. The other scores in this match were: Cowee 13, Melcher, Sanborn and Warren 12, Roxton, Field and Ward 11, Chase 11, Stone 9, Gill 8. In the merchandise match at 15 clay pigeons, Warren and Lang tied with 15 each. The other scores were: Bowker 14, Chase and Chaplin 13, Sanborn, Field and Perry 12, Ward, Bond, Melcher and Dill 11, Cowee 10, Porter 9. Seventeen sweepstakes at Keystones and bluerocks followed.

NEWARK, N. J., Sept. 18.—The local rain of to-day did not prevent a number of intrepid marksmen belonging to the Essex Gun Club of Newark from holding their regular monthly live-bird shoot on the Jersey City Heights Gun Club's grounds at Marion. The sport began at 2 o'clock and continued until dark. The conditions of the club shoot were 10 birds per man, handicap rises, ranging from 26 to 30yds., and the score resulted as follows: W. Hays 10, N. Nicholas 9, C. M. Hedden 9, A. E. Hedden 9, L. Class 9, H. Leddy 8, M. Morris 8, and D. D. Terhune 4. The object of holding the above shoot was to decide the championship of the club for each individual year, and the member having the highest aggregate at the end of the competition is awarded a valuable gold medal, which becomes his personal property. Sweepstake shooting followed the prize contest. In the first event there were seven entries at $3 per man, and each contestant had four birds to shoot. This was the result: L. Class 4, A. Hedden 4, W. N. Pindell 4, W. Hayes 4, C. M. Hedden 3, Tee Kay 3, and H. Leddy 1. Ties div. The second and last sweepstake was a repetition of the first, with the exception of one individual. The event, however, proved to be very interesting throughout, and on the first score all of the marksmen tied for the first place, and it was decided to shoot off. After making the feathers fly for nearly an hour, the event narrowed to Frank Class, the champion live-bird shot of New Jersey, and C. M. Hedden, an old veteran sportsman, who has just passed his 63d year. The men kept on shooting, but neither missed a bird, and the judge decided that they should divide the purse between them, as it was getting dark and the shooters could hardly see the birds. The majority of the pigeons proved to be good flyers.

LEBANON, O., Sept. 14.—The hammerless gun put up for competition by Mr. Al Bandle, of Cincinnati, for the shooter of this (Warren) and Clermont county who would equal his (Bandle's) score of 91 out of 100 clay birds, sprung from 5 traps, American Association rules. After many futile attempts it was finally won by Andrew Flickinger, a country boy, 19 years of age, hailing from King's Mills, Ohio, a cross-road burg on the C. W. & B. Railroad. He is a protegé of the State's double-bird champion shot Wick, and was for several years acknowledged the most rapid live and clay bird trapper Cincinnati ever knew, the Cincinnati expert, Bandle, taking him to various cities as his mascot. In the present series the boy made an excellent showing each time, but to look upon him as a winner was thought foolhardy, owing to the race being a long one, necessitating much endurance. However, he was equal to the task and emergency, and landed winner over such old-time experts as Girton, Jackson, Glassford and Shorty, all 90 men, with the handsome score of 93 out of 100 to his credit (missing his 6th, 12th, 19th, 31st, 34th, 71st and 83d), the other high entries being Girton 91, Jackson 90. There were in all 19 entries.

DEXTER PARK, L. I.—The postponed shoot of the Unknown Gun Club was held at Dexter Park, Jamaica Plank Road, L. I., Sept. 17. All the birds furnished by Miller were first class flyers, and several of the best wing shots made poor scores, as with this club only one barrel is allowed to score in killing the bird. It proved that the old wing shots completely outshot the younger ones, they taking all the prizes in the several classes:

A Rankin (23)	0011100—3	H Van Staden (24)	1100101—4
O White (23)	0011101—4	A Haas (25)	0101000—2
C Balzer (24)	1011100—4	Dr Schwartz (25)	1101110—5
H Knebel, Jr (20)	0110110—4	J Rathjen (24)	1111111—7
W Skidmore (25)	1101110—5	H Knebel, Sr (25)	1111111—7
I Brown (25)	1011001—4	D Monsees (26)	1000111—4

On shoot off, Knebel, Sr., won first and medal, Dr. Schwartz second and Capt. Balzer and H. Van Staden divided third.

WORCESTER, Mass., Sept. 19.—At the meet this week of members of the Worcester Sportsmen's Club at Coal Mine Brook Range the contest for the Norcross Trophy was continued. It was the ninth of the series. In this contest each man has a possible 30 clay pigeons thrown from open traps and in case of a tie a possibie ten. The series began in May last and has resulted as follows: First, M. D. Gilman, 28; second, E. T. Smith, 27; third, C. H. Howe, 26; fourth, E. T. Smith, 26; fifth, C. B. Holden, 26; sixth, G. A. Sampson, 27; seventh, A. L. Gilman, 27; eighth, G. J. Rugg, 29; ninth, W. L. Davis, 26. On tie of 26, Smith 10, Davis 9. The work of each man in the ninth contest more in detail follows: E. T. Smith 26, W. L. Davis 26, C. Crompton 26, A. L. Gilman 25, E. F. Swan 25, E. Walsh 24, G. J. Rugg 23, H. D. Jourdan 22, C. B. Holden 22, M. D. Gilman 21, F. M. Harris 21, Geo. A. Sampson 21, E. S. Knowles 20, V. F. Prentice 20, E. Jewett 20, J. H. Dougherty 19, F. Forehand 18, A. B. Franklin 17. Tie score: W. L. Davis 10111, 11111—9; E. T. Smith 11110, 11110—8; C. Crompton 11010w.

OMAHA, Sept. 12.—John Leonatus Winston, of Cincinnati, known as a shooter under the name of "Mudd," "Drake," "Jack," etc., to-day broke the world's record at inanimate targets in a match at 100 composition birds, shooting against Frank Parmalee of this city. The match, as stated, was at 100 single bluerock pigeons, thrown from 5 traps, unknown angles, according to American Shooting Association rules, for $100 a side. Winston scored his 100 birds straight, landing winner by 10 birds. Winston is the same gentleman who was defeated by Al Bandle, of Cincinnati, in St. Louis several months ago. Parmalee will be remembered as the running mate of Chas. W. Budd, who, as a team, defeated Messrs. Al Bandle and H. McMurchy at 50 birds the last day of the American Shooting Association tournament held in Cincinnati some three months ago. Winston's record is the best ever made at inanimate targets in a match for stake money.

RED BANK, N. J., Sept. 20.—The first shoot of the season of the Riverside Gun and Rifle Club took place this afternoon on the club grounds in Middletown township. The wind was fresh from the southwest and nearly all the birds were strong and swift. The event of the day was the club shoot at 7 live birds, modified Hurlingham rules, 30yds. boundary and 28yds. rise: Ed. M. Cooper 7, Bergen 6, J. Cooper, Bussell, John Cooper and Knapp 5, Cornwell and Hendrickson 4, Conover 3. A shoot at 5 birds between Dr. Edwin Field and Chas. Robbins was won by Field, who killed 4; Robbins killed 1. After the live bird shooting there were two sweepstakes matches at clay pigeons. The first at 9 singles was won by Ed. M. Cooper, who broke 8; Jas. Cooper, Jr., second with 7, and Bussell and Knapp tied for third with 5. The last event was a sweepstakes at 5 doubles. Jas. Cooper and Edmund Throckmorton tied for first, each breaking 8; Conover and Asa Whymer tied for second with 7 and Chas. Robbins was third with 6.

BREWER VS. CLASS.—Capt. John L. Brewer, of Trenton, N. J., and Frank Class, of Pine Brook, N. J., are to try conclusions in two matches, each for $250 a side, at 100 live birds each, under strict Hurlingham rules, except that Class is allowed four yards handicap. The exact dates are not yet settled upon, but the first match will be shot at Erb's Park, Newark, N. J., the last week in September and the second one in October, at Trenton, N. J., on the grounds of the Mercer Gun Club.

BALTIMORE TOURNAMENT.—On Oct. 1, 2 and 3, W. H. Linthicum's shoot will be held at Acton's Park, Baltimore. Keystone targets will be used under supervision of H. A. Penrose. Shooters will be classed A, B, C, and money handicapping system followed. Events at from 10 to 25 targets are scheduled for first two days, including two team races, in which the Baltimore Gun Club is pitted against the North End Gun Club, of Philadelphia, and the Wawasett Club, of Wilmington, Del. The third day is to be devoted to live birds. Shooting to commence at 10 A.M. sharp.

BREWER VS. CLASS.—Two matches have been arranged between Capt. J. L. Brewer, of Trenton, and Frank Class, of Pine Brook, N. J. Each match will be for $250 a side at 100 live birds, governed by the Hurlingham rules, with the exception that Class shall receive 4yds. handicap. The first match will be shot at Erb's Park, Newark, the latter part of this month, and the second on the grounds of the Mercer Gun Club at Trenton.

HEDDEN-REINHARDT.—C. M. Hedden and Chris. Reinhardt, of Newark, will shoot for a purse of $50 on Saturday, Sept. 25, at Erb's Park, Newark, at 1 P.M. The match is at 25 live birds each, under modified Hurlingham rules, loser to pay all expenses.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 25 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE NEWPORT RACES.

Morgan Cups, Sept. 19.

THE attendance, both of racing yachtsmen and spectators, at Newport last week was in no way proportionate to the importance of the events or the quality of the racing, but those who braved the bad weather of the early part of the week were well repaid in the end. The season of 1889 will long be remembered for its exceptional weather and strong winds, giving many fine races; but of all the stirring sea fights of the year the best were those of Thursday and Friday last. The sea and wind were no worse than in the first Titania-Katrina match in June, but on the present occasion there were forties and thirties racing, as well as seventies, and the work of the little fellows and their hardy crews was something to see and remember. On the second day in particular the windward work of the thirties was equal to anything that has been seen since the October races of the Seawanhaka C. Y. C. in '84, when Daisy and Yolande sailed on New York Bay. The prizes on the present occasion were given by Messrs. Morgan and Rogers, who between them bore all the expenses of the races; the cups being one of $350, offered by Mr. Morgan for 90ft. schooners and 70ft. single-stickers sailing together, with the N. Y. Y. C. allowance for rig, and a cup of $150 for the forties, a second cup of $100 being offered in each class for more than three starters. The Rogers cup, $100, with a second of $50 for more than three starters, was for the 30ft. class only. The courses announced were from off Brenton's Reef Lightship, 15, 10 and 8 miles respectively to windward or leeward, the time limits being six hours for the large class and five for each of the others. The original dates were Sept. 17 and 18, but the continued heavy weather along the coast made a postponement necessary, and a change was made to the 19th and 20th.

On Wednesday night the tail end of the late cyclone was still whisking ominously about Newport and Point Judith, with a N.E. wind, rain, and threatening telegrams from the signal service stations along the southern coast. The rain was still falling at daybreak on Thursday, but by breakfast time the wind had shifted to the west, and a big patch of blue sky was visible. A little later the chilly wind came fresher and the sky clouded again, making rather a dreary outlook, and hinting strongly that the end of the racing season was near at hand, but still offering a race to all who were hardy enough to accept the challenge. Unfortunately these were but few, most of the cracks had evidently had all the sport and glory they cared for, and only half a dozen out of the thirty or forty yachts in harbor made ready for the start. The schooners were absent entirely, though they might have had the finest race of the year; the singlestickers were represented only by Titania and Bedouin, Puritan not being on hand, although it had been reported that Mr. Forbes was anxious to try her with her younger and smaller sister. Such a trial would have been most interesting, but Mr. Forbes was busy with Fredonia, preparing for her match with Hesper. The 40ft. fleet that started out in June a whole regiment, had come down to a mere corporal's guard, owing to the number that have discovered that their vocation is cruising rather than racing. Little Pappoose had come round the Cape for a race, Gorilla was ready and so was Liris, while the new centerboard Awa was looking for a chance to make a record before the season closed. Maraquita had just been fitted out at Wintringham's with a new mast, the old Oregon pine boom of the Atlantic, her old mast, a 9in. yellow pine stick, being worthless; while she shipped a light spruce bowsprit in place of a heavy one of yellow pine. Some additions were made in her ballast, more lead being added outside, and she reached Newport on the night before the race, but did not start owing to Mr. Belmont's non-arrival in time.

The big Lucken tug Idlewild was ready, with the regatta committee of the New York Y. C., Messrs. S. Nicholson Kane, W. E. Iselin and Chester Griswold on board, but the wind, now W. by N., was blowing so heavily that there was some doubt as to the propriety of a start. Capt. Haff was by no means inclined to take Titania out, and turned in two reefs when the time came to go. The forties were willing to try, so at about 11 A. M. the fleet worked out, Gorilla carrying whole mainsail and headsails, while Liris, Pappoose and Awa turned in one reef and housed topmasts. Off Brenton's Reef the wind was W. by S., while there was a short, heavy sea. Everything in the way of trade, coasters and catboats, if they showed at all outside the harbor, were close reefed, and it was clear that there wet jackets and plenty of hard work ahead for the racing men. The nearest to a leeward course that was possible was E. by S., making the turn for the forties a couple of miles beyond West Island. The seventies sailed the same course but went on two knots further, their course being shortened from 15 to 12 knots. The steam yacht Vedette ran ahead with a float and flag for them to turn, while the committee boat set one for the forties. The wind was thus a couple of points off from dead astern, working still further to the south later on.

The preparatory signal was given at 12:15, with the start for the seventies at 12:25 and the forties at 12:30. In such a breeze there was absolutely no excuse for a handicap, but only two yachts, Gorilla and Pappoose, went over in time. Titania declined to show the way to Bedouin, but finally went over with 16s. handicap, a matter of no importance, as she made her arrival take 47s., or a clear gain for Titania of half a minute on the start. She had shaken out the second reef, but held the first, setting a jibheader aloft, Bedouin carrying whole mainsail and jibheader. Gorilla, with whole mainsail and jibheader, led Pappoose over, the little one having one reef and housed topmast. Liris sent up her topmast and set her jibheader over a reefed mainsail, while Awa had no topsail but topmast set. Both were handicapped, the starting times being:

Titania	12 30 16	Pappose	12 34 07
Bedouin	12 30 47	Liris	12 36 06
Gorilla	12 34 04	Awa	12 37 00

Titania set her spinaker at the line and Bedouin followed a few minutes later. There was too much wind and sea for the big kites of the forties, but Liris set her full spinaker at the line and began to walk up on Gorilla. The latter waited for some time, and finally set hers also, but with the upper part stopped up. Pappoose had her staysail boomed out, but no proper spinaker. After a long time Awa was evidently impressed with the necessity of doing something to keep her going, and set a reefed spinaker at the masthead. As soon as it was broken out Liris's spinaker ballooned over the stay, and from that time until it was taken in it went through a number of curious gyrations, but still she passed Pappoose and gained on Gorilla. A little after 1 P. M. the big fellows took in spinakers and housed topmasts, Titania having split one spinaker and finished the leg under a jury one. She had gained on the run, the times at the turn being:

Titania	1 39 00
Bedouin	1 41 30

The elapsed times for 12 knots were 1.08.44 and 1.10.43, or 10½ knots per hour. The forties were timed:

Gorilla 1:46:14, Liris 1:47:43, Pappoose 1:50:53, Awa 1:51:39. The elapsed times were: Liris 1:11:37, Gorilla 1:12:10, Awa 1:14:39, Pappoose 1:16:26.

All turned on the starboard tack, Titania standing on for a few minutes, and then going on port tack in shore, and Bedouin following when to windward of Titania's wake. The latter had a good lead and increased it at once, gaining steadily all the way home. The pair were nearing the 10-knot mark when the last of the forties were clear around it, and they were soon ahead of the small fellows. Gorilla had much more sail than she wanted for the long thrash home, especially as a bad squall had been making in the west for nearly an hour, and was now about to break on the fleet. She luffed and got down sheets and soon tried to tack, but missed stays, being finally put on port tack. Liris, with one reef in and No. 1 jib and staysail, did better than Gorilla as soon as she was trimmed on the wind, running rapidly through the latter's lee and ahead, until after 10 minutes she was in a position to tack and weather Gorilla.

"De wind she blow a hurricane,
Bime-by she blow some more,"

and as the squall came hurrying down the wind headed the boats on the starboard tack, while the sea ran very roughly. Liris determined to tack before the squall struck, but she hung in the wind, only paying off with the staysail across her. This cost her some time, and before she gathered way the squall was on her, striking her almost broadside on. The immense stability of the boat was shown in the way she stood up to the full force of the gale, never going further than to wash her rail. She hung for a few moments and then a crack aloft told that something had parted, and both the port shrouds fell on deck. Though left without support the mast, a noble stick of Oregon pine, made a brave struggle before it gave way, swaying back and forth for an appreciable time, though too brief to permit of any efforts to save it, and then falling with a crash. The sea was now higher than ever under the lashing of the squall, the little boat rolling in the trough until it was difficult to keep a footing on the deck, while the spray flew from end to end. The spar had parted about 8ft. above the deck, leaving nearly 40ft. in the broken piece, besides the housed topmast. The wreck lay across the boat, almost at right angles to her side, the inboard end just lapping the stump of the mast. At each roll the broken spar threatened to shoot away from the boat, going overboard and coming in through her side with the next sea. No one of her crew of 11 was hurt, though the boom in falling struck the man who was to leeward tending staysail sheets, while a second man got out to walk when the mast fell, but came on board after it was down. There was no confusion or panic, but all hands turned to at once, the wreck was firmly lashed across the deck, the topmast was drawn in as far as possible, the gaff, which was floating alongside with most of the mainsail in the sea, was cut loose and taken on board, and in a comparatively short time all immediate danger from the wreckage was averted.

The yacht was about 3 miles from West Island when the accident happened, and 10 miles from Brenton's Reef, but her mishap was seen from the tug, and all haste was made to reach her. When the Idlewild came up, about twenty minutes after the mast fell, a very amusing incident occurred. To quote from that stirring sea poem, the "Wreck of the Guyascutas":

"Oh, then 'twas the noble second mate,
That filled them all with awe;
The second mate, whom sailors hate,
And cruel skippers jaw."

One of the petty officers of the tug, the cook's mate, or second assistant deck hand, leaped boldly on to the tug's weather rail, struck an attitude like Farragut in the futtock shrouds, and bawled out the order, "Cut away everything and let it go." His promptitude and presence of mind met with poor appreciation, and was rewarded by a galling fire in the rear from the regatta committee, until the amateur lifesaver was effectually routed from his perch.

A hawser was finally passed aboard the yacht and made fast to the stump of the mast, the bowsprit shrouds being slacked off out of the way of the line. The long bowsprit, entirely unsupported, was thrashing about in the sea and threatened to go at every plunge, but it was necessary to send a man out to clear the topmast stay, in order to allow the wreck to be hauled aft. This difficult and dangerous piece of work was successfully accomplished by one of the seamen of the Liris, who held on, though entirely out of sight at times. With the wreck as far inboard as possible, and securely lashed, the tug started for the long trip home, heading into the sea, and then the fun really began for the crew of the Liris. The spray flew until she was almost invisible from the tug, while her antics were beyond description, something to be felt deeply but not spoken of lightly. As she plunged into each successive sea the mast across the deck seemed to press her down as though it would smash the decks in, while it was impossible to keep a footing, even below. The dismasting was timed at a few minutes past 2 by those on the tug, and it was nearly 6 o'clock before she was at her moorings in Newport Harbor, but in all the buffeting no signs of leakage or straining were apparent to the anxious watchers on board. The shrouds, 1¾in, steel wire, parted aloft, one in the splice and one just below it. Beyond the loss of the mast, and a break in the rail where it fell, no damage was done, and every piece of wreckage was saved and brought in.

The rest of the fleet went through the squall unharmed, though Titania was forced to start sheets and Gorilla had a hard time to lug her full mainsail. She did grand work all the way home, as the wind held its strength until near the finish. Titania had stood it under the land near Sachuset Point, getting smoother water when well in, and the three forties followed her, making a long tack just after Liris came to grief. Pappoose did well for a time, but the sea was too heavy for her and she dropped astern of Gorilla. Awa made but a poor showing on the way home, and did not cross the finish line, taking a short cut for Newport. The full times were:

THIRD CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Titania	12 30 00	3 58 39	3 28 39	3 28 39
Bedouin	12 30 00	4 09 50	3 39 50	3 37 42
40FT. CLASS—SLOOPS.				
Gorilla	12 34 07	4 38 53	4 04 52	4 04 52
Pappoose	12 34 01	4 53 33	4 19 26	4 14 37
Awa	12 35 00	Not timed.		
Liris	12 35 00	Disabled.		

Titania wins the prize in her class, beating Bedouin by 9m. 3s. Gorilla wins first and Pappoose second prize in the 40ft. class.

The times afford an interesting basis of comparison between the 70 and 40ft. classes, as the conditions were the same for all the boats, the larger merely sailing a little longer course.

The true elapsed times of Titania for 12 knots and Liris for 10 knots down wind give the average speeds of 10.5 and 8.4 knots respectively; the best observed speeds under favorable conditions, as given by Kemp, being 10.4 knots for Titania and 8 knots for 41ft. According to this estimate Liris did the better work down wind. The elapsed time of Liris over the 10 knots was 1.10.39, and Titania's time for the same distance would be very nearly 57.15. The difference between them is 13.24, while by the New York Y. C. rule Titania would allow Liris but 8.29 for this distance. On the way home Titania was timed by chance as she passed close to the 10-knot mark, her elapsed time from there in being 2.04.09, while Gorilla's time was 2.52.39. The difference is 39.40, while by New York rule Titania would allow Gorilla but 8.50. The above times were made under more even conditions than usually prevail, and afford about as fair a basis as is often met with for a test of the rules. From them it would appear that the allowances from the large to the small boats are entirely too small for heavy weather at least. Of course, it is unnecessary and undesirable that seventies and forties should race together; but such a comparison is important as showing a fault in the rule which has existed long without an attempt to remedy it. The performance of the forties, as far as it can be compared with Titania's, was fully as good, but under existing rules the small boats could have no possible chance of winning.

In this race Liris was steered by her professional skipper and manned by professionals, only two Corinthians being on board out of a crew of 11. Under such circumstances there was no excuse for abusing her Corinthian skipper, but some of the daily papers, notably the Boston *Herald*, lay the blame for the wreck on the owners. These gentlemen have spent nearly all the season in replacing the spars and rig, originally too light, an operation that has lost them much racing and cruising. After the breakdown at Vineyard Haven the boat was very thoroughly overhauled at Fall River, in readiness for the Corinthian sweepstakes; and again, on her return to New York, a great deal of work was done to make her ready for the Larchmont regatta and the present race. Neither of the owners were present at Newport, but on receiving news of the wreck by wire at night the order came to tow to City Island immediately and refit for the special race at Larchmont on Saturday next. The spirit and pluck they have shown in the face of the long series of disasters and disappointments should at least secure them freedom from the unfounded and malicious criticisms that have been made for some time by certain papers.

Rogers Cup, Sept. 20.

The wind blew heavily from S.W. all night, and next morning the sea was too bad for 30ft. racing off Brenton's Reef. After consultation the committee decided on an inside course, 8 knots to leeward and return, starting off Rose Island Light, just out of Newport Harbor, and running up the bay to a mark anchored one mile N.E. of Sands's Point Light, on Prudence Island, passing east of Gould Island and west of Dyer's Island each time. The starters were the thirties Tom Boy, Mr. Archibald Rogers, and Kathleen, Mr. Wm. Whitlock, Bantam, Mr. Woodbury Kane, 27ft., and Mopsa, Mr. Lyman, 27ft. The two cat yawls, Clara and Consuelo, sailed over the course and were timed by courtesy, though not in the race. Clara started with a boat in tow, which she afterward anchored, but she did not turn the outer mark, and neither she nor Consuelo kept to the west of Gould Island, as ordered. Capt. Tom Sloan, who was on from Boston to sail Kathleen, was content to house his topmast in harbor, while Capt. Pittuck, in command of Tom Boy, sent his topmast ashore. Undeterred by such examples, the impetuous young skipper of the Mopsa started out early for the original start off Brenton's Reef with topmast on end, grumbling roundly when the committee ran after him and announced that the course would be inside. Tom Boy, Kathleen and Bantam had each a reefed mainsail and second jib, but the latter came to grief very early, a catboat running into her and carrying out the bowsprit. The two Herreshoff yawls had reefed their mainsail, Consuelo having one reef and no mizen, while Clara had a double reefed mainsail and reefed mizen.

The starting whistle was given at 11:35, Kathleen being first across with Tom Boy close astern. The latter was to windward and Capt. Sloan luffed out to protect his weather, Tom Boy luffing too. After a little of this work Tom Boy set her No. 1 jib to port as a spinaker, the weight of the large spinaker boom serving to steady it. As soon as the sail was drawing Kathleen luffed again, so that Tom Boy had to go under her stern, running through her lee. Kathleen now set her large jib as a spinaker and covered Tom Boy. For the next 5 miles the pair ran together, Kathleen breaking Tom Boy's wind and keeping her spinaker aback nearly all the time. Meanwhile the bold skipper of Mopsa had started in to teach such novices as Pittuck and Sloan how to carry kites in a blow, and when over the line his spinaker was mast-headed in stops. When it was broken out there was a lively mutiny on board, as the big sail insisted in taking entire charge of the boat. The tack whipped loose and away went the sail, held only at head and clew, streaming out, wrong side first beyond the topmast stay, the tack flying out straight ahead of all. After a lot of hard work the mutiny was quelled and the sail was taken in, but only to be at once re-set, to go through worse antics than before. During this time the leaders were leaving Mopsa very badly, but she was having more fun and excitement. Consuelo did very well on the run considering her small sail and her length, 28ft., but Clara stopped to anchor her boat, and did not turn the mark. The times were:

Tom Boy	12 33 05	Consuelo	12 35 45
Kathleen	12 33 15	Mopsa	12 38 45

Maraquita was out for a trial under storm canvas, three reefs and a third jib, and had been in company with the racers for some time, turning the mark a couple of minutes ahead of Tom Boy. She stood along on the wind for two or three hundred yards and then lay to, evidently watching the race. Tom Boy luffed to trim sheets when by the mark, but Kathleen reached through her lee and was soon so far ahead that she could have tacked and made the other's weather, where Sloan was trying to put her. As the two raced along they came up to Maraquita, lying in the course without way on. Tom Boy was just far enough to windward to go by without losing time, but Kathleen found Maraquita square in her course, and had to luff or run her down. By the time she had got by Maraquita Kathleen was astern and to leeward of Tom Boy, and her chance for the day was gone. The result proved that she was no match for Tom Boy to windward in such weather, but had she made the place she worked for on Tom Boy's weather at the start of the windward work there would have been sport worth seeing in the battle between two such cracks as Sloan and Pittuck. That she did not is entirely the fault of Maraquita, a piece of carelessness utterly without excuse.

Once in the lead, Tom Boy went away fast enough from Kathleen, standing well in shore under Prudence Island before tacking. The sight from the tug was a stirring one, as the little fellows plunged through the seas that washed from stem to stern, but there was little fun on board the racers themselves. Kathleen was carrying a reefed foresail, and the sail sat so badly that it was finally taken in. Clara came up alongside of Tom Boy for a trial to windward, but the little cutter shook her off, while Consuelo, after turning the mark, had no show with the cutters to windward. Both of the yawls went inside of Gould Island, gaining considerably, but were badly beaten at the end. Tom Boy increased her lead with every foot sailed, and finished 10m. ahead of Kathleen. Mopsa sailed a poor course, keeping out in the open while the others worked close in shore, and she was so far astern that she finally withdrew, going in behind Rose Island. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Tom Boy	11 36 05	2 42 07	3 06 02	3 04 04
Kathleen	11 35 52	2 52 03	3 16 10	3 16 10
Consuelo	11 37 19	3 08 10	3 30 51	
Mopsa	11 37 00	Withdrew.		

Tom Boy beats Kathleen 12m. 6s.

The beating was a perfectly fair one and is ascribed by Kathleen's crew to the bad balance of sail. As such weather is found only once in a score of races it is always a matter of chance with a new boat how she will balance under the canvas, and only a trial like this will decide the question. Kathleen had too large a mainsail with the double reefs and yet her crew were afraid to risk the third reef, as it would probably have been too small, besides the loss of time in reefing. The reefed foresail was a failure, as the sail never sat all day and was finally taken in. The mainsail has a small first reef and a large second reef, making something between one and two reefs, and in the strong breeze it was necessary to keep the helm across the boat all day. Tom Boy has lately had a new suit of sails, and under Capt. Pittuck's skilful hand she has been worked into far better form than when in the Seawanhaka races this spring. She carried her two reefs well and seemed to steer easily, while she went to windward beautifully. Her extreme beam is 6in. less than Kathleen's, and the beam at waterline is still smaller in comparison, with far less displacement and an easier form. To this a part of her victory is due in all probability, as the great displacement of Kathleen does not seem to help her in heavy weather as it does in light, while her full form makes her heavy to drive. It is not the old question of light displacement vs. heavy displacement in a heavy sea, regardless of length, but of heavy displacement and beam vs. more moderate displacement and easier form, and as in Minerva's case, the latter came out ahead.

HESPER AND FREDONIA.

UP to the time of going to press nothing was known of the result between the pilot boat Hesper and the fisherman Fredonia, which were to race yesterday off Boston. The race has excited a great deal of interest in yachting circles, the two boats being of the same length and known for their speed. Hesper No. 3 is a pilot boat, designed and built by Mr. D. J. Lawlor, at Chelsea, Mass., in 1884, since which time she has been in service, making a good record for speed. Fredonia was built this spring by Mr. Adams, at Essex, Mass., from a design by Mr. Burgess, and has been used during the summer by Mr. J. M. Forbes as a yacht, making a trip to the Azores and back, and then joining the New York Y. C. cruise. Both vessels have been specially fitted for the race, Hesper having a longer boom, gaff and bowsprit and some new sails, while Fredonia will swing Puritan's mainsail. The conditions of the race are as follows:

Stakes $3,000 a side, payable to the winner on the written decision and instructions of the Eastern Y. C. regatta committee rules, sailing regulations of the Eastern Y. C. to govern, except as hereby modified; date race to take place Sept. 25, subject to postponement from day to day as below, but if not completed on or before Sept. 27 it shall be declared off and stakes withdrawn. If in the opinion of the committee the wind will propel the vessels at the rate of 7 knots an hour the boats will be started. The start may be postponed for not exceeding one hour. The signal for such postponement shall be a square red flag hoisted on the committee tug, to cancel all previous engagements. The starting line will be between Boston Ledge and the committee tug, lying one-quarter of a mile southeast of same. At 9:30 A. M. a flag will be hoisted on the committee tug, which shall indicate the course to be sailed as follows: Course T—Red, white and blue flag, vertically in thirds—from starting line to Davis's Ledge Buoy, leaving it to port, thence to and around a mark-boat being Eastern Y. C. flag anchored off Eastern Point (about one-quarter mile south-southeast of light), leaving on port, thence to starting line; 41½ miles. Course V—White flag with red diagonals—the reverse of course T, leaving both marks on starboard. Neither vessel shall on any course pass to the westward of Harding's bellboat, Martin's Ledge Buoy, Graves Whistling Buoy, Can Buoy off Pig Rocks, outer Breakers or Half-Way Rock. At 9:55 the course flag shall be lowered and a blue flag hoisted as a preparatory signal. At 10 the blue flag shall be lowered and a whistle shall be blown, which shall be signal to start. The exact time that each vessel crosses the line shall be taken if before 10:05, when a short whistle will note the expiration of the time for starting. Either vessel starting later shall be timed from this line. Unless one vessel shall complete the course within eight hours it shall be no race. Each vessel shall place a representative aboard the other, who shall see that all rules and agreements are complied with. No clubtopsails shall be used. Spinakers shall be allowed, but no other balloon sails. Jibtopsails and maintopmaststaysails shall be similar to those carried to windward by fishermen, and shall be inspected and approved by the representatives of the two vessels before the day of the races. The vessels shall be measured by the measurer of the Dorchester Y. C., and the measurements shall be given in writing to the committee before the day of the race. Allowance shall be calculated by Eastern Y. C. tables. The Fredonia may carry the iron ballast which she had at 1 P. M. of Sept. 11, and also any part of 12 tons of lead. If more than 12 tons extra ballast is required it shall be of iron. The Hesper may carry the ballast which she had at above hour, about 4 tons of lead on keel and 5 tons of lead inside, the remainder being iron, and shall be allowed any part of 12 tons of lead in addition. If more than 12 tons of extra ballast is needed it shall be of iron. Neither vessel shall take out any iron to replace it with lead after the hour above named.

SMALL RACING BOATS.—The Southport Corinthian Y. C. (England) has decided to adopt a class of centerboard dinghies for racing, all boats to be built from the same lines, 12ft. over all and 4ft. 6in. beam, with 100sq. ft. of sail and no ballast. Seven members at once agreed to build for next season, and there are chances of a dozen boats before the spring. A great deal of good racing can be had in places where yachting is impossible, out of such small craft, provided that outbuilding is presented by suitable restrictions.

THE THORNYCROFT WATER-TUBE BOILER.

ATTENTION has lately been drawn to this boiler by the request of the Herreshoffs that they be allowed to use it in the new torpedo boat for the U. S. Government now under construction, in place of their own boilers. The following paper, for which we are indebted to *Engineering*, was read by Mr. J. D. Thornycroft at the last meeting of the Institute of Naval Architects:

In modern warships the weight to be carried is an ever increasing source of difficulty. The essence of a skillful design is the combination of great powers of offense and of defense, of speed and coal endurance, in a limited displacement. In the ironclad of to-day, evidence may be seen in every part of the struggle of the designer to reduce the weight of his elements without impairing the efficiency of the structure. Forced to increase the thickness of his armor, he covers with it only a small portion of the hull, and he hardens the face of his plates to increase the resisting power of a given weight of material. The structure of the hull has been elaborated until the amount of material has been reduced to a minimum consistent with safety. The weight of the guns has been reduced, I am inclined to think, quite as much as is desirable when the amount of the charge is considered; and the engines, like the guns, have had their pressures and velocities increased until progress in these directions appears to have reached a limit. In the boilers, however, there is still much room for reduction of weight, not only by economizing material but also by economizing fuel. Mr. Sennett's paper, last year, shows how strong is the pressure brought to bear upon the engineering department with a view of saving weight in the boilers. His answer has been, reduced test pressures and reduced thickness of material. Economy of fuel in steam boilers depends greatly on the amount of heating surface that can be allowed for a given evaporation. If we can estimate the weight of a unit of heating surface in different classes of boilers, it becomes a very simple matter to calculate the comparative weight of boilers for a given economy of fuel. On the other hand, for a given weight of boiler we can estimate the saving in fuel, or the increase of power, due to a change from one class to the other.

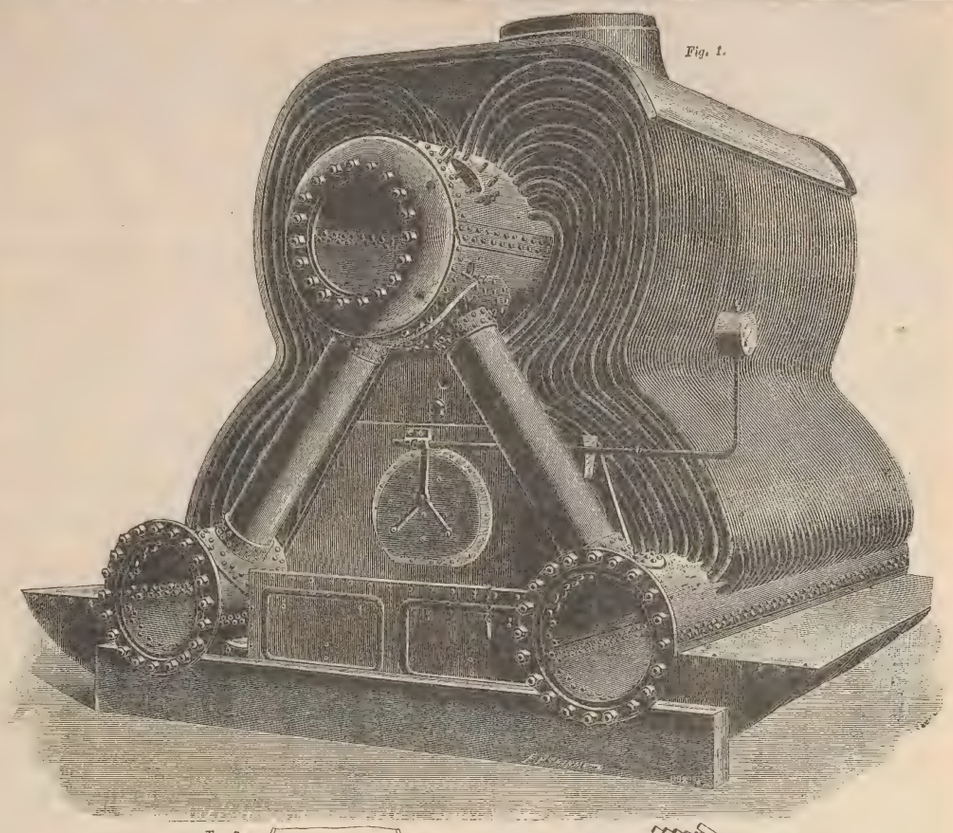
Some experiments were made at Portsmouth two years ago having a direct bearing on this subject. By an evaporative trial, at natural draught, of two boilers, the one locomotive and the other water-tube, the heating surfaces of which were in the ratio of 1 to 2.3, it was found that in the case of the latter boiler the rate of evaporation could be increased in the ratio of 1 to 2.36 with the same economy. It follows that a water-tube boiler will evaporate a little more water per foot of surface than a locomotive when working equally economically, and, therefore, under these conditions, the weights of the two types will be proportioned to one another as the weights of a unit of heating surface. The weights of boiler and water and fittings per foot of heating surface of the locomotive and water-tube boilers tried at Portsmouth were 25.6lbs. and 9.6lbs. respectively. The weight, therefore, of a water-tube boiler and water, working at the same economical rate as a locomotive boiler and water, will be less than half. In practice we prefer to make a smaller reduction in weight, and to work the boilers less hard by giving a larger allowance of heating surface for a given quantity of water to be evaporated. By this means better economy is obtained, and much less stress is put upon the boilers.

Whereas the common wind pressure for locomotive boilers in torpedo boats is from 4in. to 5in. of water, we do not usually exceed 1½in. to 2in. with the water-tube, and a corresponding reduction could doubtless be made in war-ship practice. The following figures wil show the amount of the saving in weight:

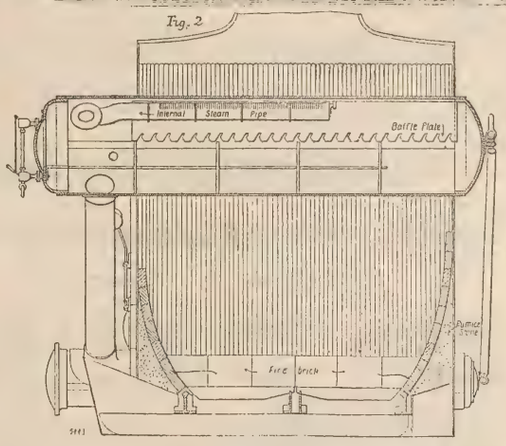
	Indicated horse power.
Indicated horse power per ton weight of water-tube boiler, including all fittings, mountings, water pipes, donkey, spare gear and funnel	68
Locomotive boiler of same power in a torpedo boat	48
Locomotive boiler in the latest English torpedo catcher	43
Boilers of H.M.S. Anson	21.3
Boilers P. and O. steamers	16.6

The boiler has other qualities which render it particularly suitable for warships. In addition to the saving of fuel due to the greater economy, the power of getting up steam in a short interval of time must tend to further saving, for when it takes a long time to raise steam it must be kept up continuously, if there is a probability that it may be wanted with only a notice of an hour or two. With the power to get up steam quickly, it would be sufficient to keep steam in one boiler, for the purpose of starting auxiliary engines and warming the main engines. It has been found that steam can be raised in from 15 to 20 minutes without risk of injury, and forced firing has never caused leakage of the tubes.

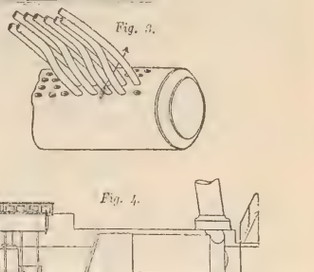
The water-tube boiler consists simply of three cylinders lying parallel to each other, the smaller being at the base of the structure, and the larger one at the top. (See Fig. 1.) These cylinders are connected by means of two large tubes at the firedoor end, and are stayed at the opposite end by a triangular frame. A further connection exists between the top and bottom cylinders in a great multitude of small tubes. These are the steam-generating tubes. On looking carefully, it will be noticed that the inner row of tubes, forming what would be the crown of the firebox, and the outer row, forming what would be the shell in an ordinary boiler, are, by means of a very simple alteration at their ends, made to lie quite close together, so that none of the products of combustion can pass between them (Fig. 3). The lower part of the upper cylinder is thus protected from the direct action of the heat. The tubes are fixed in the cylinders by expanding in the ordinary way, and an outer casing of thin steel covers the whole. In the upper half of the upper cylinder a curved baffle-plate with serrated edges is fixed to protect the steam pipe, and effect the separation of the water and steam. The firebars are disposed at the base of the boiler, and between the two lower cylinders. They are surrounded by firebrick slabs, which act as protectors to the lower cylinders, and as bridges over which the flame must pass on its way to the chimney.



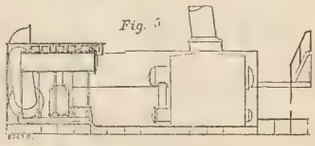
When steam is required, the boiler is filled with water up to nearly the middle of the upper cylinder, and the fire is lighted. The products of combustion pass over the side bridges and through the spaces between the lower ends of the generating tubes, into the spaces between the tubes, and along them to the upper half of the upper cylinder, whence they pass to the funnel. In addition to the heat absorbed by the gases a great amount of radiated heat is received by the tubes forming the crown of the furnace. The heat absorbed by the tubes is at first only communicated to the small volume of water within them, so that the density of the water is rapidly reduced. At the same time the two large tubes which connect the upper and lower cylinders are filled with water of the original density, thus more than balancing the weight of the contents of the generating tubes, and causing rapid circulation. The discharge from the tubes into the upper cylinder is a mixture of steam and water, and these elements are separated as they flow over a curved baffle-plate, which is placed immediately under the openings of the tubes, and incloses a considerable space above the water surface protected from spray, and from which the steam is taken.



The absence of leakage may be briefly explained as being due to the facts that the tubes can expand freely, and that their connection with the upper and lower cylinders are not exposed to the heat of the fire, while in fire-tube boilers the part of the tube exposed to the most severe heat is its junction with the tube plate, around which there is no water to cool it.



Opinions have been expressed that this boiler will have but a short life. Opinions on such a matter are not of much value, and the author thinks it will be of interest to the institution to learn how the boilers of this type, which are already at work, have stood the test of time. The first one was made for the Congo Mission steamer Peace. The vessel was tried on the Thames in 1882, then taken to pieces, the boiler included, and re-erected in Africa by the Rev. Geo. Grenfell, with black assistants only. She commenced work on the Congo in the spring of 1884, and has performed continual service since. The last news we had of her was contained in a letter from Mr. Grenfell dated the 18th of September last. He says: "The boiler itself is doing splendidly, and we have no difficulty in keeping up steam sufficient for 400 revolutions; in fact, quite steam enough for any purpose, and when head to wind often too much."



The next boiler was fitted in a second-class torpedo boat for the British Navy, and tried early in 1886. It has therefore been at work for about three years. I obtained permission from the Admiralty to remove some of the small tubes for ascertaining their condition. These specimens were cut out last week, and are exactly in the condition in which they were taken from the boiler. In examining them I was exceedingly pleased to find that the deposit it them was so very small in amount. It appeared possible that this boiler might fail, from the tubes becoming obstructed by deposit, and as it is impossible to gain access to much of their interior, this would have been a very serious drawback. I am not aware that the boiler from which these tubes are taken has been treated with any special care; the surface condenser is of the ordinary kind, and is not specially made to prevent leakage.

A few of these tubes, however, are not in such good condition as I had hoped; oxidation seems to have taken place to a slight extent within them, and the external surface of those taken from the outer rows has been very much rusted, and seems to indicate that these tubes have been wet for a considerable period. This is corroborated by the fact that the plates forming the external casting are also decayed in places. It is most satisfactory, however, to find that the tubes in the flue, and also those forming the firebox, are in most excellent condition. The blue scale is still visible on the outside, and the parts of the tubes exposed to the most intense heat do not show the least trace of injury from the fire.

THE THORNYCROFT WATER-TUBE BOILER.

The next examples are the boilers of the Ariete and Rayo. It will be remembered that an exceedingly high speed was attained by these vessels, due largely to the lightness and steaming power of the boilers, of which each boat had two. They were delivered to the Spanish Government in August, 1887. Very soon afterwards newspaper reports appeared as to defects having manifested themselves, and it was stated that the boilers were condemned, and were to be replaced by others of locomotive type. We had no communication made to us officially concerning these alleged defects.

Seeing in the newspapers an account of certain maneuvers in which these and other torpedo boats were engaged, where it was stated that one of the boilers of the Ariete was disabled, we applied to the Minister of Marine for permission to send an engineer over to examine the boilers, and to put right any defect which had arisen. After much delay this was granted, and our engineer reported as follows:

"The work of removing pipes, casing, etc., was commenced March 15. On removing the front and back plates of boiler casing, all the small tubes were found covered with a coating of soot from ⅛in. to $^{3}/_{16}$in. thick. I then caused the side casing to be removed; when this was done the lower parts of the casing (adjoining the coal bunkers) were found wasted away, caused by small coal, ashes and soot being allowed to accumulate to a depth of about 5in., the steam-heating gear pipes being imbedded and partially destroyed.

"The front frame plate carrying the ashpan doors was then removed, and I found the ashpans firmly fixed in a bedding of small coal and soot which had been allowed to accumulate; this had to be dug away before the ashpans could be removed, and through this accumulation it has to some extent corroded the sides of ashpans. On going inside the firebox I found the firebricks much damaged, and they have been in this condition for some time; those on the port side will have to be removed. The center firebrick on the inside of end casing, nearest the safety valve end of boiler, is missing, and from the crumpled appearance of the plate has been in this state for some time. The inside of separator tube and collector tubes are very fair, no appearance of pitting being discernible, although the collector tubes have a deposit on the bottom of ⅜in. of lime, etc. The separator dashplates (zinc) have wasted in their thickness from ⅛in. to $^{3}/_{16}$in. on the part that has been in the water, while the upper parts have a great deal of sediment fixed on them. The zinc bars in the collector tubes are but slightly worn.

"I have examined the safety valves and stop valves, and these are in a very fair condition. This day I have tried the small tubes with water, and have discovered one tube in the row marked 1, or the second row counting from the top center of separator, and it is the eleventh from the safety valve end of boiler; this is the only one I have discovered, and it is caused through a small hole in tube of about ¼in. in diameter. I propose to draw this tube and refit a new one, to remove all sediment from the collector tubes, clean zinc dash plates and bars, refit new firebricks, well cleanse the outside of small tubes from the soot, and remove the damaged parts of side casings and fit strips of plate 8in. deep to take the place of damaged parts.

"I would add that there is nothing in these repairs, excepting the damaged tube, but what could have, and should have, been done by the stokers belonging to the ship, but which, from the total neglect the boiler has received, has very seriously impaired the efficiency of the boiler, until the neglect is rectified. In reference to the damaged tube, there are a number of special plugs supplied with the boat for the purpose of puting out of use any defective tube or tubes. Had this been applied—and the application of it is very simple—no annoyance would have been experienced, except instead of 918 tubes there would have been 917. From the general appearance of the boiler and fittings, it shows it has been greatly neglected, for in addition to the steam cleaning gear, there are brushes supplied to assist; these have not been used, nor have the end plates been removed for this purpose nor for inspection, since the boat left England."

The next vessels in order were the Danish torpedo boats Stören and Sölöven, delivered in 1887. Since then we have supplied water-tube boilers in all the new torpedo boats built for that Government, and are now replacing the locomotive boiler in a boat 5½ years old, with two water-tube boilers.

Careful experiments have recently been made by Prof. Kennedy on one of these boilers, in order to ascertain the evaporative efficiency at different rates of working. The best result was with natural draught, when the evaporative duty reached 13.4lbs. of water per pound of coal, from and at 212°. The calorific value of the coal, as determined by analysis, was 15.41lbs. per pound of coal. The efficiency of the boiler with natural draught was, therefore, 87 per cent. of the theoretical evaporation, which we have reason to believe is the highest on record.

MIRAMICHI Y. C.

THE last race for the Miller and Call-Noonan cups was sailed on Sept. 12, the course being from Newcastle to Chatham and return, 10 miles. Wind, dead ahead on the first leg. Kilbride lead from the start, with Kittock second, Blondy third, and Fedora (schr.) last. When off Chatham Fedora was knocked over by an unexpected puff of great force, the first of the day, and retusing to luff, filled and sank in 20ft. of water. "Let go sheets," ordered the skipper, Vice-Com. Stewart, as he jammed the helm hard down, but the crew of 4 leaped upon the windward rail and seized fore and main rigging. Mr. Stewart went down with the ship, helm down and sheet in hand, and had to disentangle some ropes that floated up around his legs before he could get up. He reached the surface 12ft. from the masthead, to which the crew were clinging, and, though he had never swam a stroke before, swam on the water and under the water, against the tide to the top mast stay. Clear grit andcoolness won against the heavy odds. The judges' steamer, Derby, took the shipwrecked yachtsmen off, none the worse for the bath. Kilbride won, and Blondy took second place on time allowance. Mr. Secretary Watts's boat captured the Call-Noonan cup. The following is the record:

FIRST CLASS.

	Elapsed.	Corrected.
Kilbride, J. C. Miller	1 59 33	1 59 33
Kittock, Jas. Miller	2 04 42	2 03 50
Blondy, W. K. Gould	2 08 22	2 03 33
Fedora, J. L. Stewart	Capsized and sank.	

SECOND CLASS.

Mackerel, Geo. Watts	2 55 45	. . . .
Squirrel, Thos. Crimmen	2 59 01	. . . .

Commodore Miller has won his own cup twice, and Secretary Watt has won the Call-Noonan cup. The next and last race of the season will be for the Vice-Commodore's pennant.

LAWLEY'S YARD.—Messrs. Lawley & Son will put in new tools this fall, including a plant for composite construction,

BAY OF QUINTE Y. C.

BELLEVILLE, Ont., Sept. 16.—After having acquired the most successful record ever gained by any yachting organization in a racing sense, the Bay of Quinte Y. C. quietly dropped out of the L. Y. R. A. this season. This occurrence was greatly to the regret of many good sportsmen here and elsewhere, who hope that this lapse will not be permanent, and that the glories of the club, which but a few years ago possessed a fleet that swept the board on Lake Ontario, and still number among its craft the holder of the Fisher cup, for the championship of sloops on fresh water, and the fastest 35-footer in the world, will next year be revived.

The causes of the decadence in our club are simply these: 1. Sale of a number of yachts out of the fleet and removal of working members to other places. 2. Refusal of members to race their yachts. 3. Small attendance of foreign yachts at our regattas. 4. Dry rot in the club.

For cause 1 there is no remedy. No. 2 could be overcome, and, as the same time, public interest aroused by a race for the Fisher cup, a challenge for which would be readily accepted by the holder, with the race fixed for the day before the regatta next year, if there be one. In this connection, let me suggest to the L. Y. R. A. the desirability of challenge prizes for the championship in second and third classes. The Fisher cup provides for the first class. As to No. 3, the opening of the Murray Canal by shortening the passage for the Toronto fleet by a hundred miles and giving them a much easier and safer route, assures their attendance. No. 4 must be cured from within the club if at all. It can readily be done if all who are able to take part in the work will do their share. The same men cannot be expected to perform onerous duties as a labor of love for an indefinite period. An effort ought to be made, and I trust will be made, to this end.

With this, I repeat my advice to the L. Y. R. A. to return to their former system of classification by corrected length. If, also, they in their wisdom increase the number of classes by sub-dividing the present second class at 45ft., the interests of the sport would be advanced materially. PORT TACK.

A FUTURITY YACHT RACE.

THE following challenge, which appears in the last number of *Land and Water*, suggests something new in the way of yacht racing that is worth the attention of American amateurs. There are plenty of amateurs about New York and Boston alone who are competent to design, superintend and race a small yacht, and such a novel competition could not fail to be exciting. An agreement might be made this fall, deciding on the length of boat and the rules under which she would race, the contests to take place during the season of 1890. A good size for the purpose would be 25ft. l.w.l., under Seawanhaka and Eastern rules, as this would limit the cost for those who already have a yacht of some sort and do not care for a second boat as costly as the modern 30 or 40-footer. The challenge reads:

SIR—Inasmuch as the pleasure of winning races is greatly enhanced when the owner is also the designer of his yacht, I now challenge any English yachtsman who will design a 5-rater and have her built during the coming winter, to race for a cup next season, each competitor depositing 25 guineas at Messrs. Cox & Co., bankers, for this purpose.

Details can be arranged later, but I would suggest: (1) That each competitor should deposit with the stakeholder a declaration that the design is *bona fide* amateur—*i. e.*, has been drawn up without any professional assistance. (2) That the races be held inside the Isle of Wight; the first in June on the course of the Royal Southampton Y. C., the second in July on the course of the Royal London Y. C., and the third, if necessary, in August, on the course of the Castle Y. C. (Calshot). (4) The yacht is to be fully decked, with a watertight steering well. (4) No time allowance for any difference of rating or of rig. (5) Referees to be agreed upon, one of whom shall accompany each race and decide on any dispute or protest.

J. T. BUCKNILL, Lieut-Colonel (late Major R. E.).

THORNFIELD, Bitterne, Hants, Sept. 9.

MONTGOMERY SAILING CLUB—Semi-monthly regatta, Sept. 15. Course, Norristown to Indian Creek and return, 5 miles. Wind, southeasterly. Summary:

	Corrected.		Corrected.
F and W Playford	1 44 30	Vesuvius	1 56 50
Volunteer	1 54 20	Gracie	1 57 00
Igidious	1 55 00	Starlight	1 58 45
Nellie	1 55 30	Iola	2 02 40

It was a run to the buoy and a close reach home. The canoe Starlight should have started six minutes ahead of the tuckups, but was late getting to the line, and started four minutes behind them, otherwise she should have finished second to the Playford. Judge, William Alcorn.

BEVERLY Y. C.—The 155th race and 3d Buzzard's Bay championship was sailed at Monument Beach on Sept. 14, in smooth water and a strong and puffy E.S.E. wind, rather higher off shore. Mattie and Sirius started in first class under one and two reefs, respectively, both being short handed. Course was round No. 3, Wings Cove Bay, Scraggy Neck, and return, 11¼ miles. On the run home reefs were shaken out. Mattie finding it just her day, beat the fleet handily. In second class Gymnote was short handed and did not shake out her reefs on the way home, losing ground by it. Mist, Lestris and Gymnote started with two reefs, Widgeon with three. Mist and Lestris shook out all reefs coming home, but Widgeon kept one in. Lestris split tacks, beating to windward, and gained by it. In third class Daisy appeared with her small rig single reefed, Elna with two reefs in her big new sail, Dolly single reefed, Elna won easily. The other two shook out reefs at windward mark and sailed an exceedingly close race, Daisy beating by a quarter of a second. In fourth class Kitten, single reefed, and Edith, double reefed, sailed a close race over the five-mile course, Kitten being the best to windward.

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Mattie, Howard Stockton	26.07	1 57 07	1 45 20
Sirius, M. N. Bray	26.07	2 07 59	1 55 52
SECOND CLASS.			
Mist, G. H. Lyman, Jr.	25.06	2 00 40	1 47 36
Lestris, Joshua Crane	23.06	2 04 10	1 48 30
Widgeon, Moses Williams, Jr.	25.08	2 04 15	1 51 23
Gymnote, W. E. C. Eustis	25.11	2 06 39	1 54 06
THIRD CLASS.			
Elna, John Parkinson	22.07	1 20 49	1 18 47
Daisy, Howard Stockton	19.03	1 36 29	1 21 57
Dolly, Alt Hardy	21.05	1 36 29¼	1 24 18¼
FOURTH CLASS.			
Kitten, G. H. Richards et als	17.11	1 02 15	0 51 28
Edith, Irvin Chapin	18.10	1 02 50	0 52 49

Winners: Class one, Mattie; class two, Mist and Lestris; class three, Elna; class four, Kitten. Judge, W. Lloyd Jeffries. Pennants won and held by Elna in class three, and Kitten in class four. Buzzards Bay champions for 1889 are Mattie, Mist, Elna and Kitten.

The 156th race, cup sail off for third class cats, took place at Marblehead Sept. 21. It was a mere gamble on the weather, and the light weather boat won. Edith is without doubt the fastest boat in very light airs, Kiowa being far the best in a breeze. The weather was poor for racing, being about the only poor afternoon in the last ten days. Kiowa's old mast being very bad, she went up for a new one to South Boston, leaving Swampscott on the 12th in the middle of the severe N.E. gale of last week. It was blowing very hard with a very heavy sea; she worked perfectly under four reefs, and covered the 12½ knots in between 1¾ and 2h., the exact time not being taken.

A match race had been arranged for the 20th at Marblehead between Wanda and Nerina, and Kiowa was asked to enter. When she left South Boston the bay was feather white, there being such a strong southwester that pilot boats and coasters were carrying only jibs and double-reefed mainsails. Kiowa ran the 14¼ knots under three reefs in exactly 2h. 22m. from wharf to wharf. As she entered Marblehead Harbor she met Alga, a very weatherly 40-footer, under storm jib and trysail, just in from Provincetown. Nerina did not put in an appearance, but Wanda was on hand, and other boats were on the point of crossing the line, when one of the jaws of Kiowa's gaff (a brand new one) broke short off. This unfortunate accident stopped what would have been a lively race.

That night the wind blew itself out, and there was practically none next morning. It was Edith's race to a certainty, unless a breeze should come up later. About 1 P.M. a nice little breeze sprung up, but at 1:30 a thunder squall came up and killed the wind.

Nerina had not arrived at 2:30, the starting time, but the others waited 15 minutes for her, though the air was dying out.

The boats got off together in a light air; Edith and Kiowa had it nip and tuck half way to Bowditch, Nerina falling astern badly. Here the wind went down almost completely, and Edith spun out a good lead, Nerina steadily dropping back.

On the windward work Edith gained steadily in the light air, but it seemed doubtful if she could make the race on time. Nerina broke tacks to the southward, hunting for flukes and getting them, as a nice breeze came out from Marblehead, reaching her long before the others got any. After a while Edith, under the Beverly shore, got the breeze, while Kiowa, between the two, lay becalmed for many minutes. When she did get it she was a very bad last. She picked up a good deal, but not enough to affect the result. Kiowa broke the other jaw of her gaff just before the start, but patched up a temporary rig with a mast hoop. Summary as follows:

	Length.	Elapsed.	Corrected.
Edith, F. H. Wood	20 05	1 50 19	1 37 11
Nerina, Robt. Saltonstall	21.09	1 55 19	1 43 27
Kiowa, W. A. & W. L. Jeffries	22.01	1 55 29	1 43 57

Judge, R. C. Robbins.

This closes the club racing for the season, although Elna and Daisy are to sail five matches. BLUE WITH A GOLD CASTLE.

DORCHESTER Y. C. SPECIAL REGATTA, SEPT. 17.—Course —No. 3, club course; distance 7 miles. Weather, cloudy. Wind, S. W., strong and puffy. Tide, flood:

	Length.	Start.	Finish.	Elapsed.	Cor.
Psyche, Francis Gray	18.06	3 05 00	4 27 28	1 22 28	53 57
Rocket, H. W. Fekon	18.04	3 05 00	4 31 24	1 26 24	57 41
Paradox, C. J. Means	19.00	3 05 00	Withdrew.		

Psyche won. This race was for the Soley challenge cup, which was held by Rocket. As Rocket and Psyche had each won it once this was the deciding race between these two boats as to the ownership of the cup. Paradox was light in ballast, and after rounding the second mark of the triangle, withdrew from the race. Rocket and Psyche had a very close race running off the wind, but when they hauled around the second buoy for the beat to windward Psyche outpointed and outsailed her rival and turned the mark on the first round at 3:48:05, followed by Rocket at 3:50:15. In the second round Psyche, having the race well in hand, took things easily and finished winner by about 4m. All the boats carried double-reefed mainsails, and at times had all they could stagger to. Judges, E. R. Tilton, Hartford Davenport.

THE RECORD OF LIRIS.—The Boston *Herald* rolls up an astounding total for Liris as follows: Three masts, 2 booms, 3 spinakers, 4 topmasts, 2 gaffs, 2 bowsprits, total 16, beside channels and shrouds. The statement is in such a form as to infer that she has carried away this number of spars. Her actual record is bad enough without making it worse by any exaggeration. In the New York race she lost her mast, topmast, a spreader and sprung her topsail yard, all hollow sticks. At Larchmont, on July 4, she sprung her bowsprit so badly that a new one was necessary. On the run from Newport to Vineyard Haven, on the New York cruise, she parted a masthead runner and sprung her hollow spinaker boom, and in the race two days later the spreader went again, the topmast also going and breaking the gaff in the fall. In the last wreck the shrouds parted and the mast snapped off, no other damage being done. In addition to this her original hollow boom was replaced by a solid one, as the sail would not sit, though the spar did not break. The prime cause of all the trouble was the small size of spars and gear compared with the enormous power of the boat. In spite of the many extravagant stories afloat, the hull has stood the strain thus far with no signs of weakness, there is no leaking, even in the races, and after the terrible pounding and tugging of last Thursday it looks as though the construction was equal to any legitimate strain of racing or cruising.

CAPE ANN Y. C. SWEEPSTAKES.—The last race of the season, a club sweepstakes, was sailed on Sept. 21 off Gloucester, over a 10-mile triangular course. The wind was variable from about S.W. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Black Cloud, A. Brown	23.10	2 58 00	2 24 03
Evelyn and Silver Cloud did not finish.			
SECOND CLASS.			
Lark, A. P. Parkhurst	10.02	3 38 00	2 56 42
Inez did not finish.			

Judges, Henry A. Norwood, Franklin Davis. Mr. Brown, the owner of Black Cloud, proposes to raise her topside and add lead to her keel next season.

A STEAM YACHT LOST.—The steam yacht Leo, from Detroit for Cleveland, left her home port, Lorain, 28 miles west of Cleveland, on Sept. 15, and has not been heard from since, though the bodies of three of her crew have been found on the beach. The yacht, which is not enrolled in the yacht list, is described in our exchanges as of 17 tons, and lately purchased in Detroit for $550, which would indicate that she was an old boat. It is also reported that she had naphtha on board, though the style of engine is not given, and it is supposed that an explosion of some sort took place during the heavy storm of Sept. 16, one of the bodies being badly burned. The party included Fred Pelow, T. D. Ritter, Capt. S. Root, J. B. Tuttle, L. D. Lawler, D. A. Lawler. Benj. Kline, S. D. Knight and an engineer.

ROYAL CANADIAN Y. C.—A race was started on Sept. 21 over a 10 mile course between the 20-footers Woos, Ellida and Caprice, in a strong N.W. wind. Off the Queen's wharf the spinaker boom of Ellida broke, throwing Mr. Wm. Postlewaite, who was holding the boom down, into the water, where he was covered by the sail. At the same time the boat capsized, so the others were unable to assist Mr. Postlewaite. The Woos came to their aid, Mr. Alex. Marshall leaping overboard and supporting Mr. Postlewaite, who was nearly exhausted. The skiff was towed in by the steam yacht Abeona and her wet crew properly cared for.

COMING RACES.—In the Larchmont special race on Saturday the entries are Gorilla, Liris and Maraquita. Alice, Helen and Chiquita were to sail a private match yesterday over the course of the Hesper-Fredonia match. Kathleen will try a match with Liris under Seawanhaka C. Y. C. rules before the season closes, and will also sail against Arab for the pennant of the 30ft. class in the Atlantic Y. C. She will also meet Delvyn and Shona in the special race of the Corinthian Y. C. next month. The Dorchester Y. C. has in hand a schooner race for yachts of 90ft. and over, including the fast fishermen, for a $250 cup, presented by a member of the club, but nothing is definitely settled yet.

AN ACCIDENT TO SAPPHIRE.—The steam yacht Sapphire, Mr. John Stetson, was in collision on Sept. 17 with a coal barge in tow of a tug in Boston Harbor. The yacht was stove in above the waterline on the port side amidships, making water rapidly, but she was quickly beached on the flats at Jefferson Point.

A NEW STEAM YACHT.—Dr. C. D. Miller is now busy at his yard in Poughkeepsie with a new steam yacht, the dimensions being 81ft. 4in. over all, 72ft. l.w.l., 9ft. 7in. beam, 4ft. draft. The engine will be 7, 11 and 18×9in., with a Roberts coil boiler. A high speed is looked for.

NAHLI AND TATTLER.—The last of a series of four matches between the open jib and mainsail boats Nahli, Mr. W. E. Connor and Tattler and Expert, Mr. J. H. Cornwall, was sailed on Sept. 18 over a 19-knot course off Sand's Point, in a fresh S.W. breeze. Nahli beat Tattler so badly that she did not finish. Nahli sailed against Expert, rigged as a cat, on Sept. 2, beating her; again on Sept. 7 against Tattler under cat rig, and on Sept. 17 against Tattler with jib and mainsail, winning each race. She has won four firsts to five starts this year.

THE CAPE MAY CHALLENGE CUP.—This cup, won by Genesta from Dauntless in 1885 and then by Irex from Genesta, has gone to the yawl Wendur by default. Wendur challenged Irex for it, but the latter did not come to time for the start, and on Sept. 12 Wendur started alone to sail over the course from Ryde to Cherbourg and back for the cup.

QUEEN CITY RACES.—The open races of the Queen City Y. C. of Toronto were sailed on Sept. 21 in a squally N.W. wind. In the 20-25ft. class one yacht capsized and the others went to her assistance, so the committee decided that the race should be resailed on Oct. 5. Fifteen yachts started in the class under 30ft., the winners being Elsie, Ana and Egeria. On Sept. 28 a challenge cup race for second class will be sailed.

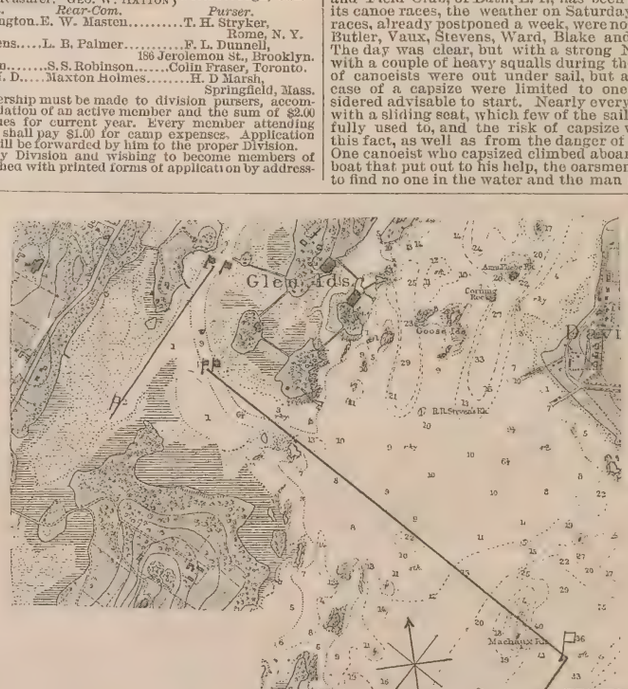
CLUB BOOKS.—The Quaker City Y. C. has issued a very neat and complete club book this year. The club has a membership of 91, with a fleet of 38 yachts. We have to acknowledge the receipt of books from the Great South Bay and the Mahopac clubs.

COLUMBIA Y. C.—The postponed regatta of the Columbia Y. C. will be sailed to-day, starting off the club house, foot of Eighty-sixth street, North River.

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.



Commodore: H. C. ROGERS			Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON			
Vice-Com.	*Rear-Com.*	*Purser.*	
Central Div.	W. R. Huntington.	E. W. Masten	T. H. Stryker, Rome, N. Y.
Atlantic Div.	W. P. Stephens	L. B. Palmer	F. L. Dunnell, 199 Jerolemon St., Brooklyn.
N'thern Div.	Robert Tyson	S. S. Robinson	Colin Fraser, Toronto.
Eastern Div.	H. E. Rice, M. D.	Maxton Holmes	H. D Marsh, Springfield, Mass.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, Chicago, Ill

MARINE AND FIELD CLUB CANOE RACES.—The Marine and Field Club, of Bath, L. I., has been specially unfortunate in its canoe races, the weather on Saturday being so bad that the races, already postponed a week, were not started, though Messrs. Butler, Vaux, Stevens, Ward, Blake and others were on hand. The day was clear, but with a strong N.W. wind and some sea, with a couple of heavy squalls during the afternoon. A number of canoeists were out under sail, but as the means of rescue in case of a capsize were limited to one rowboat it was not considered advisable to start. Nearly every canoe was newly fitted with a sliding seat, which few of the sailors had as yet become fully used to, and the risk of capsize was greatly increased by this fact, as well as from the danger of the new seats breaking. One canoeist who capsized climbed aboard and sailed in past the boat that put out to his help, the oarsmen being greatly surprised to find no one in the water and the man safely on the float.

SAILING COURSE NEW YORK ATHLETIC CLUB.
Canoe Regatta, Sept. 28, Travers Island.

NEW YORK ATHLETIC CLUB CANOE REGATTA.

THE New York Athletic Club will hold a sailing regatta under A. C. A. rules off the club house at Travers Island, Sept. 28, starting at 2 P. M., the programme being as follows: Unlimited sailing, upset sailing, man-overboard race. Among the canoeists who have promised to attend are Messrs. Butler, Gage and Goddard, of Lowell; Kuappe, of Springfield; Forrest, of Hartford; Quick and Masten, of Yonkers; Whitlock, Ward and Blake, of Brooklyn; Vaux, Stevens, Bailey and Nadal, of New York, and Elliott of the Field and Marine Club. With suitable weather some very fine racing may be expected, as the entries include some of the best sailors in the Association. Travers Island may be reached by the main line of the New York, New Haven & Hartford R. R. to Pelham Manor or by the Harlem branch from Third avenue and 133d street.

AMATEUR VS. PROFESSIONAL.

Editor Forest and Stream:

The A. C. A. is a strictly amateur organization, and should be governed by its rules, the same as any other body of the same standing.

Several years ago Frank Holmes, the then champion sculler of the N. A. A. A., rowed for a purse of $150, and won; the money was not paid to him, but was used to buy a watch, which was given to him. Yet the fact still remained, that primarily he had raced for money, and he was expelled from the N. A. A. A. and never reinstated.

In your account of the skiff races of the R. C. Y. C., in the FOREST AND STREAM of Sept. 5, W. G. MacKendrick wins the first prize, which is stated to be $12 in money. Article XVI. of the By-Laws and Rule V. of the Sailing Regulations of the A. C. A. unqualifiedly forbid all racing for money, and the application for membership also bears on this very point.

Mr. MacKendrick raced and won. If he had come in last the case would not have been altered.

The letters from this gentleman are always interesting, and the answer to this will probably prove equally so with the rest.

A. C. A. No. 1,213.

THE POINTE CLAIRE CANOE CREW.—At a meeting of the Pointe Claire District of the Montreal C. C., held at the Pointe Claire boat house on Sept. 12, it was decided to resolve the district into an organization, for the promotion of canoeing, to be called the Pointe Claire Canoe Crew. A constitution was adopted, and it was decided that the burgee of the club should be a pointed burgee composed of a white cross on a light blue ground. The totem selected was the constellation of the Plow, to be displayed on a bear of light blue. The election of officers resulted as follows: Captain, Daniel A. Poe; Mate, D. C. S Miller; Purser, W. Kennedy. The crew has a membership of twenty-nine, and its fleet includes one sloop yacht, five decked sailing, as many undecked sailing, and a score or so of open paddling canoes. Six or eight of the members are A.C.A. men, and it is hoped that the coming meet of the Northern Division in Montreal waters, will bring every active member of the crew into the Association. A great deal of interest is being manifested in sailing, and between eight and ten of the crew's sailors are talking of getting racers for next year's meets. A subscription list for a sailing trophy has been opened and a goodly sum of money has already been subscribed.

GALT C. C.—The first club regatta of the Galt C. C. was held on Sept. 18, the entries being limited to men who had never paddled previous to '89. The results were doubtful till the last stroke had been taken. Single blade, ½ mile, 4 starters: Irex, C. Turnbull, first; Cygnet, G. I. Riddle, B.A., second. Hurry scurry, run, swim and paddle, G. A. Ball. Tandem, 4 starters: G. I. Riddle and J. H. Buchanan, first; C. Turnbull and J. H. McGregor second. Lady and gentleman tandem, 4 crews: Miss M. Blake and C. Turnbull, first; James and Alice McKendrick, second. Fours: J. H. McGregor, C. Turnbull, Jas. McKendrick and H. Reynard in the Carryalovus finished first.—MAMAC.

IANTHE C. C. REGATTA, SEPT. 28.—The following programme of races for the Ianthe C. C. regatta on Saturday will attract many canoeists to the Passaic River: 1. Class I. paddling. 2. Sailing and paddling combined. 3. Sailing, record. 4. Sailing, junior record. 5. Sailing upset. 6. Paddling, Classes III. and IV., record. 7. Paddling, Classes III. and IV., junior record. 8. Paddling tandem, decked sailing canoes. Classes III. and IV. 9. Hurry scurry, Classes III. and IV. 10. Tournament.

A. C. A. PHOTOS.—Mr. S. R. Stoddard, of Glens Falls, N. Y., has ready his new list of photos of the last meet, 46 in all, with miniature card for ordering. Mr. Stoddard is at work on a handsome book entitled "Glimpses of the A. C. A., 1889," containing 20 photogravures of the meet, 7×10in. in size. It will be published by subscription, the price being $2.50.

RARITANIA.—A correspondent writes as follows about the canoe Raritania, whose design is given in "Canoe and Boat Building": "My opinion of the model for inland use, with paddle, no sails, can be summed up in one word—perfect. The canoe is light, roomy, handles remarkably easy under paddle, is a dry boat in rough water, draws but little water, has plenty of storage room; in fact, I do not see where any improvement can be made, and the model deserves to be very widely used by all who cruise, as I do, in narrow, rapid streams, broken by rapids, falls and dams."

CANOE BRASSWORK.—The establishment of the W. B. Baker Mfg. Co., at Watertown, N. Y., was lately partly destroyed by fire of supposed incendiary origin.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

DAN, Cincinnati.—Please send us your address.

L. O.—Ruffed grouse season will open in Pennsylvania Oct. 1.

J. B. H., Oswego.—The lug sail will be suitable for your purpose.

W. B. McC., Brooklyn.—Sailing craft have the right of way over vessels propelled by oars or steam.

J. T., Washington, N. J.—See Pennsylvania seasons in our shot column.

F. D. F., Cambridgeport, Mass.—You will do well to go to Maine for the small game; write to Mr. Kennedy Smith, whose post office address is Eustis, Me.

W. A.—Rail shooting is reported to be good at Pine Brook and on the Hackensack Meadows, New Jersey.

L. C. W., Oswego Center.—The squirrel shooting in Chautauqua county is reported as excellent this fall. Go to Fredonia or vicinity.

F. B. S., Allentown, Pa.—The law of Pennsylvania forbids the killing of the "yellow-hammer" or "flicker." There is no law on turtle doves.

M. A. T., Plymouth, O.—For Michigan seasons, see our game columns. For full text of law address State Game and Fish Warden Wm. Alden Smith, Grand Rapids, Mich.

F. H. S., Washington, D. C.—The firm is of Birmingham, Eng. and makes a gun of medium grade and price, with a good reputation. Neither in cost nor grade do their arms compare with those of the best London makers.

J. A. H.—There are rattlesnakes in Pike county, Pa., but not so many that you need hesitate to take your dog out there. There are quail, ruffed grouse, woodcock and deer there. For open seasons see our shot department.

B. A. J., Syracuse.—Please inform me if ducks can be shipped out of the States of Minnesota and Wisconsin. I am going about Oct. 1 after ducks, though not for market, but I would like to send my friends a few. Ans. Forbidden to export from Minnesota, but not from Wisconsin.

H. E. W., Newark, N. J.—Is chilled shot made so by a mixture, or is merely chilled on the surface? Ans. Chilled by a hardening "temper," which is an alloy mainly of antimony and is put into the melted bar lead. The manufacturers have their own secret "temper" mixture.

ORNITHOLOGIST.—It would be interesting to me and I think to a majority of your readers, if you would give a short account of how birds are procured for lad'es' hats. Ans. This subject was fully treated two years ago in connection with the decrease of song birds and the organization of the Audubon Society.

A. McG., New York.—Can you inform me whether smelt will take a fly, and if so what are the best flies to use? Also if there have been any smelt caught in the Hackensack River? Ans. Smelt sometimes take the fly (a scarlet one), but are usually caught with bait, shrimp, minnow, pieces of fish or of frog, etc. They are not due before the last of October or the first of November.

F. W. S.—The powder is generally apt to give poorer penetration. The Hazard will give good results if carefully loaded. The charge you name should give a low trajectory, as the powder is a heavy charge for the lead. You will gain much instruction by a study of the tables in our little pamphlet "Trajectories of American Hunting Rifles," giving the results of our extensive and careful tests at Creedmoor in 1885.

W. H. K., Newark, N. J.—Will you kindly tell me where I can get .32cal. round bullets for reloading the Winchester S. & W. shell for short range target practice? I have tried to get buckshot the proper size, but cannot; they are either a little too big or too small. Ans. You will probably find it necessary to mould them yourself. Mr. Jas. Conlin, of Conlin's gallery, this city, makes his own .32s round and will perhaps supply you with some.

F. C., Toms River, N. J.—Will you please name the following bird for me? Body about the size of a duck egg, spotted black and white, head black, breast white, webbed feet, and a bill like a duck. It was shot while swimming in a pond on the salt meadows, by a friend. I have heard of only two having been killed here for a long time. Ans. The description is too vague to permit of accurate identification. It is probable that the bird is a phalarope. Either the northern phalarope (*Phalaropus labatus*), or Wilson's phalarope (*Phalaropus tricolor*), more likely the first.

ALWAYS SMALL-BORE.—Mount Vernon, N. Y.—I have often wondered that you never publish the pattern and penetration of some of the large bores, say 4 and 8 at 100yds. In these modern times, when ducks and geese are so hard to get at, I think a few such trials would interest your readers. At the same time I am a "small-bore man" and believe in proportion they beat the large bores hollow. I have a record of three sparrows to a shot with a .22 shot cartridge. Ans. We will, perhaps, give these large bores a test at our range.

A. H. M., Meriden, Conn.—I have a case which I wish you to decide for us, as we are not quite posted. On the card inclosed you will notice the offer which our State secretary made to the State shooters through us. In the State championship match Mr. A., a resident of Springfield, Mass., wished to enter, but I refused to allow him because of his non-residence. Now, when we came to the double-bird match he entered and shot before I was aware of it, making the highest score, and claims the cash and medal. I refused it until we can get a decision from you. I understand he belongs to the Colt Gun Club, of Hartford, in this State; but does this make any difference, as he is a non-resident? Suppose a resident of Ohio should belong to one of our clubs, would he be entitled to shoot for these medals and cash? We think not. Ans. According to the wording of the programme furnished us, which is all we have on which to base our decision, Mr. A. was not entitled to shoot in the first event, as that is scheduled as an "individual State Championship Match," but in the second event no such limitation appears. The programme simply says, "Second event, double-bird match, 20 pairs, medal and $10 to winner, optional sweep, $2 entrance." This would allow entries from Ohio or California for that matter. On a strict reading of the programme, Mr. A. is entitled to medal and money.

No Chemicals.

W. BAKER & CO.'S

Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

HERE I AM AGAIN AS USUAL, CUTTING THE PRICES OF FISHING TACKLE. IT WILL PAY YOU TO BUY YOUR TACKLE IN BROOKLYN.

PRICE.		PRICE.
$2.75	For Split Bamboo Salt-Water Bass Rod, 6 strip, 2 joints, 8ft., 20oz., Solid Reel Seat, Nickel Trimmings, Double Guides, Silk Wound Black Beaded Handle	$2.75
3.32	For Split Bamboo Black Bass Rod, 8½ft., 3 joints, 10 or 12oz., Solid Reel Seat, Nickel Trimmings, Raised Tie Guides, Extra Tip, Silk Wound, Wood Form	3.32
3.32	For Trout or Black Bass Fly Rod, same finish as above, 10½ft., 7 to 9oz., complete in wood form	3.32
.90	For Ash and Lancewood Weakfish or Striped Bass Rod, Hollow Butt, Extra Tip, Swelled Ferrules	.90
1.50	For Fine No. 00 Brass Multiplying Reel, Balance Handle, Screw Oil Cup, holds 600ft. 18-thread Linen Line, diameter 3½in. Also Nos. 0, 1, 2, 3, same price. See catalogue	1.50
3.75	For Hard Rubber and Nickel Multiplying Reel, with Drag, Raised Pillars, holds 600ft. 15-thread Linen Line	3.75

Hooks. Down go the prices. My best quality all kinds snelled on single gut, 10cts. per doz.; double, 15cts.; treble, 20cts.; in ½ doz. packages. Leaders: Treble gut Weakfish and Striped Bass Leaders, three length, 5cts.; four length, 7cts., five length, 9cts.; all best quality. Reel Lines on Blocks of 300ft., 9 thread, 38cts.; 12 thread, 43cts.; 15 thread, 46cts.; 18 thread 53cts. 300ft. Braided Linen Reel Lines on Blocks, 41cts. Broken lots of Hooks from best manufacture, all kinds and sizes, 2cts. per dozen. SEND FOR CATALOGUE.

Open Evenings. J. F. MARSTERS, 51, 53 & 55 Court St., Brooklyn, N. Y.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 8, 1889.

VOL. XXXIII.—No. 11. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

A FOURTH CHAPTER OF ACCIDENTS.

ON Sept. 20 a Middletown, New York, farmer, while carrying his gun through a hallway, muzzle pointed toward his stomach, accidentally struck the hammer against a chair, the gun exploded, and the man died almost instantly. On the following day, as two Pennsylvania sportsmen were returning from a rabbit shooting expedition, one of them carrying his gun aimed square at the neck of his comrade in front, the arm was accidentally discharged and the victim instantly killed. Last week a young man of Yonkers was shooting in the suburbs. Walking up to retrieve a bird, he found it not quite dead, and hit it with the butt of his gun; the second barrel exploded, filling him full of shot; he died a few days after.

These are specimens of frequent firearm casualties They are all the result of foolish carelessness, they are the stern penalties paid for violation of the rule never to point a gun at one's own person nor at the person of another—a rule so imperative, so simple and so easily remembered and observed, that there is no room for excusing its neglect.

That the rule is violated one has only to read the newspapers to learn; for the name is legion of those who poke their guns at others, pull them toward themselves, and point them around promiscuously, as if they were some harmless variety of the big-headed canes carried by small-headed dudes. The hopelessness of it all is that these people are, in most instances, grown up men, but individuals who for all their years have not arrived at the age of discretion in handling deadly weapons, and never will; they are past reproof and instruction, and as fast as they accidentally kill themselves and their fellows their ranks and the supply of their victims will be filled by others like them.

It is, if not profitable, at least interesting, to classify the firearm pokers and pointers and clubbers, as alienists segregate the various classes of the feeble-minded and insane, or as an ornithologist might catalogue according to the A. O. U. Check List the birds that destroy themselves by flying against the Washington Monument. First, then, for one reason because they are often very old men and should have precedence because of their gray hairs, come those who pull their guns after them, muzzle foremost. Thus a Newark gunner, aged seventy-four, having climbed over a fence, reached back after his gun, which, catching under the edge of the top board, was discharged, and the load passing through the board entered his left wrist. It was found necessary to amputate the arm. For the fence accident there is a stereotyped formula: "While getting over a fence he shot himself in the neck and died instantly;" "in climbing over a fence his gun was accidentally discharged, the shot entering his left hand and blowing off the two last fingers and breaking the middle one;" "at 4 P. M., as he was climbing a fence, his gun was accidentally discharged killing him instantly."

In many instances the mischief is done before the fence has its opportunity; there is a distinct class of wagon casualties. A Maine hunter, when getting out of the wagon, lifted his gun; it was accidentally discharged, the shot passed through his coat sleeve and then instantly killed his little eleven-year-old son. In the Adirondacks one combination was a buckboard, on a rough road, in it a young man with a loaded gun, with the muzzle pointed toward his body and the butt between his feet, a cigarette and a match; to scratch the match on the leg of his pantaloons he lifted his foot, twitched the trigger, and blew an arm off. A Nebraska farmer, whose gun had slipped from the wagon seat, grasped it by the muzzle and attempted to pull it toward him; both barrels were discharged into his heart. A Long Island sportsman, standing on a hub of a front wheel, drew his gun toward him on the bottom of the wagon; the hammer caught on a cleat, and the load of bird shot proved fatal.

In a similar category belong the boat fatalities. A gunner on Sinnepuxent Bay, Md., caught his gun by the muzzle and pulled it toward him; it was discharged by contact with a seat, and his injuries were fatal. The same thing happened to a Sandusky, Ohio farmer, and a San Francisco man brought a like fate on himself, in a precisely similar way, on the rail marsh at Belmont; while a New Orleans physician, who was collecting bird specimens, and an Auburn, N. Y., duck gunner met their deaths by pulling guns out of boats.

Clubbed muskets are legitimate arms in time of war; but fate is against the gunner who uses his rifle or shotgun as a club. An East Poughkeepsie, N. Y., party were coon hunting at night, when the dogs got into a fight. One of the hunters attempted to allay the scrimmage by clubbing the dogs with the butt end of his gun. The stock hit a tree, the weapon exploded and the man died. A sailor rode out into the country after game; and when his horse balked, he poked up the animal with his gun so effectively that the refractory creature kicked up its heels, struck the gun, and shot off the man's arm and killed him.

Allied to this class, as a passive manifestation of it perhaps, is the employment of the loaded gun as a staff or a crutch. A North Carolina sportsman, who had been hunting and had returned safely home again, was relating to his family the story of his luck; and as he talked he leaned on his gun, butt on the floor, muzzle at chin, while his little boy played with the hammer. When the gun went off it tore away the entire top of his head. A Pennsylvanian lost his head in a like manner; having primed his muzzleloader with a lucifer match, he leaned on it, muzzle to face, when the stock slipped and the hammer fell. In a Connecticut barn a young man stood leaning on his gun, and talking with a friend; during the conversation he crossed one leg over the other, thus discharged the gun and killed himself. At a Chicago turkey shooting match one of the contestants, who was waiting for his turn to shoot, placed the muzzle of his gun, with both barrels full cock, under his right arm-pit and leaned on it; then swinging one foot from side to side, he accidentally struck the trigger and fell down dead.

An army officer rested his rifle with the muzzle on his foot, and it cost him a big toe. A Wisconsin gunner, caught in a shower, put his hand over his gun muzzle to keep the powder dry; a clap of thunder made him jump, his knee struck the gun hammer, and he lost the hand that was keeping the powder dry. A Brookfield, Conn., gunner, handling his cocked gun by the muzzle, caught the trigger in one of his boot straps; a Staatsburg, N. Y., man caught the trigger of his gun in his clothes; a Hagerstown, Md., boy got his trigger tangled in his shirt collar; all these with fatal effects to the gunner or a companion. That there are still many muzzleloaders in use is demonstrated by the frequent reports of the unfortunates who peep into the muzzle to see why "the old thing did not go off," or who, having loaded one barrel, kill themselves by discharging it while attempting to load the other.

TROPHIES OF SKILL.

THERE is a class of sanguine and enthusiastic people, whom no anticipation of danger or difficulty can daunt, and who are ready enough to go to the world's end in pursuit of hazardous undertakings, but succumb readily enough when brought face to face with them. Several Englishmen of this class went out to Cashmere during the past summer, allured by the spirited accounts of hunters, of the glorious sport in pursuit of bears and chamois, and the spreading-antlered deer of that favored region. They were men of means, who took with them express rifles and all the appliances for camp life and a summer's sport, and after a very pleasant trip they reached Srinuggur, to find that man and nature and especially women had conspired to make it the veritable paradise it had been represented; but three days' clambering among the rugged mountains in pursuit of ibex was quite sufficient to take all the Excelsior out of them, and glad enough they were to reach Srinuggur again in safety.

But they were a practical set of men; who, when they found they could take no comfort out of mountain climbing, applied themselves to achieving one, at least, of the objects of their journey by other means. They sat at home in the bungalow in the Vale of Cashmere, and employed native hunters to bring them the trophies of the chase.

Whether these men have done wisely or not is yet to be proven; they will take their trophies to England, some they will probably present to friends, and some they will probably display in their dens, never pointing to them, but when questioned about them, simply saying that they are some of the things that they brought from Cashmere when they went there for a shooting trip. We have heard of one man who thus took home a lot of purchased trophies from India and left it to be inferred that they were the spoils of his own weapon, until at last he had to invent a history of his acquisition of each trophy in turn, and repeat it, until he was driven to give the whole lot away for his conscience sake. But all men are not constituted alike; for we know of another, who, having had a lot of skins given him by a friend, invented a story of his acquisition of each, and told them so often and circumstantially, that he was at length able to tell them unblushingly and in full detail to the man who had presented him with them, pointing at the same time to the holes in the skins to embellish his narratives.

"A SUMMER HUNT WITH THE PAWNEES" is the title of a sketch by "Yo," which will be published in our next issue. Readers of the FOREST AND STREAM, who are familiar with "Yo's" descriptions of rough life in the West, will be pleased to learn that he has prepared a book of "Pawnee Hero Stories and Folk-Tales"—and a capital book it is—which will be published at an early date from this office. A fuller notice of it will be given next week.

CLUB PRESERVES are attracting more and more attention among thoughtful sportsmen. Decided differences of opinion prevail respecting the merits and demerits of the system. There are those who profess to "view with alarm" the growing dominion of the preserves; while others claim to see in the extension of club holdings only beneficial results. The subject is one that deserves careful consideration and full discussion.

OUR TRAP REPORTS have of necessity taken up much room of late, for having set out to give the best trap department published in America, the FOREST AND STREAM has accomplished that purpose only by a generous allotment of space. Now that the tournaments are nearly finished and gunners are giving more attention to field work, our Game Bag and Gun columns will expand.

COL. ROBERT PATTON CROCKETT died at his residence on Rucker's Creek, Texas, last Thursday, in the seventy-third year of his age. His death removes the only remaining son of Davy Crockett.

The Sportsman Tourist.

THE MODERN KNIGHT.

THE lance and shield in days of old
Were emblems of the warrior bold,
Who for his love grim death would feel;
But now we have an era new
When landing net and split-bamboo,
With fly-book, line and reel,
Will better please a maiden coy,
And fill her gentle soul with joy,
And often bring her heart to creel.

J. CHARLES DAVIS.

IN PAWN IN A FRONTIER TOWN.

IN the summer of 1885 I spent several weeks on a hunting trip in the White River country of northwestern Colorado. Colorow and his band of Utes were on their annual hunt at that time in the neighborhood, and, as there is always a prodigious destruction of game by the Indians on these occasions, I had met with only moderate success in my quest for deer, and had failed utterly in a wish to add an elk's head to my trophies.

Somewhat chagrined at the result of the trip I had turned my steps homeward; but was spending a few days on a ranch near the new settlement of Meeker, beguiled by the unsurpassed trout fishing of the place, when I met with an odd adventure which gave an unexpected turn to the latter part of my summer's sojourn in Colorado. While fishing one morning I incautiously, and with some difficulty, forded the river in order to reach a coveted spot. I was not so fortunate when I attempted to stem the swollen stream further down on my way back. Where the river broadened out somewhat, forming a series of rapids, I ventured in. The current swept over the slippery, moss-grown rocks with bewildering rapidity, and I kept on my pins with difficulty. When mid-stream was reached an unlucky stumble caused me to lose my balance. In an instant I was caught up by the flood and borne down toward the deeper waters. The thought of being tossed into the vortex below was not reassuring, and I clutched a big rock as I was being carried along. Clinging to this I was able to get my breath and steady myself. An overhanging bough assisted me to shore, and I was congratulating myself that aside from the wreck of the trout rod, I was none the worse for my involuntary bath, when it suddenly occurred to me to look for my pocketbook, which I had placed the night before in the outside pocket of my shirt. Of course it was gone, gone with all my money and beyond the hope of recovery. Returning to the cabin, I put on dry clothes and began to cogitate on my position. The situation was awkward to say the least. Two hundred miles from a railway, among comparative strangers, and with no means of communicating with friends except by the slow overland mail. There was apparently no prospect of money reaching me at that distant point inside of three or four weeks. I determined therefore to make for Glenwood Springs—the nearest town of any size—and there await the arrival of assistance in the shape of a money order or registered letter.

Cowboys have a reputation for kind-heartedness and generosity, and, as I needed provisions to carry me over the journey to Glenwood, I resolved to put this to the test. So next morning I asked one of my cowboy acquaintances to accommodate me with a small loan. Without a moment's hesitation he produced his wallet and handed me the needful wherewithal to begin my journey homeward. Next morning I said good-bye to my new friends, and started over the divide to the Grand River, where I arrived three days later without further adventure. With well assumed assurance I rode up to the best hotel in the town, called for the hostler to look after my horse, and walking into the office, signed my name and asked for a front room. The clerk in charge, after a discriminating look at my now ragged and travel-stained garments, had a brief consultation with the proprietor. The two then entered into conversation with me. My easy air and Eastern accent were not without effect, and the order to "show the gentleman up to 22" was given, and I soon found myself in a cosy room overlooking the main street. On the door was tacked a printed notice, which, among other items, contained the following:

The Price of this Room is $3 per Day.

REDUCED RATES FOR THOSE REMAINING A WEEK OR LONGER.

ALL BILLS PAYABLE WEEKLY.

A stage coach started next morning for Aspen, where there was a telgraph station, and that night before going to bed I sat down and wrote out the following somewhat pathetic message, addressed to one of my friends: "I am at Glenwood, busted and without credit. Send $100 immediately." Next morning I intrusted this to a passenger on the stage, with a request that he forward it directly on his arrival. To cover the expense I gave him a dollar bill—a portion of the cowboy loan I had reserved for that purpose. I counted on getting an answer to this urgent communication at the end of a week. In the meantime I set out to amuse myself in such quiet and harmless recreations as the bankrupt state of my finances permitted.

Unlike so many other towns in Colorado, Glenwood did not owe its birth to the discovery of mineral deposits in the neighborhood, but rather to the presence of numerous mineral springs, said to be of great medicinal value. One of these is especially interesting. From the floor of a cave in the wall of the cañon a boiling spring gushes forth, emitting a sulphurous vapor which is efficacious in removing rheumatism and other ills.

Notwithstanding the fact that Glenwood owed its inception to the faith of its projectors in hot baths rather than in rich "finds" in the mountains, there was no absence among its citizens of that abiding confidence in the future greatness of the place which animates the breast of every Western pioneer. A court house nearly completed and two rows of one-story shops on the main street were the only features which suggested the future metropolis; while scattered over the plain and perched on the rocks overlooking the river was a curious collection of cabins, tents and "dugouts," the homes of the small army of health-seekers who had flocked here from all parts of the State. A noisy activity characterized everything—houses were going up everywhere, contractors were busy. Every stage brought additions to the ranks of the invalids, merchants, speculators, saloon-keepers and gamblers. Every other house was a saloon and every saloon had a "lay out" for the devotees of fortune. At night interesting groups gathered about the tables. There you would see the well-dressed, dainty-fingered professional presiding at the faro bank with inimitable *sang froid*, while bronzed cow-punchers, brawny laborers, convalescing patients and alert capitalists risked their earnings on the turn of the cards.

By some tacit arrangement the guests at our hotel were seated at the tables according to their supposed social importance. To my disgust the autocratic head waiter assigned me a place at the fourth or lowest table. Perhaps my ragged habiliments justified him in doing this; but I resented it all the same and laid my plans for promotion. Next day I brushed up my clothes, polished my boots, and resolved that nothing in my demeanor would betray me as the conscious owner of but fifty cents. As a result the stable boy had some one else for a neighbor at table that day, and I found myself with men who wore coats at table and who abstained from the use of expletives with every remark.

My *vis-a-vis* at this table was the proprietor of the largest faro bank in town; he was always accompanied by his "lady"—a delicate-featured girl, who seemed strangely out of harmony with the surroundings. I made the acquaintance of a leading real estate man, and through his good offices, and by significant references to my cattle interests (in a very distant part of the State), I had the satisfaction of sitting at the first table and counting the magnates and cattle kings of the country among my acquaintances. In spite of this little social triumph, time hung heavy on my hands, and I longed to get away from the place. With all drinks and cigars costing twenty-five cents each such luxuries were out of the question, even had I been disposed to seek distraction in that quarter. Trout fishing was a great solace at this time, and every day found me trying my luck in some stream in the neighborhood. Whether successful or not, the few hours' walk among the trees or along the river bank was always a welcome change from the noisy town.

One morning I was reading a newspaper in the saloon of our hotel. Two games of poker were in progress at the time. Suddenly the stillness was broken by the reports of two pistol shots, and a few moments afterward the barkeeper rushed in and said a man had just been killed outside. Anxious to see the row, I started to go out, but before doing so paused to note the effect of the announcement on the gamesters; not a muscle changed as they quietly continued the game, each man guarding his pile of chips and the deal going round as usual. Outside a group stood bending over the burly figure of a well-known gambler who had just paid the last great forfeit in the game of life. He lay where he had fallen in the street, with a bullet through his heart. They said the tragedy was the outcome of a dispute over a game of poker. The slayer of this poor fellow "sent to his account with all his imperfections on his head" was arrested, but I never learned whether or not his case ever came up for trial.

By the middle of the second week I had grown more impatient at the non-arrival of the letter. I could not sell my horse, for he was a borrowed animal and I was responsible for his safe return. Already the first of September had come and gone, and I still had a ride of 185 miles ahead of me. It would have been foolhardy to have undertaken this journey over the mountains alone and without money or provisions; yet I am sure I would have attempted it but for the load of debts which encumbered me and kept me perforce a prisoner in the hateful town. Finally, on the evening of Sept. 4, the important epistle was forthcoming at the post office, and next morning, after paying my bills, I rode down the Grand River valley *en route* for headquarters. The confinement in the livery stable on a hay diet, had broken the spirit of my once proud-stepping Dan, and it was only by the occasional reminder of the spurs that he could be persuaded to resume his usual gait.

The rough Indian trails which I followed during these last days stretched over a most diversified country. For hours my horse would pick his way among the rocks of dry creek bottoms, then low mesas would have to be crossed, dreary stretches of desert solitude, where the cactus and sage bush only partly concealed the white patches of alkaline soil. But the scenery was not all of such a depressing character, and I found myself betimes on a high tableland, where the hot breath of the valley gave place to the stimulating air of the upland. Here the trail wound its way through dim shadowy groves of quaking aspen, across sparkling rivulets and over the soft green turf of the little parks. Again leaving all this behind, I descended into the valley of the Gunnison River, where the screech of a locomotive soon apprised me I was nearing my journey's end. At length a well-traveled wagon road led me into the town, from which ten weeks before I had departed, gay and eager to taste the bitter and sweet of wild Western life.

The tendency of nature to leave something of her own rude, savage impress on one who has lived with her for a period, was illustrated in my own case, for I found it necessary to disclose my identity to a number of friends, who failed to recognize a visitor from the East in the bronzed, bearded and generally uncouth looking individual who now saluted them. H. G. B.

A GROUSE IN TOWN.—Huntington, Mass., Sept. 30.—*Editor Forest and Stream:* Yesterday (Sunday) morning at 9 A. M. I was sitting by the window in my dining room reading the morning paper; and I heard *quit-quit-quit*, and I looked out of the window, and upon the broad stair beside my house within 8ft. of me stood a partridge. She did not leave for three minutes, probably she had learned of my selling my gun and that the Selectmen of our town had recently offered ten dollars reward for information that would convict any one hunting upon Lord's day in Huntington. My house is in a village of about 800 inhabitants, not more than ten rods from the railroad, the church and my store.—H. W. M.

Natural History.

ALBINOS AND HYBRIDS AMONG BIRDS.

IN the bird collection of the U. S. National Museum, at Washington, there are numerous examples of albinism, including white blackbirds, white bluebirds, white robins, and white crows. Albinos among birds are found in all parts of the world, and are much more common than is generally supposed. Black and dark colors, in general, are the most susceptible to albinism. The white robin is apparently the most common albino in this country. Specimens are found entirely white, while others are normally colored except that they have a slight mixture of light-colored feathers, others again being variously intermediate.

Some albinos are yellow instead of white on account of the presence of a yellow pigment in the plumage, which the disease does not affect, though all the darker colors and markings of the normal plumage may be obliterated. An example of this style of partial albinism is the ordinary cage canary bird in yellow plumage, the normal color of the species being olive green, streaked with dusky. There are, also, a great many specimens of albino crows in various stages of albinism: some are entirely white and others are mixed, having more or less of the black remaining. In the common Bob White there are cases where the brown color has faded out entirely and the black markings remain, while in other specimens of the same species the reverse has taken place, the brown remains and the black is absent. There are many other examples of albinism in the National Museum. We noticed an albino redbird, a white sora, albino ducks, owls, hawks, meadow larks, and in fact one will find specimens in almost every group of birds.

Then, too, there are examples of partial albinism affecting only a portion of the bird. This is well shown in the case of a Mexican house finch, with partial albinism affecting only one side of the bird, the markings upon the one side of the head being crimson, while those on the other side are pale yellow.

"The prettiest albino I have ever seen," says Mr. Ridgway, "was a common flicker. It was entirely pure white with the exception of the scarlet crescent on the back of the head and the golden yellow coloration of the under surface of the wings and tail."

Hybrids among birds are quite common. Among geese we have a cross between the ordinary Canada goose and the blue-winged goose, and another between Hutchins's goose and the white-fronted goose. Among ducks we have three beautiful males representing a cross between the mallard and pintail; the three specimens are exactly alike, each combining perfectly the peculiarities of form and plumage of the two parent species. There are also several hybrids between the dusky duck and the mallard, and several between the mallard and the muscovy duck.

MOCKINGBIRDS IN MASSACHUSETTS.

Editor Forest and Stream:

The Connecticut Valley in this region is remarkable for the variety of its birds. For fifty miles each way we have the overlapping of the Northern and Southern migrants. The great Arctic owl and the pine grosbeak, with the beautiful Northern snow bunting, are here in the winter, and if the season be a severe one they come in large numbers.

One of the latest and most interesting instances of this extension of migration is the fact that now for two successive years a pair or two of the real Southern mockingbirds have bred across the river in West Springfield.

There is no doubt about the identity of the birds, and a few of us who were in the secret have driven across the river many times during the season to see and hear these beautiful and musical visitors. Of course we are not treated to the full volume and richness of the Southern song, for parental anxieties and duties dull the music for a while, but the graceful motions and the domestic musical interludes at dawn and twilight have illustrated their presence. They nested near a public, much traveled highway, and could be often seen about and across it, but few people suspected the identity of the visitors.

SPRINGFIELD, Mass. E. H. LATHROP.

NOTES ON BACK NUMBERS.

IN reply to Joseph Ide, I would say that it is pretty conclusive that the loon cannot rise from a small body of water. If it is found in such a place, its instinct will cause it to resort to diving as a means of safety. Here along the ponds of the Mississippi River lowlands there are plenty of loons during the spring and autumn seasons. Great numbers of them may be seen sitting on trees near the banks of rivers and ponds. One time I found two crested fish-ducks in the open center of a large pond which was nearly frozen over. Not having much space of water to start upon, they refused to leave it, and resorted for safety to their well-known proficiency in diving.

Have you ever seriously and scientifically considered the great moral of the Bible command to "Be as wise as serpents and as harmless as doves?" Very few persons are familiar with the nature and traits of either one. The dove and the snake are well chosen types of the good and the bad spirits. The serpent is low and deceitful in all its habits, while the pure and innocent dove is the very perfection of harmlessness.

One of your correspondents tells of a woodcock being crippled by flying against telegraph wires. Here in Missouri, where wild chickens are plentiful, numbers of them are killed by striking telegraph wires. Quail suffer much in the same way. All swiftly-flying fowl are subject to such accidents.

The middle of September appears to be rather late for the hatching of quail, yet that is the date when a flock of ten came forth from a nest I had been watching. These were hatched mainly by the sitting of the male bird, and of the dozen eggs two failed to develop birds. I believe I never noticed so many quail as there are here this year. No doubt the mild and favorable winter was the principal reason for the splendid flocks which now are so common in our fields and forests.

On Sept. 4 a white-headed eagle passed here on his journey south. It is a rare occurrence to see the emblem of freedom earlier than November in this latitude. Per-

haps the one I saw was a knight of labor out on a strike.

FOREST AND STREAM recently inquired as to the correct spelling of the name of the fish known in differt parts of our country as croppie, crappie and croppy. Along the Mississippi and its tributaries the usual name applied to the fish is croppie.

One of the sights to amuse the naturalist is to see the fierce little kingbird routing a hungry hawk and getting in its savage thrusts on the bird of prey. I had often heard it said that the pugnacious nature of the kingbird is such that it will even venture to take a ride on the back of a hen harrier, yet I somewhat doubted the story. Recently, however, I had all my suspicion clearly dispelled by seeing this warlike propen ity of the kingbird exhibited in it charging upon a large hawk and taking a position on its back, all the time vigorously pecking the greatly alarmed flesh-eating bird. Surely the kingbird's title is well bestowed. JASPER BLINES.

ALEXANDRIA, Mo.

SMALL BOYS AND THE SONG BIRDS.—Yonkers, N. Y., Sept. 29.—Something needs to be done to save the birds from extermination at the hands of the small boy. This morning I found several boys in a clump of briers and saplings on Ludlow street shooting at the feeding birds with rubber slingshots. One of them had killed a yellow-bird, and was searching for another which a lame but none the less rascally "Murphy" declared he had knocked off a limb "wid a stone." A volley of foul language was my reward for interfering in behalf of the birds. This afternoon I took a walk to the beautiful plateau just adjoining Mt. St. Vincent, where the Leake & Watts new orphan asylum is being built. The day was beautiful. But the small boy again spoiled my enjoyment of it. My wife espied a shaver of some 10 years with a small breech-loader, and on nearing him I found he held a half-grown catbird with a broken wing in his left, while trying to load with the right hand. "I shot him *easy*, so that I could put him in a cage," was all the excuse he made for his cruelty, but he speedily decamped on being threatened with arrest. I ended the little creature's sufferings, and only wished the scamp of a boy could experience the feeling of being shot "easy."—C. L. S.

TWO-HEADED SNAKES.—The recent note of a two-headed snake has brought out this memorandum from a Denver, S. C. correspondent: A double-headed snake was found near here a few years ago by Mr. W. T. Lander and placed on exhibition at the drug store of Orr & Sloan, Anderson, S. C., where it was seen by a great many people. It was about a foot long and had two perfectly developed heads, which seemed to act independently of each other. About an inch from the heads they joined in one snake without any other peculiarities. It was what is known as a "king snake," black, with white rings around it. For aught I know it can be seen yet at the drug store preserved in alcohol.—BLUE RIDGE. The editor of the Sunbury (Pa.) *News*, commenting on our note, reports that a two-headed snake was found in Sunbury this year.

BLACKSNAKES.—Springfield, Mass.—I noticed some time since in the FOREST AND STREAM a contention as to whether there was a ring-necked blacksnake. I can say there is, for I have killed two, one in the summer of '86 and one in '87, both in the same locality; and I think if one cared to do so they might capture one or more in the same place. They are quicker in their movements than the common black variety, and I think a large one would be an ugly customer. When I was a boy two of my brothers and myself killed a blacksnake with a white spot on its throat; when it saw us it turned and came directly for us, and I shall always think that but for a lucky blow with a stone it would have been a serious matter for one of us, as we were all small lads at the time.—A. C. SIKES.

NATURAL HISTORY COLLECTIONS FROM AFRICA.—Mr. W. H. Brown, of the U. S. National Museum, is to accompany the party going to St. Paul de Loando this month to view the eclipse of the sun, for the purpose of making collections for the National Museum. Mr. Brown will be provided with an outfit for securing large collections of birds, fishes, reptiles and insects; and it is hoped that he will be favored with weather and other conditions suitable for collecting objects of natural history, especially as this is a large field, containing many animals desired by the Museum.

Game Bag and Gun.

PENNSYLVANIA GAME LAW.

WILKES-BARRE, Pa., Sept. 30, 1889.—*Editor Forest and Stream:* Permit me to call your attention to an error in the game law of Pennsylvania, as published in the last issue of the FOREST AND STREAM. At the last session of the Legislature the game law was amended, as follows: "No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any quail or Virginia partridge, between the fifteenth day of December in any year and the first day of November next following, under a penalty of $10 for each one so killed, exposed for sale or had in possession. Approved the 25th day of April, A. D., 1889." Previous to this amendment the open season for quail was from Oct. 15 to Dec. 15, as published by you. IRVING A. STEARNS.

THE GAME SEASON.

Editor Forest and Stream:

Chautauqua game notes are rather uninteresting this fall excepting in the squirrel line. This has been one of the great squirrel years, and they have been slaughtered accordingly. They are here, there and everywhere, evidently migrating, for places that have not harbored a squirrel for years and have no food for them have been alive with them. They have come into the village limits and played around in the shade trees. They are frequently seen on the highway fences, away from any woods. Farmers kill them in their apple orchards and chase them across lots. They are now and then so numerous in the public roads as to block the wheels of wagons. (This, I'll acknowledge, makes me tired, like the wagon wheels; but give me credit for not making it more flagrant.) Some of the rodents are very fat and some quite poor, which makes a fair average. Strings of a dozen and upward are common, black and gray alike. Red squirrels too plenty to mention—oodles of 'em. I slew a black squirrel, as black as the conventional hat or cellar, excepting that the tip of his tail was snow white. He was an odd fellow.

Wild geese are not plentiful yet. Plenty of the tame kind, both feathered and human. They have been usually plucked, but are not fat enough to kill. The wild turkey flight did not stop this year. They must have passed during the night. We expected that grouse would show up in great shape this fall, but so far, in a number of trips in good cover, I have not started a feather. Why so, I am at a loss to understand, for they were numerous last fall, and the winter was mild. Maybe it's microbes or bacteria or something that has carried them off. It is an off year for bear and deer. There was much rain in the spring about the time of their usual nesting, and they were probably drowned out. There were several woodcock shot during the summer, but the hunters who poked around through the bushes, slopped through the mud, fought and cursed the mosquitoes, tore their clothes and sweated themselves to death, earned every cock they missed. It's the kind of stopcock I don't affect.

O. O. S.

CHAUTAUQUA COUNTY, N. Y., Sept. 25.

Editor Forest and Stream:

Up here in old Connecticut where, though the birds are scarce, we have more than our share of glorious crisp days during the fall, we always look forward with pleasure and longing for October first. Cooped up as I have been in New York city almost continually this past summer, I am counting the very moments till next Tue day, when, D.V., I expect to introduce Spike, a young four-legged Englishman, to a covey of partridges that have been fattening these past few weeks under the shade of a scrawny old grape vine not many miles from Exouizee. The past winter was an open one, and Letl says the birds wintered well, and then, too, the spring was favorable for young birds, there being none of those deadly wet cold storms, so that taking into consideration the number of birds that I have seen on the one or two Sunday walks I have had this summer, I confidently expect enough birds to satisfy me and, withal, a glorious time. In my short experience I have shot bear in New Brunswick, deer in Maine, elk, antelope, etc., in Wyoming (Casper Mountain and Bate's Hole), and yet, despite those heart-warming memories, I would not change for all, the days I have stumped up through the scrubs on a sunny sidehill, chasing a wily old partridge, or, sinking knee deep into the black soil, have startled a woodcock from his shady table, spread by nature near a tiny stream. What though I missed this one, or my dog flushed that one? We both had our sport, the days were only too short, and satisfied, Bang and I rustled home through the scarlet leaves. To the ever-repeated question, "Well, what luck to-day?" a short "three" or "five and a rabbit," sufficed, but of those we missed the details of "how" and "why" always lasted through dinner and far into the evening. It is this kind of a day, and a week or two full of them, that I am looking forward to, and I know that some of your readers, FOREST AND STREAM, who, looking back over the summer, with a week here and "over Sunday" there, wish they were in my boots and could say with me, "I begin my vacation on the first of October." F'LIN.

Editor Forest and Stream:

The open season does not begin till Nov. 1 for partridges, but doves may be killed in August. The outlook for wing-shooting was never better. Bob White has done exceedingly well, and young birds are better grown than usual. It is a common remark among all classes that the supply of birds is unusually large, notwithstanding a great deal of wet weather during summer. This is probably accounted for by the early nesting, which enabled the young birds to get large enough to stand the wet before it began. However, Mr. M. D. Mays reports finding two nests while pulling fodder the last of August. These birds, if alive, will be too small to kill Nov. 1; and this fact of some birds being so small caused our Legislature to defer the time of opening the season so late. The season continues till April 1, giving hunters five months to hunt in.

Some idea of the shooting done in Anderson county can be derived from the amount of shot used each year. One firm in city of Anderson sells six tons of shot each season, and a number of other houses sell quantities of them, besides those sold at Pendleton, Pelzer, Piedmont, Belton, Honea Path and Autun, which swells the amount up to snug proportions. Nearly all of this shot is expended on game, as the trap is very little used here. BLUE RIDGE.

DENVER, South Carolina.

Editor Forest and Stream:

Everything is very wet. The swamps are full and the fields nearly so. Consequently the birds are in unusual places. I went out with a friend on Monday and we had a good time, but found few birds, although we knew there were plenty of them on the same grounds a week or two ago. We put up two partridges (both old birds) and got one, and five or six woodcock, and brought to bag four of them. We found all of them on new grounds. Please send us some dry weather. COHANNET.

TAUNTON, Mass.

Editor Forest and Stream:

To all appearances is very little game in the markets here. I have seen two brace of partridges but no woodcock. In the early part of the month there was very little gunning, but later I have seen and heard of a few good bags. I saw to-day in the show window of Green's pharmacy a bag of twenty-five of the handsomest gray squirrels that I have seen in five years. They were the result of a two-days' gunning trip, made by H. C. Farnham, a well-known sportsman here. No shore shooting heard of as yet. COHANNET.

PROVIDENCE, R. I., Sept. 25.

Editor Forest and Stream:

The shooting is not very good just now, nothing but summer ducks, wood and black ducks, but they have been shot at so much they do not come into the rice beds until after dark, and leave at daylight in the morning for some of our small lakes in the woods, sit there all day and flock to the rice beds at dark. In about three weeks the fall ducks will come in thousands and stop until the lake freezes up. The shooting will be good then. There are plenty of partridges in all the woods around the lake; it requires a good dog to tree them. CHAS. GILCHRIST.

HARWOOD, Rice Lake, Ont., Sept. 25.

QUAIL IN RED RIVER BOTTOM—II.

THE next morning found us on our horses in rapid movement to reach the Pickett plantation, but I was stopped by a messenger with a note from Mr. Tom Pickett to bring up my compass and establish the line between him and Dr. Robert Moss. Bidding the messenger go on to Gold Dust and get my surveying instruments, I rode with Mr. Pickett to the lane between him and Dr. Moss, who fortunately was riding by at that moment, and very quickly I found that the lane was due north and south. We then requested Mr. Pickett and Dr. Moss to accompany us. The Doctor said he had no shells loaded. I offered to supply him with all he should need, if he would get his gun and join us. To this he consented. Mr. Pickett said he was going to his nephew's plantation, and would accompany us to witness the sport.

We did not arrive on the grounds where the birds feed until 11 o'clock. Dr. Moss had never seen the fielding of pointers or setters. This morning Ventura permitted Cora to go with us. As soon as the dogs got to the grounds Cora set, with Maud and Dan's Trump backing. Dr. Moss was perfectly delighted. The birds were flushed, he bagged one, Ventura one, but I missed. The birds were retrieved, and the dogs did not go but a few steps beyond the point where the birds fell before each dog pointed to a separate bevy. I went to Dan's and bagged two birds as they rose, Moss went to Cora and bagged a bird, while Ventura went to Maud's birds and bagged a bird. I never saw dogs do prettier work. Not a flush was made by them, the presence of Cora seemed to animate Dan's and Maud, and made them hunt both with more activity and good caution. In retrieving, it was only the question which got to the point the bird fell, in advance of the others, for it to be retrieved.

We found a large bevy in high grass. I did not go to the point, but remained on the inside of the wire fence. when the birds were flushed, Dr. Moss bagged two birds, one with each barrel not twenty yards from him. Considering this was the first time he had ever shot over a pointer, it was remarkable good shooting. The bevy flew back into the inclosure, and as they came by me, I made a double shot, and a remarkably good one for me, as the birds were at long range and a broadside shot. Mr. Pickett shot a few shots with Ventura's gun, but only bagged one bird. He and the Doctor left us to go back to dinner. The Doctor had bagged eight birds in all. Ventura and myself continued the hunt until late, with varied success. Sometimes he would miss and I would kill, and then I would miss and he would kill. We had reduced the number of birds down to a very small figure, not a dozen birds had escaped, and those I proposed to Ventura to leave for breeding this summer. We returned home with forty-one birds, each bagged the same number, and one was a joint shot.

This will close my hunt for the season; I am too good a sportsman to desire the entire destruction of the game, and would do more to protect it than any one in this whole section of country. But what avails my single efforts, when the law is openly violated over the entire State, and no punishment ever ensues for its violation.

GOLD DUST LANDING, La. UARDA.

THE SQUIRREL EXODUS.

RENOVO, Pa., Oct. 1—*Editor Forest and Stream:* The unprecedented hegira of black, gray and the red or pine squirrel, through the West Branch region of the Susquehanna has certainly been wonderful, and the oldest inhabitant fails to recall to his mind anything like it.

The black and red squirrels predominate, the gray not being so numerous, although there are a goodly number in the crowded woods. The red or pine squirrels are as thick as Pharaoh's locusts. They are saucy and so impudent that they almost invade the muzzle of the hunter's gun. Strange, too, they seem to be on good terms with the blacks and grays, this being so different from what naturalists tell us about them. My own observation, too, about these red denizens of the forests is that they become belligerent whenever a gray or black squirrel shows itself. Not so with this crowd; they seem to be on good terms with each other and all seem bound for the same place. They are apparently going south. That they have come from the north somewhere is evident from the fact that there are none on the south side of the river, or at least very few, and they are "natives and to the manor born."

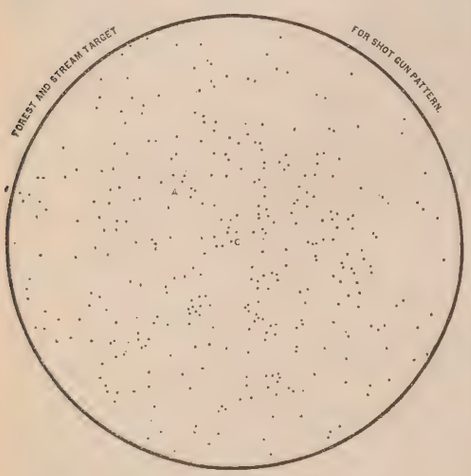
Thousands of these squirrels have been shot by our native hunters and converted into food. While we have old fogies who intimate that they would just as soon make a feast off a kitten, the majority, however, are of the opinion that there is no better dish than squirrels and potpie. The potpie itself is a favorite dish among Pennsylvania people; but when the squirrel is added to it and they are cooked in one pot, then they are food fit for the gods. These squirrels are as fat as butter, from the plenitude of nuts in our woods, and the chestnuts, acorns and hickory nuts were never known to be more plentiful.

The trouble is in this section of Pennsylvania we have so many pot-hunters—destroyers of game out of season.

There are a number of these fellows around here who kill deer every month in the year, and when the genuine sportsmen goes to look for game in season it is not there. The same way with our pheasants. The broods were numerous in our surrounding woods last spring, but these destroyers of game have been killing them right along out of season.

The Susquehanna is full of game fish, but the Fishery Commissioners do not seem to pay any attention to this part of the State, and allow numerous fish baskets to be put in the river and remain there all fall. Both above and below us here the river is lined with fish baskets and wing walls for nets. We have strict laws, but no one in authority seems to care about enforcing them. The Fish Commissioners have unlimited power and plenty of money to enforce these laws, but they seem to be neglectful of what is certainly their plain duty in the premises.

The result of all this wanton destruction of our game has become too apparent to the true sportsman. It will have to be brought up with a round turn or our game, notably the deer tribe, will become as scarce in Pennsylvania as the buffalo is in its native land.



JAMES H. FERGUSON.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

PATTERN AND PENETRATION.

WINCHESTER REPEATER, 10 AND 12-GAUGE.

THE gun on the stocks this week for examination marks the first appearance of the repeater in the tests. It came from one of the largest arm factories in the world and has been pushed in a successful recognition of its merits by the energetic New Haven firm. This Winchester came to test under exceptionally favorable conditions. It was a selected arm, brought down by the shooting expert of the company, Geo. W. Albee, who, it will be remembered, holds the record for rapid and accurate rifle firing, made years ago with the Hotchkiss rifle and not as yet surpassed in any record test. Mr. Albee brought down a pair of the Winchester repeating shotguns, and struck pretty fair weather at the Jersey shooting ground. There was a stiff wind on and it came up the line of fire in a way to drop the shot a bit and perhaps affect the penetration. But the air was humid, and no bird hunter ought to expect a much better showing.

WINCHESTER 10-GAUGE, 40YDS., 357 PELLETS.

Mr. Albee treated the gun in the usual trap-shooter's fashion, dipping the barrels for a foot or 10 inches into cold water after each discharge. In this respect he was the only shooter in the whole series of tests thus far to follow the fashion of the Parker expert, Mr. Gaines, who kept his barrels carefully wet through his shooting last spring. Curiously enough it was in the second test of the Parker arm when the most attention was paid to this wetting of the interiors of the barrels, and it was at the second test that the best shooting was not done.

The Winchester with its single barrel was a simple gun to test. There is no comparison between the barrels, and five shots at each range with each gun enabled the whole

WINCHESTER 12-GAUGE, 40YDS., 340 PELLETS.

shooting to come well within an hour. It was not fired as a repeater, each cartridge being inserted after the previous one had been fired. How smoothly it worked is shown in the following table, showing the count of pellet marks in the 30in. aimed circle and again at the circle selected from the same sheet for best pattern with the distance in inches between the two centers:

10-GAUGE GUN.

Aimed Circle. Pellets.	40YDS. Selected Circle. Pellets.	Between Centers. Inches.	Aimed Circle. Pellets.	60YDS. Selected Circle. Pellets.	Between Centers. Inches.
284	324	6	150	173	6
326	327	7	146	160	3½
258	304	7½	145	153	5½
208	324	6	172	194	5
348	351	5	174	203	7½
Av...303	326	6½	157	177	5½

12-GAUGE GUN.

307	337	5½	111	140	9
313	328	4	167	175	4½
307	338	6	200	211	8
326	340	5½	187	201	6½
295	324	3½	157	159	5
Av...309	333	5	164	177	6½

The arm worked in good shape, and the throwing down of the breech mechanism sent the shell flipping out over the shooter's shoulder. The rolled steel barrels used were of the ordinary output of the Winchester Works, being uncut in fitting and without any of the binding which comes with the braizing together of a pair of barrels; it is urged that under action the Winchester is scientifically uniform. It is certainly a quickly manipulated arm in experienced hands, and the ready fashion in which Mr. Albee got in breaking shots at three targets sprung simultaneously showed what a killing arm the Winchester would be when ducks were plenty and time for reloading very limited.

The best pattern for each of these two guns is given for the 40yds. distance, *A* showing the point aimed at and *C* the center of the target for best patterns. The formal and complete record of each gun is shown in the regular way as follows:

CLAREMONT, N. J., Sept. 20, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Winchester Repeaters, Steel Barrels.

Gun—10-Gauge. Cost, $25. No. of gun, 22,345. Weight, 8¾lbs. Length of barrel, 30in. Full choke.
Gun—12-Gauge. Cost, $25. No. of gun, 4,036. Weight, 7⅞lbs. Length of barrel, 30in. Full choke.
Weather—Clear. Direction of wind, 12 o'clock. Force of wind, 16 miles per hour. Thermometer, dry, 63°. Do., wet, 56°. Humidity, 64°. Barometer, 29.6in.

Editor Forest and Stream:

In common with many of your readers I have been greatly interested in your shotgun trials, and believe that these reports will be of great value in showing us what may reasonably be expected from our shotguns. While it is a trial of guns and not ammunition, still your careful and accurate analysis of the cartridges is worthy of study; for instance, your reports have demonstrated that our American manufacturers of shot have succeeded in making their produuct of remarkable uniformity of size.

Your plan of giving us the weight of each load in Troy grains, and in an opposite column, the number of pellets by count, enable one to detect at a glance even slight variations in the average size of the pellets, by comparing the count with the weight of the several cartridges analyzed.

In several other particulars, to which I may refer at another time, your reports will furnish data which will enable us to come to very definite conclusions.

NEW BRITAIN, Conn. WOODEN NUTMEG.

ALL-ROUND RIFLES.

SOMERVILLE, Mass., Sept. 20.—*Editor Forest and Stream:* As is well known to many readers of FOREST AND STREAM, the writer has given a great deal of attention to the small-bore rifle, to adapt the same to hunting small game, and if possible to secure, by trying and experimenting with different rifles and cartridges, different methods of loading, lubricating, alloying and making bullets, etc., etc., the best results. For a long time I have been trying to find the rifle which has been longed for by so many, and for which thousands and thousands of dollars and a great deal of time has been wasted, viz., the all-around rifle; the arm that can be used for anything and everything successfully, from a chipmunk or English sparrow to a deer. I will omit other large game, as the deer is the largest that we have in this State, and will try to cover the field of small game and include deer. As is the case with many others, I thought that a large caliber, say .40, could be so loaded with light charges of powder and a round or light conical bullet that it would do nicely for gray squirrels, grouse, rabbits, etc., but soon found that the meat was badly torn and the game spoiled for the table. Then I dropped to a .32, which, by the way, comes the nearest to it of anything, as the .32-40 is a powerful cartridge, and if the .32 Smith & Wesson revolving rifle bullet, 98grs., is used with a light charge of powder, good results can be obtained. But then there comes light gallery or practice shooting around home, and this rifle is too large, so, as is the case with some other "rifle cranks," I buy my experience, pay dearly for the whistle, and then give it away to the younger ones that are coming on the field, that they may benefit themselves without paying a fortune for their knowledge, as some of us older ones have to do.

I do not desire to give a free ad. to any gun or ammunition maker, and will speak of those that I have proved to be good, while those that have proved not to be so I will give the benefit of the doubt and say nothing of them. As regards sizes or calibers, it is more a matter of cartridges than rifles, so I have found it necessary to select three cartridges to cover the ground that I have tried to cover. The cartridges represent also three different calibers, viz., .22, .25 and .38. These three calibers can be used in three different barrels and belong to the same gun by using the Maynard rifle, which has interchangeable barrels to use on the same stock, and for which the new .25cal. .25-20-85 cartridge is made. These rifles also handle the .22 long rifle cartridge well. My favorite arm for this cartridge is the Stevens rifle, and it is (in my opinion) as near perfection, using the .22 long rifle cartridge, as will ever be found, and is just the thing for target practice at short range, sparrows, squirrels, etc., etc. The cartridge has some faults which may be remedied in the future, of which I have written before in FOREST AND STREAM, and of which no more need be said, only that the extreme accuracy of the cartridge in several different Stevens rifles, as well as Maynards, leads me to call it perfection itself. Then the new .25-20 cartridge is just the thing for ordinary hunting purposes as well as target shooting up to 200yds. It is good for geese, turkeys, ducks, black and gray squirrel shooting, and all of the medium sizes of game. In the East our game is rather wild and has to be shot at longer range than in some other places.

Now the third and last, but by no means least of the cartridges the writer has selected is the .38-50-255 Remington. The rifle being a No. 3 Remington-Hepburn model, 28in. octagon barrel, and mounted with a nice telescopic sight. This rifle is the one for long range, game and venison shooting, and woodchucks, crows, hawks, owls, wild geese, etc. etc., at distances from 100 to 500yds. are liable to get into serious trouble, unless they leave before the combination can be brought to bear on them. The latter cartridge and rifle is the maximum size that I care to use, and is good for anything that wears hairs or feathers that is found east of the Rocky Mountains. A few words regarding the telescopic sight and I will close this. Telescopes on rifles have given me no end of annoyance at various times, and a sight of this kind meant a good round sum of money and then, perhaps, an inferior glass. Here is a pointer from experience. I ordered not long ago a telescope and mountings from Mr. L. N. Mogg, of Marcellus, N. Y., told him the faults I had to find with some of the glasses I had used and the high prices I had been charged for them. Well, to make a long story short, the glass and fittings came in a few days with instructions to send it right back if not satisfactory. The price was very moderate, and for the benefit of the readers of FOREST AND STREAM that are interested I would say that it is the equal of any one I ever used. I can easily see a .38cal. bullet hole in white paper at 200yds. This, of course, I mean in good light. The freedom from distortion is remarkable, and for one having as much power as this the absence of vibration is noticeable at once. On my small-bore hunting rifles to use in the woods for off-hand shooting I find nothing so good as the Lyman rear and ivory front sight. I think that with these three cartridges I am satisfied. "But," some one asks, "supposing you can have but one rifle, which cartridge will you choose?" My answer is choose according to the work you wish to do. They are all three good. IRON RAMROD.

A VAIN QUEST.

Editor Forest and Stream:

Where can I get an "old-fashioned" flintlock shotgun, such as I was lucky enough to own twenty-nine years ago? As early as that I found that there were imitations, and that there was a wide and far shooting difference between the two kinds. In those old days I had a Hudson's Bay gun, a singlebarreled flintlock, that, could I find it, I would give the best breechloader that ever I owned for it. It would shoot anything from buckshot to cut up nails, and I brought home more game with it than ever I have with my Parker or Greener. In those days we lived on the frontier, and when I didn't kill something the family had no meat. It took three fingers to pull it off, but the mallards had to be a long way out in the lake, if some of them didn't turn up when that long barrel blazed out her charge. In those days there was a kid that, with powder horn and shot bag, and that homely old thing of a gun, knew where the partridges hid, where the patches of wild buckwheat that fed dozens of coveys of prairie chickens, the lakes that bore the wild rice which the big mallards knew too, and the oak ridges where a deer might be found. And that old gun had a partner, a mongrel cur, that went by the name of Bounce, and he was a hunter too. It is of no use to ask you where I could get another such a dog, for money wouldn't buy him; he was a boy's dog. Ah! if I could only have, now, that old gun, and that dog, and the fun that boy had, and his appetite. E. S.

PHILIPSBURG, Montana.

[E. S. will find the old flintlock, not a bit rusted, leaning against the Norse tree on which grow the apples that make one young again; the old dog is lying there in the shade, too, and the appetite will be restored by quaffing the Fountain of Youth bubbling up near by.]

PETALUMA, Cal., Sept. 21.—The whole country north of here up the coast is a paradise for the sportsman, no healthier spot in the world, with game enough for any reasonable person; but it cannot last. The trout hog and deer hog are everywhere. Near the city the game laws are pretty well respected and enforced, but the mountaineer does as he pleases.—BYRNE.

FASTENING WADS IN BRASS SHELLS.—"W. P. H." in issue of Sept. 19 asks how to fasten paper to brass shells. I use shellac to fasten wads in brass shells and find it satisfactory.—J. R. T.

MICHIGAN WILD TURKEYS.

HARTFORD, Mich.—*Editor Forest and Stream:* There are still some wild turkeys left in Michigan. A few miles west of Bay City they are found along the line of the Pere Marquette Railroad; again on the line of the Michigan Central Railroad, where one may get off at Fairland or Decatur; or take the narrow gauge at Lawton as far as Paw Paw, and then go north and west four or five miles. There are some fine broods of turkeys in this neighborhood, and lots of grouse. Nor are they confined to these especial localities, for every few days one hears of a flock of turkeys having been put up somewhere.

I don't go much afield nowadays, but eight years ago last fall I took my trusty 12-gauge Parker with a supply of ammunition and started off, telling my wife that we would have wild turkey for Christmas. I drove five miles southwest from Hartford into Berrien county, put the horse in a barn, and learning from my host that turkeys were in the habit of coming into his back field, I started in that direction, taking cartridges loaded with 3½drs. powder and 1⅛oz. No. 3 shot. I soon found tracks in a cornfield that had been harvested, and my dog, which was part pointer and the rest, as my boy says, "just dog," only waited my command to track them to cover. In a few minutes he raised his voice to let me know he had found, and guided by the sound I soon reached a tamarac marsh, and open swamp with high grass, and scarcely had I got fifty yards into this latter before up went an old bronze gobbler scarce fifty yards in front of me. I dropped him, and before the smoke had cleared away up went a hen, which the next minute lay kicking in the grass.

I tied their heads together and started for my horse, and by the time I reached the barn I estimated the weight of that pair of turkeys at 100lbs., or thereabouts; the steelyard made them only 31lbs., but there was ample for Christmas. S. C.

THE SHIP HARBOR TRAGEDY.—A correspondent sends us the testimony of the moose hunter who recently shot a man by mistake for a moose near Ship Harbor, N. S. He said: "Wm. Taylor and myself stayed at a camp at Gold Lake diggings on Thursday night. In the morning we came to Grassy Lake Ridge, a distance of one mile. Wm. Taylor called for moose by a tree about two rods off the road, and I sat down at a tree about three rods from him at the same side of the road. I heard a cow moose answer Taylor to the northwest, in a swamp. Taylor called again and I heard her answer to the west of us, coming down toward the road. In about fifteen minutes I heard the same call, I supposed, on the road. When I heard her on the road I rose to my feet, and could see the opening of the road through the small bushes. On account of these bushes I could not see the bed of the road. I was confident it was a small cow moose, and on that account was watching the opening on the road, expecting to see the cow moose come up. I had taken my eyes off the opening for a few seconds, and when I looked back I saw what I took to be a moose coming toward me, but could not see it distinctly on account of the small trees standing close by me. I raised my gun to my shoulder. I had taken sight and then taking my eye off it for a second or two, and moved my head to the left a few inches and saw what I felt certain at the time was a moose's head and ears, and I could see what I felt certain was the top of the shoulder. She appeared then to be turned with her shoulder toward me. I put my eye back to the gun and fired instantly, and could see that something fell. The first sound I heard I thought was the groaning of a moose that had fallen, when I heard a man exclaim, 'You have shot a man.' I exclaimed, 'My God, I have shot a man,' and fell to the ground. I rose as soon as I could and proceeded toward them, when I saw the men lying on the ground and I fell again, and was not able to go up to them for some time."

THE LAW OF FIELD SPORTS: A Summary of Law Affecting American Sportsmen. By George Putnam Smith, of the New York Bar. Contents: Equipment, Dogs, Trespass, Property in Game, Game Laws, Fish and Game Clubs. Appendix: Abstracts of the Game and Fish Laws of all the States and Territories. A most useful book for every one who uses rod or gun. Price $1. Forest and Stream Publishing Co.—*Adv.*

Sea and River Fishing.

CLUB PRESERVES.

TWENTY odd years ago the Rev. Adirondack Murray marshaled his admiring hosts and led them through swamps and midgets into the finest umbrays of the North Woods. Justly may he claim precedence as the apostle who first imbued the intelligent masses with a love for angling and its associate charms. The passing generation are not likely to forget the furore then created. The movement developed new industries, opened new lines of traffic, stimulated inventions, and compelled an abandoned region to pan out gold where it refused to yield due tribute in iron. It introduced the parasol and sardine box into sequestered precincts sacred to the presence of Audubon and John Lodd, and it festooned the limbs which overarched their sinuous streams with glistening lines of silkworm gut, which vied with the filmy handiwork of spiders spun in the mid-summer noontide, indicative like brokers' wires of the amount of business transacted and of close connection with distant tackle shops and tourists' outfitters. But, like John the Baptist, who came crying in the wilderness, Murray was but the forerunner or harbinger of the great impulse which was to come later. In those flush days, which now seem ancient, the speckled trout was the superlative quest of the most ambitious neophyte who went afishing. All were content with this *ne plus ultra*; with its grateful environment, the freedom of the waters, the homeliness of the log walled inns, and the immunity from the straight-jacket of the autocrats of fashion. Until about five years ago the Adirondack region remained a happy Arcadia, where all its population were wood nymphs together, untrammeled by forms and unrestricted by lineal metes and bounds. Here was the kindergarten of our rudimental beginning, where the alphabet of angling was diffidently spelled beside the lakes and streams. Stilted science had not invaded its penetralea to give old things new names, nor had the familiar brook trout entered its protest against the nomenclature of the gods.

And the trout is doomed! Its cultivated, pampered and over-fed substitute may live, but the wild trout has had its day in all accessible regions. With the increase of intellectual light and scientific development his name has not only been changed, but his very entity has been transmogrified into a pale and sickly semblance of his former self. Protection, like a high tariff, is working out his ruin. Fenced in and corraled, coddled and appropriated by the rich, with the vulgar multitude persistently kept aloof, only the barons of a *soi-disant* nobility will be privileged to enjoy him while a lingering remnant remains, and then he will pass forever into the realms of apotheosis, where it is to be hoped he will abide as a pleasant memory, and become a conspicuous shiner among the constellations of angel fish which bespangle the piscatorial heavens.

During the last ten years or so the bass, the salmon, and latterly the winninish have superseded his excellency, and now the bolder and hardier classes of anglers habitually seek Canadian waters for superlative sport. There, in that wild elysium, whose impetuous and restive streams outvie the favorite rivers of Scotland, which a few American enthusiasts were wont to frequent as long as fifty years ago, they indulge their favorite propensity with an ardor as fervent as the dash of the fish they tempt and contend with, for no fish that swims is the peer of the salmon, and no angling experience or pastime carries with it the exciting episodes, aspects and vicissitudes of salmon fishing. But even now, these privileges can be enjoyed only under tense restrictions. All fishing privileges are subject to an official fee, and all good rivers are leased by the Government, and those who would fish must pay dearly for the sport. Well may our miscellaneous populace who love an outing in the woods, view with alarm the encroachments of wealthy individuals and clubs of gilded sportsmen who are so rapidly acquiring exclusive possession of all the choice fishing waters of this country, and not of ours only, but those of Canada, shutting out the public as trespassers, and gaining no personal compensation to justify the hardship imposed upon their fellows save the comforting vain glory which attends the consciousness of unlimited possession and the power which money brings.

Memory recalls in vain that halcyon period when the world's width was a public domain; when all of our interior streams were virgin; when our forests were uncored by the swampers' axe, and no logging roads threaded the sequestered penetralia; when to the birch canoe alone there was an open sesame. Many are the mid-summer weeks which I have passed alone on these changeful rivers. But when my old stamping grounds became occupied in course of time, I hied me to new fields without more regret than the camper usually casts at the smouldering embers of last night's fire when he breaks up to go. But now, whither shall I flee? Last July I went into the wilds of Canada, two hundred miles back of the river St. Lawrence, and but a little distant from the western confines of Labrador, and there I found the river lessee and the clubs before me! A railroad led up to the casting grounds, and steamboats plowed their way to the camps. This was the luxury of ease, but for the ordinary vacation rambler it involved only a privilege to see, and not to participate in the sport. Five dollars per day was the least exorbitant of the charges for fishing, and reasonable enough, too, for the moss-backs or backwoodsmen of the old days could not have furnished shelter, canoes, grub, guides and transportation at anything like such minimum cost, for what he saved in cash he would have to furnish in hardship and expense of time. Only a bold and hardy explorer of the old school, like Lanman or Ruxton, would now voluntarily exchange the convenience and comfort of the new for the crucial regime of the old days. We who protest against the occupation of the fishing grounds will not inveigh against the lessee who sub-lets rod privileges. Indeed, he is the only foil which stands between us and absolute prohibition of our pastime. Likewise those who travel over the stock ranges of Texas do not object to the small rancher who occupies the land and charges us on passing what he supplies us with. It is the wire fences we object to, which compel us to drive twenty miles around in order to accomplish less than one. So when we go to the Adirondacks or to the Laurentian water-shed and find vast tracts utterly without a human tenant, but legally closed to all but their owners, who have absolute title by purchase and whose right is unquestioned, we are apt to vehemently protest and to ask *Cui bono?* Who profits by the protection? Does it profit the owner, or the fish, or the country? The latter gains, to be sure, in proportion as the proprietors spend money and introduce improvements and invite settlers—settlers to settle anywhere except on their territory. But as it happens the lessee soon tires of his prerogatives; the game proves not worth the candle, and he moodily vacates the premises after two or three seasons. But the title stands and the notice to trespassers continues to stare each would-be angler in the face. If the angler enters he does so under danger of any penalty, however heavy, which the decree of a prejudiced court may impose on him. The chances, however, are in favor of the trespasser not being discovered or informed upon, if he is prudent, but there is a risk, and inasmuch as there is no pecuniary incentive for professional poachers to ply their calling in these out of the way places, the domain is generally left unmolested; for such gentlemen as visit the wilds for pleasure usually seek out those limits which are not tabooed. And thus vast areas of the best selected territory are kept under the ban of entry and occupation by the fiat of selfish monopolists who differ from viceroys only in name. This is a few removes from the position of Henry George. Between the two extremes we might hope to discover the happy medium, but in a republic the only intervention possible seems to be by Government's reserving and appropriating for public use, subject to regulations, all such wilderness tracts as are useless for other purposes, the chance discovery of minerals and ores being the only condition of exception.

I have read with much interest the multiplying complaints of a disbarred and distressed public, and they come not too soon. If your readers believe the statements to be exaggerated, let me enumerate here. The evil is not confined to the Adirondacks; it is all over. Besides several tracts of thirty to fifty thousand acres in the North Woods, not to mention lots of minor tracts, we have the 72,000 acres of the Megantic Club in the Dead River region of Maine and the eastern townships of Canada; 50,000 acres in the Cheat Mountain country, West Virginia; 18,000 acres of the Blooming Grove Park Association in Pike county, Pa.; the ten-mile tract of the Rising Sun Park in Illinois; the Arden Park in Westchester, N. Y.; the great game preserve in the pine lands of New Jersey; the big preserve in the Cheyenne Valley, Kansas, and others which I have no memoranda of at present. In Canada it is even worse. There are no less than fifteen fishing clubs, composed of residents of Canada and the United States, with an aggregate membership of perhaps 200 souls, besides individual owners, which have leased or purchased large areas of forest inclosing scores of lakes. The Stadacona Club, of Quebec, covers an area of forty or fifty miles. The Laurentides, of Quebec, covers a group of large lakes on the Myguick and Batiscan. The Metabetchouan Club, of which U. S. Senator O. H. Platt is president, is located twenty-two miles north of Lake Edward (which is seventy-seven miles from Quebec) and fifty-five south of Roberval, the interval covering fifty-five miles. The Springfield (Mass.) Club, E. S. Brewer president, occupies the lower Metabetchouan River, and a Philadelphia club twenty-eight miles of the upper stream. The Paradise Club of New Yorkers, of which Judge Henry A. Gildersleeve is president, is located at the lower end of Lake Edward. The fishing privileges of Lake Edward *en haut* and Lake Kiskisink are owned by the Lake St. John Railway Company. Messrs. A. B. Scott, W. H. Griffith, Harry Poole and Messrs. Twombly and J. C. Eno are lessees of all the winninish pools at the Grand Discharge, or outlet of Lake St. John. Nazarre Tuscotte controls both banks of the river Au Sable. Mr. R. L. Ogden, of New York, controls large fishing privileges. The Jeanotte and Batiscan rivers have both been in large part appropriated. Indeed the choice waters of the accessible parts of this far off land have all been thus early pre-empted by the pioneers of sport. This statement would seem incredible, but it can be verified officially. One thing in advantage of Canada: Its government usually retains its fee to the land. It leases, but does not sell, and the leases are not for long periods. The United States might do well to follow the example, though, with a plethoric treasury, it might despise the small revenues which the Dominion is glad to receive. In the case of clubs, where the privileges of domain are shared by many individuals, or by families, as in the case of Blooming Grove Park, whose membership is 200, the objections raised are not serious, but where great territories, equal to European duchies in extent, are held by individuals, unoccupied and totally unused except for a single fortnight each year, it is a case of selfish appropriation such as the author of the "Dog in the Manger" never dreamed of. I am glad to see these abuses agitated by the press, though I do not perceive, as yet, what great good will come of it. CHARLES HALLOCK.

SHOOTING THE FOUR-EYED FISH.

MANY years ago, while tramping along the Trinidad side of the Gulf of Paria, in company with a friend, we came to a long, sandy beach some miles north of the celebrated Pitch Lake, and there for the first time I saw schools of fishes, apparently about ten inches long, coming up with the advancing waves upon the beach, remaining there for a second or two after the tide had retreated and then suddenly turning around and scuttling back. These strange movements excited my curiosity, and being unable to capture them in any other way, I took my gun, which I fortunately had with me, and fired at an incoming school, killing three of them. Upon taking these up I immediately recognized in them a species of the remarkable four-eyed fish (*Anableps tetrophthalmus*), previously only known as an inhabitant of the coast of Guiana.

Evidently, then, this development of the so-called four-eyes has relation to this peculiarity of habits, but as my stay was necessarily limited, I could not enter upon an extensive investigation at the time as to what was the exact reason of the habit, whether in search of the minute crustaceans that are to be found upon the beach, or for some other reason. The species of *Anableps* is peculiar to tropical America. There are three well-defined species, two occurring along the northern coast of South America and extending to Trinidad, and one living along the western coast of Central America. They are members of the family of *Cyprinodonts*, of which the common killifishes of the United States are well known representatives, and are the largest of the family, attaining a length of 10 to 12in. The eyes are unique in that each one is divided into two parts by a horizontal, dark-colored band of the conjunctiva, while the pupil is completely divided by a pair of lobes projecting from each side of the iris. The orbits are extended upward above the level of the head, so as to at once attract attention on account of their prominence.

The four-eyed fish of the Pacific was one of the earliest species described by me, and was named *Anableps dowi* in honor of Capt. Dow, a famous collector. Immediately after the description some of its peculiarities were noted and published in the "Proceedings of the Academy of Natural Sciences" for Feb. 12, 1861, page 21. "Dr. Le Conte stated in regard to the species of *Anableps* described in the Proceedings of last month, by Mr. Gill, as *A. dowi*, that he had seen it in great abundance, not only in the Bay of La Union, San Salvador, but in all the streams emptying into the Gulf of Fonseca, and also in the small tributaries of the Rio Lempa, as far as the town of Vertud, a great distance from the ocean. The method of swimming is very peculiar; the fishes are seen in groups on the surface of the water, with their eyes projecting. They are easily alarmed and very active. They are known to the natives under the name of *cuatro-ojos*, in allusion to the transverse black band which divides the iris."

THEO. GILL.

VERMONT BASS.—The famous Back Bay region at the head of Lake Champlain has not been able to retain its great piscatorial reputation this year, owing to the exceedingly wet season. The waters were too high to enable anglers to pick out their accustomed fishing beds, and more than all else, the many rains filled the lakes and streams so full with fresh and tasty tidbits that the sensible fish disdained the substitutes offered, no matter how temptingly, by the zealous Ikes. The writer visited a small lake famous for its big bass, about six miles from St. Albans, and secured one fish of 4¼lbs., which was the only bass of over a pound weight caught there by any one during the three days of his sojourn. That is a fair example of the season.—W. H. R.

CAMPS OF THE KINGFISHERS.—XI.

ECHO LAKE, ONTARIO, CANADA.

IT was a long, hard pull to the Sault, and one not acquainted with the river would be tolerably certain to miss the channel frequently, and more than likely get lost in the dark among the many islands dotting the river up toward the rapids.

Cunningham was asked if he could find us a man who knew the river to pull one of the boats, Charley and I agreeing to follow in his wake in the other one, near enough to keep from getting lost. He knew an Indian, "Big Joe," who was just the man if we could get him, "strong as an ox, and the best man with a boat in the whole region." Joe was sent for, and brought another much smaller Indian with him, and we recognized them as the same two that had come to the camp after Louis, "big Joe and little Joe" as they were called, and cousins to Louis, as we afterward learned.

Big Joe was a picture, over six feet in height, deep-chested, broad-shouldered, with the prominent cheek bones of his race, built from the ground up in perfect proportion, with not an ounce of flesh on his big bones that didn't belong there; his shirt sleeves rolled back, exposing a pair of long, powerful arms, on which the cords stood out like brown ropes, and straight as old Sam's "tree box;" he was about as perfect a physical specimen of a man as I had ever seen; and doubtless Cunningham did not greatly exaggerate when he said he was "strong as an ox."

Asked what they would charge to pull the two boats to the Sault, Joe said "a dollar and a half apiece and their boat fare back in the morning," which was fifty cents each. If he had doubled it we would have paid it just as willingly, for the boats had to go back that night, or we would be detained there another day and night.

When the Indians got their suppers and reported back ready for the start, it was 9 o'clock, and dark, except for the faint light afforded by the stars. Charley volunteered to go along for company, but as he would only be an additional weight to pull, it was decided that only the "skipper" should make the trip, and at the same time learn, if possible, what had become of the other boat and our two young comrades, for Uncle Dan was getting uneasy about them.

The larger boat had two sets of rowlocks and two pairs of stout, tough, ash oars, and with little Joe at the bow, big Joe at the after pair, and the skipper at the tiller, with the smaller boat towing astern, we were off in the darkness for a ride of twelve good miles, that will be remembered by the skipper as one of the "episodes" of his life.

Big Joe set a lively stroke from the start, and it was kept up without the slightest noticeable variation, the powerful sweep of the oars being as regular, and apparently as tireless as the even throb of a smoothly running engine. Once in a while he would lose the stroke for half a minute, to dip up a drink of water from the river with an old basin lying at his feet, and then the boats would almost lose steerage way, but when he caught the stroke again, a string of bubbles would go dancing by on either side in the faint starlight, showing the increase in the pace. The lesser Joe was made of good tough stuff too, but he lacked big Joe's great strength and quickness.

Big Joe was a wonder. Totally unlike Tom, he was a good talker and spoke English very well. In fact he talked all the way up in a natural tone of voice without seeming to get out of breath on account of the violent exercise; at least it looked to me like the hardest kind of work, but he seemed to do it without the least effort. He kept up his piston-like stroke, and at the same time entertained me with hunting and fishing stories galore; told me of his adventures by flood and field, of his experience with hunting and fishing parties as guide and cook, how he once packed 150lbs. of provisions on his back from the Sault, thirty miles back in the woods to a lake for a party that had run out of grub; again how he was caught in a storm in a small boat near Drummond Island, while looking after some fish nets and tossed about the upper end of Lake Huron for sixty hours, without anything to eat before he was picked up. He told me of his life, and family, and relatives, that there were forty-seven of them of the same name—Lesarge—and how his grandfather had died a short time before at the great age of 102 years, instructed me how to build a raft with no tool but an axe, how to construct a bark camp, how to smoke and cure a fish on green twigs over a fire so it would keep fresh and sweet for days, and a hundred other scraps of information that kept me interested from the time we left Cunningham's till we crossed the river under the roar of the rapids. Big Joe was full of the lore of the woods and the waters and good nature; the lesser Joe seemed to be full of nothing but silence and river water, and said not a word during the whole trip.

As we rounded a point a couple of miles up, the lights at Garden River twinkled in the darkness a short distance ahead, and we pulled in to see if we could learn anything of our stray boys. Entering the post-office and store—a country post-office won't thrive without the inseparable "store"—we stated our errand to the proprietor, who said the boys had been there, but finding no mail for them they had got aboard the steamer Atlantic with their boat and gone up to the Sault.

Back in the boat and out in the stream again, Joe looked over his shoulder—he seemed to have a joint in his neck like an owl—and to hold the boat for a certain star hanging low down near the top of the hills, as he intended to edge over to the American side to avoid the current as much as possible, and then he launched into some more yarns of the woods. An interruption broke the thread of his discourse a mile or more above Garden River, when we had gone fifty yards or so past a house near the edge of the water, but only for a minute or two. A light flashed out over the water at the corner of the house, and a shrill, piping feminine voice hailed, "Oh, Mister Harrison, is that you?" "No, ma'm," answered big Joe, as he dropped his oars and dipped up a drink from the stream. "Oh, I thought it was Mister Harrison," and in the same breath, "did ye come up from about the landin'?" "Yes, ma'm," Joe answered; and the lesser Joe rested and scooped up a drink with the basin. Again the piping voice pierced the darkness in search of some more information, "How is the diptheery down at the landin'—is it gittin' any better?" "No, ma'm, but some of the children are," Joe replied; and the light went out behind the corner of the house as suddenly as it had appeared, and the female went in, doubtless as full of information—and wrath—as I was of laugh. Another "episode," as old Sam would have happily figured it out.

The four oars fell as one, Joe picked out another star to steer by, and the boat was quartered across to the Canada side to get into easier water. It was so dark that the shore line could with difficulty be made out unless within a few yards of it, and as we neared a point reaching out in the stream the shadows were so delusive and mystifying that I held the tiller a trifle too much "port," and the boat crashed into the rocks with a shock that sent the lesser Joe sprawling on his back over in the bow, and big Joe nearly on top of him, while I was only saved from a headlong dive under the thwart Joe had just vacated by the firm grip I had on the tiller ropes.

Reaching out quickly, the bow of the little boat towing astern was shoved to one side barely in time to miss crashing in the stern of the other one, and then when the two Joes had got back on their thwarts, after a look to see if any serious damage had been done, we backed out and gave the point a wider birth for a new start. Another "episode," which old Samwell would have greatly enjoyed had he "bin thar," for Sam heartily relishes a good episode.

Again we crossed over to the American side, and followed the dim outline of the shore for half a mile or more, in the deep shadows of the hills frowning darkly above us, and then back to the Canada side, which we held till ready to cross the river below the rapids. After following this shore a while, Joe said we were nearing a widening in the river infested with numerous small islands, and I would have to keep my eye peeled, and be on the alert to obey his order to "starboard" or "port" without fooling away any time, and then his entertaining talk resumed its flow where he left off.

When we entered the widening, we ran into a fog so white and thick that we could scarcely see the boat's length into it, and I intimated to Joe that we were possibly in a category, but he said it looked more like a fog to him, and as he didn't seem to be very well acquainted with categories, the stroke and speed were kept up, as though it were broad daylight and the sun shining.

He seemed to know every current and eddy and channel in the broad river by intuition, but it was impossible for me to steer with perfect certainty in the thick pall that had settled on the water, even in accordance with "his orders to the wheel," and two different times in less than a quarter of a mile we tried to run over two different rocky islands under "full steam," but fortunately no damage of consequence resulted, only a good shaking up all around. Had only Charley and I been together we would have camped on the first island struck, and staid there till the morning sun dispelled the fog.

After the last "island episode" I had a notion that Joe's faith in my ability to steer through the fog without running aground on every island in turn was a trifle shaken, as he ordered the helm aport, and said we would work over against the shore into a channel free of islands, but the route would take us a little out of a direct line, and make our time a few minutes longer at the Sault.

Occasionally the lesser Joe would get tired, and let his oars trail in the water while he rested a few rods—the stroke was too quick for him—but big Joe appeared to be absolutely tireless, and the boats were kept booming through the water with a barely perceptible falling off in the pace.

Big Joe was indeed a marvel of strength and endurance, and I caught myself wondering if the man was made of iron, and his muscles fashioned out of steel, with a boiler hid somewhere inside, carrying 100lbs. of steam to the square inch to furnish the power. He started out from Cunningham's with a quick, powerful stroke, and I don't believe the strokes varied two in the minute on the whole trip, except when he dipped up a drink of water, when we stopped at Garden River, and during the "episodes" that occurred on the way, and the distance was made in a little less than four hours, towing a jerking boat at the stern against a strong current a good part of the time, and the last five miles in a dense fog. Had we tied the little boat jam up against the stern she would have towed much easier, but it would have interfered with the working of the rudder.

We were now in hearing of the rapids, and all we had to do was to keep the boats in the water, and not try to climb the bank. Sometimes we would get so close in, the trees would be hanging over us through the fog, and once we had to go around a long point reaching out in the river, but Joe seemed to feel when he was within a few yards of it, and with a "Hold her out a little more," we passed around, with the starboard oars striking the rocky bottom as we went by.

The fog was a regular old-fashioned "Scotch mist," and my coat—not a heavy one—was wet through on the shoulders, as well as my arms and legs where exposed, and the air had turned quite cold, and I was chilled to the bone, and cramped and doubled into the semblance of a figure 5 from long sitting in one position, and I heartily wished the voyage at an end.

Joe said from the sound of the falls we must be very near the town, and just then a light shone dimly through the fog almost over us, and in a moment we were right under the stern of the Atlantic lying at her dock, which was barely missed by jamming the tiller hard-a-starboard, so closely had he calculated the distance from the shore, for we could see it no more than if we had been in the middle of Lake Superior. With the roar of the rapids on the starboard beam to steer by, we soon slowed up on the other side of the river, to feel our way through the fog to a landing place. For the last mile or two we had been looking for the powerful electric light at the lock, which could be seen for five miles, Joe said, on a clear night, but not until right at the dock could we see it, struggling faint and dim through the drifting mist with a brighter gleam at intervals, like the fitful flashes of a feeble firefly. Pulling slowly along down the dock, feeling our way the while till we found the slip where the boats belonged, they were made fast, and I got out, stiff, sore, wet and chilled, but glad to be once more on solid ground where I could cut a few capers and work the kinks and cramps out of my benumbed legs. The two Joes were in better trim, as pulling the boats had kept their blood in circulation, and they were little the worse for the trip; big Joe was not even tired. Big Joe Lesarge is still a wonder to me.

We found our way into a street, dim, dark and deserted at this hour of the morning, and following it through the gloom a short distance, fortunately ran across, and nearly over, a friendly policeman, who put us on the trail to Everett's house, where, after some vigorous knocking, he was roused out, the boats paid for, and our mission was accomplished.

Everett said the boys had returned the other boat the previous evening, and as every thing was now squared to his pleasement, we searched our way back through the fog, till we found the "Messenger" lying in her slip below, got the clerk out under a protest of growls about "waking people up at 1 o'clock in the night," went to bed to have a sure thing on not getting left in the morning, and slept solidly, till awakened by the working of the engine, as the boat backed out of the slip to go up to her dock in front of the town.

I looked for the stray boys to come aboard and go down with us, but saw nothing of them, and no time being left to hunt them up, they were left to follow when the spirit moved them, or stay there the rest of the season, as they chose; their erratic "gaddin' 'round" having about exhausted the small stock of patience I had left on hand for the next "shipwreck."

A friendly morning breeze had blown the fog from the river, leaving only a few straggling wisps of mist clinging along the shore, and around under the lee of the islands here and there, as reminders to the two Indians and the "skipper," of the episodes of the night before.

At Cunningham's we took the boys and the calamities aboard, shook our Samaritan friend and the Indians a kindly good-bye, waved our hats courteously at Mrs. Cunningham standing in the store door—may her days be full of happiness for her kindness to the "Kingfishers!"—and were off again in search of a new camp, and glad to get out of a region that had bowed us down under a burden of big trout—(stories) echoes, "shipracks" and "episodes," albeit the kind treatment received at the hands of the Ruttles and Cunninghams more than made amends for the disappointments and back-sets that had betaken us since Captain Tate stranded us at the sawmill dock, through too much "tamperin' with the critter."

Happily we saw nothing more of Captain Dave after he disappeared in the woods back of the mill, carrying his skin full of "snake breeder" and the marks of the "wollopin'" administered by the big engineer as reminders to him that "the ways of the bibulous bring them at last to grief."

Nor did we see anything of our friend from Detroit; but this was a disappointment, for Brother Fritz was one of our kind, and a sportsman "of many parts." He got as far as the Sault, he afterward informed us by letter, but having promised his wife not to go beyond reach of telegraph communication, on account of sickness in the family, he had taken the back track next day for Mackinaw City, where a dispatch awaited him to come home at once; and we thus missed a chance of judging his attainments as a beguiling "fish liar" in the flicker of a camp-fire, for which Knots said he had a high and untarnished reputation.

As we passed by the sawmill, Captain Barker was reminded of the unpleasant predicament he had left us in the previous evening, but he "crawfished" out of the responsibility by saying he was at supper at the time and didn't see us, else he would have landed and taken us aboard; and the unctuous mate, who was at the wheel, said there was a bad bar running out in the stream above the mill that would have delayed them some time in getting around had he made the landing at the dock, and he didn't know it was our party, and he couldn't stop the boat without orders, etc., etc., all of which was highly satisfactory to them, but mighty "onsatisfyin'" to us, who had been put to a deal of inconvenience and trouble because they chose to be pigheaded and disobliging to their fellows when in a "category."

But we were in a better humor than we were the night before, and as we had in reality lost no time, the hatchet was buried and we turned to the enjoyment of the scenery along the course of the grand old stream, of which a lover of nature can never grow tired.

About 6 o'clock in the evening we were once more in Mackinaw City, bothering our friend Carpenter, of the G. R. & I. R. R., about another camping place, but having "a leanin' that way himself," he is always ready and willing to help a brother angler with his advice and services without leaving the impression that he owns the road, a disease that frequently crops out on the average station agent with alarming and sometimes fatal symptoms.

We had thought of making a camp in Carp Lake, seven or eight miles down the road, but he thought Douglass Lake, about half way between Mackinaw City and Petoskey and six miles off the road, would suit us better if we could get boats, and after dictating a few inquiries that covered the case, a brief talk by wire with the agent at Pellston and a wait of half an hour or more brought back the information that he had hired a team to be on hand when we arrived in the morning, and had also secured two boats, and there were a couple more that we could hire when we got to the lake.

This was better luck than we had been used to, and old Sam at once pronounced it "a heap the best episode that had hit us."

In the morning Dan decided to wait for the two Decatur boys, and give them his "blessing" when they did come for the worry and anxiety they had caused him, and the Jedge's business calling him home, there were but four of us left to go on and make the camp. However, the truants came down on the Jay Gould that evening, and were at camp next morning, ready for another lesson in pitching a tent under the watchful eye of Uncle Dan, this time without the annoyance of the blackfly.

Just as we got the last of the calamities out on the platform at Pellston, and the train was starting, old Knotts startled us with, "Where's my trunk?" and without waiting for an answer, swung on to the step and disappeared in the baggage car as the train moved off. The engine was, in railroad parlance, one that "picked up quick," and before 200ft. from the platform was going at a lively speed.

As the train was just then passing over a short "fill" of loose sand 10 or 12ft. high, Knots appeared on the lower step of the baggage car, and without hesitation sailed out in the air, with arms and legs extended like the sails of an ancient windmill, or, as old Sam made it out, "Like a great fat water spider doin' a flyin' trapeze act without the trapeze." He struck the loose sand on his feet without the usual dull thud, pitched heels over head, and rolled over four or five times to the bottom of the em-

bankment, while we held our breaths, and then, without losing any valuable time, picked himself up, scrambled up on the track, and came walking leisurely back to the station, brushing sand from his clothes the while, when on learning he was entirely unhurt the smothered snickers burst forth, for we were afraid to laugh before knowing the result of his flying leap.

"What the devil are you laughing at?"—his mouth twitching with the suspicion of a smile—"can't I take a little exercise and practice a few gymnastics without you fellows splitting your sides with unseemly hilarity? Where *is* that cussed pie box, anyhow? It ain't on the train, and it's got all my fishing tackle in it." It was pointed out to him at the bottom of the pile of baggage, and he yanked it out to make sure it was his, with a few remarks that "he didn't see why some of us couldn't tell him it was there before he nearly broke his neck getting on and off the train." However, the hilarity subsided, and we turned our attention to loading the wagon which was waiting on the other side of the track. He said the conductor told him he could jump off easy enough, but it was a dangerous experiment at the speed the train was going, and had the ground been hard or rocky the result might have been a broken limb or two, if no worse; but to even things up, had the pie box been in sight before the train started, he would have missed the opportunity to exhibit himself as a new-fangled flying machine, and old Sam would have been cheated out of "another episode, the beatin'est one o' the trip."

We hired a young fellow, recommended by the station agent, to go along and cook, whose incessant talking and fresh ways proved more annoying than his poor cookery, but "the Joneses never was used to the best o' everything nohow," and by mixing in a little more meekness and humility in our deportment than was our habit in camp, we managed to pull through, without having to answer for the crime of drowning him in the lake, but it was a close shave. Deliver us from a camp cook with a tireless jaw, who knows it all.

The wagon was loaded and we trudged after it the six miles to the lake for lack of room to ride, and because another wagon was not to be had.

We found Douglass Lake to be a beautiful sheet of water, about six miles long by nearly two miles wide at the widest part, and well-wooded around its entire shore. The outlet is Maple River, a rapid, shallow stream, ten to twenty yards wide, and famous for its grayling below the mouth of the West Branch, a stream of ice-cold water that joins it a couple of miles below Pellston. The Maple flows into Burt Lake, one of the chain forming the "inland route" from near Petoskey to Cheboygan on Lake Huron.

We had heard much of Douglass Lake as a great lake for bass, and were anxious to wet a line in its clear waters. A camping place was selected about a mile above the outlet, on a smooth, level beach, well shaded in the afternoon, and before sundown the camp was made, the two boats dragged from their hiding in the adjacent "bresh," and with a few lank-bellied Michigan frogs, the emaciated remnants of the "menagerie" that had survived the bumps and jolts of the trip to Echo Lake, enough bass and pickerel (will we ever find a gallon of water in Michigan without a pickerel in it?) were taken in the bay in front of the camp for supper and breakfast, and we went to bed that night tired and happy, each one with a "curve of expectancy" in his spine for the days of sport to come.

In the morning when Dan's tent was up, and his cot stretched to the exact tension and "flatness" required, and the old flag run up on a tall sapling planted firmly in the sand, the "camp of the Kingfishers" was once more in running order, and we settled down to the enjoyment of a couple of weeks of solid comfort, marred only by the hum of the ever present skeeter, and the tireless efforts of our fresh cook to wear out the running gears of his jaw, and our forbearance.

While in this camp Charley and I walked seven miles one morning to the sawmill near the mouth of the West Branch, waded and fished the stream a matter of five miles down to the old Brutus House—famous as a hostelry in the day of stage coaches, but now deserted—and tramped back in the evening by sundown, seven more miles, with an even 50 grayling, weighing just 18lbs. And the following day old Sam and I fished over the same water, striking the stream at 10 o'clock in the morning and leaving it at 4 in the afternoon, with 35 fine fish, 85 in all for about twelve hours fishing during the poorest part of the two days.

But the time draws nigh for these chronicles of the camp, the "episodes" and happenings by the way to end. They are already much longer than at first intended, but it seems there is always something more to write about the woods and the waters; another cast to make which is to be the "very last" before reeling up for the campward tramp, and the pen will linger over the paper as does the rod over the pool, loth to be laid aside.

I might go on and tell of the bass we took in Douglass Lake, and of some cunning, powerful fellows that we didn't take; of "more pickerel," big and little, gaffed and knocked on the head; of the "beatin'est place in all Michigan fur bluegills," near the upper end of the lake; where old Dan and Sam and Knots reveled in "pure delight," taking one, two and three at a cast on trout flies, some of them a pound in weight, till darkness drove them to camp; of the days of sun, and rain and storm, and how the running gears of the cook's jaw held out to the very last; but all this may peradventure be better told in another series of letters.

Suffice it that each day brought its pleasures and its minor disappointments, with an occasional "episode" for old Sam, till the end came at last, and we took our way homeward with a new lease on life, and planning in advance a fresh campaign for next year.

And now, if the foregoing pages have served to while away a lonesome hour, and "lighten the burden" of some disappointed brother whose vacation didn't "hit" this season, the time will have been well spent, and I lay the pen aside with a kindly greeting to the gentle craft, to all the readers of FOREST AND STREAM, and the "rest o' mankind in gineral," trusting that we may meet again in the wilds of well-beloved old northern Michigan to "swap reminders" in the flicker of the camp-fire in some future "Camp of the Kingfishers." KINGFISHER.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st., Boston, or 199 Fulton st., N. Y.—*Adv.*

A PIECE OF LUCK.

ONE sometimes hears surprising stories of anglers recovering lost leaders and other tackle by hooking the same fish a second time and landing him with the lost tackle still fast in his mouth.

It was my good fortune to recover my lost tackle one day this summer by a still greater piece of luck. I was "paternostering" for perch in the little pond near the hotel at Manomet, Mass., using two hooks on a light gut "trace" (I believe that is the proper phrase when you are using a "paternoster," with the sinker below the hooks), and was having very fair luck. Presently I had a bite, and on striking found that my fish had "hung me" on one of the troublesome snags, which are abundant in this pond, so securely that I was unable to clear it with my rod, and when I tried to haul in the line by hand the trace parted about a foot from the end of my reel line. I had no whole spare trace with me, but found a piece of an old leader in my pocket, which I tied on to the remains of the trace, and putting on a new sinker and a single hook, baited up and tossed over in the same place. No sooner had the hook reached the bottom than it appeared to catch on again, and fearing that I was once more snagged, I raised the tip of my rod, and to my surprise found that, instead of snag, I had a fish, and apparently a good one. After a little run, for I was using light tackle, I brought the fish alongside the boat, and was astonished to find that I had two fish! How could I have caught two fish when I had only one hook! I could hardly believe my eyes till I lifted my fish into the boat, and found that I had caught not only a half-pound perch and a hornpout somewhat larger, but my lost trace complete, sinker, hooks and all! The hornpout was securely hooked on one hook and the perch on the other, while my last hook had caught the trace somewhere between the two, and the whole was well tangled up.

I suppose when the trace parted it gave way just where it was caught round the snag, so the pair of fish were set free, but tied together like dogs in a leash. Apparently they couldn't agree to go off together, but one pulled one way and one the other, thus stretching out the trace for my hook to catch on.

I basketed the perch, restored the pout to the water, and mended up my paternoster again. I caught a good many more perch with it afterward.

The yellow perch bit very nicely in the South Plymouth ponds round Manomet during August, though bass fishing was not up to the mark. We took three good baskets of perch from Beaver Dam Pond—the first day, two rods, 124 perch; the next day, two rods, 94 perch, and the last day, three rods, 226 perch, all fair perch, with a "pounder" or two in each lot. These fish were not wasted, but were all consumed at the hotel.

LATE SPAWNING TROUT.

Editor Forest and Stream:

I had made ready to start for the Manistee waters after grayling, but the rain of this morning upset my plans, and remembering that I promised you a brief of my notes and observations on late spawning trout, I have prepared and herewith inclose the same. It would be more complete and valuable had my attention been sooner called to the subject, and I now offer it for whatever it may be worth.

I think that many, perhaps one-half, of our trout contain spawn in May; that it is probable that some deposit their spawn during each month of the summer, and there is no doubt that they do so in August. Brook trout caught in May, 35, containing spawn 6 (or more); June, 85, containing spawn 15; July, 50, containing spawn 21; August, 43, containing spawn 13. It will be seen that in May about $\frac{1}{6}$, and probably more, contained spawn; in June about $\frac{1}{4}$, in July nearly $\frac{1}{2}$, in August nearly $\frac{1}{3}$, and that of the 213 trout recorded, 55, or more than $\frac{1}{4}$, were in an interesting condition.

If these facts have any value you may publish them, and I hope will add your opinion as to their significance.

CENTRAL LAKE, Mich. KELPIE.

[Thorough investigation of this matter needs to be made. The size of the fish, old or young, containing spawn and their location, whether on spawning beds or not, are questions to be answered. A trout when taken from the water, if found to be full of spawn, should be returned immediately back to the water, if this is possible, without injury to the fish. It is to be hoped that "Kelpie" and others will continue their observations leading to a better understanding of what is required to secure the proper protection of trout.]

CHEAP FISHING FOR "PODGERS."

Editor Forest and Stream:

I see by your last number that a generous-minded fisherman down at Tarpon Springs, Florida, takes compassion on my discouraging experience in Eastern salt-water fishing and invites me to "come down" to a country where things are cheap and fishing is good. I am greatly obliged to "Tarpon," and can indorse his views, being familiar with the west coast of Florida, having fished from Cedar Keys to Charlotte Harbor, but one don't care to go down to so low a latitude in the summer months.

"Tarpon" is all right on the general facts, and I have had it in my mind to run down that way this coming season. I know that the fishing is good—too good if anything—that is, too easy in general, but the tarpon fishing is more a question of chance and skill, and hence more desirable. Meantime I must ask him not to let the skipper of that little cabin yawl get the swell head and raise his prices, for I am no longer a partner of Mr. Vanderbilt and shall not take down over a matter of twenty thousand dollars for the winter's expenses. See you later, "Tarpon." PODGERS.

LAKE ST. JOHN.—The Quebec *Chronicle* of Sept. 23 says: "The fishing for the celebrated game fish of Lake St. John, the ouananiche, is now very fine. The fish have left the Grand Discharge and are now going up the rivers flowing into the lake. Some splendid sport is being had on the Metabetchouan River. Last week Mr. J. E. Livernois, of Quebec, caught a large number of heavy fish, and a New York gentleman who has just returned from Metabetchouan, made the following splendid score with one rod, using the fly: Sept. 1, 8 fish, 27lbs.; Sept. 3, 11 fish, 45lbs.; Sept. 5, 19 fish, 75lbs.; Sept. 8, 9 fish, 31lbs.; Sept. 10, 11 fish, 41lbs.; Sept. 12, 4 fish, 13lbs.; Sept. 14, 13 fish, 55lbs.; Sept. 17, 9 fish, 32lbs.; total, 84 fish, 319lbs. A writer in FOREST AND STREAM, speaking of the netting which is being done in Lake St. John, says: 'It seems incredible that this rare and highly prized game fish, that has carried the fame of the Lake St. John waters into all English-speaking lands, should be exposed to extinction for such a paltry sum as the Government obtains for a netting license.' The writer goes on to suggest that the Government should endeavor to protect and propagate this fish by means of a hatchery, such as they have at Tadousac, and elsewhere, for the salmon, and that the adjacent lakes and rivers should be stocked from it. The suggestion is well worthy of consideration, for this species of fish can be had nowhere else on the continent, and if properly protected will attract to our Province an influx of visitors from all over the world. This year sportsmen have come all the way from Texas and California, on purpose to catch the ouananiche."

ASTROLOGY AND THE FISHING.—Chatauqua County, N. Y., Sept. 25.—Bass fishing has not been good in Lake Erie this summer. Last year tugs with nets ruined our sport. This year a few fish have been taken, but not enough to grow jubilant over. There has been much wind, which with the undertow has probably changed the season, or floated the reef into deep waters or otherwise interfered with our accustomed catch of blistered hands and tanned noses. This has been an off year all around, any way. I suspect the conjunction of Jupiter and Saturn, which brought the frost in May which knocked out the apple crop, almost ruined the grapes and gave chickens the murrain, had as much to do with poor fishing as anything, both for trout and bass. There are a few half-starved and wholly scared trout left in the county that would migrate with the squirrels if they could. Some of the streams were stocked several years since, but small boys and worms, both on the hook and in the fish (I refer to the worms) in and out of season have got away with all the fingerlings. Knowing that there were trout in Canada, I went up to the Nipissing region last spring, but I haven't time to talk about it now.—O. O. S.

RICE LAKE.—Harwood, Ont., Sept. 25.—The fishing has been good this season, is good now, and will be for six weeks yet for maskinonje; not so good for bass. Our lake is full of small-mouth and big-mouth bass. Quantities have been taken this summer. I saw two Indians a few days since who had been trawling; one had 22 maskinonje, the other had 13. There are about 70 Indians who fish pretty much all time, trawling. I estimate their catch through the season at 30,000 maskinonje. Last winter they caught about 100,000lbs. of big-mouthed bass through the ice. There are millions of them in the lake. —CHAS. GILCHRIST.

A HINT.—See next issue for adv't. of *Hints and Helps for Sportsmen*—611 of them.

Fishculture.

AQUARIA NOTES.

[Occasional Observations on the Fishes of the Aquaria of the U. S. Fish Commission at Washington.]

THE EFFECT OF CHANGE FROM FRESH TO SALT WATER.

SOME white perch (*Roccus americanus*), caught in the fresh water of the Potomac River, on being placed in an aquarium, were so severely attacked by fungus (*Saprolignia*) that most of them died in spite of repeated salt-water baths. As a last resort a number of them were placed in a salt-water aquarium, with a density of 1.020, on the "kill or cure" principle. In this they were unable to submerge more than two-thirds of their bodies, and were apparently otherwise affected, so that the density of the water was reduced to 1.015. In this density they appeared more at ease, but the dorsal fin and a small portion of their backs remained above the surface. They were able only by a great effort to swim a few inches below the surface, and on relaxing their efforts they immediately rose again. The fungus disappeared at once. It was a week before they were able to move about freely, having by osmosis acquired the density of the water.

In a similar experiment made on some eels, it was found that they were able to keep near the bottom, but had a tendency to stand on their heads. They had fully recovered in two days.

This would indicate that the necessity for a gradual change from one density to another exists in the necessity for a corresponding change of density in the fish, and opens up an interesting field for experiment. It is a question as to whether these changes, if quite gradual, are not possible with other than anadromous fishes.

A CURIOUS PARASITE AND ITS RELATION TO TEMPERATURES.

A curious infusorian parasite, which appears to be identical with one fully described by Dr. C. Kerbert under the name of *Chromatophagus parasiticus* in the Report of the U. S. Fish Commissioner for 1884, last winter infested the percoid and salmonoid fishes in the aquaria. The same parasite infests similar kinds of fish, also cyprinoids in European aquaria. Very strangely the cyprinoids in the Fish Commission aquaria were wholly exempt from their ravages.

It is a terrible pest, resisting any treatment which is not sufficiently severe to destroy the fish also. A fish will be completely covered with them, encysted in the skin, so close together that they have the appearances of fungus.

In the spring, however, when the water had risen to 60 degrees, they had wholly disappeared. The Commissoner of Fisheries, to whose attention the matter was called, suggested that the proper remedy is in keeping the fish in a temperature never below 60 degrees or in subjecting them to water of that temperature for a period sufficient to rid them of their tormentors.

NUPTUAL COLORATION.

During the period of sexual excitement, preliminary to and while spawning, the male of the killifish (*Fundulus majalis*) becomes intensely black, while that of *Fundulus heteroclitus* becomes a very dark blue flecked with pale yellow and with margins of the same color on the fins. These changes of color are assumed in the course of an hour or two. Sometimes, as in the case of *F. majalis*, the coloration will be confined to a part of the fish in irregular blotches, making a vivid contrast to the lighter color. The black horizontal and vertical bars and bands characterizing the male and female of this species, are entirely obliterated by this coloration. WM. P. SEAL.

FOR THE FISH COMMISSON AQUARIA.

THE Bluewing has returned to Washington with a good supply of live fishes for the fish aquaria in Central Station. The weather was very unfavorable most of the time, so that she could not get further than St. Jeromes, Md. Thirty odd species of fish were collected, and the young of the food fishes of that region were found to be plentiful. Mr. Seal says the striped bass (*Roccus*) is the favorite fish in that locality. The fishermen say the demand for this fish is steady, and that it always brings a good price; also, that they deplore the fact that this species with them is growing scarcer each year. Kingfish from an inch up to about four inches long were found in considerable numbers at St. Jeromes. Plenty of young trout (*Cynoscion*) were also found at this place, and in fact at every point visited. Young bluefish, called salt-water tailor in the Chesapeake, from five to ten inches long were found. No large ones were seen. One specimen of the common square-tailed catfish (*Aniurus nebulosus*) was taken; also one sunfish (*Lepomis*) in brackish water. Several mud-shad (*Dorosoma*) were obtained in Breton's Bay, near Leonardtown, Md.; these were about ten inches long. Menhaden were also taken, but these, like the mud-shad, died in transit. The weakfish or trout were also hard, if not quite impossible to keep alive. Quite a number of toadfish (*Batrachus*) were collected, and are now doing well in the aquaria. Mr. Seal was much surprised to find that the toadfish is eaten by people of this locality. Those elegant little fishes, the harvest and butterfishes, were found. A large eel sports in one of the tanks. Mr. Seal informs us that eels are much thought of by the fishermen, as they find a ready market for them.

Other species taken were: Yellowtail (*Bairdiella*), croakers, spots, flounders and hog-chokers (*Achirus*), mummichogs, killifish, top minnows, lizard fish (*Synodus*), a good-sized sheepshead, and two fine tautog or blackfish.

But one species of crab was observed, the common blue crab. Shells and plants of various kinds were obtained. Mr. Seal says the recent storms have washed out the pound nets, causing much loss to the fishermen of the Chesapeake.

SHRIMPING IN FRANCE.—The French Fisheries Committee, after investigating the fishing for shrimp with trawl nets, have concluded that the nets injure the fry of various food fishes, and advocate that shrimping with trawls be abolished. Two other methods are recommended for the capture of shrimp. One of these is a trap on the principle of the lobster pot, and consists of a wooden frame in the shape of a barrel, about 2½ft. long, having two funnels made of small-meshed net, through which the shrimp are attracted by bait. The second method is a conical pocket made of fine meshed net, 18in. deep, fastened to an iron ring with a diameter of from 30 to 36in. Four lines are attached to the ring, and are made fast to a rope extending from a buoy. Pieces of fish are used for bait; these are placed on the bottom of the pocket, and some bait is hung in the ring to attract the shrimp. It is necessary to raise this trap about every half-hour, and it is said to work well when fished early in the day, or morning, during low water.

ARIZONA FISH COMMISSION.—The Governor of Arizona has recently appointed T. W. Otis and John Howard, both of Prescott, and C. W. Stearns, of Phœnix, Fish and Game Commissioners of Arizona Territory. These Commissioners have commenced work with a view to the introduction of food fishes into their ponds and public streams, and have made application to the U. S. Commissioner of Fish and Fisheries, Col. M. McDonald, for such fishes as are distributed by the Commission. Carp, trout, etc., will be introduced if possible.

TROUT IN THE YELLOWSTONE.—The shipment of 7,000 trout from Northville, Mich., and their introduction into the waters of the Yellowstone Park, has been successfully accomplished. Out of the whole 7,000 but 30 trout died during transit. These fish have been distributed throughout the Park as follows: The brook trout (5,000) were planted in the middle and west fork of the Gardiner above the falls. The California trout were planted in the Gibbon River, and the Loch Leven trout in the Fire-Hole or Madison River above the Geyser Basin.

THE ALBATROSS is now at Portland, Oregon. She will proceed to San Francisco in the course of a week, where she will be fitted out for her work upon the California coast during the coming fall and winter. The weather has been too stormy upon the Oregon coast for her to continue work there any longer during this season. This summer, and up to the present time, she has carried her work southward from Columbia River to near the southern border of the State.

THE ALASKA INVESTIGATION.—Livingston Stone, one of the party sent out to investigate the salmon rivers of Alaska, has arrived in San Francisco, and the remainder of the party are now due at the same place.

The Kennel.

FIXTURES.

DOG SHOWS.

Oct. 1 to 3.—Third Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. F. C. Barnes, Secretary.

Oct. 8 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary. Entries close Sept. 28.

Nov. 14 to 16.—First Dog Show of the Continental Kennel Club, at Denver, Col. Claude King, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 318 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Anaual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Aanual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

ST. LOUIS NATIONAL MEET.

ST. LOUIS, Mo., Sept. 23.—A fair attendance met the first day's races of the National Coursing Association of Hutchinson, Kan., at the Fair Grounds here last Saturday, and the beautiful and spacious grand stand presented what the daily reporters would call an animated appearance. It was not claimed by the management that all advertising and other preliminary work had been more than hurriedly done, as the advance time was limited to three or four days. All details at the grounds, however, were perfect, and the association may congratulate itself that it has secured a smooth-working plan. A large tent at the upper end of the course served as a corral for the hares, and they were sent out of this through a chute into the course. The latter, a quarter of a mile in length, lay directly in front of the grand stand, the sides of the race-track fence being provided with wire netting and canvas. The escape was a fence, arranged hurdle-fashion with brush, and the opening of the escape-tent was so arranged that the hare was safe after passing through the hurdle. It was perhaps a neglect of the management that the hares had not been chased over the course frequently with slow dogs, but although the hares often turned back and ran to the upper end of the course again, this gave really a longer and finer exhibition of coursing to the people. The hounds were run muzzled, and out of the total of hares run into, there was only one which appeared injured, and that was due to the slipping of the muzzle. For the most part the hares seemed very confident, and it is probable that if well trained on the course, so that they would go straight through, they would rather enjoy a turn with a pair of greyhounds of the class, for the most part, entered here.

The stake run for Saturday had an entry of 16 dogs. First prize, a young greyhound, Dick Kline, by champion Sandy Jim, a very fairish young brindle; second prize, a fine dog collar. The running was open only to local dogs and the contest chiefly for glory.

In the first series Mr. John Egans white bitch Ponta and Mr. C. McCarthy's red dog Tom McCarthy ran a very sensational race for the benefit of the grand stand. Ponta was unsighted at the start, the dust raised by a solitary horseman employed by the management obscuring almost everything. The horseman is supposed to "extend the hare," but he mostly extended an annoying dust cloud and won the derision of the Roman populace by always getting in the way. They very justly invited him to go bury himself. Once sighted Ponta drew in and made all the work. Just at the escape, Ponta wrenched repeatedly and the hare turned back. Ponta could not close. The hare turned to the red fellow, who lost at once, and Ponta "killed" with muzzle on, beating Tom pointless. Ponta is a thin and weedy bitch, but had more back than Tom McCarthy.

Dr. L. G. Tandy's white and blue bitch Beatrice and Mr. P. Rohn's white bitch Fola ran neck and neck down to the stand. Fola drew in and scored seven wrenches at once, beating Beatrice pointless, the latter, a green young one, running with ears up much of the time. Fola is a stocky-coupled bitch with poor head and neck. Miss Beatrice is not fine, being too lathy and light.

Mr. Frank K. Doane had out a good one in his blue bitch Bell Smart, and a feel of her loin showed she had been fitted. Not so much could be said for Col. R. S. McDonald's big fawn dog Ranger, whose, too, too solid flesh proved too much load for him to carry. Ranger had a notion that this coursing business had been gotten up for his personal amusement, and pranced gayly up and down a limited portion of the course, watching Bell run circles around him in a pumping hard course, which showed her a close stayer.

Dr. Tandy's black dog Sir Charles and Mr. S. Plant's fawn dog Punch had a good gallop to the hare, which favored Punch in the turn, the latter failing to hold possession. Sir Charles, scoring repeatedly, was at the hare as the latter stumbled and rolled over, and beat Punch any way he liked, the latter earning perhaps a point.

Mr. Ben O'Keefe's blue dog Jim K. showed good hind-quarters but bad chest. His mate, Mr. Chris. Von der Abe's light fawn dog Fly, is a litter brother to Braudt, runner-up at Louisville. He is a well made big dog, large but not coarse, a very well proportioned fellow. He placed Jim K. on the gallop up, and scored three points. Jim, however, held possession long enough to win, the big dog not being able to get about fast enough.

Mr. L. Bambrick's red and white dog Jake Kilrain is a sea serpent of a brute, too long and straight in the back to get under himself on the turn. He proved good in a straight away, however, and took a grand go-by in the round-up, scoring then a turn and two wrenches, placing Speed. Speed then proved so much better at close work as to cut down the lead and win by a bare point. The long dog is very speedy and game.

Mr. Frank K. Doan's fawn dog Paddie, and Mr. Dan O'Keefe's red dog Prince Albert next went into the slips. Paddie is the dog that tried to carry off Mr. Carney's barbed wire sheep fence at Great Bend last year. He is a trifle long-coupled, but a useful one, and was in good condition. Prince Albert wants more lung room. These dogs ran an undecided course. Paddie scored plenty to win on a quarter course, but Mr. Luse, who acted as judge, thought it better to put them in again for a longer course, to be held over until the following day.

Mr. John Madden's blue dog Don is a fairly working-like dog and was in fair condition. He is long in the loin and of bad muzzle. He went in with Mr. E. Burgess's fawn dog Spring, a game-looking and clear-built large dog, which was pronounced a good one by the old coursers present. When slipped these two fell to fighting, and the hare trotted up the course and was cornered and captured by Dr. Royce, official field steward, assisted by one of Capt. Bellair's men employed about the park. They were then slipped single to a good hare. Spring led up and made all the work, scoring eleven points and beating Don pointless. He works wonderfully well for so large a dog.

This closed the racing for the day. The comment was general that the sport had been good and interesting to the point of excitement. There were present some of the regular attendants at the American Coursing Club's open meet at Great Bend, including Col. R. S. McDonald and Miss McDonald, Mr. and Mrs. Frank K. Doan. They were all pleased, Mr. Allison, Mr. Luse and Dr. Royce were all present in official capacities. It looked quite like old times, and the greatest of eagerness was expressed for the October meet in Kansas.

SECOND DAY.

It was estimated that between 2,500 and 3,000 people were on the grounds to witness the deciding courses, and the gate receipts show this estimate to be not far wrong. The racing was good and the enthusiasm marked, and it was evident that the people were beginning to understand the sport.

The first course was the undecided one brought forward from the day before, between Mr. Doan's Paddie and Mr. O'Keefe's Prince Albert. Paddie led up, turned, won a go by, worked the closer on the turns, took three go-bys and rolled up twenty-two points in a grand course, winning every way. The hare escaped from the tent and ran out on the course. Prince Albert followed idly and quit.

Running was now begun in the second series, Mr. Rohn's Fola and Mr. Eagan's Ponta being drawn together. Ponta had the advantage in the run-up, turned and wrenched better and held possession most of the time. Long-tailed Fola could not keep the pace. Ponta tripped twice and turned to Fola who killed.

Mr. Doan's blue bitch Bell Smart had already grown a great favorite with the crowd, and applause met her as she went out with Dr. Landy's Sir Charles. Bell was better up, and had her six points scored before Sir Charles got in. She then doubled them up out of sight. Bell worked the hare admirably and much in the style of an old courser.

Running was begun in the third series, Jim K. and Paddie going in. Paddie could not stay in this course, and Jim K. had the better in the exchange, enough to win.

Running was continued in the second series, Mr. O'Keefe's Speed and Mr. Burgess's Spring going in. Spring went out of slips like a rocket, and rolled up enough to win over Speed's turn and kill.

In the third series Ponta and Bell Smart fell together. Bell was better in a cracking run-up, scored four points and placed Ponta. Ponta scored, but lost a go-by to Bell, who scored nine points additional. Ponta killed. Bell Smart won, and was a high favorite for final winner. To old coursers she showed a decidedly experienced look.

In the third series Spring and Jim K. went out well on a short hare. Not much was done, and if Spring really won he did it by a small majority. That, however, was technically sufficient.

There remained now for the fourth series and the decisive course only Bell Smart and Spring, and they showed a good pair as they went down to the slips. Spring got away in great shape, his muscles fairly cracking under the strain. Bell held her own well for a moment, then rapid exchanging followed, in which the fawn dog had the better of it. He went about wonderfully close. Bell stuck to it and got in some points, but it appeared as if she was not running altogether square, being a little tired from her earlier courses. She had up her ears once, and while she certainly could not be disqualified for running sly, she probably was waiting just a bit, and had no serious objection to Spring's doing a trifle more than his share. This Spring did and won. Mrs. Doan, who had wagered two pounds of candy with a press representative on this result, was much grieved over her blue racer's defeat. Such, however, is frequently the fate of favorites and of good dogs. It was certainly a good dog that beat Bell, and old coursers connected with the association think much of him. The two dogs may meet again in the Kansas events.

A disgusting and well-nigh disastrous affair occurred after the close of the running, and while the assistants were driving the hares from the escape-tent to the upper corral. There were four or five hares trotting along just in front of the grand stand gate, when all at once three greyhounds, loose and unmuzzled, were seen to spring away after them, coursing them up and down amid the shouts of a few brutal hoodlums who called out to the attendants to "get out of the way of the dogs." The mob wished to see the distracted hares killed, and would have had it not been for the crowd which swiftly broke into the track. It was said that four greyhounds were loose. FOREST AND STREAM's representative saw three. One of these was the prize dog, Dick Klines; one was Tandy's Sir Charles, and the other was a white bitch, said to be be Mr. Egan's Ponta. It is probable that some or all of these dogs were loosed purposely by those who were holding them, although it is very difficult to get at the facts, as the confusion was very great. Tandy's explanation is that he heard some one call out, "There's a rabbit!" and thinking it was loose in the grounds across the track, he loosed Sir Charles to catch it, becoming afterward, in the confusion which followed, so excited as to call out to the dog and urge him on. Nothing could be learned as to the other dogs. Any of them might or might not have broken away, might or might not have been loosed intentionally. The man who would do an act of the kind could not be called a sportsman by any straining of the term. These hares are difficult to obtain and difficult to handle. The association values each of them at $25. More than that it is barbarous and inhuman to chase and kill them in this way. One hare was killed and another will die. It should be borne in mind that the association had no fault in this matter, but did all in their power to get the dogs away from the course. It would have been perfectly justifiable under the rules of the park to shoot any or all of the loose dogs, and this would have taught their owners a good lesson. Capt. Bellairs, the park superintendent, says that a valuable zebra was killed in the park last year by a loose dog, which chased it into a fence where it broke its neck.

The National Coursing Association has made a success of its two-days' meet here, and its success has been both financial and popular. There is much talk about the sport here to-day, and if there could be another day or so of the running the attendance would be better and better. The Association gave St. Louis a good exhibition, and St. Louis has appreciated it. Struggling under all the trials and discouragements incident to any enterprise of the size, it is a matter of congratulation that these plucky Western men—as good a lot of men as ever got together—have made so fair a success and have so good an outlook for the future.

SUMMARY.

First Series.

Ponta beat Tom McCarthy.
Fola beat Miss Beatrice.
Bell Smart beat Ranger.
Sir Charles beat Punch.
Jim K. beat Fly.
Speed beat Jake Kilrain.
Paddie beat Prince Albert.
Spring beat Don.

Second Series.

Ponta beat Fola.
Bell Smart beat Sir Charles.
Jim K. beat Paddie.
Spring beat Speed.

Third Series.

Bell Smart beat Ponta.
Spring beat Jim K.

Final Heat.

Spring beat Bell Smart, and won. E. HOUGH.

CLUMBER SPANIEL LOST.—*Editor Forest and Stream:* On Sept. 19, the Clumber spaniel bitch Lass disappeared from the stables, where I kept her, and thinking that some of your readers may come across her, I write to you, hoping that in that event they will do as they would be done by, and put me in the way of recovering her. She is a small bitch, about 40lbs. in weight, head very heavy, one eye marked with lemon, the other white, ears partly white and white body. When going up to any one she crouches close to the ground. She is very low on the leg, body of good length. She was clipped recently from head to foot, but hair was beginning to grow again. Lass is one of the last of the Piers' strain, consequently valuable for breeding, and I should be loth to lose her.—F. H. F. MERCER, Ottawa, Canada, Sept. 20.

BEAGLE LOST.—Lawrence, Mass., Sept. 27.—*Editor Forest and Stream:* We have just got word that our beagle bitch Molly, exhibited at the Elmira bench show this month, was lost. She had on a collar marked E. A. Peabody, Salem Depot, N. H. Any brother sportsman that can give us any information regarding her will confer a great favor.—CLARK & RUTTER, Lawrence, Mass.

THE GORDON SETTER CLUB.

ST. LOUIS, Mo., Sept. 26.—*Editor Forest and Stream:* In your issue of Sept. 19 appeared an article by Dr. J. H. Meyer on the mode and manner of the election of officers for the American Gordon Setter Club, in which he says that several members object to the election. If he had said simply that he personally disapproved of it, the remark would have been less open to criticism.

In looking over the constitution of the A. G. S. C. I fail to find any basis for the angry carpings in Dr. Meyer's letter. What his object is I am at a loss to know. If Dr. Meyer is, as he says, working for the interest of the club, and if everything is not just the way he would like it to be, I think his proper course would be to endeavor to win a majority to his views, and endeavor to secure the needed reforms by harmonious action. Dr. Meyer says the laws and constitution are deficient. What nonsense. It would be one of the wonders of this world if all should be right at the beginning. If Dr. Meyer had written on this question months ago, and showed the members where the laws needed mending, every member would have been willing to make any change or correction for the benefit of our club and dogs.

With regard to Dr. Malcolm's letter advising our Gordon men not to run their dogs, I heartily agree with him; so do the balance of the Gordon men of St. Louis. And if Dr. Meyer is so anxious to run his Gordons, why not enter them and run against other breeds? The Gordon Club and its members do not wish to clash against each other, but will continue to work together and keep their dogs at home until the field trials of this country are no longer controlled by Llewellyn men.

When all dogs shall run as they are drawn, and all classes be done away with, and a judge be appointed for each breed (as Mr. Eustace says) then, and not until then, will the Gordons become field trial runners. Try your Gordons with other setters and never mind any one else in the club; it is no one's business but your own. A word about proxy. I have in my mind an institution that represents hundreds and thousands of dollars, and all the officers are elected by proxies sent to the secretary. If all the members of our G. S. C. lived in New York city, I would say do away with proxy voting. I will say I have requested our secretary, Mr. Norris, to save all the votes by proxy and have them put in a package and sealed up, so that any member can examine them and see if the members' proper signatures are signed. I love free elections, and that is the only way to protect the ballot-box with us. I think Dr. Meyer will agree with me on this point.

Dr. Meyer says that sections three and nine conflict. They can easily be righted without destroying the whole fabric, and yet he wanted to postpone the meeting for sixty days, after he had had twelve months to look this matter up. If he remembers right our last election was in the beginning of July, 1888.

It reminds me of the party out of office; they always cry for a radical change in the office-holders, as the old officers have done nothing. Only Dr. Meyer credits the office holders of the club with having retarded the growth of our organization.

Now, Mr. Editor, let us see what has been done by Mr. Malcolm and the members of our Gordon Club. In the first place there was no G. S. C. Mr. Malcolm wrote to all our sporting papers, who very kindly published all he wrote to the several owners of Gordons recommending that a Gordon club should be formed, mentioning the names of Queen Bess and Royal Duke as a stopping point. Then came the tug-of-war. Mr. Meyer at that time was not with us, as Mr. Morris had not sold him his Beaumont.

Now, I do not intend to be personal, as that shows bad breeding. A great many of our sportsmen rushed into print with grape and cannister at what Malcolm had written, and some that had nothing to do with the formation of the Gordon club at all, as they did neither own one, nor would own one at any figure. Now, mark what follows: a club is formed and admitted in the A. K. C., a Gordon class is obtained, and a standard for Gordons adopted, and in spite of the opposition we encountered, we gave a $25 silver cup at the Richmond show, open to all, members or not. Mr. Baillie, a non-member, got the award for the best Gordon; Malcolm was the judge. We also gave $30 to the Syracuse show. What more could a young club do? I do not know of any other club doing as much in the first year of its existence. I would say let the club go on smoothly, it is now plain sailing, the hard work is done, all difficulties have been overcome, and nothing left now for us to do but pay our dues, and donate some, if needed, for the coming shows. St. Louis members indorse the action of Mr. Bennitt, Mr. Norris and Mr. Malcolm by voting the ticket got up by them.

It may appear to Dr. Meyer that I am writing this because my name is on the ticket, but no, I am writing for the benefit of our club. I do not see the expediency of any member making his troubles known to the public. If a wrong exists, the club and not the press should be called on to remedy it.

I fail to see any possible good results from Dr. Meyer's letter in all our sporting journals. I know that either Mr. Norris or Mr. Malcolm will give Dr. Meyer all the information at his command. They may have been a little slow to inform Dr. Meyer and this may seem to be a good excuse for his rushing into print. In looking over his letter I find it just eight days between dates (I only take figures). That is between his asking Mr. Norris and his publication of the action of our president. I cannot see where the clique and the desire to perpetuate their term of office comes in. Is there any emolument, or what benefits do the president or any of the officers get for work? Of course hard work is done, those in office, I mean the president, secretary and treasurer, did it. If any member will write to me saying he would like to be on the ticket in my place. I will gladly give him my place by resigning in his favor with the best of feeling toward him. Now, do not be backward, brothers, you know a faint heart never won a fair lady. And another thing, it shall not be made public, for the public have nothing to do with our affairs, except when we donate something open to all, as we did at Richmond and Syracuse shows.

Look at the condition of affairs impartially and I think you will find every officer has been true to his trust. The man that must be at the head of our club for one more year is what other writers call the champion of the Gordons. The time is not far distant when any man can be our president, that is, if he is a member and owns a Gordon.

The sporting journals of this country know that in our fight to form a club and secure recognition of the American Kennel Club, I never ran down any man's dogs, or any strain of the Gordon type. I refer you to my letter published in our journals in the first week of December, 1888.
